Mr. LAUSCHE. Mr. President, I offer the following amendment: On page 32, in line 1, before the word "levied," insert "or tax"; and insert the same words in line 4, following the word "assessment."

Mr. HUMPHREY. Mr. President, will the Senator from Ohio yield to me?

Mr. LAUSCHE. I yield.

Mr. HUMPHREY. I am happy that the Senator from Ohio has submitted the amendment, because it is a technical one which must be included in order to make the bill comply with the amendment agreed to yesterday. In short, it is necessary that this technical amendment be included.

The PRESIDING OFFICER. The amendment submitted by the Senator from Ohio will be stated.

The LEGISLATIVE CLERK. On page 32, in line 1, before the word "levied," it is proposed to insert "or tax"; and on the same page, in line 4, after the word "assessment," it is proposed to insert "or tax."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

Mr. LAUSCHE. Mr. President, I reserve the remainder of the time available to me on my amendment.

Mr. MAGNUSON. Mr. President, will the Senator from Ohio yield 2 minutes to me?

Mr. LAUSCHE. I yield.

Mr. MAGNUSON. Today, the committee accepted the amendment of the Senator from Florida [Mr. HOLLAND], on page 23, in lines 15 and 16, to delete the words "the generation of electrical energy."

Mr. HUMPHREY. That is correct.

Mr. MAGNUSON. Unfortunately, I could not be in the Chamber when the debate on that amendment was had. However, I realize that during the debate the purpose and effect of the amendment have been made clear.

I understand that the bill as thus amended will not in any way affect Federal projects which come under existing law, such as the Bonneville Power Administration.

Mr. HUMPHREY. That is entirely correct; and section 11 makes that even more specific, in terms of the exemptions which already are taken care of under existing statutes.

To be precise, the amendment of the Senator from Florida [Mr. HOLLAND] in no way affects existing power projects and Federal statutes which relate to them, in terms of shared revenues, payments in lieu of taxes, or whatever consideration may be given to the States or local communities.

Mr. MAGNUSON. I thank the Senator from Minnesota.

Mr. DWORSHAK. Mr. President, on what basis does the Senator from Minnesota make his last statement?

Mr. HUMPHREY. On the basis of section 11 of the bill.

Mr. LAUSCHE. Mr. President, I reserve to myself the remainder of the time available to me on my amendment.

Mr. KUCHEL. Mr. President, at this time I yield 2 minutes to the able Senator from Idaho [Mr. DWORSHAK].

Mr. DWORSHAK. Mr. President, I have asked a question of the Senator from Minnesota. Is it not true that despite the amendment of the Senator from Florida, which has been added to the bill, it will be possible for publicly owned electrical generating facilities to pay taxes to local and State units?

Mr. HUMPHREY. Only by specific existing statutes, or by means of further statutes; or the Board may so recommend to the Congress—but it will be only a recommendation.

The Senator from Washington asked whether the Holland amendment would in any way affect the existing public projects or hydroelectric power-generating projects and any payments or shared revenues concerning them. My answer is that the Holland amendment will not do so. The Holland amendment merely provides that electrical generating facilities, under the term "industrial or commercial use", as that term appears in the bill, that are not covered by existing law, shall be excluded.

Mr. DWORSHAK. Most of them are not covered, anyway.

Mr. HUMPHREY. Then they are excluded.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

Mr. CASE of South Dakota. Mr. President, will the Senator from California yield 1 or 2 minutes to me?

Mr. KUCHEL. Mr. President, I yield to the Senator from South Dakota 2 minutes of the time available in opposition to the amendment of the Senator from Ohio.

Mr. CASE of South Dakota. Mr. President, I should like to direct the attention of the Senator from Minnesota to the fact that on page 22, in line 9, under the definitions, the term "State" is defined to mean "any State of the United States."

Will the Senator from Minnesota agree to accept an amendment to add the words "and the District of Columbia"?

In view of the compliment recently paid the Senator from Minnesota by the voters of the District of Columbia, I am sure he would not want to discriminate against them by excluding them from the benefits of this bill.

Mr. HUMPHREY. Let me say this whole matter was given very careful consideration by the staff and by the committee some years ago and also in this 86th Congress. The reason why the District of Columbia was not included is simply that in the District of Columbia there is Federal sharing and obviously there are Federal appropriations.

Mr. CASE of South Dakota. But not on the basis of the taxes which normally would be levied on the property now owned by the Federal Government in the District of Columbia, if such property were privately owned. There is an authorization to pay up to $25 million, as a Federal contribution; but that is far less than the amount of taxes which would be paid on these Federal properties in the District of Columbia if they were privately owned.

Mr. HUMPHREY. In other words, the Senator from South Dakota is asking, as regards the categories of special assessments and commercial and industrial properties covered by the bill, that when a special provision already is made, the District of Columbia be included. Is that correct?

Mr. CASE of South Dakota. I wish to have the District of Columbia included in the definition of "State," so the whole bill will also apply to the District of Columbia.

Mr. HUMPHREY. I would have no objection to such an amendment.

Mr. CASE of South Dakota. Mr. President, may I offer that amendment at this time?

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. CASE of South Dakota. If there is no objection, then I submit the following amendment: On page 22, in line 10, after the word "States," to include "and the District of Columbia."

Mr. LAUSCHE. Mr. President, I rise to a point of order: Is not my amendment pending?

The PRESIDING OFFICER. Yes; but the Chair is advised by the Parliamentarian that the submission of the amendment of the Senator from South Dakota [Mr. CASE] would not displace the amendment the Senator from Ohio has offered.

Mr. CASE of South Dakota. Mr. President, I thought the amendment of the Senator from Ohio had been agreed to.

The PRESIDING OFFICER. It has not yet been agreed to.

Mr. HUMPHREY. Mr. President, the technical amendment which has been offered by the Senator from Ohio must be included in the bill, if it is to be in conformity with the action taken yesterday.

The PRESIDING OFFICER. The question now is on agreeing to the amendment of the Senator from Ohio.

Mr. LAUSCHE. Mr. President, I yield back the remainder of the time available to me on my amendment.

Mr. KUCHEL. Mr. President, I yield back the remainder of the time available to me on the amendment of the Senator from Ohio.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

The amendment was agreed to.

Mr. CASE of South Dakota. Mr. President, I offer an amendment, on page 22, in line 10, after the word "States", to insert the words "and the District of Columbia."

The PRESIDING OFFICER. The amendment to the committee amendment offered by the Senator from South Dakota will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 22, line 10, after the word "States", to add the words "and the District of Columbia."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Dakota to the committee amendment.

Do Senators yield back the time on the amendment?

Mr. HUMPHREY. Mr. President, I yield back my time.

Mr. KUCHEL. Mr. President, I yield back my time.

Mr. CASE of South Dakota. Mr. President, my understanding is that the amendment is acceptable to the Senator from Minnesota.

The PRESIDING OFFICER. All time having been yielded back on the amendment of the Senator from South Dakota to the committee amendment, the question is on agreeing to the amendment to the committee amendment.

The amendment to the amendment was agreed to.

Mr. LAUSCHE. Mr. President, I offer an amendment to the committee amendment, on page 23, in line 8, to strike from the bill the words "or other public improvement."

The PRESIDING OFFICER. The amendment of the Senator from Ohio to the committee amendment will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 23, in line 8, to strike out the words "or other public improvement."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Ohio to the committee amendment.

Mr. LAUSCHE. Mr. President, on page 23, in subsection (k), there appears a definition of the words "public improvement", and that section reads:

> The term "public improvement" means any street, road, bridge, sewer, water-distribution system, drainage project, or other public improvement.

My amendment is to strike out the words "or other public improvement."

An attempt is made to define "public improvement," and that is done. Then, by including the words "or other public improvement," the whole subject is thrown wide open, without any limitation. I submit to my colleagues it is an open end coverage, and completely too broad to provide at this time. Stadiums, dance pavilions, and other such buildings might be constructed. I do not believe the citizens of Circleville, Greenville, Fairfield, and Greenfield, those who live in rural areas, and who will get no benefit out of such construction, should be paying taxes to build such public improvements in suburban or in urban areas. This is no method of definition. A public improvement is a public improvement.

Mr. HUMPHREY. Mr. President will the Senator yield?

Mr. LAUSCHE. I yield for a question.

Mr. HUMPHREY. There was a discussion of the matter. We had extensive discussion with technicians of the executive branch about the provision. The Bureau of the Budget representatives thought it was important to have that provision in the bill. I do not think it is. I am perfectly willing, as one Senator, and as a sponsor of the bill, to to accept a much more restrictive definition of the words "public improvement." In light of the amendment to the bill relating to special assessments, I think the amendment is desirable.

Mr. BUSH. Mr. President, if the Senator will yield, I agree with the Senator that we should accept the amendment; and I hope it will induce the Senator from Ohio to support the bill.

Mr. LAUSCHE. Mr. President, I simply cannot vote for a measure, the cost of which none can foretell, and I cannot vote for a measure which merely lays the groundwork for another attack on the problem 1 year from now, when the demand will be made to eliminate the date of June 30, 1950, and an attempt will probably be made to push the date back to 1945 or 1940.

Mr. President, I yield back whatever time I have remaining on the amendment.

Mr. BUSH. Mr. President, I should like to observe, if I may have a moment, as one who has sponsored this kind of legislation for the last 8 years, I certainly would not agree to change the date to an earlier date. I doubt that any sponsor of the legislation will be persuaded to push the date back beyond 1950. There is good reason for establishing that date. I could see no good reason for pushing it back.

Mr. LAUSCHE. Mr. President, I suggest that the Senator from Connecticut read the remarks made yesterday by the distinguished Senator from California. He will find that there is a vision that all the Federal property in California will be taxed.

Mr. KUCHEL. Mr. President, whom is the Senator talking about? Which California Senator? The Senator who is now on his feet?

Mr. LAUSCHE. Yes.

Mr. KUCHEL. I am going to ask the Senator from Ohio to get yesterday's RECORD and get the comments the senior Senator from California made, and point out, if he can—and I deny that the Senator can and the RECORD will bear me out—anything that even by remote, speculative implication would form the basis of the statement the Senator from Ohio just made. I deny it, and I do not believe the RECORD will substantiate that comment. I say that to the Senator from Ohio with all sincerity.

Mr. LAUSCHE. I see. I thought I heard the Senator from California yesterday enumerate the many properties the Federal Government has within his State.

Mr. KUCHEL. Indeed the Senator from California did, but I deny that the Senator from Ohio can accurately or logically draw from that statement an implication that I want to use every single foot of Federal property located in the State of California, or elsewhere, as a basis on which in-lieu payments will be made. I come from a State half owned by the Government of the United States, and I wanted to demonstrate that fact to the Senate, but I say to the Senator from Ohio, sincerely, I had no such desire as stated when I spoke, and have none now, nor will I have in the future.

Mr. LAUSCHE. I am glad to hear that. I am glad to correct my statement. I hope what the Senator from California said yesterday will prevail—that there has never been any contemplation of paying the local governments' tax structures on properties that are used solely for governmental functions.

Mr. HUMPHREY. Mr. President, if the Senator will yield, such payments are excluded in the bill. The bill makes it absolutely, unqualifiedly, and unmistakably clear that where there is Federal property used exclusively for governmental functions, with the exception of special assessments, there will be no Federal payments in lieu of taxes.

Mr. KUCHEL. And there ought not to be.

Mr. LAUSCHE. Very well. I yield back the remainder of my time.

Mr. HUMPHREY. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). All time on the amendment having been yielded back, the question is on agreeing to the amendment of the Senator from Ohio to the committee amendment.

The amendment to the amendment was agreed to.

Mr. HUMPHREY. Mr. President, I offer an amendment, on page 19, in line 21, to strike out the numbers "1959" and insert in lieu thereof "1960."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota to the committee amendment.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question now is on agreeing to the committee amendment as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. The question now is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and read the third time.

The bill was read the third time.

The PRESIDING OFFICER. The question now is, Shall the bill pass?

Mr. KUCHEL. Mr. President, I yield 5 minutes to the able Senator from New Hampshire [Mr. COTTON].

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 5 minutes.

Mr. COTTON. Mr. President, obviously the bill will pass. It is my sincere hope it will receive a Presidential veto; and it is my sincere hope we will not override the veto.

Mr. President, 6 years ago, as a freshman Member of this body, it was my privilege to serve on the Committee on Government Operations with and under the able leadership of my esteemed friend from Minnesota, whom I greatly admired for his work on that committee. My admiration continues.

A bill of this type then came before our committee. At the very moment it came before the committee, Mr. President, the local communities and the States in this Union were offering enticements for private industry to locate with in their borders. The States were offering tax exemptions for periods of years. The States and local communities were building and offering factories and plants.

I have no objetcion to that procedure. I admired it then, and I admire it now, as a demonstration of enterprise on the part of those people.

Mr. President, in the committee at that time, 6 years ago, the junior Senator from New Hampshire offered an amendment, which I am glad to say is still in the bill, providing that a State or community which is offering such tax inducements cannot avail itself of the privilege under the bill of getting payments in lieu of taxes from the Federal Government on manufacturing enterprises or similar industrial enterprises within the State.

Mr. President, the situation which then existed in a sense will always exist. There is an adage in the Bible which says:

> For whosoever hath, to him shall be given; and whosoever hath not, from him shall be taken even that which he seemeth to have.

That, in a sense, is true. My heart cannot bleed too much for some of these great States which are filled to the brim with Federal enterprises which bring money into the States, bring employment into the States, bring business to the merchants, and lifeblood into the communities.

In most cases the representatives of these States have come to Washington, D.C., very naturally and laudably, to continue to ask for these Federal enterprises. But as soon as they get their feet into the tent, they turn around and ask the Federal Government to make payments in lieu of taxes.

Mr. President, I represent a State which is hungry for industry and hungry for more employment. I represent a State which will receive virtually none of the largess envisioned under the bill. I say to some of my friends who come from these States, who have spoken in the last few days, "If you do not want to build the highways, if you do not want to maintain the sewers, if you do not want to maintain the water systems for these plants, we will be very happy to have those plants move into our State, and we will give a written guarantee that we will never ask for a contribution of taxes from the Federal Government."

I served on the committee 6 years ago, and I learned one thing as a freshman Senator, that this is one of the most difficult and technical tasks which can ever be faced by the Senate.

In the last 2 days we have seen and reviewed all the corrections and the amendments and the safeguards and the provisions which have been placed in the bill and they have confirmed the thought that we are venturing into a field in which it is almost utterly impossible to legislate fairly, to legislate with safety, and to legislate without signing a blank check for years and years ahead.

With that knowledge, despite the respect I have for those who have supported the measure and helped it through this body, I venture the prediction that in the years ahead some of the Senators who now support the bill will decide it was a dangerous step and a very unsafe step to take. With all respect to those Senators, I voted to recommit the bill. I shall vote, whatever form the vote may take, against passage of the bill. I hope to have a chance to vote to sustain a Presidential veto. I think the bill, no matter what we may do to clean it up, is bound to be discriminatory, to be unfair, and to be expensive almost beyond our imagination.

Mr. HUMPHREY and Mr. ALLOTT addressed the Chair.

The PRESIDING OFFICER. The Senator from Minnesota is recognized.

Mr. HUMPHREY. Mr. President, does the Senator from Colorado wish to speak? I shall be glad to yield the Senator some time.

Mr. ALLOTT. I desire to speak on the bill. I will get some time from the acting minority leader. I wish to speak in opposition to the bill.

Mr. HUMPHREY. Mr. President, I shall say only a few words in reference to the comments of the Senator from New Hampshire, for whom I have great personal affection, and high admiration.

Mr. President, I am pleased that there were no more amendments offered to the bill than were submitted. This is a complicated bill. We do not deny that. I honestly can say this is not the kind of measure which the Senator from Minnesota finds particularly politically attractive. It has none of what we call "political sex appeal."

This is a legislative proposal which offers simple justice. It is a beginning. The bill is couched in terms which will limit its application to a very small number of cases.

The difference between this bill and a mere study bill is that the pending bill provides not only that a Federal Board shall make a comprehensive study of the entire problem of Federal payments in lieu of taxes and all other fiscal relationships between the Federal Government and local governments, but will also authorize payments in three very limited categories. This will give the Board a chance to obtain some experience in deciding which of the applicants should be granted some relief.

We have been studying this matter from an academic point of view for many years. Universities have studied it. The Bureau of the Budget has made three studies of it. The Treasury Department has studied it. Committees of the Congress have studied it. I think there have been perhaps 15 studies over the last 20 years of the question of payments in lieu of taxes and the fiscal relationships of the Federal Government to local governments. In the meanwhile, the Federal Government moves ever more into what we might call the proprietary interests and ever more into the local government areas, acquiring property which is taken off the local tax rolls as the result of Federal acquisition.

Mr. President, an honest and sincere attempt has been made in S. 910. This is not the Humphrey bill. This is not the bill of the Senator from Connecticut [Mr. BUSH] or of the Senator from California [Mr. KUCHEL], even though these two esteemed Senators have contributed mightily to it. They have testified. They have worked. They have helped to refine the provisions in the bill. So have many other Senators.

This is the end product of a good deal of hard work by the staff, by the Bureau of the Budget, by the Presidential Commission on Intergovernmental Relations, by universities, by students in the field covered by the bill, and by many others.

I admit that undoubtedly there are some flaws in the bill. I hope when it goes to the House of Representatives it will be worked on and some improvements may be made in it. I assure the Senate that efforts were made to see to it that the bill did not have an open end, that it was not a handout, that it would not lead to fiscal irresponsibility or recklessness. What we tried to do was to get a system of casework, so to speak, before the Board, so that the Board could attempt to perfect some kind of system.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. COTTON. I will say, in reply to the distinguished Senator from Minnesota, that what he has had to say I think has, I believe, confirmed everything I said a few minutes ago.

In the first place, I will testify from my experience in the years I worked on this type of bill in the committee with

the distinguished Senator from Minnesota, I agree 100 percent that the Senator's service in this field has not been from any political motivation. With the deepest of sincerity, with the greatest of skill, with unlimited industry and unflagging enthusiasm, the Senator from Minnesota has worked his level best to bring forth a fair, a reasonable, and a constructive measure. I honor the Senator for that.

The fact that the Senator has brought to the attention of the Senate the information that there have been 15 different studies of this matter by different groups, in an attempt to devise some way of achieving the effect desired without discrimination, without danger, and without extravagance, and that these groups have been unable to find the solution, confirms my opinion.

I honor the sincerity and the skill of the Senator. However, this proposal represents a step out into the darkness in an attempt to solve the problem, with the understanding that it is to be a trial-and-error method, and with a further realization that there is to be no limit as to how far we shall go.

There is one idea about which I would take issue with what the distinguished Senator has said; I must disagree with the statement of the Senator. It is not a fact that the safeguards and the landmarks which have been provided in the measure, with complete sincerity, will hold back the floodtide. I have served in the Congress of the United States, in both branches, for 14 years. Many Senators now in the Chamber are my seniors in service. I ask any one of them if there has ever been a time when we have embarked on a new program at Federal expense and have written into the bill safeguards so that the program will not grow, when those safeguards and those protections ever held back the tide.

We cannot say that will be done any more than we could say, when we started paying total disability payments under the Social Security Act to those who were over 50 years of age, that the provision would not be extended. Now people come in to say, "Why should we not pay disability payments to those who are under 50 years of age?" When we write the safeguards into the bill, they simply will not be sufficient.

I honor the Senator for his sincerity. I can testify to the very fine leadership he has given in this field.

Mr. HUMPHREY. I thank the Senator.

Mr. HOLLAND. Mr. President, will the Senator from Minnesota yield 5 minutes to me?

Mr. HUMPHREY. I yield 5 minutes to the Senator from Florida.

Mr. HOLLAND. Mr. President, this question is not new to a great many Senators. Some by reason of their long service in the Senate and on the committee from which the bill has come, and some by reason of their service as Governors of their respective States, are well acquainted with the problem. My own experience in this field took place when I was serving my State as its Governor.

I do not know whether every Senator knows, or whether the record shows, but under the rule of the national Governors' conference no action can be taken except by unanimous vote. I wonder how many actions we would have in the Senate if we had that requirement? By unanimous vote of the Governors at the national Governors' conference it was decided that one of the things which cried out for attention was the question of the loss of revenue in certain counties, districts, school districts, and the like, by reason of the Federal Government coming into such county or school district and taking over property and removing it from the tax rolls. By unanimous vote of the Governors a committee was created. I myself as Governor, and later the comptroller of our State, spent weeks in Washington trying to set something in motion which would take care of the problem.

I invite the attention of Senators to the fact that piecemeal we have been taking care of this problem in various ways. For example, we have taken care of the impact of defense establishments on schools by measures for the construction of school buildings and school operations. But there is no definite policy or program.

As late as last year our able President recommended that we not renew the law by which the plight of many school districts was recognized because of the impact of great defense installations. The Congress did not see fit to follow that recommendation. I have the greatest of respect for the Chief Executive. I am sure his recommendation was based upon his conviction. But I call attention to that fact as illustrative of the point that no permanent policy has been laid down in this important field.

I have jotted down a few of the temporary expedients which have been adopted since that time. One of them has to do with the sharing of minerals in States where minerals are produced from public lands. States in the West in particular receive quite a large amount of revenue yearly by participating in the income from minerals and from oil products.

In the case of forest products, the little county of Wakulla in my own State, without the revenue which comes from its participation in the sale of forest products from a national forest which practically covers all of that county would have difficulty in continuing to operate. I know there are many similar counties in the forested areas of the Nation.

Then there is the question of power installations, which has been mentioned already. If I correctly understood the Senator from Minnesota [Mr. HUMPHREY], there are approximately 55 dams and power units which are covered by contribution provisions which have been enacted by the Federal Government at one time or another going all the way from the sweeping declaration in the case of TVA to almost as sweeping declarations in the case of the whole Bonneville structure and others that are more applicable to independent and individual enterprises.

Likewise, in the field of grazing there is a sharing position.

The point I make is that the field calls out still, as it did then, for some kind of reasonable policy announcement to be engrafted on the law so that our local units of government, which have a legitimate interest in this problem, as a matter of right, may know what they can depend upon by way of Federal revenue. I dislike the part of this bill which puts the local units of government in the position, for the time being, of coming with a cup in their hand to a Federal agency to determine whether or not they are entitled to any payments in lieu of taxes.

The reason I support the bill, and the reason I opposed its recommittal after the two important amendments offered by the Senator from Ohio [Mr. LAUSCHE] and the Senator from Florida had been adopted, is that I think we must proceed to make a thorough study. The important part of this bill is the provision for setting up a board of capable, full-time members, whose nominations would be confirmed by the Senate, to study this very difficult and complex problem. It is becoming more complex with reference to such areas as the county of Arlington, across the Potomac River from the District of Columbia, and the new State of Alaska, and other areas which might be mentioned.

I think that study should move ahead. I vote with some reluctance for that part of the bill, which I regard as a temporary expedient. I would not have voted for it, but for the adoption of the two amendments which I have already mentioned. But I believe the whole field manifestly requires attention, and it is for that reason that I shall vote for the bill. This is not the last form of the bill. The House will still find some defects in it, as we have found in the Senate. We do not expect perfection on a first attempt in a debate on the floor of the Senate after many years of effort to solve this question, but I think we should get along with the solution of it.

Finally, the subject should be placed on a basis of right, so that the units of government which have to keep their schools open, which have to build roads, which have to do all the things which are implicit in local government, will know that when the Federal Government comes in and disturbs their tax structure unduly, there are some things upon which they can definitely depend. It is in the hope that that kind of result will be accomplished by the passage of the bill that I support it.

I thank the Senator from Minnesota for yielding 5 minutes to me.

Mr. KUCHEL. Mr. President, I yield 5 minutes to the Senator from Colorado [Mr. ALLOTT].

Mr. ALLOTT. Mr. President, I have just listened to the very persuasive arguments by my friend from Florida, who is a brilliant lawyer. I must confess that he nearly persuades me, but each of us comes finally to rely upon those principles upon which he places most emphasis.

I shall vote against the bill, although I am a cosponsor of the original bill. I believe that most of us can discuss the bill without assuming to cast any re-

flection on any work which any Senator has done or any position which any Senator has taken upon the question. We can disagree with the positions, but I cannot see any justification for letting the personal element creep into the discussion, as has sometimes happened on the floor here in the past day or so.

What compels me primarily to vote against the bill is that in my opinion it delegates the work of the Appropriations Committees of the Senate and of the House to a board called a Federal Board for Payments to Local Governments without any opportunity for the Congress ever to review the actions of that board with respect to the payments it decides to make.

In this situation I realize that all that the distinguished Senator from Florida [Mr. HOLLAND] has said about the great number of years which have been spent on this problem is true. The problems he has mentioned are problems in my State, as they are in most other States. Nevertheless, I cannot bring myself to vote for a bill which I think is as dangerous as this bill could be.

I must say that it is hard to vote against the committee, which has taken so much time on the bill. Although the committee has spent a great deal of time on the subject, I still believe implicitly that the bill does not lay down, for the payments of money to the States or the local authorities, sufficient guidelines to protect the Government of the United States.

The committee does lay down guidelines generally upon the basis of businesses and upon the basis of special improvements or public improvements. The public improvements part, I believe, was stricken by the amendment of the Senator from Ohio, which was agreed to a few minutes ago.

Nevertheless, I do not find any criteria laid down in the bill anywhere which would govern the Board in the determination of how much should be awarded to any given authority or any given municipality or any given State in a given instance.

Then when we come to page 37, subparagraph (f), we read:

> (f) Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies, unless such order is modified or reversed by a court of competent jurisdiction or is adjudged invalid in whole or in part by the General Accounting Office.

Mr. President, I can interpret that language in only one way, and that is that the payment is final unless the General Accounting Office adjudges it invalid. Therefore we have placed in the General Accounting Office and in the Board the power to appropriate money for this purpose.

However, there is still another exception, and that is: "unless such order is modified or reversed by a court of competent jurisdiction."

Upon what standards would any court of competent jurisdiction reverse a finding made by the Board? I believe I can say without fear of contradiction that the only basis upon which a court could reverse such a finding would be upon a finding of malfeasance or misfeasance of members of the Board. I do not believe we need worry too much about that kind of situation arising.

The second ground would be—and I ask Senators to pay particular attention to this—a gross abuse of discretion. There is not a lawyer in the Senate who does not know how difficult it is to overturn an action of any administrative body on the basis of abuse of discretion.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DIRKSEN. I yield 1 additional minute to the Senator from Colorado.

Mr. ALLOTT. Therefore, Mr. President, with all due regard for the work which the committee has done—and I do not minimize the importance of the work the committee has done, and I do not minimize the time it has spent on this subject, and I do not minimize the difficulties of the problem—because I believe the bill actually amounts to a deprivation of the Appropriations Committees of Congress of their powers, I must vote, reluctantly, against the bill.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I was one of the original sponsors of the bill. In fact, I introduced a bill on the subject in a previous Congress, several sessions ago.

I regretfully must vote against the passage of the pending bill, in spite of the fact that I believe the committee has done an excellent job in studying the problem, and has done all it could do in making the recommendation with which it has come forward to the Senate. I wish to compliment the chairman of the subcommittee which made this study. He certainly has been assiduous in applying himself to the task. Therefore I regret it is necessary for me to be against the bill, even though I favored it when it was in its original and simple form.

We must have a reason for backing off from a position previously taken. I am in complete sympathy with the philosophy of the Government paying moneys instead of taxes. However, I am not in sympathy with the broad and very general payments that this bill now encompasses. The original position I had taken was directed toward the ownership of Federal lands, mainly in the Western States, where great problems are confronting us as our populations grow.

For instance, in my own State of Arizona we can tax only 16.4 percent of the land in the State. That was all right when we had only a few people and a handful of Indians. However, now that the population of my State is increasing at the rate of 60 percent every 10 years, the 16.4 percent of taxable land is not enough to support the population.

It was with this in mind that I wrote the first bill that I introduced several years ago. It was with this in mind that I supported the original Humphrey proposal. I did so because I felt it would be minimum in its effect, and would apply only to areas such as public lands where Government industry or a Government contracted industry occupies tax-free land and where that industry impacts school districts or communities.

Such a program will not solve the problem. It is not even directed at it. However, we are confronted with a problem, and that problem caused my interest in the subject in the first place.

The Bureau of Land Management was created in 1945 under a presidential reorganization plan. One of the objects encompassed by the Bureau of Land Management Act was to get the land belonging to the Federal Government back to the States or back to the people. In 1955, in the Federal budget, the Bureau reported it was administering 737 million acres of public land in the United States and Alaska, in the interest of conserving forest, range, mineral, and water resources. One of the reasons the Bureau of Land Management gave for its existence was to get this land back into the hands of the State and into the hands of the people.

Mr. DIRKSEN. Mr. President, I yield 2 additional minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, they recognized that was one of the prime purposes of the act. Then let us look at the 1961 budget. We find that the Federal Government now has 833 million acres of land, an increase of 96 million acres in 6 years. That increase represents the combined area of England, Ireland, Scotland, Wales, Denmark, Holland, and Belgium.

We in the West are very apprehensive of the Federal Government's growing ownership of land. It was to this ownership that the original bills were directed, in an effort to alleviate the growing responsibility of State governments in the West to the people who are moving into these sections. I was hopeful that the bill would encompass just those very narrow areas where the Federal Government, by insisting on owning land, which should belong to the people, would make these payments.

The argument has been made that the Federal Government pay the Western States for forest lands, and so forth. Mr. President, we get very little money for the forests in Arizona—and we have the largest stand of ponderosa pine in the world—and we cannot support our schools with those funds, even though that was the original intent.

We cannot build the necessary roads. It was to that end that I was interested in the original bill, so that the Federal Government would assume or could assume more of its rightful responsibility in this area.

Therefore it is with great regret that I must leave my good friend from Minnesota on the pending bill. I reiterate my compliments to him for having done an outstanding job, even though I cannot agree with his final result.

Mr. HUMPHREY. Mr. President, I yield 4 minutes to the Senator from Alaska.

Mr. GRUENING. Mr. President, I wish highly to commend the tenacity and devotion which the chairman of the subcommittee, our dedicated friend, the senior Senator from Minnesota [Mr. HUMPHREY], has shown in pursuing this

important subject—securing Federal payments in lieu of taxes—session after session—indeed he began working at it when he first came to the Senate over 11 years ago until he has finally brought it to the point where we can be hopeful of producing a bill, a modest bill, it is true, but one which moves in the right direction which at least makes a start, and that that bill will be enacted into law.

Likewise I wish to associate myself also with the excellent remarks made by the senior Senator from Florida [Mr. HOLLAND], who has brought new light and fresh impetus to this whole subject, as well as with the valuable contributions made on the floor yesterday by the junior Senator from California [Mr. ENGLE] and the junior Senator from Utah [Mr. Moss].

I consider the pending bill important to Alaska, where 99 percent of the land is in Federal ownership. It is true that under the Statehood Act, in the next 25 years we will be allowed to select 27 percent of that land for the 49th State. That will still leave 73 percent of the land in Federal ownership.

On top of all that, Mr. President, there are vast reservations for special purposes. We have some national parks and monuments in Alaska, three of which are larger than some States. In addition, we have tremendous Federal withdrawals of all varieties and more are threatened. We have all kinds of military withdrawals, some actual, and others potential, which at any time can be made by the President if he thinks it necessary for defense purposes.

While these problems are not met by this bill, I cite these facts as an indication of how extensive has been the impact of Federal ownership in Alaska.

The bill is, as I have said, a modest one. It is limited in time and in scope. It expires in 5 years and applies to only certain types of Federal ownership. It is an exploratory operation, which will give us an opportunity to make a beginning in a matter that has been before Congress for decades. It certainly deserves support. It is obviously unjust that the Federal Government should move into communities and preempt large sections of revenue-producing land and other enterprises, removing these areas from the State and local tax rolls, and not make some requital.

In my judgment, the bill does not go far enough. But I am happy to support it in its limited form, because I believe it is better to begin in a small way and see how its works. At the end of 5 years, when the act will expire, we will be in a better position to judge what has been accomplished and what the next steps should be.

I hope the bill will be enacted shortly.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of the letter sent to the chairman of the Committee on Government Operations, the distinguished Senator from Arkansas [Mr. MCCLELLAN], by David A. Lindsay, assistant to the Secretary of the Treasury, under date of August 11, 1959. The letter appears on pages 37 and 38 of the committee report. It points out that the Treasury Department found the bill to be acceptable and it embodied principles which the Treasury Department regarded as sound for a temporary program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE SECRETARY
OF THE TREASURY,
Washington, D.C., August 11, 1959.

Hon. JOHN L. MCCLELLAN,
Chairman, Senate Committee on Government Operations, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in response to your request for the Department's views on S. 910, to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes.

The bill, S. 910, is identical with S. 4183 reported favorably by your committee during the 86th Congress and with S. 967 introduced in the 85th Congress. It would authorize a limited program of payments in lieu of taxes for a 5-year period beginning January 1, 1960, on industrial and commercial real property acquired by the Federal Government after June 30, 1950. These payments would be limited to jurisdictions which have suffered a demonstrable financial hardship as a result of the removal of the property from their tax rolls. The amount of such payments would be determined on the basis of the amount of local taxes which would have been payable if the property were privately owned, increased by any additional expenditures incurred by the local taxing jurisdiction in furnishing services to the Federal agency, and reduced by the value of local-type government services furnished by the Federal agency. Adjustment would also be made for any special tax benefits for which the Government's property would be eligible under State or local law if it were privately owned.

The bill would also authorize the payment of special assessments on Federal property in urban and suburban areas if levied also against real property owned by taxable persons and of taxes on the Federal Government's interest in real property leased or sold to private persons under conditional sales contracts.

The payments program authorized by the bill would be administered by a Federal Board for Payments to Local Governments composed of five members to be appointed by the President, subject to Senate confirmation. Said Board would be required, in addition, to conduct a comprehensive study of the problems arising out of Federal immunity from local real and personal property taxes, including the operation of existing payment programs, and within 2 years to submit recommendations for the future treatment of the Government's real and personal properties with respect to local tax laws.

The provisions of the bill generally accord with the program outlined to your committee by the Assistant to the Director, Bureau of the Budget, on April 19, 1956. On that occasion the administration recommended legislation "to provide the authority and mechanism for payments, during a period of 4 or 5 years, in cases of demonstrable hardship involving the recent removal of real estate from the tax rolls by reason of its acquisition by the National Government for industrial or commercial purposes, and including provision that during that period there should be detailed field studies of specific local situations."

Since the submission of these recommendations to your committee, the U.S. Supreme Court, in four separate decisions rendered last year, ruled that the Government's contractors and leaseholders are required to pay the local taxes on the possession or use of Federal real or personal property in their custody. In at least some of these situations, the economic burden of the local taxes is on the Federal Government.

The 1958 Court decisions have altered fundamentally the constitutional and fiscal relationships existing between the Federal Government and the States and may require congressional consideration of legislation defining the status of the Government's properties under State and local tax laws. The subject matter is currently under study by the Federal agencies concerned. Pending completion of this evaluation, it is not clear what additional legislation will be required. Nonetheless, since the bill, S. 910, embodies principles the Department regards sound for a temporary program of payments in lieu of taxes on real properties in the possession of the Government, and would provide machinery for the ultimate development of permanent legislation in an area of vital interest to local governments, the Department does not counsel that its enactment be further delayed. It therefore supports enactment of S. 910, reserving the right to recommend such additional legislation as is deemed necessary with respect to the tax status of the Government's properties in the hands of contractors and lessees.

The Bureau of the Budget has advised the Treasury Department that there is no objection to the presentation of this report.

Sincerely yours,

DAVID A. LINDSAY,
Assistant to the Secretary.

Mr. WILEY. Mr. President, will the Senator from Minnesota answer a few questions I wish to ask?

Mr. HUMPHREY. I shall be glad to do so.

Mr. WILEY. My name appears on the bill because I think that, fundamentally, the idea of having the Government make a contribution when, in equity, it should do so is a good idea. However, I should like to ask some questions.

Suppose in my town a new post office were to be built, and the Federal Government acquired some land within the next year or two on which to build it. On what basis would the Federal Government pay taxes on that property?

Mr. HUMPHREY. It would pay on that property only whatever special assessment might be required in terms of public improvements or, under the amendment which was offered by the Senator from Ohio [Mr. LAUSCHE], if there is a tax for a public improvement, as defined in the law—the language is now more restrictive, due to the amendment of the Senator from Ohio—then the Federal Government would have a responsibility for payment. But the payment must not be discriminatory. In other words, the local taxing authority cannot ask more from the Federal Government than it would ask from any other taxable person. Furthermore, the special assessment must be levied on all other taxable persons in the assessment district. It cannot be levied only on the Federal property.

Mr. WILEY. Would a tax be imposed on real estate on which a plant was built?

Mr. HUMPHREY. No.

Mr. WILEY. The tax would simply be on what are called special improvements?

Mr. HUMPHREY. That is correct.

Mr. WILEY. Very well. Suppose the Federal Government acquires 2,000 or 3,000 acres of land in a State for the purpose of constructing an airfield. After it had acquired the land, suppose the Government either used it or left it alone. Would any tax be imposed on the Federal Government for acquiring that property?

Mr. HUMPHREY. Only for public improvements, or if the land were converted to some private use, under which a taxable person would use the property. Then the portion which was used would be taxable.

Mr. WILEY. If the Federal Government built a plant for the use of a private business concern, but the property was owned by the Federal Government, although the business concern occupied it and utilized it, what would be the status of the tax on the real estate and the plant?

Mr. HUMPHREY. The personal property in the plant would not be subject to tax, but the payment in lieu of tax would be upon the real property.

Mr. WILEY. The Senator from Minnesota has clarified some thoughts I have had.

Mr. HUMPHREY. The bill is a limited bill.

Mr. WILEY. What is the purpose, then, of the further investigation? The bill contains a provision for a further investigation. What would be investigated—the method of assessment?

Mr. HUMPHREY. A continuing study would be made of all forms of Federal payments in lieu of taxes to the local governments. In other words, a continuing study would be made of the Federal-local fiscal relationships. Under the pending proposal, the studies and investigations would be directed toward presenting to the President and to the Congress within 2 years the results of the study, together with recommendations. The Board would make recommendations to Congress and to the President.

Mr. WILEY. I heard yesterday the statement that the measure is an open door which would permit the Federal Government to be taken, we might say, for a further tax ride. I am wondering if there is any truth in that statement.

Mr. HUMPHREY. I do not believe so. The Treasury Department does not think so, and is quite specific in its communication.

As the Senator from Florida [Mr. HOLLAND] has pointed out, the local government does not come here by right; it comes by reason of a grant to the local taxing authority to make its plea to justify its case. The burden of proof rests upon the local taxing authority. It does not have any right, per se, to come before the Federal Board; but it can be heard. In other words, the Federal Board, of 5 members, will consider the application and decide the request on the basis of the information which is presented, within the confines and limitations of the act.

Mr. WILEY. Why was the year 1950 designated?

Mr. HUMPHREY. It was felt by the Department of Defense and the Bureau of the Budget that this was the year in which an appreciable amount of commercial- and industrial-type property had been acquired or constructed by the Federal Government due to the Korean war. World War II properties had been pretty well either integrated within community life or disposed of by surplus sales to private industry. Nineteen hundred and fifty was felt to be the best base year. I can honestly say that there might be a better year, but it was necessary to draw the line at some place. Nineteen hundred and fifty excludes World War II properties, many of which were declared surplus and sold by the Federal Government. The 1950 base year takes in the expansion of the industrial plant for the rearmament program which began in 1950. Also, I think it places upon the agencies of Government which own Federal properties that are currently being put to an industrial- or commercial-type use an incentive to get rid of them and return them to the normal tax rolls, and not to continue to hold such properties for an indefinite period.

In this sense, the bill is an economy measure, because it will place upon the Federal agencies the responsibility to reexamine continuously the necessity of holding such properties. If there is no real need or long-term necessity for retaining them, the agencies should dispose of them and return them to private hands, so that the properties will become a part of the private economy, subject to normal taxation.

Mr. WILEY. The Senator from Minnesota has answered my next question, whether or not, in his judgment, if the bill should become law, it would constitute what so many persons have contended, a real reason for the disposition of Government-owned property which the Government does not need.

Mr. HUMPHREY. Yes; and so the agencies of the Government testified in response to our inquiries.

Mr. WILEY. Has the Senator an estimate in his own mind as to what the program would cost the Federal Government over a term of years?

Mr. HUMPHREY. I made an estimate yesterday. It is only a guess, because one does not know, first of all, what properties will be brought to the attention of the Board.

We have a pretty good idea that in the category of special assessments the amount will be modest. As to commercial and industrial properties, with the restriction placed in the bill, the amount will be cut back substantially.

There will be very little adjudication of these matters in the first year. In 2 years we will have a complete study followed by a report to Congress.

What we seek to do is to have an opportunity to have a case-by-case study, so to speak, based on individual cases which will be brought before the board—so that we can really ascertain what the problem is rather than to discuss it from an academic point of view.

I believe the letter of the Treasury Department to the committee indicates that we are not too far off, in the light of even the recent court decisions, which some persons felt would have imposed an additional burden on the Government. The Treasury Department in its letter stated:

> Nonetheless, since the bill, S. 910, embodies principles the Department regards sound for a temporary program of payments in lieu of taxes on real properties in the possession of the Government, and would provide machinery for the ultimate development of permanent legislation in an area of vital interest to local governments, the Department does not counsel that its enactment be further delayed. It therefore supports the enactment of S. 910, reserving the right to recommend such additional legislation as is deemed necessary with respect to the tax status of the Government's properties, in the hands of contractors and lessees.

Subsequently, the Bureau of the Budget took a different view, and said it preferred that at this time there be only study legislation.

But the Treasury Department did advise the committee, after carefully examining this from a fiscal point of view, that it felt this measure was reasonably good, constructive legislation.

Mr. WILEY. The Senator made the point that, in his opinion, if the bill becomes law the Government will begin to liquidate its ownership of some of these properties.

Mr. HUMPHREY. That is my hope; yes.

Mr. WILEY. Is there any estimate in that connection? Some claim the Government owns billions of dollars' worth of such properties.

Mr. HUMPHREY. An inventory has been made; the Committee on Government Operations, under the chairmanship of the Senator from Arkansas [Mr. MCCLELLAN] has an inventory of federally owned properties, particularly the industrial and commercial properties. There is no doubt that the total runs into the hundreds of millions of dollars.

There is always a tendency of the Government agencies to hold on to these properties longer than I regard necessary. But if, as a result of the enactment of this bill, they must make payment in lieu of taxes, and must include the funds for such payments in their departmental budgets, then the Appropriations Committees will ask them, annually, "Why do not you dispose of this property at a fair rate, and return it to private hands, where it will be subject to taxes on a fair base?"

Mr. WILEY. Some claim the bill will unbalance the budget. Has the Senator given any thought to a possible increase of taxes anywhere along the line?

Mr. HUMPHREY. I do not believe the bill will have the effect which some persons predict it will. I cannot believe that the Treasury Department, which has great responsibility for the Federal revenues, would have recommended that the bill be passed, and would have regarded the bill as sound legislation, if the Department thought the bill would throw the Federal budget out of kilter.

Mr. WILEY. I thank the Senator from Minnesota.

Mr. CARROLL. Mr. President, will the Senator from Minnesota yield to me?

Mr. HUMPHREY. Yes, if sufficient time remains under my control.

Mr. President, how much time remains under my control?

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). Three minutes.

Mr. HUMPHREY. Then, Mr. President, I shall be glad to yield all that time to the Senator from Colorado, if he desires that I do so.

Mr. CARROLL. I should like to ask one or two brief questions.

Mr. HUMPHREY. I yield.

Mr. CARROLL. Is the proposed board to be an arm of the Congress or an arm of the executive branch?

Mr. HUMPHREY. It is to be appointed by the President, and confirmed by the Senate, as an independent board.

Mr. CARROLL. It is to be independent?

Mr. HUMPHREY. Yes, it is to be independent.

Mr. CARROLL. Is the board to be given the power to make rules and regulations? In other words, will the board be under the Administrative Procedure Act?

Mr. HUMPHREY. Yes; obviously it will fall under the Administrative Procedure Act.

Mr. CARROLL. Therefore, the Board itself will be able to issue and establish rules and regulations, because the authority to do so is provided under the Administrative Procedure Act.

Mr. HUMPHREY. That is correct. In addition, section 5(d) specifically provides that the Board may make such rules and regulations, not inconsistent with the provisions of the act, as may be necessary for the performance of its duties.

Mr. CARROLL. Let me ask a question of the Senator from Florida [Mr. HOLLAND], who has spoken on this subject, and is an able lawyer: When the Board establishes rules and regulations and procedures, and when, thereafter, an application is filed, if the Board rules against the application, will the applicant have a vested right to appeal under due process?

Mr. HUMPHREY. Under this proposal, he will have a right to judicial review of the Board's decision. Therefore, on that basis, if, following a ruling by the Board, someone wishes to contest the ruling, he would be able to have a judicial review in court.

Mr. HOLLAND. Mr. President, will the Senator from Minnesota yield to me?

Mr. HUMPHREY. I yield.

Mr. HOLLAND. The Senator from Minnesota has stated the matter exactly as I understand it, although I am not as familiar with the bill as he is. But I should like to point out that the bill contains an unusual provision, which I regard as salutary; namely, that the General Accounting Office, an arm of the Congress, will have veto power over the payment of any funds, if it believes the Board has proceeded irregularly. At times when the Congress was not in session, that provision would, as nearly as could be, result in some supervisory power and control.

Mr. CARROLL. I agree with the interpretation of the Senator from Minnesota; and I shall vote for the bill.

But we must remember that as regards each application upon which the Board passes, and as to which a record or history is established, this provision will serve as the administrative law which will be applicable.

In the event of an appeal, from what could the applicant appeal? Could he appeal on the basis that the action of the Board was arbitrary, capricious, or discriminatory?

Mr. HUMPHREY. Yes.

Mr. CARROLL. I think that under the Administrative Procedure Act there will be some guidelines which will serve to protect against a charge of fiscal irresponsibility. That is why I asked whether this point has been considered by the committee.

Mr. HUMPHREY. On pages 32, 33, and 34 we lay down specific guidelines to guide the Board as regards the making of payments.

The PRESIDING OFFICER. The time available to the Senator from Minnesota has expired.

Fourteen minutes remain available to Senators who oppose the bill.

Mr. DIRKSEN. Mr. President, I shall use only 1 minute.

I reassert what I have said on a number of occasions: On July 8, 1959, in a message from the Director of the Bureau of the Budget to the chairman of the Committee on Government Operations, there appeared this sentence:

> However, in view of the numerous difficulties as yet unresolved by S. 910, we must oppose its enactment.

On occasion it has been said that the Treasury approves this bill. But I point out that on August 25, 1959, the Assistant Secretary of the Treasury, David A. Lindsay, said, in a letter addressed to the chairman:

> This will confirm the information given you this morning by telephone that the administration's position on S. 910 is reflected in the letter to you dated July 8, 1959, from the Director of the Bureau of the Budget, rather than in my letter to you, dated August 11, 1959.

Mr. President, I add that this morning I talked to the Director of the Bureau of the Budget. He has reaffirmed and reasserted the position he took in that letter to the chairman of the committee.

I believe this bill will be an open door. The estimates already run as high as $500 million; $128 million in estimated taxes by Federal contractors have already been presented, up to a year ago; and probably a good many more have been presented since that time.

I cannot reconcile the idea of a study bill with a provision for the making of temporary payments, allegedly because hardships are involved.

This road is so complicated that the Congress should not go down it, unless Congress is absolutely sure that it is a valid one.

For that reason, Mr. President, I oppose the bill.

I regret that the motion to recommit the bill, for further study, did not prevail. However, in view of that fact, which is on the RECORD, in connection with that vote, I shall not ask that a yea-and-nay vote be taken on the question of final passage of the bill. Instead, I shall let the yea-and-nay vote on the motion to recommit speak for itself.

However, I wished to be sure that the present viewpoint of the Federal agencies involved is made a part of the legislative record or history in connection with the bill.

Mr. President, I yield back the remainder of the time under my control.

Mr. LAUSCHE. Mr. President——

The PRESIDING OFFICER (Mr. HUMPHREY in the chair). The Chair recognizes the Senator from Ohio.

Mr. LAUSCHE. Mr. President, I wish to state that if a yea-and-nay vote were taken on the question of final passage of the bill, I would vote against passage of the bill. I should do so because I think a paradoxical situation exists, in which many communities are asking the Federal Government to construct post offices, Federal office buildings, and bring in commercial plants, and otherwise. While they beg for these improvements, an added burden is asked to be put upon the Federal Government of giving an additional premium to those communities which have the good fortune of having the manpower to be employed in offices located in their areas.

Under the bill, the Federal Government will have to pay the equivalent in taxes that would be levied against the property and against the building. It would not be paid in the form of taxes or special assessments, but in lieu of taxes and special assessments.

If it were contemplated providing that, to the extent the Federal Government had removed property from the tax revenues, the Federal Government would pay, there would be equity in such a law. But in the proposal before us, if a community asks for a $20 million office building, for example, which will result in employing thousands of people, the Federal Government will have to pay the equivalent of taxes not only on the land, but on the building, for all public improvements.

Public improvements are, of course, as defined in the bill, bridges, irrigation plants, roads, highways, sewage disposal plants, and water distribution plants. That is quite a burden to put on the Federal Government when it settles in a community in a State. Let us keep in mind also that the benefits will come only to the community in which the property is located. There may be a hundred other communities in the State which will have to pay taxes to benefit the community in which the job-giving structure was placed.

Mr. CARROLL. Mr. President——

Mr. DIRKSEN. Mr. President, all time on the bill has been exhausted; has it not?

The PRESIDING OFFICER. All time on the bill has been exhausted.

Mr. CARROLL. Mr. President, in view of the fact that the Senator from Ohio was allowed to express his opinion,

I should like to express mine, since there will be no record vote.

The PRESIDING OFFICER. Is there objection?

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the Senator from Colorado may speak for 3 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Colorado is recognized.

Mr. CARROLL. Mr. President, if I were permitted to record my vote on this bill, I would vote "Yea." I heard the argument of the Senator from Ohio, and I had in mind the points he made when I began a study of the bill. I know that certain benefits fall to a community when the Federal Government moves a project into it. I know the civic leaders and the fathers of communities want such projects brought into their communities. But I can, if necessary, give the Senate specific cases where the Federal Government has condemned land for such a project in a county adjacent to a big city, and the people of that county, under the taxing laws in existence have had to bear the cost through sharply increased real estate taxes, and presently there is no immediate relief given to the people of such areas. I can give the Senate examples where the Federal Government condemned land in World War II, and is now leasing that land to private corporations, and that land is paying no taxes to the communities.

That is the question which concerns me as I look at my own State and examine the situation which exists in some counties. I agree with the Senator from Ohio that if, for example, Denver wants a post office, Denver should not necessarily file an application under the bill. Why? The Board would require evidence showing demonstrable hardship. This means that every such community could not go, willy-nilly, before the Board and demand money. It would have to show a demonstrable hardship. It would have to be shown that the construction of a plant necessary for the war or defense effort, or an atomic plant, resulted in a need for pipes, gutters, and other such improvements; that the people of the county should not be required to pay for those improvements, unless there was enough real property on which taxes could be levied to pay for such improvements.

That illustration is one reason why I shall vote for the bill.

I should like to read from page 26 of the bill:

> The Board may make such rules and regulations, not inconsistent with the provisions of this act.

It was in view of that provision that I asked the Senator from Minnesota whether the Board would come under the provisions of the Administrative Procedure Act, to assure that the Board would not be turned loose to run free, raiding the U.S. Treasury. The Board is going to be bound by rules and regulations under law, under the Administrative Procedure Act. We know the Board will follow the intent of the bill, as indicated by the debate which has taken place on the floor of the Senate, and which I hope will take place to a greater degree on the floor of the House.

It was one of the reasons why I became convinced, as I began a study of the bill and heard the very intelligent speech of the able Senator from Minnesota. I intend to vote for the bill.

The bill is not going to open up any great holes in the present budget. Why? It will take a year for the Board to function. It will take almost a year before it drafts rules and regulations. The Board will start sifting matters slowly. It will be a year, too, before it really begins operating.

During this period of time reports should be coming to the Congress which should reveal the scope and extent of this legislative program.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? [Putting the question.]

The bill (S. 910) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Payments to Local Governments Act of 1960".

DECLARATION OF POLICY

SEC. 2. (a) Although the United States is under no constitutional obligation to pay taxes, or to make financial contributions in lieu of taxes, to any State or any political subdivision or instrumentality thereof with respect to any property of the Federal Government, the Congress hereby declares that it is national policy to avoid demonstrable financial hardship upon such local governments caused by the exemption of Federal real property from taxation by local governments.

(b) It is the purpose of this Act to provide for the conduct of a comprehensive study to ascertain (1) the nature and extent of any continuing need for Federal contributions to those governments to relieve such hardship, and (2) the ways and means whereby any such hardship may be alleviated most effectively and economically. It is further the purpose of this Act to make temporary provision for the relief of those governments from such hardship, pending the completion of that study, by authorizing the making of certain Federal contributions to local governments in lieu of the payment of—

(1) special assessments and taxes levied after the effective date of this Act upon real property situated in urban and suburban areas to defray the cost of local public improvements;

(2) taxes with respect to Federal real property in the custody or control of taxable persons under lease, contract, or permit arrangements, to the extent that taxes with respect to that property are not paid by such taxable persons; and

(3) taxes upon Federal real property acquired after June 30, 1950, which is in the custody or control of any Federal agency for industrial or commercial use.

(c) In consideration for the payments authorized by this Act, the Congress expects that the recipients thereof will make all public services normally provided by them available to and with respect to the Federal Government, its property, and its officers and employees and their families, upon the same terms and conditions as such services are made available to or with respect to other property and individuals.

DEFINITIONS

SEC. 3. As used in this Act—

(a) The term "Federal agency" means any department, agency, officer, or independent establishment in the executive branch of the Government of the United States, and any corporation now or hereafter subject to the provisions of the Government Corporation Control Act (31 U.S.C. 846);

(b) The term "Federal property" means any real property the legal title to which is held by the United States or any Federal agency;

(c) The term "real property" means any interest in land, and any improvement thereon, if such interest or improvement constitutes real property under law in effect within the State in which such property is situated;

(d) The term "controlling agency", when used in relation to any Federal property, means the Federal agency which is charged with the duty of administering such property;

(e) The term "Board" means the Federal Board for Payments to Local Governments established by this Act;

(f) The term "State" means any State of the United States and the District of Columbia;

(g) The term "tax authority" means any county, city, municipality, tax district, or other political subdivision or public entity of any State having authority under the law of such State to levy within its territorial jurisdiction any tax or special assessment upon real property;

(h) The term "tax" (except as otherwise specified) means any tax of general application levied according to value by any tax authority upon real property situated within its territorial jurisdiction, but does not include any tax levied upon the manufacture, purchase, sale, transfer, or use of any property or upon any income derived from any property;

(i) The term "taxable person" means any individual, partnership, private association, private corporation, or other nongovernmental legal entity;

(j) The term "special assessment" means any levy, other than a tax, imposed after the date of enactment of this Act by any tax authority directly upon real property situated within its territorial jurisdiction to defray the cost of any public improvement;

(k) The term "public improvement" means any street, road, bridge, sewer, water distribution system, drainage project undertaken by or on behalf of any tax authority for the benefit of residents of the geographical area over which such tax authority has jurisdiction; and

(l) The term "industrial or commercial use", when used in relation to any Federal property, includes any use made of such property for (1) the mining, manufacturing, fabrication, or repair of any article or commodity, (2) the transportation of individuals or property, (3) the sale or leasing of any property, commodity, or service, and (4) the storage of property incident to any of the uses heretofore enumerated, but does not include the use of any such property for (A) the housing of individuals for which rent is received, (B) the storage of any agricultural commodity, or (C) any purpose for which the property, if privately owned or used, would by reason of its use be exempt from tax under laws applicable within the tax authority of its situs.

FEDERAL BOARD FOR PAYMENTS TO LOCAL GOVERNMENTS

SEC. 4. (a) There is hereby established the Federal Board for Payments to Local Governments (referred to hereinafter as the "Board"), which shall be composed of five members appointed by the President, by and with the advice and consent of the Senate, who shall serve at the pleasure of the President. Not more than three members of the Board may be members of the same political party. The President shall designate one member to serve as Chairman of the Board.

(b) A vacancy in the Board shall not impair the right of the remaining members to exercise all the powers of the Board, and three members shall at all times constitute a quorum. The Board shall have an official seal which shall be judicially noticed.

(c) Each member of the Board shall receive compensation at the rate prescribed by law for Commissioners of the United States Court of Claims, and no member of the Board may engage in any other business, vocation, or employment while serving as such member.

(d) The Board shall cease to exist on December 31, 1966.

POWERS AND DUTIES OF THE BOARD

SEC. 5. (a) The Board shall exercise the powers conferred upon it, and perform the duties imposed upon it, by this Act.

(b) In the performance of its functions under section 6 of this Act, the Board in its discretion from time to time may consult with the Advisory Committee established under section 7 of this Act to receive its advice and recommendations with regard to problems encountered by the Board in the performance of those functions. The Board shall consult from time to time with representatives of tax authorities and State governments, and such other persons as it may deem appropriate, in carrying out the provisions of this Act. The Board is authorized to pay to such representatives and persons, while serving without compensation for purposes of consultation pursuant to this subsection, transportation, and per diem as authorized by section 5 of the Act of August 2, 1946, as amended (5 U.S.C. 73b–2).

(c) As soon as may be practicable after the end of each period of six calendar months, the Board shall submit to the President, for transmittal to the Congress, a report concerning its operations during such period. Each such report shall contain full and complete information concerning the applications received and the payments ordered by the Board during such period under section 8 of this Act, together with such other information as may be helpful to the Congress in evaluating the operation of this Act and all other provisions of law authorizing the payment of taxes, or the making of payments in lieu of taxes, to States and to tax authorities.

(d) The Board may make such rules and regulations, not inconsistent with the provisions of this Act, as may be necessary for the performance of its duties, including such uniform rules, regulations, and forms as it shall prescribe for (1) the filing by tax authorities of applications for payments authorized by this Act, (2) the examination of such applications and the conduct of hearings thereon, and (3) the determination of action to be taken upon such applications.

(e) Subject to the civil-service laws and the Classification Act of 1949, the Board may appoint and fix the compensation of such personnel as may be necessary for the performance of its functions.

(f) The Board is hereby authorized to procure services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55(a)), at rates not exceeding $50 per day for the personal services of individuals.

(g) Subject to provisions of law and regulations relating to the classification of information in the interest of national security, the Board is authorized to secure from any Federal agency any information necessary to carry out its functions under this Act, and each Federal agency is authorized to furnish such information to the Board upon request made by the Chairman thereof.

SURVEYS AND INVESTIGATIONS

SEC. 6. (a) The Board shall conduct a comprehensive comparative survey to determine the nature and effect of—

(1) provisions of law in effect within the several States relating to the taxation of real property by such States and by tax authorities thereof; and

(2) existing provisions of Federal law providing for—

(A) the payment to any State or to any tax authority thereof of any tax or special assessment with respect to any Federal property or any personal property of any Federal agency;

(B) the making of any payment to any such government or authority in lieu of the payment of any tax or special assessment with respect to any such property; or

(C) the rendition of assistance to any State or to any tax authority thereof through the making of grants-in-aid, the sharing of revenues derived from properties of the United States, or through the furnishing of services or facilities by any Federal agency.

(b) The Board shall conduct a comprehensive study and investigation of the extent to which States and tax authorities thereof derive benefits directly or indirectly through payments made to them (1) under the provisions of law described in section 6(a)(2); (2) by persons residing or employed upon Federal property; and (3) for or in connection with any property, trade, business, occupation, or transaction situated or occurring upon Federal property.

(c) The Board shall conduct a comprehensive investigation to determine the extent, if any, to which there is need for additional legislation by the Congress to provide continuing financial assistance for States or tax authorities thereof to relieve hardship incident to the tax-exempt status of Federal property. Such investigation shall include inquiry to determine—

(1) the classes of Federal property, if any, with respect to which any such additional continuing assistance should be granted;

(2) the nature and extent of any such additional continuing assistance;

(3) the conditions, if any, under which such additional continuing assistance should be granted;

(4) the annual cost to the United States for providing such additional continuing financial assistance with respect to each such class of Federal property and with respect to all such classes of Federal property; and

(5) ways and means whereby States and tax authorities thereof may be accorded effective right to apply personal property taxes in effect within their several jurisdictions to industrial plant equipment, materials, supplies, and inventories owned by taxable persons and used by them for commercial purposes within plant facilities owned or controlled by departments and agencies of the United States Government.

(d) Within two years after the date of enactment of this Act, the Board shall submit to the President, for transmittal to the Congress, a comprehensive report containing—

(1) the text of all provisions of law referred to in subsection (a), together with an analysis of the purpose and effect of each such provision;

(2) the findings of the Board as to the facts disclosed by its studies and investigations made under subsections (b) and (c) of this section;

(3) its recommendations as to any additional legislation the need for which has been disclosed by its investigation under subsection (c) of this section;

(4) a detailed analysis of the relationship between any recommendations so made and the provisions of existing law referred to in paragraph (2) of subsection (a); and

(5) specific recommendations with respect to the future treatment of properties for which payments are temporarily authorized by title VII of the Federal Property and Administrative Services Act of 1949.

ADVISORY COMMITTEE

SEC. 7. (a) The President shall establish an advisory committee on Federal payments to local governments composed of twelve members appointed by the President, of whom six shall be officers or employees of Federal agencies, three shall be representatives of State governments, and three shall be representatives of tax authorities. One member shall be designated by the President to serve as chairman of the committee.

(b) It shall be the duty of the committee to—

(1) study the administration of this Act and all other Federal legislation authorizing the payment of taxes, or the making of payments in lieu of taxes, by Federal agencies to tax authorities, and problems arising in connection therewith;

(2) consult with the Board, upon its request, in an advisory capacity in the solution of such problems; and

(3) transmit from time to time to the Board and to the President for transmittal to the Congress a report containing a summary of the results of its studies, together with its recommendations for administrative or legislative changes which it may consider necessary or desirable for the efficient, economical, and equitable administration of such provisions of law.

(c) Members of the committee who are officers or employees of any Federal agency shall receive no additional compensation for service rendered under this Act. Other members may receive such compensation, not in excess of $50 for each day of service, as the President shall prescribe. All members shall be reimbursed for travel and other expenses necessarily incurred in the performance of their duties under this section in conformity with the provisions of section 5 of the Act of August 2, 1946, as amended (5 U.S.C. 73b–2).

TEMPORARY AUTHORIZATION FOR PAYMENTS TO TAX AUTHORITIES

SEC. 8. (a) Subject to the provisions of sections 9 and 11 of this Act, there is hereby authorized to be paid to any tax authority, upon its application made in conformity with the provisions of section 9 of this Act, for any period such amount as the Board may determine to be equal to the sum of—

(1) the amount which would be payable to such tax authority, with respect to all Federal property situated in any urban or suburban area within the territorial jurisdiction of that tax authority, upon any special assessment or tax levied after the date of enactment of this Act to defray the cost of any public improvement, if such property were owned by a taxable person, except that no such sum shall be payable unless such special assessment or tax in fact was levied upon real property owned by taxable persons;

(2) the amount of the real property tax which would be payable to such tax authority, with respect to all Federal property situated within the territorial jurisdiction of that tax authority which is in the custody or control of a taxable person pursuant to a lease, contract, or permit executed by a Federal agency, if such property were owned by a taxable person, diminished by the amount of any real property or other tax measured by the value of such property which is payable by the taxable person having custody or control thereof to such tax authority for such period with respect to that property, or for or on account of the possession or use thereof; and

(3) such amount, if any, as the Board may determine to be payable in conformity with subsection (b) as to all Federal property situated within the territorial jurisdiction of such tax authority which (A) has been first acquired by any Federal agency after June 30, 1950, (B) is in the custody

or control of a Federal agency, and (C) is devoted to or held for predominantly industrial or commercial use.

(b) Subject to the provisions of subsection (c), the sum referred to in subsection (a)(3) shall be a sum equal to—

(1) the nominal Federal liability, which shall be the amount of the real property tax which such tax authority would have been entitled to receive for such period on account of such property if it had been owned by a taxable person; increased by

(2) the specific Federal liability, which shall be the aggregate amount of the expenditures necessarily incurred by such tax authority during such period in furnishing directly to or on behalf of such property any facilities or services of kinds not customarily furnished by such tax authority to or on behalf of other properties of like class; and diminished by

(3) the credit against Federal liability, which shall be the aggregate value of governmental services of kinds normally furnished by tax authorities which, during such period, were furnished within the territorial jurisdiction of such tax authority by Federal agencies controlling such property, computed upon the basis of the unit cost incurred by such tax authority in providing like services, or (in the absence of such data) the unit cost incurred therefor by comparable tax authorities in the same vicinity; and further diminished by

(4) any additional credit against Federal liability, which shall be such sum as the Board may determine to be required to assure equitable treatment of Federal property situated within the territorial jurisdiction of any tax authority which, under State or local law or public policy, grants any exemption or immunity from the payment of any tax of any kind, or any reduction in the rate or amount of any tax paid, with respect to real property of any taxable person as an inducement to such taxable person to engage in industrial or commercial activities within the territorial jurisdiction of such tax authority.

(c) No payment determined pursuant to subsection (b) to be payable with respect to any Federal property situated within the territorial jurisdiction of any tax authority shall exceed the amount which the Board finds to be equivalent to the tax which would be payable with respect to such property if it had been developed and used by a taxable person for a similar private industrial or commercial use within the territorial jurisdiction of such tax authority or in nearby comparable communities, as determined by the Board.

APPLICATIONS AND PROCEDURE FOR DETERMINATION AND PAYMENT

SEC. 9. (a) Each application made by one or more tax authorities for any payment under section 8 of this Act with respect to one or more parcels of Federal property situated within the territorial jurisdiction of such tax authorities shall specify (1) the Federal property or properties with respect to which claim is made for such payment, (2) the basis upon which such claim is made, and (3) the period of time for which such claim is made.

(b) Each application made by any tax authority for any payment under this Act shall be for a period not in excess of twelve months, beginning not earlier than January 1, 1960, and ending not later than December 31, 1964. No tax authority may file with the Board more than one application for any period with respect to the same Federal property. Each application for payment for any period must be filed within six months after the end of such period.

(c) Upon the filing of any application under this Act by one or more tax authorities for any such payment, the Board shall—

(1) examine such application to determine whether it states a probable basis for the making of any such payment;

(2) if such probable basis is found to exist, conduct a full and fair hearing upon such application;

(3) upon the basis of evidence received at such hearing, or obtained by such field investigation as the Board may determine to be appropriate, or both, prepare its report in which it shall set forth its findings of fact and its conclusions as to the merits of such application; and

(4) enter its order thereon, prescribing the amount, if any, awarded to each applicant who joined in such application, and the portion thereof to be paid under this Act by each controlling agency administering real property chargeable in whole or in part for such award.

(d) Upon the entry of the order of the Board upon any application for any payment under this Act, the Board shall give notice thereof to each tax authority which was a party to such application. Each such order shall become final upon the expiration of a period of sixty days after its entry, unless the Board during such period has granted a rehearing of such application upon request made by any applicant who joined therein. Not more than one rehearing shall be granted upon any application, and any order entered by the Board after a rehearing of any application shall become final upon its entry. A certified copy of each final order of the Board shall be transmitted (A) to such tax authority joining in the application upon which such order was entered, and (B) to each Federal agency charged thereby with the payment of any part of any award made thereby.

(e) Upon the certification by the Board to any Federal agency of any final order of the Board awarding to any tax authority any payment under this Act with respect to any Federal property controlled by such agency, such agency shall pay to such tax authority the amount specified in such order.

(f) Each final order made by the Board under this Act for the payment of any award shall be final and conclusive upon all tax authorities and upon all Federal agencies, unless such order is modified or reversed by a court of competent jurisdiction or is adjudged invalid in whole or in part by the General Accounting Office.

HEARINGS CONDUCTED BY THE BOARD

SEC. 10 (a) The Board (or any duly authorized member thereof or any examiner duly designated thereby) may conduct any hearing or investigation authorized by this Act; administer oaths and affirmations; examine witnesses and receive evidence at any place in the United States; and require by subpena the attendance and testimony of witnesses, and the production of documentary evidence, relevant to the matter under inquiry. Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States at any designated place of hearing. Witnesses summoned shall be paid the same fees and mileage paid to witnesses in the district courts of the United States.

(b) In the case of any disobedience by any person to a subpena issued under subsection (a), the Board may invoke the aid of a district court of the United States in requiring the attendance and testimony of such person, or the production of documentary evidence by such person, or both. The district court of the United States for any judicial district within which any such inquiry is conducted may, in the case of the contumacy or refusal of any person to obey a subpena issued under subsection (a), issue an order requiring such person to appear (and to produce documentary evidence if so ordered) and to give evidence relating to the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. For the purposes of this subsection, the order or process of the district court for any judicial district may be served and shall be effective within any other judicial district of the United States.

(c) Hearings conducted under subsection (a) shall be open to the public. In any such hearing upon any application made under section 9, each applicant shall have the right to present its case with the assistance of counsel; to offer oral or documentary evidence; to submit rebuttal evidence; and to conduct such cross-examination as may be required for a full and true disclosure of the facts. An accurate stenographic record shall be taken of the testimony of each witness in each hearing conducted by the Board, and a transcript of such testimony shall be filed in the office of the Board.

LIMITATIONS AND SAVING PROVISIONS

SEC. 11. (a) No payment may be made under this Act to any tax authority with respect to any parcel of Federal property for any period for which such tax authority is eligible to receive from any Federal agency any payment with respect to such property under (1) any other provision of law which authorizes any payment of real property tax or any payment in lieu of the payment of real property tax, or (2) any revenue-sharing arrangement.

(b) No payment may be made under this Act to any tax authority with respect to (1) any power property owned or controlled by the Tennessee Valley Authority, or (2) any portion of any multipurpose property owned or controlled by such Authority which is allocated to power purposes. With respect to those properties and parts of properties, such Authority shall continue to make payments to States and to tax authorities, as a charge against its power operations, in accordance with section 13 of the Tennessee Valley Authority Act of 1933 (48 Stat. 66, as amended; 16 U.S.C. 831L). With respect to other properties and parts of properties owned or controlled by the Tennessee Valley Authority, such Authority shall make payments in accordance with the provisions of this Act in addition to the payments required to be made under section 13 of the Tennessee Valley Authority Act of 1933.

(c) Nothing contained in this Act shall bar the making of any payment under any provision of law or revenue-sharing arrangement referred to in subsection (a) or subsection (b).

(d) The failure of any Federal agency to make, or to make timely payment of, any payment authorized by this Act with respect to any Federal property shall not subject—

(1) any Federal agency, or any purchaser of such property from any Federal agency, to the payment of any tax, penalty, penalty interest, or other charge; or

(2) such property to any lien, attachment, foreclosure, or other proceeding not specifically authorized by this Act.

(e) Nothing contained in this Act shall limit or impair any power which any tax authority may have under any other provision or principle of law to levy upon or collect from any taxable person any tax upon any interest in Federal property possessed by such person, or with respect to the possession or use by such person of any Federal property.

APPROPRIATIONS

SEC. 12. There are hereby authorized to be appropriated to the Board, and to each Federal agency controlling any Federal property, such sums as may be required for the discharge of its duties and obligations under

this Act. Any sum determined by the Board to be payable under section 8 of this Act by any Federal agency shall be considered to be a necessary expense of such agency.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I move that the vote by which Senate bill 910 was passed be reconsidered.

Mr. CARROLL. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. McCARTHY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MONITORS-TEAMSTERS CONTROVERSY

Mr. McCARTHY. Mr. President, in 1957, the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America held a convention during which a new international constitution was adopted. This was followed by an election of the union's officers.

In September of the same year, some members of the union filed an action to set aside the election on the ground that the convention and the election were "rigged." They also alleged "various breaches of fiduciary duties and responsibilities" by some union officials, and asked that a "temporary receivership be established for the limited purpose of assuring and supervising elections and a convention that would be conducted in strict compliance with the international constitution."

Evidently there was sufficient substance to those charges so that a trial was held.

After several days of trial, the parties to the dispute agreed on a compromise which was embodied in a consent decree entered on January 31, 1958, by Judge F. Dickinson Letts of the U.S. District Court for the District of Columbia, who had presided over the trial.

The settlement provided, among other things, that a board of three monitors should be established to serve until the holding of a new convention for the election of officers; that election, which the union's general executive board was authorized to call, was to be held, as I recall, 1 year from the date the consent decree was promulgated; the union officials who were elected at the 1957 convention were to serve provisionally until the new election.

In accordance with the agreement, one member of the board was to be appointed by the union; one member, by the dissident members; and the other, by the court. The board of monitors has had membership troubles, one member of the board has been replaced for alleged ineffectiveness while another has refused to resign on invitation.

I am informed that the union's general executive board, pursuant to its authority under the consent decree, issued a call for a new convention and election for March 1959. However, the court having found that conditions for a new convention were not yet ripe after a year of operation under the consent decree, ordered, on February 9, 1959, slightly over a year ago, that the consent decree be modified to make the time for the new convention "subject to recommendation by the board of monitors to the general executive board of the international brotherhood, with the exact time of holding the convention being subject to the final approval of the court."

In the meantime, charges and countercharges have been hurled by both parties against each other.

The action of the monitors has been questioned; the action of the judge has been questioned; and there has been continuous questioning of the officers of the union itself.

Mr. President, it is not my purpose at this time to justify these charges or countercharges, one way or another. I am sure they have been extensively and exhaustively presented by the parties concerned through all the available media.

However, there are several questions which I think are of concern to Congress. One is the question of whether or not the workers are to be given the right to hold a free election under proper conditions.

It is a fact, I believe, that the holding of the union's election has been postponed for almost 2 years since the establishment of the monitorship under the consent decree.

If the problem is with the union, the election should be postponed. If the problem is with the monitors, it seems that that is a matter of concern to Congress. If the problem rests with the court, then the court itself should look to its own internal affairs.

The second question relates to whether or not the legislation passed by Congress last year is adequate to meet a problem of this kind, one with which the court, it appears now, is attempting to deal.

The third question really relates to the second one, and is the basic one of how much of an administrative burden is to be put upon courts or court-appointed monitors or trustees in other cases, not only in a case involving a labor union, but also in the case of industry or finance or any nongovernmental institution or activity in the United States.

It seems to me that there are enough questions with regard to this problem that the committees of the Senate and the House which are properly concerned in the matter—the Committee on Labor and Public Welfare or the Committee on the Judiciary—ought to give some attention to the problem.

Mr. MOSS. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. MOSS. Is it not true that earlier this year we passed a labor bill, one of the provisions of which was to limit the time during which there could be a trusteeship of the parent labor union over a local union?

Mr. McCARTHY. That is correct. We set a limit.

Mr. MOSS. Therefore, would it not follow that it would be considered improper or undesirable to have a period of monitorship or trusteeship or control from the outside over a labor union?

Mr. McCARTHY. I believe it is certainly true, whether it be a labor union or a steel corporation or any other nongovernmental institution or activity. Unless there are compelling reasons for court supervision, it should be terminated.

Mr. MOSS. As I understand the Senator's position, it is that some action should be taken at this time to resolve this impasse which has continued for 2 years, I believe the Senator said.

Mr. McCARTHY. I would hope that it might be resolved. At least we should get somewhat more complete information to Congress as to what the real difficulty may be.

Mr. MOSS. I thank the Senator for his remarks. I should like to concur in his general approach to the matter, without indicating to what extent I believe the matter ought ultimately to be resolved. However it seems to me that there has been a long period of stalemate and impasse, and certainly Congress should examine into the matter and find a way of concluding the matter.

Mr. McCARTHY. I agree with the Senator. There is no question about interfering with the courts, since the main problem seems to be with respect to the court-appointed monitors who carry on a quasi-judicial but principally an executive function. That should be of concern to us, particularly because we have passed new legislation dealing with the problem of the internal conduct of labor unions, and we ought to look into the problem to see where justice lies and what course of action should be followed.

Mr. DODD. Mr. President, I am reluctant to engage in this discussion today, and I have not done so on previous occasions, because I was counsel, with others, for the dissident group which instituted the proceedings that resulted in the appointment of the monitors.

I understand the attitude and view of my colleagues the Senator from Minnesota and the Senator from Utah, who as I understand them want to know more about the proceedings.

I intend, if necessary, to make a full and complete statement in the Senate, since the matter has come up here, and has come up in the other body as well. However, because I have had such active personal interest in it as a lawyer before I came to the Senate, I have been reluctant to do so.

The monitors were appointed, I might point out briefly, after the plaintiffs had

put in their case in the District Court for the District of Columbia. It was a settlement mutually acceptable to both sides.

It might be well at a later time to describe more in detail what took place. I wish to assure the Senator from Minnesota and the Senator from Utah that I shall be happy to shed light on the situation. Something perhaps should be said to clear up some of the confusion with regard to the appointment of the monitors. I cannot speak from personal experience about what has happened since the appointment of the monitors, because I have not been in the case for some time.

But I believe I know what happened when the monitors were appointed and why they were appointed and I have excellent facilities for getting the facts on what has happened since they were appointed.

Mr. McCARTHY. The Senator from Connecticut has made a valuable contribution to the discussion. As he has said, he has been identified with the matter from the beginning, when he was not a Member of Congress, and he is fully familiar with what I consider to be a continuing problem. I look forward to the time when the Senator from Connecticut will make a comprehensive statement on the problem. I yield the floor.

Mr. BARTLETT subsequently said: Mr. President, to the best of my knowledge, one union in the United States, and one union only, continues under the control of a monitorship. I refer, of course, to the Teamsters Union. I have little knowledge, personally, of the affairs of that union, and no acquaintance whatever with its top officials. However, it seems to me, since the Labor-Management Act of 1959 was enacted to provide, among other things, for free elections in all unions operating in the United States, that that right ought to be reinstated soon—at the very earliest possible moment—for the Teamsters Union.

One million, six hundred thousand members—good Americans—of this great labor craft have a right, it seems to me, to decide who their officers shall be. It has been said that the monitors are draining the resources of the union's treasury. That may be true, or it may not be true; I do not know. But it is certain that the monitorship arrangement requires the expenditure from the union's treasury of large sums of money. This is not a democratic system which ought to be continued ad infinitum. The time has come, it occurs to me, when the members of the Teamsters' Union ought to have the right to elect their national officers, and the choice should be theirs. It might be that the monitors would not agree with that choice, but that does not matter in a democratic country such as ours.

For example, over the years, many criticisms have been made of the union of which Harry Bridges is the president. Yet no effort has been made to take the control of that union from the officers elected by its members and to place such control in the hands of a board of monitors. I do not think that ought to be done indefinitely with respect to any union.

I am glad the senior Senator from Indiana [Mr. CAPEHART] has introduced a bill on this subject, and I join several of my colleagues in expressing the hope that the bill will have early consideration. In making that statement, I do not wish to imply a personal belief that Congress should intervene in connection with matters now pending before the courts. In whatever way this is to be accomplished, I firmly believe that the members of the Teamsters Union should, at the earliest possible date, have the right to elect their own officers.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 2778. An act to amend the act relating to the Commission of Fine Arts;

H.R. 1607. An act for the relief of Mrs. Anne Morgan; and

H.R. 10474. An act to authorize construction of modern naval vessels.

THE SUMMIT AND THE TEST BAN FALLACY

Mr. DODD. Mr. President, this coming Monday the leaders of the free world and the supreme dictator of the Soviet world will come together in Geneva for still another summit conference.

There is an uneasiness in all of us, I believe, about the outcome of this conference. There is an uneasiness throughout the country, some of it articulate, most of it inarticulate. Despite our reassuring statements, there is still uneasiness among our allies. As for the so-called neutral nations, from the least of them to the greatest of them, from the most friendly to the most critical—they all know that their fate, too, ultimately depends on the hard reality of American power. And, though they cannot say so, they share the uneasiness of the rest of the free world.

This uneasiness has been fanned by the forcing down of the U–2 reconnaissance plane over Soviet territory last week, by Khrushchev's intemperate diatribes, by his threats to dispatch missiles against those airfields in our allies' countries from which U–2 planes might take off or at which they might land. The fear is now expressed in some quarters that East-West relations have deteriorated to the breaking point and that the issue of peace or war may very well hang on the outcome of the summit conference. I do not believe this is so. But I am sure that the Communists would like us to believe that it is so.

The purpose of any conference is somehow to amend the status quo. From the standpoint of the free world, the forthcoming conference can result in one of three things. The status quo minus, the status quo plus, or a deadlock. Since the Soviets are making all the demands, and we are making none, it is a foregone conclusion that the conference will not result in the status quo plus. A deadlock is the best that can be hoped for. But this is uncertain, even improbable, because we have so heavily committed ourselves to seek some kind of settlement of the crisis Khrushchev has created. There is, therefore, a very serious danger that we shall once again wind up with the status quo minus.

In my opinion, we have, over the past few years, retreated to the point where we now stand quite literally with our backs to the wall. I believe that the American people understand this, and there have been some encouraging evidences that the administration, too, is beginning to understand. Our policy on Berlin has again been firmed up. In this connection, I wish to pay my personal tribute to Under Secretary Dillon's magnificent presentation to the AFL–CIO Conference on World Affairs in New York on April 20. I can recall no more cogent analysis of the world situation or statement of American policy by a spokesman for the Department of State.

If we hew to the policy outlined by Under Secretary Dillon, there will, I am certain, be no surrender on the question of Berlin. But I cannot help fearing that, in the light of Khrushchev's recent tough talk and our own confusion and embarrassment over the recent plane incident, there may be some temptation on our side to purchase a deferment on Berlin by offering concessions in some other area.

Specifically, I fear that, because we do not understand the gravity of the issue, we will yield to the demand for a nuclear test ban covering not only detectable tests which contaminate the atmosphere, but nondetectable tests that do not result in contamination. And if such a treaty should not be signed at Geneva, I am just as worried that, out of deference to the possibility of such a treaty at some future date, we will consent to further prolong the 20-month old voluntary moratorium on weapons tests of all kinds.

It is to this subject, Mr. President, that I wish to direct my remarks.

I speak on this subject for the first time with some hesitation, knowing how much study the distinguished Senators who serve on the Foreign Relations Committee and on the Joint Committee on Atomic Energy have devoted to the problem. I could not have spoken on this subject 6 months ago because I stood in awe of those of my colleagues who could bandy about words like "thermonuclear" and "fissionable" and "neutron." If I venture to speak today on the question of the nuclear test ban, and if I now myself employ a few of the technical words that seemed awesome a few months ago, there are two reasons for this transformation.

Reason No. 1 was a gnawing conviction that the moratorium was wrong,

that the Communists were not abiding by it, that it increased the danger of war rather than diminished it, that it might ultimately cost us our freedom.

Reason No. 2 was my recent illness, which gave me some time for reading and reflection. The more I read, the more I thought about the problem, the more I discussed the matter, the more I was able to replace intuitive estimates with established facts—the stronger my fears and my convictions became.

I now believe that we stand in mortal peril, and that this peril is not many years removed.

The lack of understanding on the test ban issue cannot be explained in terms of its complexity. It is really not that complex. The scientific aspects of the problem can, I assure you, Mr. President, be understood by any intelligent layman. To achieve comprehension, the basic requirement is the kind of understanding of politics and of the nature of communism and of the realities of power relationships that I believe most of us in this Chamber possess.

Why, then, is there so little understanding? I can think of two reasons:

First, the facts have not been given to the public.

Second, our minds have been confused, our nerves dulled, our wills sapped, by what I consider the Kremlin's most spectacular triumph in the realm of propaganda and psychological conditioning.

Thanks to the occasional learned presentations by the distinguished Senator from New Mexico [Mr. ANDERSON] and by the equally distinguished Senator from Tennessee [Mr. GORE], the present occupant of the chair, I believe that we in this body are beginning to have an awareness of the problem. The justification for my speech today is that I believe we must look at the problem both whole and in detail.

We start from the premise that the whole complex of nuclear problems—including such matters as the question of nuclear weapons technology, the strategic and tactical use of nuclear weapons, the test ban, the moratorium—must be viewed within the context of national purpose, as expressed by our foreign policy.

We have certain stated purposes on which there is broad bipartisan agreement. We are committed to the broad, moral purposes that are stated with enduring eloquence in our great historic documents. We are committed to the defense of our own freedoms, and of the free world at large against Communist aggression. We are committed—sincerely, if vaguely and ineffectually—to the extension of freedom to the peoples now enslaved by communism and to the principle of self-determination.

We are committed to the maintenance of peace—with justice, and without surrender. We do not believe in peace at any price. Benjamin Franklin once declared that those who believe they "can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." There is as much truth in this in the age of thermonuclear weapons as there was at the time it was written by Franklin.

On these attitudes and purposes we agree. But there have been times in recent years when I have had the impression that the conduct of our foreign policy had somehow been separated from any guiding principles, that we were simply responding on a fire department basis to emergencies and crises created by the Kremlin.

I am even more profoundly convinced that the entire critical relationship between nuclear weapons and foreign policy has not been understood. The nuclear capabilities we have developed are sadly out of balance and at certain points are in conflict with the principles we espouse. They are, I fear, inadequate to cope with the spectrum of dangers that confront us. Our guileless approach to the moratorium is, in my opinion, a reflection of the same disjunction between our nuclear thinking and our national commitments.

All the purposes I have enumerated are interrelated. In order to maintain peace, in order to defend the free world, in order to embark on a positive foreign policy, in order to extend the frontiers of freedom, in order to keep faith with our forebears and our children, in order to reduce the danger of thermonuclear war to a minimum, in order to create a stable basis for peace, there are two prior conditions that must be met.

The first requirement, on which there is no dispute, is that we maintain a superiority in strategic nuclear weapons—that is, large-yield weapons of devastating power—so that the Soviets will never be tempted to seek a settlement of the cold war by means of a thermonuclear Pearl Harbor. We are committed to the avoidance of preventive war. If the Kremlin should strike first, only a portion of our original strength would get off the ground, and only a portion of this, in turn, would reach enemy targets. General Powers has expressed the opinion that a surprise Soviet missile attack could reduce our ability to retaliate to near-zero. This viewpoint has been challenged by other competent officers; but even the most optimistic estimates concede that a surprise strike by the Soviets might immediately eliminate 50 percent or more of our bombers and ICBM's. To serve as an effective deterrent to a surprise attack, therefore, our superiority must be nothing short of overwhelming.

Today, I am inclined to agree with the President that our retaliatory capability is sufficient to deter such an attack. Technological superiority, however, is something that must be constantly renewed. If the Soviets ever achieve superiority or if they beat us to a major breakthrough in the field of nuclear weaponry—for example, the anti-missile missile—a preemptive strike might become a serious possibility. We cannot ignore this possibility, the more so since Soviet military thinkers—and I shall cite evidence of this—have given such serious consideration to the concept of a preemptive strike.

Corollaries of requirement No. 1 would be the development of an anti-missile defense, the invigoration of our civil defense, and a mandatory shelter construction program. The greater our ability to survive a surprise attack and to retaliate, the less likelihood there is that such an attack will ever take place.

But our strategic deterrent by itself is not enough. Indeed, by itself it may be highly dangerous. There is much to be said for Thomas Murray's argument that we have placed altogether too one-sided an emphasis on multimegaton weapons, that our very capacity "to wreak unlimited nuclear violence inhibits us from the use of limited force which may be politically necessary." I am, in fact, inclined to believe that, with our exclusive reliance on nuclear retaliation, we have succeeded in frightening ourselves and our allies far more than we have frightened the Kremlin.

Obviously, if the Kremlin drops thermonuclear warheads on American cities, we will retaliate in kind; we would have no alternative. But if it is simply a matter of a limited challenge at Berlin or in the Mideast or in the Far East, can we, will we, respond to this by destroying millions of men, women, and children in Soviet cities? This is a terrible decision for any President to have to make, especially when he knows that minutes later a comparable number of American civilians will have perished in the ashes of our own cities.

Requirement No. 2, therefore, is the development of a system of tactical nuclear weapons capable of being used with discrimination against military targets both on the battlefield and in the rear. The possession of such weapons would enable the forces of freedom, in Europe and in Asia, to confront the vastly superior Communist manpower with firepower of "unacceptable" superiority. Only in this way can we offer deterrence to the increasingly serious threat of limited aggression.

"We arm to parley," Winston Churchill once said. The peace of the world can be considered secure only when we have met these two basic requirements—only when we have established deterrence at both the strategic and limited levels. At that point we could go to the conference table with the initiative firmly in our grasp. At that point we could truly embark on a positive foreign policy.

If our weapons requirements should be determined with reference to our national purposes and commitments, our policy on the question of nuclear testing should, in turn, be determined in the light of our weapons requirements. Instead, our once sound policy on the question of the test ban has now degenerated into nothing better than a frightened, unthought-out reaction to the international hysteria which the Kremlin has so cleverly fostered and exploited.

What makes it so difficult to cope with this hysteria is that all of us, whether we recognize it or not, have been afflicted by it, some in smaller degree, some in greater. There can be no question that the overwhelming majority of the decent citizens who favor a test ban believe in freedom and abhor the tyranny of communism. There can also be no question that the agitation for a complete cessation of tests has been the central item on the agenda of the world Communist movement for several

years now. Of this there is ample documentary proof. Through the infinitely subtle propaganda apparatus which they command, through the thousands of channels of information to which they have access, the Communists have unquestionably succeeded in infiltrating this movement and in providing it with much of its guiding philosophy and stock of arguments.

There is nothing novel or really surprising about this situation. There has been a whole series of critical situations in which the Communists have succeeded in persuading the majority of the people in the non-Communist world to believe what the Kremlin wished them to believe. The widely held belief, for example, that the Chinese Communists were not really Communists, but simple agrarian reformers, helped to pave the way for the Communist takeover in China.

The Communists achieved a similar success in the realm of psychological conditioning at the time of the 1944 Communist insurrection in Greece. If you look back through the American newspapers of that time, you will find that a great majority of our editors, our public officials and public opinion molders in general, attacked Prime Minister Churchill for his courageous decision to put down the Communist insurrection. They did so because, in one way or another, they were led to believe that Churchill was intervening against the heroic Greek resistance fighters, and not against a Communist insurrection which had already gone to the point of mass executions of anti-Communist citizens. Today, of course, everyone agrees that Prime Minister Churchill did the right thing. In fact, he did the only thing. But very few people stopped to consider how it was that the Communists were able completely to befuddle our mental processes and destroy our sense of balance.

On the issue of the test ban, we are today the victims, at both governmental and private levels, of the same kind of befuddlement and psychological conditioning that led both public and Government to the wrong conclusions on the Chinese Communists and on the Greek insurrection.

I could list many more such experiences and I hope at a later date to remind the Senate of them.

The general argument in favor of the test ban can be broken down into eight basic propositions, to which I shall hereafter refer as the eight fallacies of the test ban.

FALLACY NO. 1

Fallacy No. 1 is that a test ban agreement would serve to "open up" the Soviet Union—that the stationing of international inspectors at a number of fixed points would at least create a first chink in the armor of secrecy.

Soviet spokesmen have hinted that they might be willing to consider the establishment of a few fixed stations on their territory and a few onsite inspections. The distinguished Senator from Tennessee [Mr. GORE] pointed out, in his statement of March 2, that after 18 months of negotiations, the Soviets have yet to commit themselves to a single onsite inspection or to the establishment of a single station. All of our efforts to pin them down have failed.

On one occasion, as I have heard, Congressman HOLIFIELD cornered Mr. Semyon Tsarapkin, the chief Soviet delegate to the test ban conference, and demanded to know what quota of annual inspections the Kremlin was prepared to accept. Mr. Tsarapkin, according to the story, shrugged his shoulders and said: "A few." On another occasion Soviet Ambassador Zaroubin contemptuously said to Dr. Alvin Groves of Los Alamos, that the West could, if it wished, have all of its three inspections at the same time.

Personally, I consider it inconceivable that the Soviets will ever accede to the revised Bethe formula calling for 21 manned stations, 600 robot stations, and 300 onsite inspections per year. I consider it highly improbable that they will even accede to the original Geneva formula of 1958, which we now know to be absurdly inadequate, but which called for 21 manned stations on the territory of the Soviet Union, plus 20 to 30 onsite inspections. I am afraid that if they offer us anything remotely resembling the original Geneva formula—perhaps 50 percent of the formula, perhaps 25 percent—we will hail this as a great concession, sign a treaty on Soviet terms, and present this agreement as an assurance of "peace in our time."

It is utter nonsense to argue that such an arrangement would "open up" the Soviet Union. It can be taken for granted that the international inspectors would be confined to their stations and that most of these stations would be located in isolated areas. It can also be taken for granted that the inspectors would see nothing and would have minimal opportunities for contacts. If they engage in a handful of on-site inspections, they would do so in company of the Soviet members of their teams, who would exert themselves to the limit to frustrate their fellow inspectors, and would watch over them with eagle eyes.

I have the greatest doubt that 10,000 or 20,000 American tourists who will visit the Soviet Union next year will in any way help to "open it up." I would point out that the tourist traffic to the Soviet Union was just about as heavy in the mid-thirties, during the heyday of the Stalinist terror, as it is today. It opened up exactly nothing. The tourists saw what Stalin wanted them to see, and most them returned to this country convinced that the stories of Bolshevik terror were greatly exaggerated.

In his article, "Beware Tourists to Russia," in the Reader's Digest, Eugene Lyons described the manner in which the Kremlin bemuses and befuddles the tourist innocents. But these impressionable ordinary tourists, I am convinced, are far more plausible instruments for "opening up" the Soviet Union than a handful of nuclear test ban inspectors at fixed stations and under constant surveillance.

FALLACY NO. 2

Fallacy No. 2 is the argument that we are now far ahead of the Soviet Union in nuclear weapons technology, that if the race should continue indefinitely the Soviets would probably surpass us, that a freeze on weapons testing would therefore be to our advantage.

This argument is based on a whole series of assumptions which, as I shall demonstrate later, are, at the worst, demonstrably false; at the best, highly questionable. Among other things, it assumes the following:

That we will be able to conclude a test ban agreement with the Soviets providing for an adequate and enforceable system of inspection.

That, despite any initial inadequacy, the system of inspection will ultimately be improved to the point where weapons tests of any significant magnitude will be detectable.

That, once detection has been established, there will be no serious difficulty in establishing verification.

That, if there is a voluntary moratorium on tests of less than 20 kilotons magnitude, the Soviets will abide by this moratorium; that they will faithfully honor the provisions of the treaty and will not engage in clandestine tests, no matter how much the Kremlin may stand to gain from them.

Fallacy No. 2 has been advanced over and over again as a reason for entering into a formal test ban agreement. It is amazing to me that mature men could give serious consideration to an argument based on so flimsy a substructure of "ifs." Among other things, this argument, after assuming that the Soviets have the ability to surpass us technologically, even without cheating, does not consider what might happen to our technological lead if Khrushchev and company should cheat.

I believe we can take it as a maxim that, if there is something to be gained from it, the Communists will cheat. But let us be generous. Let us assume that there is a 50–50 possibility that Khrushchev and company would adhere to their word. Can the future security of the United States be based on a 50–50 possibility?

This argument also fails to consider what will happen to our technological lead if there should be no agreement, if, instead, the negotiations drag out year after year while, year after year, we continue to renew our voluntary moratorium on all tests in the hope that an agreement may be just around the corner.

At the time the Soviets exploded their first A-bomb, it was estimated that we had something like a 4 to 5 year lead in nuclear technology and weaponry. By the time we embarked on the present moratorium in October 1958, this lead had unquestionably been cut down—according to informed estimates, to a figure of 3 or 4 years at best. If the Soviets have not been observing the honor moratorium, then we have already dissipated almost 2 years of our lead. If the moratorium persists for another 2 years, then, even without an agreement, we shall have completely dissipated our lead in nuclear weapons technology.

FALLACY NO. 3

Fallacy No. 3 is the fallacy of the ultimate technological plateau.

According to this argument, there is little point to the further development

of our nuclear weapons because we already possess sufficient multimegaton weapons and weapons of other yields to destroy the Soviet Union several times over.

This argument ignores the fact that our stockpile of thermonuclear weapons leaves us helpless, unless we are prepared to resort to all-out nuclear war, to cope with some of the limited threats and challenges with which the Kremlin will confront us.

It ignores the fact that the NATO land forces can serve as an effective deterrent to such threats only if their manpower inferiority is offset by the possession of a broad and flexible system of tactical nuclear weapons.

It ignores the fact that research into the possibilities of antimissile defense is still in its infancy.

It ignores the fact that we require new multi-megaton missile systems to cope with hardened missile sites and for other defensive purposes.

that technology has no limits. There is

In short, it ignores the elementary fact no such thing as an ultimate technological plateau. On the contrary, with each new breakthrough, new and more fantastic developmental vistas seem to open up.

The hydrogen missiles we now possess and those that are scheduled for the next few years are not the ultimate weapons. Given a continuing developmental program, there will be a second and third and fourth generation of missiles and warheads.

The yield-to-weight and yield-to-diameter relationship will be improved so that the warheads can be miniaturized.

Missiles will be reduced in size and cost and greatly improved in accuracy. By enabling us to make many more missiles and much more effective and more mobile missiles at a greatly reduced cost, such a development would vastly strengthen our deterrence and would help to vindicate our peace policy.

The energy of fusion explosions will be tailored to produce a variety of effects which correspond to the nature of the intended targets.

Clean weapons of all yields will be produced, thus greatly increasing the utility of the atom for tactical, defensive, and strategic purposes.

Entire new weapons systems will come into being—weapons that seem as fantastic today as the atom bomb did in 1943 or the hydrogen bomb in 1945.

Such developments could have incalculable strategic consequences. If the Kremlin were to get there first on any major technological breakthrough in nuclear weaponry, my conviction is that we would, in short order, find ourselves confronted with a choice between annihilation or surrender. At the very least, this is a serious possibility.

I found Khrushchev's statement of January 14 ominous in terms of its emphasis on continuing technological progress. I am sure that this statement came to the attention of many of my colleagues, but I wish to recall it here nevertheless. In my opinion, it is a statement to be read—and reread—and pondered:

> Our armed forces have to a considerable extent been transferred over to missile-nuclear arms. These arms have been perfected and will continue to be perfected. The armament which we now have is formidable armament. The armament under development is even more perfect and more formidable. The armament which is being created and which is to be found in the folders of the scientists and designers is truly unbelievable armament.
>
> We state openly that in reducing the numbers of men in the armed forces we are not diminishing firepower. On the contrary, it has increased qualitatively several times.

Other Soviet spokesmen have gone further than Premier Khrushchev in stressing the importance of technological surprise and in hinting at the possibility of a preemptive attack. Marshal A. A. Grechko, in an article published in Red Star on February 23, emphasized the following points:

> (a) Suddenness (or surprise) is crucial to success in modern war.
>
> (b) Technological surprise may be equally crucial.
>
> (c) The initial phase of the war will be of decisive importance.
>
> (d) Soviet forces will employ nuclear weapons as their main armament.

Another Soviet marshal, Marshal Nedelin, I note parenthetically, was last week appointed "Marshal of Soviet Rocketry."

What is the "truly unbelievable" armament of which Khrushchev spoke? Let me outline some of the possibilities on the technological horizon—possibilities that can only be realized by the renewal of testing both in space and underground.

First of all there is the matter of tactical weapons. The so-called tactical rockets and cannon shells which we now possess are in reality medium-sized atomic bombs, with all the unpredictable danger of fallout. They are clumsy; they are potentially dangerous both to the user and to the civilian populace adjacent to the area of battle; they cannot be used with real discrimination. The military planners who have been working on the development of tactical nuclear weapons, have, as I understand it, been thinking of light, clean weapons with yields of from 1 to 100 tons—with a kiloton yield almost an outside figure. These weapons would be small enough to be fired from bazookas, from tanks, from weapons carriers, from light field guns, or in salvos from missile-launching trucks.

There is a limit beyond which weapons development cannot go without testing. Commenting on the semiannual AEC report, the Washington Post said on January 31, 1960:

> The AEC report said only that weapon research and development were continuing on weapons with greatly reduced fallout but special emphasis was being placed on small rugged weapons that could be assembled and made ready to fire in a matter of minutes. One already announced is the "Davy Crockett," a one-man bazooka-launched weapon. Although it is being produced for the Army, it has not been tested yet because of the moratorium. The Army is reported to be reluctant about ordering them in quantity before they have been proven.

The production of a clean, tactical, nuclear weapon would open the way to a whole series of technologically significant breakthroughs. By definition such a weapon would have to have a fusion warhead—that is, a heavy hydrogen or tritium warhead—which is not triggered by fissionable material or else triggered by only a minute quantity. Such an explosion would produce a small amount of carbon 14, but, compared to today's weapons, it would be 95 percent clean. The radioactive fallout would be negligible. This technique, once mastered, would be substantially applicable to warheads of all sizes, up to the multimegaton range.

It is the fissionable material in a thermonuclear bomb which makes it so extremely expensive to produce. The chemical components, chiefly heavy hydrogen and lithium, which are immediately responsible for the fusion explosion, are relatively cheap to manufacture. If a straight fusion weapon can be developed—and there is no doubt that it can—this would open up the way to the production of thermonuclear weapons of all yields in vastly increased quantities and at much smaller cost.

Then there is the matter of the neutron bomb, to which there has already been some reference in the press. Such a bomb can theoretically be produced by tailoring the energy of a fusion explosion so that, instead of heat and blast, its primary product is a burst of neutrons. Such a burst would do negligible physical damage, but it would immediately destroy all life in the target area. It would, in short, operate as a kind of death-ray.

I have heard that, in the light of present theoretical knowledge, the neutron bomb is no more questionable than the hydrogen bomb was 6 months before it was demonstrated that one could be built. Although there have been a few fragmentary references to the neutron bomb in the press, I was told, when I tried to obtain more information, that the matter was classified. When I pressed my physicist friend further, he threw up his hands in despair and said: "You must forgive me, I have never heard of a neutron."

I consider all the hush-hush that surrounds the neutron bomb to be a glaring instance of the official abuse of secrecy. To keep the facts of life on the nuclear age from the American people is foolish, and potentially disastrous. If there is a possibility that a neutron bomb can be built, if there appears to be any chance that the Soviets may succeed in building one before we do, then the American people have a right to the facts.

The current issue of Foreign Affairs contains a remarkable article on the question of the test ban by Dr. Freeman J. Dyson. Dr. Dyson quotes a paragraph from a report by the prominent Soviet physicist, L. L. Artsimovitch entitled "Research on Controlled Thermonuclear Reactions in the U.S.S.R.," printed in

December 1958. Let me read this paragraph, Senators, very slowly:

> It may also be possible to realize a pulsed thermonuclear reaction under conditions in which the high temperature is produced by a charge of conventional explosive (such as TNT or something more powerful) which surrounds a capsule containing heavy hydrogen. Without dwelling on the experimental details, we may note that conditions have been found under which the generation of neutrons in hydrogen reactions has been established reliably and reproducibly. In experiments carried out in 1952, there is no doubt that we have observed neutrons which are formed as a result of the heating of matter to extremely high temperatures.

From this, it is apparent that the Russians were experimenting with fission-free hydrogen devices as far back as 1952 and that, as a corollary of this, they have for years had some understanding of the possibilities of the neutron bomb.

Once upon a time there was no hydrogen bomb. But there were a few scientists, a tiny but brave minority, who said it could be made and who urged that we embark on a crash program of development, lest the Kremlin beat us to it. At that time we had a President, Harry Truman, who gave the facts to the people. Had he not done so, had he not enjoyed the public support that only comes from understanding, the production of the H-bomb might have been deferred beyond that fateful day in 1953 when the Soviets exploded their own first H-bomb.

I believe President Eisenhower owes a similar duty to the American people in the case of the neutron bomb. The President should tell the people what the scientists told him. Not to do so would be a dereliction that can only lead to the most dangerous kind of speculation.

Then there is the matter of the so-called Christofilos effect, first suggested by an amateur Greek physicist and subsequently confirmed in the Argus test shot. All we know at this moment is that after the Argus shot, there was a temporary blackout in radio communications in the area due to the release of neutrons and rays at high altitude. These effects conceivably could have a revolutionary impact on modern war. They might be used by either side to interfere with the communications of the opposing side. It is not even precluded that a massive release of neutrons at high altitudes could be used to prevent missile attacks. The fact is that we do not understand the military potentialities of the Christofilos effect. Our national security demands that we learn more about these phenomena. But without tests, this is impossible.

Then there is the antimissile missile. The development of the antimissile missile by either side would have strategic implications comparable to the development of the A-bomb or H-bomb. We cannot afford to let the Kremlin get there first.

There are competent scientists and engineers, I know, who believe that, for all his genius, man will never be able to devise a missile capable of knocking down an incoming missile traveling at a speed of 15,000 miles per hour. But I am impressed by the fact that the corps of equally competent scientists and engineers who have worked on the antimissile system for the U.S. Army are profoundly convinced that both the problem of guidance and the problem of a suitable warhead for the Nike-Zeus can be solved. Indeed, they believe that their project is far enough along to warrant the advance procurement of vital components. This, in my opinion, is sufficient reason to order full speed ahead and to provide the necessary funding without stint. Perhaps their judgment will be proved wrong. Perhaps it will be proved right. But there is so much to be gained if they are right that even at 10-to-1 odds, I would be in favor of risking the several hundred million dollars involved. Every day's delay may cost American lives if a showdown ever comes. It is not too much to suggest that delay in this area alone may cost us our freedom.

While we have been making considerable progress in the field of missile technology, we have been inclined to sit smugly on our stockpile of nuclear and thermonuclear warheads, apparently confident that, come what may, they are so fearsome that no aggressor dare challenge us. In the multimegation field, it is not much of an exaggeration to say that we have been standing still, or almost standing still. The Soviets, I am convinced, have not been standing still. Somewhere along the line, if they run hard enough and push their clandestine tests hard enough, they may achieve a technological superiority in both strategic and defensive weapons that would make a surprise thermonuclear attack on the United States a distinct possibility.

According to expert testimony, the Soviet ICBM's are far superior in thrust to our own. This means that they can carry a much bigger cargo, so that, even with inferior technology, they have been able to arm them with warheads of substantially greater yield. According to these estimates, the Soviet ICBM's carry warheads of 5 megaton yields against the 2 megaton warheads with which our Atlas missiles are equipped.

The missile gap we confront is, by common consent, a matter for concern even as expressed in numbers of ICBM's. It becomes a matter for much greater concern when expressed in megatons. Whether we find this pleasant or not, the hard, inescapable fact remains that megatons constitute the basic currency necessary to purchase deterrence and perhaps necessary to purchase survival.

The word "megaton" has come to have an evil connotation because it is generally associated with the mass devastation of cities. But I would point out, in defense of this word, that the multimegaton weapon will almost certainly become the chief instrument for defending our own cities and our own lives against enemy attack. If we are ever attacked, an effective antimissile system alone may require thousands of multimegaton warheads; and we would need more thousands of high-yield weapons to strike back at the hardened missile sites of the enemy.

General Powers has declared that the Soviets now have the capability to wipe out virtually all of our retaliatory capacity with several hundred missiles. In reply to this, it has been argued that it would require an average of three 5-megaton missiles to knock out the average SAC base and ten 5-megaton missiles to knock out hardened missile sites. The deduction from this is that the Soviets will never be able to afford the thousands of missiles required to reduce our retaliatory capacity to what the military people call "acceptable level."

Is it not conceivable, however, that as a result of technological improvements, the Soviets, within the next several years, will be able to develop a missile system capable of delivering a more powerful warhead with greatly increased precision? In that case, 2 missiles instead of 10 might do an adequate job of destruction on a hardened missile site or on a SAC base. If, finally, such weapons could be made compact and cheap, the arithmetic of deterrence would have to be completely rewritten.

I ask the Senators to imagine the consequences of a major technological breakthrough by the Kremlin in the fantastic, limitless horizon of nuclear weaponry. Suppose that at the next May Day parade in Moscow or at the opening of the next session of the Supreme Soviet, Prime Minister Khrushchev were to make the following statement:

> Comrades, a year ago the glorious scientists of the Soviet Union solved the problem which is still baffling the scientists of the capitalist world. They produced a missile capable of knocking down an ICBM in flight. Today all the major approaches to the Soviet Union are guarded by batteries of anti-missile missiles.

Suppose, on the heels of such a statement, Khrushchev were to renew his Berlin ultimatum. What, then, would be the reaction of the free world?

We can suppose a lot more things. Suppose at the next May Day parade a division of Soviet troops marches by the reviewing stand with gun carriers, tanks, rocket launchers, and bazookas of clearly nuclear design.

Suppose that, while we concentrate on producing improved missile systems, Khrushchev one day announces that the neutron bomb has for the past 6 months been in mass production in the Soviet Union.

If any one of these things happened, we would be in immediate jeopardy. If the Soviets could time their announcements so that they hit the free world simultaneously, or salvo fashion, with the news of two or more major technological breakthroughs, then the effect would very probably be disastrous.

FALLACY NO. 4

Fallacy No. 4 is the fallacy of the "*n*th nation."

According to this argument, the world will be placed in serious jeopardy at the point where nuclear weapons come into the possession of the so-called "*n*th nation," the point, in other words, where

control becomes impossible. It is therefore of overriding importance that we conclude an agreement—any kind of agreement—as rapidly as possible.

This argument is propounded in all earnestness by sincere pacifists, by the members of the Committee for Sane Nuclear Policy, by many other people of both liberal and conservative opinion, by the Department of State, and by the British Foreign Office.

It is also propounded, with altogether different motivations, by the international Communist apparatus. The Kremlin's purpose in brandishing the menace of the "*n*th nation" is obvious enough: it is part of its effort to create a climate which will make it impossible for us to provide our NATO allies with nuclear weapons.

The NATO alliance is the chief target and immediate victim of the "*n*th nation" fallacy.

If NATO is today a sick and purposeless organization, wracked by defeatism, this, in my opinion, is due to two things: First, our one-sided reliance on massive retaliation; and second, our failure to convince our allies that we are prepared, if necessary, to fight a land war in Europe.

President Eisenhower has been indiscreet enough to inform the world that it would be pointless to try to fight such a war. But even more destructive on morale than the President's indiscretion has been our obstinate refusal to provide our NATO allies with the modern nuclear weapons they must have to be able to deter or resist an aggressive strike by the Red army. Who can blame our NATO allies if, lacking confidence both in our intentions and in their own military capabilities, they have fallen far short of the 40 divisions originally prescribed as essential for the defense of Western Europe? At his press conference of February 3, President Eisenhower said that he favored arming our NATO allies with nuclear weapons. When the Kremlin protested, the White House recoiled and announced that we had no intention of distributing nuclear arms to our NATO allies at this juncture. But this is a measure which we put off at our peril. It is a measure for today and not for tomorrow. It would do as much as, perhaps even more than, an airborne alert to increase our deterrent power over the coming critical period.

Despite their bluster, the Soviets will not be able to emulate us, because there is nothing they fear more than nuclear arms in the hands of the satellite armies. Would the Kremlin have dared to intervene in Hungary if the Hungarian Army had possessed nuclear weapons?

Since the provision of nuclear weapons to our NATO allies would, if anything, stabilize the situation and make peace more secure, and since the chances that the Soviets will share their nuclear weapons with their satellites are decidedly remote, the hypothetical danger of the "*n*th nation" is, I am convinced, a chimera—a chimera in the literal sense of being a mythical monster. I do not say that the theory will have no validity at some remote date in the future. But I do say that in the context of the present, it has no significant validity, and that its only conceivable effect will be to keep NATO disarmed.

Somewhere along the line, Egypt or Israel or some other small nation may build a few nuclear weapons. We should certainly attempt to discourage this development, but I can see no ironclad way of preventing it, short of enforcing an "*n*th nation" ban on peaceful nuclear technology. But small nations will never become nuclear powers, and a word of caution from the only real nuclear powers would be more than enough to restrain them.

There remains the single question of Red China. In the case of China, the "*n*th nation" justification for accepting a test ban without adequate inspection, is doubly fallacious. It is the height of folly to believe that the conclusion of a treaty between the Big Four could persuade Peiping not to develop or test her own nuclear devices. No matter what we may do or say, Communist China, I am convinced, will explode some kind of device over the course of the next few years. It can be taken for granted that this will be the signal for an unprecedented campaign to bring Red China into the United Nations on the theory that this will make her more amenable to control. In fact, I think it is highly conceivable that the Kremlin, by arrangement with Peiping, will soon explode such a device on Chinese territory in order to accelerate the panic.

The second part of the fallacy of the "*n*th nation" thesis, as applied to Red China, is that the explosion of a nuclear test or two by Mao Tse-tung would place the free world in mortal jeopardy. Given her poverty, her still massive backwardness, the enormous industrial and agricultural requirements of her 5-year plans, and the fantastic cost of nuclear weapons, Red China would be accomplishing miracles if she achieved nuclear power status 20 or 25 years hence. There are two schools of thought as to whether the West or the Soviets will have the most to fear from this distant prospect. In either event, there is absolutely nothing we can do to prevent or impede this development other than pressing unremittingly for international inspection based on complete "openness."

In the age of nuclear technology, nuclear weapons are inevitable. No great power will forever forego the right to nuclear weapons and forever resign itself to second-class status simply because the nuclear powers who were first on the scene have entered into an agreement to limit their club to a total membership of three.

We must free ourselves from the tyranny of the chimera of the *n*th nation.

The sharing of nuclear arms with our NATO allies will decrease the danger of war by putting some modern military muscle into NATO, by making NATO meaningful, by giving our allies confidence in NATO and confidence in our own intentions. It would simultaneously provide us with greatly increased leverage in pressing for "openness" in our proposals on disarmament and the test ban.

FALLACY NO. 5

The fifth fallacy is the fallacy that underground tests and tests at high altitude and in space, are detectable and verifiable.

Even the most ardent test ban advocates admit that under the best of circumstances, many tests could go undetected, and that, after detection, there would still be a formidable job of establishing proof. They argue, however, that it would be adequate to have a 1 in 5 or even a 1 in 25 chance of verification. A significant possibility of detection, according to this point of view, would be sufficient to deter any government from attempting a sneak violation of a test ban treaty.

In an age that is already notorious for its political folly, there has been no concept more fallacious than that of the enforceable ban. The hearings held by the Joint Committee on Atomic Energy from April 19 to 23 have, in my opinion, reduced the entire concept to a rubble of nonsense.

I believe the free world owes a great debt to the distinguished Senators and Representatives who organized and participated in these hearings. I wholeheartedly agree with Arthur Krock's statement in the New York Times of Sunday, April 24:

> The hearings ordered by the Joint Committee was an act of statesmanship, as well as service to its high responsibility for national security in the nuclear field.

The four volumes of evidence are, unfortunately, still in transcript form. I hope it will not be too long before the Joint Committee can make available to Congress and to the general public its printed record of these historic hearings. I consider the wide distribution of this record so vital that I think it might be possible to get out a paper-back edition.

The committee brought before it as impressive an array of scientific brains as had ever appeared in a congressional committee room. There were those who favor a test ban treaty, while admitting that it contained many elements of uncertainty. And there were those who were convinced that no system of inspection could be devised that offered anything better than a marginal hope of detecting and verifying a concealed test shot.

None of the scientists questioned the "big hole" theory, which was originally developed by Dr. Albert Latter of the Rand Corp. While the higher mathematics that go into the theory are beyond most of us, in essence the theory constitutes the kind of scientific common sense that a nonscientific layman like myself can appreciate. Let me explain it in my own way: If one simply tamps an atomic charge into a hole in the ground and shoots it off, he will get a seismic signal that is roughly proportionate to the magnitude of the explosion. If, on the other hand, one explodes a test shot in the center of a large spherical cavity, the surrounding air muffles, or decouples, the explosion so that one gets a much smaller seismic signal. If the hole is made large enough, the seismic reading can be reduced by a factor of 300, which means that 300 tons would register as 1 ton.

By their joint calculations, Dr. Latter and Dr. Bethe have demonstrated that,

in a spherical cavity 500 feet in diameter a 20-kiloton device—that is, a device equal to 20,000 tons of TNT, which was the size of the Hiroshima bomb—would produce a seismic signal equal to that of 70 tons of TNT. Unless the seismograph were close in, this would produce no more than an imperceptible wriggle in a seismic reading.

The original Geneva agreement of 1958 had been based on the assumption that an international network of 180 stations, which would include 21 stations in the Soviet Union, would be adequate to detect tests to 5 kilotons. Later this was amended to read that the system would be adequate for detection of seismic readings of greater than 4.75. This would be, roughly, equivalent to the explosion of a 20-kiloton bomb.

I must say a 20-kiloton bomb could not have demolished the Geneva agreement more completely than did the "big hole" theory.

The debate that took place between the scientists representing the two points of view makes highly interesting reading.

Dr. Hans Bethe, Dr. Roberts, and some of the other scientists who favored compromise said that while the "big hole" theory was unchallengeable as theory, it was questionable whether it would ever be translated into practice. Apart from the general agreement on the "big hole" theory, their opinions were challenged at virtually every other point by Dr. Edward Teller, Dr. Latter, Dr. Brown, and some of the other scientists who testified.

The first group said that a hole of 500 feet in diameter could only be excavated by running water through an underground salt deposit; that such an operation would cost $50 million, which would make it prohibitive in price; that salt deposits of the necessary cubic volume and deep enough underground could be found only in a very limited number of places; that such a cavity could not be excavated without detection of the human activity in the area and of the increased salinity in the adjacent waters and soils.

The second group pointed out that one salt dome of 500 feet cubic diameter already does exist in the United States; that limestone deposits, which are very widely distributed, also lend themselves to the construction of big holes; that a 500-foot hole could probably be built for much less than the estimated $50 million, but even $50 million was not a prohibitive sum when equated against the cost of a nuclear-weapons program, and when it is assumed that the cavity could be used over and over again; that in a totalitarian state human activity was highly concealable; that any increase in salinity would dissipate rapidly.

Finally, they pointed out that the hole need not be 500 feet in diameter—this is the size of the hole needed to decouple a 20 kiloton explosion effectively. To take care of a 1 kiloton explosion—and at this level a considerable amount of really significant testing can be done—would require a big hole only one-twentieth the size. This would involve a very simple exercise in engineering and would reduce the cost to no more than several million dollars per hole.

They argued further that, at the 1 kiloton level, it would be possible to conduct tests inside a specially constructed container—perhaps disguised as a factory.

Having argued at every point in support of the feasibility of an adequate detection system. Dr. Bethe went on to agree that the discovery of the decoupling technique made a more extensive detection network imperative. As I have pointed out previously, he proposed a system involving 21 manned stations, 600 robot seismic stations, and 300 onsite inspections per annum.

Dr. Bethe said that the installation of his proposed grid of seismic stations at 125 mile intervals would provide a 300 times greater sensitivity than the original Geneva network, which would compensate for a potential decoupling factor of 300. With the proposed network, therefore, it would still be possible to detect explosions of greater than 20 kilotons magnitude.

The scientists on the other side of the table challenged this argument on two scores. First, they said, it was naive to believe that the Kremlin, which has not yet agreed to the installation of a single station, could be talked into accepting 600 stations. Secondly, they pointed out that while Dr. Bethe's network might take care of a decoupling factor of 300, the technology of decoupling and of cheating in general was still in its infancy. It was suggested, for example, that a greatly increased decoupling factor could be obtained by surrounding the nuclear charge with several tons of graphite. When the charge went off, the graphite would be vaporized and the great heat required to produce vaporization would sap much of the energy of the explosion and reduce its seismic impact.

Dr. Roberts and others argued that it was theoretically possible to distinguish the seismic signal of an earthquake from that of a nuclear explosion and that the technique of obtaining and reading seismic signals might be improved by a program of research. Dr. Harold Brown of the Lawrence Radiation Laboratory stated that initially it had been believed that only a small percentage of the continental earthquakes which occur would produce seismic signals which did not clearly identify them as earthquakes.

On the basis of our experience in the Hardtack tests of 1958, however, Dr. Brown declared that, of the 5,000 or more continental earthquakes per year which produce seismic signals equivalent to a 1 kiloton explosion or greater, "only a few percent could be identified by the seismic signature method." This, he said, "left many thousands throughout the world which could then be suspected of being nuclear explosions of between 1 and 5 kilotons and about 100 which could be suspected of being nuclear explosions of 5 kilotons or more." Actually, I am told these statistics on earthquakes are conservative. There probably are tens of thousands. Even if we were to accept Dr. Bethe's estimate that 90 percent of the earthquakes could be identified by their seismographic signal, it would still leave many hundreds and perhaps thousands of seismic disturbances that could not clearly be identified as such.

Dr. Brown and others pointed out that the earth is a noisy medium, that it is extremely difficult to filter out background noises produced by trains or trucks or other man-made disturbances or by pressure changes in the atmosphere, or by waves beating on the shore. If the first upward motion on the seismograph, which might be expected from a nuclear exposion, is lost in the background noise, then the second motion on the chart, which is downward, would appear to be the first motion—and under these circumstances, the conclusion would be that the signal had been caused by an earthquake.

Dr. Brown pointed out that seismic signals could be confused or forged by simultaneously detonating large quantities of conventional explosives in some legitimate engineering enterprise which the Soviets might demonstratively open to public inspection.

Finally, the scientists pointed out that the Kremlin could achieve complete seismic concealment by setting up their test shots so that they would be triggered by seismic shocks of considerably greater magnitude. This would be an extremely simple arrangement, and there are enough natural earthquakes occurring each year to enable the Kremlin to run off such test shots to its heart's content. The debate went on and on and on, in this manner. I found the reading of the arguments on both sides fascinating. But I feel that the entire argument was rendered completely irrelevant by the two points on which the opposing sides agreed.

Point No. 1 is that even if the impossible did happen and the Kremlin agreed to 21 manned and 600 robot seismic stations plus 300 annual inspections, this would only provide us with the capability of detecting blasts of greater than 20 kilotons magnitude. Even with today's technology—and this technology will be improved—tests of far less than 20 kilotons magnitude could be extrapolated in designing improved weapons systems covering virtually the entire nuclear and thermonuclear spectrums.

Point No. 2 is that, even given the Bethe network, and even given the maximum conceivable improvement in methods of detection, there is a threshold below which no detection—let alone verification—would be possible. This threshold was estimated at approximately 1 kiloton. A kiloton blast, decoupled or reduced, by a factor of 300, becomes the equivalent of only 3 tons of TNT. What this signifies is that there will never be any method of detecting nuclear explosions in a range that covers virtually the entire projected spectrum of tactical nuclear weapons.

If these two points are true, what conceivable purpose is there to arguing about our ability to detect tests of greater than 20 kilotons magnitude?

It would be bad enough if this entire irrelevant argument had been confined to the hearing room of the Joint Committee on Atomic Energy. But it seems to me that the President and State Department have now bogged down in this

grotesque and utterly irrelevant argument. And, in doing so, they have, unwittingly, helped the Kremlin to befuddle Western public opinion completely.

Perhaps I am obtuse or just plain unscientific, but for the life of me I see no point to a detection system which would cost several billion dollars to install and probably another billion dollars per year to operate, and which would still leave the Communists free to sneak test any device up to the size of a Hiroshima-type bomb.

But we have not yet come to the end of the nonsense. Dr. Bethe's proposed enlargement of the system would not in any way take care of test shots released over remote ocean waters, perhaps in the proximity of the Antarctic. With the Soviet Union and the United States both building missile submarines with nuclear propulsion, the vast stretches of the world's oceans are to be "inspected" by only 10 ship stations. What way would there be of preventing a Soviet submarine from surfacing in a remote area, firing a test shot, taking its observations, and then submerging for a long underwater trip back to its home station? We might detect such a shot—but how could we possibly prove, in the absence of a corpus delicti or a captured submarine, that it had been fired by the Kremlin? If we wanted to police the seas on a scale that would make inspection meaningful, it would probably cost additional billions of dollars per year.

If the discussion on detection capabilities was irrelevant, the debate on verification was doubly irrelevant. Verification would require the production of material evidence in the form of a radioactive core of rock.

Again I may be obtuse or unscientific, but what conceivable point is there to discussing the pros and cons of verification if one cannot even detect a test shot of less than 20 kilotons magnitude? There may be a flicker of hope that with thousands of stations, signals might be obtained indicating a test ban violation above a threshold of, let us say, several kilotons. But it is one thing to suspect a violation, and another thing to prove in a legally valid form that a violation has occurred. And, as I see the matter, the proof would have to have legal validity before we could cancel the treaty or ask for sanctions against the violator.

I should like, nevertheless, to summarize some of the testimony on verification that was given to the Joint Committee, because it all helps to demonstrate what a monstrously fallacious thing the so-called enforceable test ban is.

Although the scientists varied in their estimates, all of them agreed that verification was an exceedingly complex problem and that the mathematical odds were in favor of a determined and enterprising cheater. Several of the scientists estimated the odds against verification at 100,000 to 1.

The distinguished Senator from Tennessee has pointed out that in the case of the Rainier test shot, even though we knew the exact underground point at which the shot had been exploded, it required 3 months of drilling to come up with a radioactive core. But let me summarize for your amusement some of the complexities of the problem of verification as described to the Joint Committee.

Let us assume the inspection system is set up and a station at point X receives a seismic signal which cannot clearly be identified as an earthquake. Depending on the spacing of the stations, it would be necessary to carry out a minute examination of some 100 square miles to 500 square miles of Soviet territory. The first surveys would be aerial surveys utilizing all types and sizes of aircraft, ranging from helicopters to multiengine, fixed-winged craft, and flying at survey altitudes ranging from 150 feet to 18,000 feet. The aerial reconnaissance would involve first, visual observation; second, photography; third, radiation, magnetic, electromagnetic, and infrared surveys.

Obviously, the first task of the aerial survey would be to determine whether or not the seismic event was an earthquake, or a nuclear explosion. A nuclear explosion might produce a fissure in the ground if it were not down deep enough—but this is a possibility we can rule out. There might be some metallic debris or other signs of human activity if the Communists were careless—but I believe that this is a possibility we can also rule out.

So, the aircraft flies over this suspected area. The inspectors find no signs of human activity, and their sensitive instruments pick up no surface evidence of an explosion. On the other hand, there is physical evidence that a genuine earthquake has occurred in this area. What do the inspectors do at this point? Do they call off the search and write off the seismic signal to a genuine earthquake? Or do they take the quite realistic stand that the earthquake may have been used as a shield for a test explosion? In the latter case, every suspicious seismic event would involve detailed inspection over a large area, by air, on the ground, underground, and under water.

According to the most optimistic estimates, it would be possible, by means of such techniques, to narrow the area of suspicion down to one-half of 1 square mile and ultimately to a radius of 500 feet. Then drilling would commence. The smaller the test shot, the greater the difficulty of location. According to Dr. C. E. Violet, of the Lawrence Radiation Laboratory, the probability of locating radioactive debris from a 1.7-kiloton explosion would be approximately 1 in 100,000. To make the probability 1, or equal to unity, he said, one would have to drill 100,000 holes. A far more optimistic estimate was presented by Dr. Richard M. Foose, of Stanford Research Institute. Let us examine this "optimistic" estimate.

If the area of suspicion could be cut down to 500 feet in radius, it would require only 63 drill holes, in triangular grid pattern, to insure 100 percent completeness of search. The tables presented in connection with this "optimistic" estimate are "enough to make a cow laugh"—to use a favorite expression of Comrade Khrushchev. The drilling of 63 holes would involve a total footage of 75,600 feet. This, I would point out, is the equivalent of three Mount Everests. At a cost of $5 per foot—exclusive of all mobilization costs—this would work out to $378,000. Working three shifts a day, it would require 1,008 man-days of drilling and this, mind you, simply to carry out one inspection of one undetermined seismic disturbance. If one were willing to settle for a 1-in-10 chance of verification, fewer holes would be necessary.

At this point, Representative DURHAM made the apt comment:

> If you had about 10 seismic disturbances and had to inspect them on the basis of what you told us here, you probably would have full employment in most of the country.

I am afraid that this employment would not be limited to our skilled and unskilled workers. To carry out 300 such onsite inspections per annum would probably require several entire graduating classes of seismologists, geologists, and of scientists and engineers in the critical field of nucleonics.

If the probability of detection is 1 in 1,000 and the probability of verification is 1 in 1,000—and these are far from being the most conservative estimates—then the combined probability of detection and verification is 1 in 1 million. If the combined probability figure were a thousand times smaller than this, it would still be preposterous. It would be bad enough if it were simply a matter of absurdity. But, as I have pointed out previously—and as I want to emphasize again—these estimates of probability become utterly irrelevant when you consider that they apply to tests of greater than 20 kilotons magnitude, that below this level, no detection would be possible.

How ridiculous can we get?

As for tests in the lower reaches of space or in outer space, all the evidence points to the conclusion that the Soviets would be able to conduct such tests with impunity even with devices of considerable size. As everyone knows, our Argus shot went completely undetected.

Let us assume that the Geneva network is installed in the Soviet Union and that a clandestine 100-kiloton test shot is fired at an altitude of several hundred miles somewhere in the northernmost reaches of Siberia on the fringe of the Arctic Ocean. Light-measuring instruments, if stationed close enough, might detect the explosion. But if the shot were fired against the background of a brilliant display of the aurora borealis, how could we ever prove that the transitory flicker registered by our light instruments was not actually caused by a sudden brilliant burst of the aurora? There might be electromagnetic disturbances similar to those which caused the temporary communications blackout after the Argus shot. But if the shot were fired at a period of considerable sunspot activity, how could we ever prove that the sunspots had really not been responsible? No matter how great

our suspicions might be, in the absence of radioactive debris there would be no way of clinching our case against the cheater.

It is time that we put an end to all this sorry exercise in futility and irrelevance.

It is high time—it is past time—that we presented the facts to the American people.

It is time that we woke up to the fact that these protracted negotiations are part of the conflict strategy of the Soviet rulers—that they have used these negotiations first, to impose a moratorium on nuclear weapons testing by the United States; second, to intensify the international propaganda in favor of a total test ban, without inspection or with inadequate inspection; third, to create a condition of international hysteria which would restrict or prevent the possibility of effective Western reaction to aggression.

It is time we realize that the extension of the moratorium is a deadly serious business—that a single, major, technological breakthrough by the Soviet scientists who have produced the A-bomb, the H-bomb, and the sputnik, may confront us with a choice between enslavement and annihilation.

On February 11, President Eisenhower submitted to the Soviet Government a four-point plan for ending the deadlock in the nuclear test ban negotiations. His proposal called for an immediate ban, under assured controls, of all nuclear weapons tests in the atmosphere and in the ocean, of space tests up to altitudes where effective controls can function, and of underground tests above a seismic magnitude of 4.75.

It also called for a joint program of research and experimentation, and offered to extend the ban systematically to remaining areas underground as adequate control measures were devised.

I favor the proposal of an immediate, complete, and unconditional ban on the several categories of tests that result in atmospheric contamination. Such an agreement could have gone into effect without delay since such tests are easily monitored, whereas the detection of even very large underground tests, of tests in space, and of tests over remote ocean areas, requires the establishment of extensive monitoring facilities.

By and large, however, the President's plan was a good one. It was a simple, straightforward proposal on an issue of vital importance to the whole of mankind. I agree with the President that, had the Soviets accepted this proposal, it might ultimately have paved the way for a much broader agreement on disarmament.

But, instead of accepting our proposal, the Kremlin responded with a diplomatic ploy. It announced that it was prepared to "accept" the President's proposal to ban all major tests of nuclear weapons if the West would sign a pledge not to conduct any nuclear tests, big or small, for a number of years to be decided by negotiations. A period of 4 years was suggested. Among other things, it specifically "accepted" the President's proposal that during the period of the moratorium, a joint program of research would be carried out for the purpose of improving detection capabilities.

At the time it was made, the Soviet counterproposal was hailed as a concession to our point of view. For the life of me, I cannot understand why. In my opinion, their counterproposal constituted an act of international blackmail, and we should have called it this. It was as though the Kremlin were pointing a pistol at the head of mankind and saying to us: "We refuse not to contaminate the atmosphere—unless you agree to a moratorium on undetectable underground tests, which do not contaminate the atmosphere, but which might conceivably add to your defensive capabilities."

The Soviet counteroffer conceded nothing. It was merely a rehash of the old Soviet position, substituting the concept of a voluntary moratorium for that of a formal ban on small underground tests. But instead of exposing it for the fraud it was, the President suggested that the Soviet offer was indicative of a sincere desire to come to terms; and Ambassador Wadsworth issued a joint communique with the Soviet and British representatives which carried the strong implication that the Kremlin had accepted the American proposal with certain minor modifications.

The distinguished Senator from New Mexico [Mr. ANDERSON] deserves the thanks of all of us for immediately denouncing the Soviet offer as a "phony" and for the incisive analysis which he presented to the Senate on March 22. We are equally in the debt of the Senator from Tennessee [Mr. GORE] for the dignified but forthright manner in which he raised the matter of the joint communique and explained to Ambassador Wadsworth that, in signing it, he had made an unwitting contribution to the Soviet propaganda campaign.

But Senator ANDERSON'S eloquent warning fell on deaf ears. On March 22, the very day on which he spoke in the Senate, there took place a meeting of the so-called Committee of Principals—Secretary of State Christian Herter, Allen Dulles, George E. Kistiakowsky, the President's science adviser, Atomic Energy Commissioner McCone, and Deputy Defense Secretary Douglas, sitting in for Secretary Gates. According to an article by Mr. Chalmers Roberts in the Reporter for April 27, the Committee of Principals, with only Commissioner McCone opposing, decided in favor of conditional acceptance of the Soviet counterproposal.

According to Mr. Roberts, the joint communique issued by President Eisenhower and Prime Minister Macmillan on March 29 from Camp David was based largely on the agreement reached by the Committee of Principals on March 22. In the Camp David communique, the two heads of government said that they had agreed that, once remaining issues had been resolved and a treaty signed, "they would be ready to institute a voluntary moratorium of agreed duration on nuclear weapons tests below that threshold—4.75 on the seismic instruments—to be accomplished by unilateral declaration of each of the three powers."

This statement contained two vital concessions to the Soviet point of view. By implication, it extended the scope of the proposed test ban treaty to cover undetectable tests in space. In this respect, and in consenting to a moratorium on undetectable underground test shots we abandoned the cardinal principle of enforceable inspection which has thus far guided us in our negotiations on disarmament and the test ban. In my opinion, it constituted the single most catastrophic retreat since the inception of the test ban negotiations.

I agree wholeheartedly with Mr. Arthur Krock's statement in the New York Times of March 31:

> The response of the President and the British Prime Minister to Soviet Russia's latest nuclear disarmament proposal gave Premier Khrushchev what he wanted.

Because of the softness and lack of understanding which the administration had displayed on the test ban issue, this has become the area of greatest danger at the forthcoming summit conference. But I feel that the hearings recently held by the Joint Committee on Atomic Energy provide the administration with every justification for reconsidering its position.

With all the earnestness at my command, I would urge the President and the Department of State to give the most serious consideration to the testimony of Dr. Bethe, Dr. Teller, Dr. Romney, and the other scientists who testified before the Joint Committee. In the light of this testimony, I consider it mandatory that we free our hands to resume tests that are not subject to detection and do not contaminate the atmosphere—at the very least to resume small underground tests.

I do not think the Administration need feel in the least embarrassed over revising its stand at this point. The original moratorium was based on the belief of competent scientific advisers that an adequate system of detection and verification could be devised. On the basis of the most recent scientific testimony, it is now apparent that the chances of developing such a system are exceedingly slim—certainly it is not something that can be counted on within the next decade.

In theory—despite our recent concessions—we still adhere to the position that any agreement on testing must be based on a truly enforcible system of inspection. We would be acting in consonance both with this principle and with recent scientific evidence if we now reverted to the President's eminently sensible proposal of February 11.

I believe that the fate of our country and the fate of the entire free world community may hinge upon our early resumption of underground nuclear testing. Every day of delay cuts down our nuclear technological lead over the Soviets. It is not inconceivable that, as a result of our voluntary 2-year moratorium, they have already caught up with us and surpassed us at a number

of points. Heaven knows what will happen if the moratorium is now extended for another year or 2 years—with or without a formal treaty.

FALLACY NO. 6

Fallacy No. 6 is that the cessation of nuclear tests will, ipso facto, result in a relaxation of the dangerous tensions that have grown up in the world. This fallacy we can dispose of in a few minutes because that is all it deserves.

The Conference of International Experts on Nuclear Test Detection took place in Geneva in the summer of 1958. While the conference was still in progress, and after it became apparent that the West was yielding and that a joint statement on agreed findings would be issued, the Quemoy-Matsu crisis erupted.

On October 31, 1958, the United States exploded its last nuclear test shot and announced to the world that it was embarking on a voluntary 1-year moratorium, while the possibilities of a test ban were being further explored with the Soviet Union. Simultaneously, the Soviet Government embarked—or announced that it was embarking—on a reciprocal moratorium.

Exactly 4 weeks later, on November 27, 1958, Khrushchev promulgated his famous Berlin ultimatum. The 18 months that have elapsed since the ultimatum was issued have witnessed a whole series of missile-rattling perorations by Mr. Khrushchev, the bloody riots in the Panama Canal Zone, the establishment of a quasi-Communist regime in Cuba, and stepped up activity by the Communist Parties throughout the free world.

This is the relaxation of tensions which we purchased with our voluntary moratorium on nuclear tests. I do not consider this sequence of events accidental. I am not surprised by them. It is only natural that the Communists should have been emboldened by their success in bludgeoning us into a nuclear test policy, the folly of which was eloquently described by both President Eisenhower and Secretary of State Dulles in statements made as late as the end of 1957.

My prediction is that, if we now formalize the moratorium by entering into a test ban treaty with inadequate inspection, the Kremlin will again be emboldened, and will become more demanding, not less demanding.

FALLACY NO. 7

Fallacy No. 7 is the oft-repeated statement that in the course of the Geneva negotiations the Russians have conceded far more points than have the West, that they have shown a genuine desire to reach agreement, that the two sides have already arrived at an agreement on all but 4 or 5 of the 17 articles of the treaty—and that an agreement on an enforceable test ban is, in fact, just around the corner.

It is entirely true that the Soviets have made concessions on a number of points—even on many points. But these concessions have always been on points of secondary importance. On the really basic question like the number of onsite inspections per annum, they have shown themselves absolutely adamant.

Let me give one example of the great concessions the Soviets have made. When the "big hole" theory was first presented to them at Geneva by Dr. Bethe, the Soviet delegates denied its validity. The "big hole" theory, however, is something that can be demonstrated mathematically in a black-and-white manner and which has also been verified in recent tests conducted with conventional explosives. After a period of resistance, the Soviet delegation finally abandoned its opposition to the "big hole" theory, but without specifically accepting it. This was just as if they had agreed not to argue against the proposition that two plus two equals four—but without specifically agreeing that it does.

Dr. Bethe and some of our columnists hailed this as one of the most significant of the Russian concessions and as another indication of their genuine desire to compromise. I am not a scientist but I have had some experience with facts. Consequently, I find Dr. Bethe's logic here very difficult to follow.

Compared with the altogether minor concessions which the Soviets have made on a number of points, the West has made three concessions of fundamental importance.

Our first major concession, was our agreement—in violation of everything we had previously said—to consider the questions of nuclear testing in isolation from the general problem of disarmament.

The second major Western concession was our agreement to extend the test ban treaty to cover undetectable tests in outer space. This, again, constituted a violation of our fundamental position that there should be no disarmament of any kind without enforceable inspection.

Our third major concession, and in my opinion potentially the most disastrous, was our submission to the Russian demand that the conclusion of the treaty be accompanied by a voluntary moratorium or, to be exact, by the extension of the already existing voluntary moratorium on undetectable underground tests.

It is true, too, that agreement has been reached on some 12 or 13 articles of the 17-article treaty. But the articles on which no agreement has yet been reached constitute the heart of the treaty. Let me quote the comment of the Washington Post on April 20:

> In its present form, the incomplete treaty is like an automobile with a chassis, wheels, transmission, body, dual controls, upholstery, and trim. Missing from it is the engine, electrical system, and fuel.

Finally, it may also be true that a test ban treaty is just around the corner. But, if a test ban treaty does come into being, in the light of present attitudes and of the Camp David pronouncement I believe we can safely predict that it will not be the kind of test ban agreement about which we were talking 1 year ago. It will not, in short, be a test ban agreement in which our national interests are protected by a system of enforceable inspection.

FALLACY NO. 8

The eighth fallacy is the thesis, exceedingly popular after the first Geneva conference, that the question of a test ban can easily be resolved if we simply turn the problem over to the scientists on both sides.

According to this fallacy, the scientists at Geneva, who came together unencumbered by political prejudice, had no difficulty in arriving at a meeting of the minds. The conference was conducted in an atmosphere of openness and cordiality; and there emerged from it an honest agreement on the guiding scientific principles for a test ban agreement.

The true story of what happened at the Geneva conference is very far from the romantic idyll which was presented to the press of the world.

In checking through the documents pertaining to the conference, the first thing that strikes one is the almost indecent haste with which we rushed to get to Geneva. Here was a projected conference of extraordinary complexity, in a field where there was virtually no body of experience to serve as a guide. But the delegation to the conference, consisting of 3 senior scientists and some 20 technical advisers, was thrown together, briefed, and dispatched to Geneva all within a period of a few weeks.

The picture of idyllic apolitical relations which were supposed to have existed at the conference, was badly punctured by the recent testimony of the American scientists to the Joint Congressional Committee on Atomic Energy. Let me quote a few items from these hearings.

Dr. Wolfgang H. Panofsky, High Energy Physics Laboratory, Stanford University, told the committee:

> After the report of the 1958 conference of experts was filed with the governments of the three countries, all of them (including the United States) formally accepted the report. As a result, the U.S.S.R. delegations like to refer to the report as a formal agreement on technical facts rather than as a technical working paper. In so doing, they propose that the experts' report is an unchangeable point of departure for the political negotiators. On the other hand, the United Kingdom and United States delegations have assumed that the technical facts should be brought up to date to reflect changes in our knowledge.

Dr. Harold Brown, Deputy Director of the Livermore Weapons Laboratories, made this commentary on the behavior of the Soviet scientists.

> On a number of occasions, I have seen them [the Russian scientists] accept something in private scientifically, or at least appear to accept it scientifically, and then come back for the record with quite a different attitude. There is always a technical explanation. Sometimes it holds almost no water. Sometimes it is quite fallacious. Other times there is some basis to what they say.

Dr. Brown went on to say:

> No conference of experts' report can logically be criticized for not taking adequate account of the self-evident fact that a violator of a treaty or a moratorium on nuclear weapons tests must be expected to take full

advantage of whatever methods he can find to reduce the probability of detection.

One can say, looking back, that perhaps not enough attention was paid to them (the difficulties of detection) particularly in such items as the possibility of very large decoupling, the difficulties of on-site inspection, and the possibilities of shielding explosions in space.

I cannot conclude my comments on the fallacy of the scientific idyll at Geneva without some reference to Dr. Hans Bethe, the chief adviser on nuclear testing to the President's Scientific Advisory Committee.

Dr. Bethe is one of the greatest living theoretical physicists, and, as a man of science I have nothing but respect for him. He has the good and the bad qualities of the theoretical physicist. He is by reputation stubborn in his convictions, but willing to listen to demonstrable evidence when he is proven wrong. Unfortunately, Dr. Bethe's predictions in the field of science have frequently been wrong, and his predictions in the fields of technology, military science, and politics have fared even worse.

In the immediate postwar period he frequently declared that the Soviets would not get the atomic bomb for decades. Before the H-bomb, he took the stand that it could not be made and should not be made. And when we developed the hydrogen bomb, he was just as emphatic in his declaration that the Soviets would never discover the secret for themselves. Before the big hole theory was developed by Dr. Albert Latter, Dr. Bethe had declared that decoupling was impracticable. After Latter had developed his theory, Dr. Bethe was big enough to examine and confirm the validity of the theory. In the light of this new knowledge, Dr. Bethe was also realistic enough to propose a substantial enlargement of the original Geneva detection network. But, in proposing it, he came up with the proposition that it was possible to construct completely tamperproof instruments and communication lines for his network. Experts with whom I have discussed the matter tell me that to this date no such thing as a completely tamperproof mechanical device has yet been produced. Nor did Dr. Bethe offer any suggestions.

On the basis of such a record of error on vital matters, what value should we place on the political sagacity of Dr. Hans Bethe?

At this hour of peril, how much reliance can the Nation place on the ability of the President's chief test ban expert to accurately forecast the course of future events in science or in politics?

THE QUESTION OF FALLOUT

There is another argument that used to play a central role in the antitest-ban agitation: That is, the danger of fallout. I have not listed this as a fallacy because once upon a time this argument had some validity. According to the most recent findings, the danger is substantially less than was previously believed, but it is real, nevertheless. But fallout is no longer an issue. No one proposes the resumption of tests that contaminate the atmosphere. Such tests, in my opinion, will not be resumed by either side, even in the absence of a formal treaty. The only question at issue today is whether we should leave ourselves free to conduct tests that do not contaminate the atmosphere and that are essential to our national security.

OUR PRESENT POSITION, AND A PROPOSAL FOR ACTION

Now that I have examined the major fallacies of the proponents of the nuclear test ban, I should like, in closing my remarks, to reexamine our present situation and to suggest the outline of a positive plan of action.

I realize, of course, that it is not enough to point to dangers and to criticize. A purely negative approach on the question of nuclear testing could have disastrous propaganda consequences. But we do not have to be negative. I am convinced that, if we give the facts to the people of our own country and of the other free countries, we shall be able to carry the propaganda offensive to the Kremlin. Let me suggest the outline of such an approach.

First. We inform the Soviets that in the light of recent scientific testimony, an adequate inspection system for underground tests, based on fixed stations, would present virtually insuperable technological difficulties, would be prohibitively costly, would if installed, provide no means of detection for tests under 20 kilotons magnitude.

In the light of this testimony, it is obvious that there would be only one way of effectively policing an agreement banning all categories of tests. This would be the acceptance of the principle of complete openness by both sides. We, therefore, propose a test ban based on President Eisenhower's "open skies" proposal, plus unlimited right of ground inspection, and policed in each country by a stated number of aircraft and inspection teams enjoying complete freedom of movement.

Second. If the Soviets do not accept our proposal for a complete test ban based on "open skies" and unlimited rights of inspection, we propose, as an alternative, an immediate ban on all tests that contaminate the atmosphere. We point out that an agreement on this simple but basic proposal would respect the opinions of mankind, would be easily monitored, and would at the same time, pave the way for further and broader agreements.

Third. If the Soviets, in turn, reject our proposal for a worldwide ban on "dirty" tests, we announce that we ourselves will voluntarily observe a moratorium on such tests. We express the hope that the Soviets will also observe a voluntary moratorium in the absence of a formal agreement—but we warn that, if there is ever conclusive evidence that the Soviets have resumed such tests, then we shall have to reconsider our own position.

Fourth. We announce our willingness to extend the ban to other categories of tests, if, as, and when enforceable methods of inspection are developed.

Fifth. We leave ourselves free to resume tests in space and underground.

Sixth. We commit ourselves, with testing again possible, to an all-out program of nuclear weapons development, conceived on a scale that will not merely maintain our lead over the Soviets but will increase it from year to year. This program must be continuous. We must not again rest on our laurels—as we have done under both Democratic and Republican administrations—when we reach the next technological plateau.

Seventh. We declare our intention (a) to embark on a so-called "plowshare" program—that is a program of research on hydrological and geographic engineering and on other peaceful uses of nuclear explosions, (b) to appropriate $100 million for this program of research, (c) to use our underground weapons test program, insofar as this can be done, to further our "plowshare" program, (d) to disseminate freely all information resulting from this program.

Eighth. We commit ourselves publicly to announce all tests.

Ninth. We act immediately on the President's suggestion of February 3 that we arm our NATO allies with nuclear weapons. Nothing would do more to reinvigorate NATO or to persuade its member nations of the seriousness of our intentions.

Tenth. Recognizing the fact that nuclear physics is not an American monopoly, that Italian, Hungarian, German, Danish, and other scientists all played an important role in the development of the atom and hydrogen bombs, we call for and offer to participate in a joint NATO effort in nuclear weapons development. Such an enterprise would not be designed to replace our own facilities, but to cooperate competitively with them. Nothing would do more to tighten our alliance and to challenge the Russians. The existence of such NATO-wide research facility would also add to our leverage in pressing the Kremlin for "openness."

On May 7, the President stated that we will resume underground nuclear testing, presumably by the end of the year. This declaration was hailed by many as a welcome reversal of policy. But his statement leaves much unanswered and even more undone.

It commits us to limit the new test series to nonmilitary devices—when the crying need is for underground tests of new warheads and new devices designed to provide our land forces with tactical nuclear weapons and our defenses with antimissile capabilities.

It still leaves us committed to the offer made in the Camp David communique of May 29. This called for (1) a treaty banning not only detectable tests in the atmosphere, underwater, underground, and at high altitudes, but also banning undetectable tests in space; and (2) a moratorium on undetectable underground tests while a research program on improved methods of detection was carried forward.

It ignores the fact that with each new extension of the moratorium—no matter what we may say about our intentions at the end of the stated period—it becomes psychologically more difficult to renew testing.

In the war of propaganda, the Communists have used the test ban issue to place the West on the defensive, and to create a condition of international hysteria which would restrict or prevent the possibility of Western reaction to Communist aggression. They have been able to place us on the defensive for the simple reason that we have not given the facts to the American people and the people of the free world. The President's statement of May 7 still does nothing to give them the facts.

The President's statement still leaves us without a positive program that would enable us to carry the propaganda offensive to the Communists.

The President's offer of March 29 already conceded far more than should have been conceded. His statement of May 7 strongly suggests the conclusion that at the forthcoming summit conference it will be used as a bargaining device, and that our offer of March 29 may now be regarded only as an opening position which will be further compromised.

In the light of Khrushchev's recent conduct, in the light of the Berlin ultimatum, in the light of the situation in Cuba, and the many other evidences of aggression and subversion, what possible justification can there be for a continuation of the moratorium on underground tests—with or without a treaty banning tests in detectable media?

For my own part, as I have stated previously, I believe it can be taken as a virtual certainty that the Kremlin has not been observing a corresponding moratorium, and that it will not do so if a treaty is signed.

If the Administration does not accept this point of view, is it prepared to assure the American public that the Kremlin—its opposition to inspection notwithstanding—has honored the moratorium and will continue to do so? And if it cannot offer this assurance, on what grounds does it justify the extension of the moratorium?

By our exclusive reliance on the doctrine of massive retaliation; by our failure to concentrate on the development of clean tactical nuclear weapons as the chief means of offsetting the Communist superiority in manpower; by our failure to arm our NATO allies with the nuclear arms that are available; by our voluntary 2-year moratorium on tests—which, I am positive, have not been reciprocally observed by the Communists; by our failure to accord the antimissile missile the priority it deserves; by our failure to explore the potentialities of the neutron bomb and of the so-called Christofilos effect; by our failure to pursue the further development of nuclear weapons with all the energies at our command; by our recent abandonment of the principle that all disarmament measures, including a test ban, must be based on a system of enforceable inspection—by all these catastrophic errors in judgment, we have placed the free world in mortal peril.

That is why I am worried. That is why I have spoken at such length today.

The Pulitzer prize-winning novel, "Advise and Consent," pictures an America of a few years hence, an America in which demagogs can inflame huge gatherings and bring them to their feet cheering with the slogan, "I would rather crawl to Moscow on my hands and knees than be killed by an atomic bomb."

Is this to be the image of America tomorrow? God forbid it. For should this book prove prophetic, it will mean that our people have rejected the choice between liberty and death made by Patrick Henry and the Founding Fathers, the choice which drew the cheers of America and of free men everywhere from 1775 down to the recent past.

It would mean the victory of the apostles of nuclear surrender. It would signify our total moral and spiritual capitulation.

It would mean that free America has chosen a slavery which is worse than death.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. I understand that the conference report on the mutual security bill is ready. I ask the distinguished Senator from Alabama [Mr. SPARKMAN] to submit it.

MUTUAL SECURITY ACT OF 1960—CONFERENCE REPORT

Mr. SPARKMAN. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of today, p. 10167, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that there be printed at this point in the RECORD a statement prepared by the chairman of the Committee on Foreign Relations, the Senator from Arkansas [Mr. FULBRIGHT], in connection with the conference report.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR FULBRIGHT

This conference report, like all conference reports, represents a compromise. There are some things in it which I wish were not. There are some things not in it which I wish were. I am sure this is true of all the Senate conferees, but on the whole, we are reasonably well pleased with it and are glad to recommend it to the Senate.

The overall total authorized by the bill is $1,366,200,000, compared with $1,405,500,000 in the Senate bill and $1,318,400,000 in the House bill. The accompanying table and statement show the figures in detail, and explain other provisions of the bill.

It is becoming increasingly clear to me that this program cannot survive many more annual authorizations. Every year there is a steady accretion of new restrictions, new conditions which must be met, and new procedures which must be followed in the administration of the program. The cumulative result of these provisions is to make the program so slow and cumbersome as to reduce its effectiveness very greatly. When, under these handicaps, the program fails to perform as it should, its opponents seize on this as an excuse to add more handicaps.

Another mischievous result of annual authorizations is the inordinate amount of time they take in the Congress. Every year the Committee on Foreign Relations is virtually precluded from considering any other business, except the most routine kind, for a period of 6 weeks to 3 months. This year, for example, the committee began its hearings March 22, and here we are completing action the second week in May. In the meantime, we have neglected the International Development Association, the Chicago water diversion, the Antarctic treaty, a badly needed revision of passport legislation, the Japanese security treaty, and various other matters. I am not suggesting that all of these would have been disposed of in the absence of mutual security, but certainly many of them would have been given more consideration than they have so far received.

Neither am I suggesting that the mutual security program should be freed of all legislative oversight. But there comes a point at which legislative oversight is self-defeating, not only for the program overseen but also for the committee overseeing it. We frequently hear complaints, for example, that more information on the program should be made available to Congress. I am not against the Congress having information, but I am reminded of the story about the little girl who went to the library and asked for a book on penguins. She was given a large volume and after reading only part of it, returned it with the comment that "This is rather more than I care to know about penguins." I submit that Congress already has rather more information about the mutual security program than it can digest. The Committee on Foreign Relations has file cabinet on file cabinet of voluminous documents which are widely unread. If the committee were to undertake to scrutinize all these documents and to follow up all the questions they suggest, the whole New Senate Office Building would not be big enough for the staff the committee would need. It might be said that the committee should enlarge its staff, but this, too, would be self-defeating. No matter how many staff members we have, there are still only 17 Senators on the committee. Each of those Senators, as we all know only too well, has a great many other things to do and can absorb only so much about the mutual security program. The staff would work to no avail if it produced more than the committee could digest.

The function of a legislative body is not to second-guess every administrative action, but rather to concern itself with broad questions of policy. The more time and effort the Senate spends on administrative detail, the less time and effort it can spend on policymaking, which is its true role in this Government. In my judgment, we have already gone so far that we allow our policymaking function to suffer and at the same time we seriously handicap the administrators of the program. I think it is

significant that in the Senate debate and in the conference committee this year, the great preponderance of issues presented went not to the amounts of money but to administrative strings and conditions of one kind or another.

I hope that next year, not only for the sake of the program, but also for our own sake, steps can be taken to put more, perhaps all, of the program on a multiyear authorization. This would leave the way open for periodic review by Congress. Perhaps military assistance could be looked at one year, defense support the next, technical cooperation the next, and so on. My urgent plea to whoever moves into the White House next January is that he give this matter his close attention.

	Administration request	House bill	Senate bill	Conference agreement
Defense support	$724,000,000	$675,000,000	$700,000,000	$675,000,000
Bilateral technical cooperation	172,000,000	172,000,000	172,000,000	172,000,000
U.N. technical cooperation	33,000,000	33,000,000	33,000,000	33,000,000
OAS technical cooperation	1,500,000	1,500,000	1,500,000	1,500,000
Special assistance	268,500,000	256,000,000	260,000,000	256,000,000
U.N. High Commissioner for Refugees	1,500,000	1,500,000	1,100,000	1,300,000
Escapees	3,500,000	3,500,000	3,500,000	3,500,000
U.N. Children's Fund	12,000,000	12,000,000	12,000,000	12,000,000
Palestine refugees	[1] 18,500,000	[1] 18,500,000	[2] 22,000,000	[1] 16,500,000
Ocean freight	2,000,000	2,000,000	2,000,000	2,000,000
ICA administration	40,000,000	40,000,000	40,000,000	40,000,000
Atoms for peace	3,400,000	3,400,000	3,400,000	3,400,000
Contingency fund	175,000,000	100,000,000	155,000,000	150,000,000
Total	1,454,900,000	1,318,400,000	1,405,500,000	1,366,200,000

[1] Plus unobligated balances of $6,500,000.
[2] Unobligated balances of $6,500,000 to revert to Treasury.

Military assistance to Latin America: The conferees agreed on the provisions of the Senate bill as reported by the Foreign Relations Committee. The amendment added on the Senate floor, dealing with reimbursement to the Defense Department, was eliminated as unnecessary and redundant.

Defense support information to be furnished Congress: The House bill contained a proviso making the authority for defense support contingent upon the furnishing, on request, to the General Accounting Office and congressional committees of all documents and other material relating to defense support. This was accepted by the conferees after it had been modified to provide that either the information must be furnished or the President must certify that he has forbidden it to be furnished and give his reasons. This was one of the most important points at issue, and it was resolved in a manner satisfactory to the Senate conferees. As finally agreed to, it allows the President to exercise his constitutional prerogatives without stopping the whole defense support program.

Development Loan Fund: The House accepted most of the Senate provisions designed to broaden the purposes of the Development Loan Fund and to give greater emphasis to social, as distinguished from strictly economic, activities. The purposes of the Fund, and the criteria it is to consider in passing on loans, are broadened to include the development of free economic institutions as well as economic resources and to make it clear that agricultural as well as industrial production is covered. The conferees retained the Senate language stating the sense of Congress that, consistent with the other purposes of the Fund, special consideration should be given to housing loans and guarantees, but the conferees deleted the section of the Senate bill relating to housing projects in Latin America. This latter action was taken largely on the grounds that in view of the new emphasis given to housing worldwide, special reference to Latin America was unnecessary and redundant. The conferees were agreed, however, that conditions are peculiarly favorable in Latin America, which is in an intermediate stage of economic development, for the kind of activities envisaged by the amendments; and the conferees expect that many of these activities will in fact be carried out in Latin America.

The House bill contained an amendment, for which there was no corresponding provision in the Senate bill, and one of the effects of which would have been to prohibit the Development Loan Fund from making advance commitments or allocations to support broad programs of economic development, except in special and limited circumstances. The amendment would have restricted the Fund instead to specific projects and would have surrounded them by so many stringent criteria that, in the opinion of the Senate conferees, the Fund would have had no chance of effective operation.

The Senate conferees resisted this amendment most strongly and were successful in securing a modification which, in their judgment, will give the Fund an acceptable degree of flexibility.

It seemed to the Senate conferees that the amendment was based upon a misconception of the purpose of Congress in creating the Fund. Implicit in the amendment was the concept that the Fund should operate as a hard-boiled bank, restricting itself to specific, bankable projects. In point of fact, the legislation creating the Fund specifically provides that "it shall be administered so as not to compete with private investment capital, the Export-Import Bank or the International Bank for Reconstruction and Development." Moreover, the amendment in question would have made the Fund's operations subject to even more severe restrictions than those applying to the Export-Import Bank which frequently extends line-of-credit loans without meeting the criteria for specific projects which the amendment would have applied to the Fund.

Finally, the amendment seemed to be based, at least in part, upon criticism of State Department dominance of the Fund and of the weight given political considerations in the Fund's operations. This is precisely what Congress intended, and the legislative history of the Fund's creation and early operations allows of no other interpretation. In 1958, for example, when the Fund was incorporated, the Committee on Foreign Relations report contained the following statement:

"The committee has acquiesced in the administration's desire to incorporate the Fund, because a Government corporation has many advantages of business management and stability. But the committee is emphatic that incorporation does not imply any greater degree of independence in the Fund's operations. The Fund is an instrument of American foreign policy, and is intended to be under the foreign policy direction of the Secretary of State, whether incorporated or unincorporated."

Under the language agreed to by the conferees, the Fund will continue to be free to support sound programs of economic development as well as specific development projects.

International Development Advisory Board: The House bill repealed section 308 of the act which provides for the International Development Advisory Board. Although this Board once performed a useful function, it has languished in recent years and the Senate conferees agreed it might as well be abolished.

Fifty-fifty shipping: Both the House and Senate bills authorized funds for the Indus Basin development to be used without regard to the 50–50 shipping requirement. The House bill, however, contained a proviso requiring compensating allowances to be made in other shipments to the same area. It seemed to the Senate conferees that this was too confining, and agreement was reached on a proviso requiring compensating allowances in other shipments to the same or other areas. This will enable the adjustment to be made worldwide instead of only in regard to south Asia.

Palestine refugees: This presented one of the most complicated issues before the conference. The House bill authorized $18.5 million for 1961 and repealed a proviso which earmarked 10 percent of the funds for repatriation or resettlement. This had the effect of freeing $6.25 million, which had accumulated under the proviso, for relief purposes. The House bill would have likewise authorized the continued availability of an additional $250,000 in other unobligated funds.

The Senate bill authorized $22 million for 1961 and also repealed the earmarking proviso. At the same time, however, it provided that the funds which had accumulated under the proviso, as well as the other unobligated funds, should revert to the Treasury.

On this point, the conferees agreed to an authorization of $16.5 million for 1961, to repeal of the proviso, and to continued availability of unobligated funds. The net result is to provide a total availability for 1961 of $23 million, or $2 million less than the House bill and $1 million more than the Senate.

The Senate bill contained two other substantive provisions not found in the House bill. One of these would have prohibited use of U.S. contributions after January 1, 1961, for programs of relief heretofore administered on the basis of ration cards except for refugees whose need and eligibility for relief have been certified after July 1, 1960. The other directed the President to include in his recommendations to Congress for the 1962 mutual security program specific recommendations for the progressive repatriation and resettlement of refugees and for reducing U.S. contributions to the UN Relief and Works Agency.

The House conferees felt strongly that the Senate provisions were too tightly written and that, in view of the conditions existing in Jordan, they would be impossible of administration and would interfere with achievement of U.S. objectives in the area. The Senate conferees agreed to a revised version which expresses the sense of Congress that "the earliest possible rectification should be made of the Palestine refugee rolls in order to assure that only bona fide refugees whose need and eligibility for relief have been certified shall receive aid from the Agency and that the President in determining whether or not to make U.S. contributions to the Agency should take into consideration the extent and success of efforts by the Agency and the host governments to rectify such relief rolls." The revised language further provides that the President is to report to Congress next year on the progress made toward rectifying the relief

rolls as well as toward repatriating and resettling the refugees.

President's special education and training fund: The House bill repealed section 412 of the act which earmarked $10 million a year of mutual security funds for each fiscal year of 1960 through 1964 for the President's special education and training fund. The Senate conferees acquiesced in view of the provision in the current appropriation act prohibiting use of funds for this purpose.

Loans to small farmers: The House bill contained a section stating the policy of the United States to provide agricultural assistance "particularly through loans of foreign currencies to associations of operators of small farms, formed for the purpose of joint action designed to increase or diversify agricultural productivity." The House bill limited unpaid balances of loans under this section to $10 million in the aggregate and to $25,000 for any association.

The conferees modified the section slightly to provide for foreign currency loans "for" rather than "to" associations of small farmers. This modification will make it plainer that lump sums can be made for this purpose to local institutions, such as agricultural banks, and that U.S. Government agencies need not directly administer small individual loans.

The activity contemplated by this section is one which is badly needed in many underdeveloped countries, and the Senate conferees were glad to agree to the House provision, as modified.

Congressional travel expenses: The Senate bill contained a provision, which was not in the House bill, modifying existing law regarding congressional use of foreign currencies. Existing law requires each congressional committee to make a consolidated report for publication in the CONGRESSIONAL RECORD showing its total itemized expenditures of foreign currencies for the preceding calendar year. The Senate bill expanded this requirement to include a report of dollar expenditures from appropriated funds and publication of the expenses of each member and employee of a committee.

The conferees agreed to retain the requirement for reporting dollar expenditures and to insert clarifying language which was suggested by the House and which makes it plain that the expenditures to be reported are those incurred as a result of the official activities of members and employees of committees. The new language follows existing law in not requiring publication of reports of individual members or employees.

Upper Nile cultural monuments: The House bill did not contain the Senate bill's provision respecting U.S. participation in an internationally financed program to preserve the cultural monuments of the upper Nile from flooding upon completion of the Aswan Dam. Instead of the rather elaborate Senate provision, which spelled out conditions for U.S. participation in some detail, the conferees agreed on a simple statement expressing the sense of Congress that prompt and careful consideration should be given to the proposal and asking the President to submit his recommendations in this respect to Congress on or before March 1, 1961.

Standards for land and water resource projects: The House bill contained a provision applying the domestic standards of the Budget Bureau to nonmilitary flood control, reclamation, and other water and related land resource projects financed abroad with nonmilitary mutual security funds. A comparable provision had been rejected when offered in the Senate, and the Senate conferees stood firm by this position, taking the view that domestic standards are inapplicable abroad and that the attempt to apply them would result in paralysis. The conferees agreed to a provision requiring that costs and benefits for these foreign projects be computed insofar as practicable in accordance with Budget Bureau domestic standards, but the new language does not make these domestic standards ironclad for foreign projects.

Pay of employees abroad in foreign currency: The Senate bill authorized the chief of a U.S. diplomatic mission in a country, whenever he determined that the achievement of U.S. foreign policy objectives required it, to issue regulations governing the extent to which Government employees and contractors in that country were to receive their pay and allowances in foreign currencies. The House conferees accepted this provision with only minor changes. Under the conference language, the determination is to be made by the President, who may then direct the chief of mission to issue the regulations. It was never contemplated that the chief of mission would act except upon instructions, or with the approval, of the Department of State and the President. It should be emphasized that the determination required by this section relates to the achievement of U.S. foreign policy objectives. Although it is not intended to work an undue hardship on anyone, the convenience of members of the Armed Forces or other affected employees is not to be taken into account. Other changes made in the Senate version simply clarify it as applying to enlisted men as well as officers and also as embracing employees of contractors.

Security clearance: The House bill substituted, for the employees security clearance requirements in the present law, a provision applying the standards and procedures of Executive Order 10450. This is the Executive order which covers security clearance for other Government employees, and the Senate conferees agreed to put mutual security employees on the same footing.

Duties of Inspector General and Comptroller: The House bill deleted the provisions of existing law making the Inspector General and Comptroller responsible for designing the form and prescribing the financial and statistical content of the annual mutual security program presentation to Congress The Senate conferees agreed to this provision.

Congressional presentation: The Senate bill contained an amendment, adopted on the floor, which prescribed in some detail the content of the annual program presentation to Congress for military assistance. The amendment also, however, deleted the requirements of existing law prescribing the content of program presentation for defense support. The House bill contained no new provision on this subject, and the Senate conferees agreed to leave the existing law as it is.

Assistance to Cuba: Senate conferees agreed to a provision of the House bill prohibiting assistance to Cuba "unless the President determines that such assistance is in the national and hemispheric interest of the United States." This applies to bilateral aid programs; it would obviously be impractical to try to apply it to multilateral programs of the Organization of American States and the United Nations and its agencies.

Use of Public Law 480 currencies for health and education: The Senate bill contained a highly technical amendment to section 104 of the Agricultural Trade Development and Assistance Act (Public Law 480), the effect of which was to make available currencies accruing under title I of that act for health and education programs related to economic development, without appropriation, while continuing to require appropriation of such currencies for health and education programs of direct benefit to the United States and not related to economic development. This subject had not been considered by the House, and the Senate conferees agreed to delete the Senate provision, with the hope that further consideration can be given to the problem next year.

Use of title II of Public Law 480 for economic development: The House bill contained a provision, which was rejected on the Senate floor, authorizing the disposal of surplus agricultural commodities under authority of title II of Public Law 480 on a grant basis for purposes of economic development as well as for purposes of famine and other emergency relief. The Senate conferees agreed to this expanded authority for a period of 1 year, during which time Congress can review the matter on the basis of trial experience.

Payment of general average contributions: The House bill contained a rather complicated amendment relating to payment of ocean freight charges on relief goods shipped under title II of Public Law 480. The amendment was designed to meet a rare but embarrassing situation which arises when a portion of a ship or its cargo is damaged or destroyed in order to save the ship or the remaining cargo. In these circumstances, the owners of the ship and of the remaining cargo are liable, pro rata, for the damage. Although the United States pays the ocean freight on title II relief shipments, title to the commodities passes to the recipient country at the U.S. port. Thus when, as occurred in at least one instance, some other cargo on a ship is damaged, the recipient government becomes liable for claims against a gift of relief goods. The House amendment, which was agreed to by the Senate conferees, will enable the United States to pay these claims, which are known in admiralty law as general average contributions.

Food and Agriculture Organization: The Senate bill repealed the $3 million ceiling on U.S. annual contributions to the U.N. Food and Agriculture Organization, leaving intact the ceiling of 33⅓ percent of total contributions. The House bill did not contain a similar provision, and the Senate conferees receded in view of the fact that the dollar ceiling will not become an acute limitation until next year and the matter can be further considered at that time.

Assistance to foreign students and teachers of foreign languages: The Senate conferees receded from provisions of the Senate bill authorizing assistance to universities for orientation programs for foreign students and assistance to American teachers of foreign languages for study abroad. This was done reluctantly and in the hope that these programs may be further considered in connection with other legislation.

In other respects, the bill agreed upon in conference is in substantially the same form as the bill which passed the Senate.

Mr. SPARKMAN. Mr. President, the Senator from Arkansas is absent on official business today and is unable to be present, but he prepared a very comprehensive statement regarding the conference report before he left.

Mr. President, there were no great differences between the Senate version and the bill as it passed the House. There were some differences. There was a difference as to amount, and some of the amendments were in different wording. The conferees met in two or more sessions and were able to compromise their differences, and the report is a compromise of the differences between the two Houses.

There was no great difference between the amount of money. The amount was compromised by dividing the difference almost evenly. I believe from the standpoint of the Senate the Senate conferees did a very good job. There were some things which the Senate had written into the bill upon which the House conferees were absolutely adamant, but by

and large I believe the action of the Senate was more generally adopted than was the action of the House. I ask for a favorable vote on the conference report.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. WILLIAMS of Delaware. What did the conferees do in connection with the amendment which the Senate approved 68 to 0, the purpose of which was to require Members of Congress and congressional employees to render an accounting of their expenditures on trips abroad?

Mr. SPARKMAN. The point is covered in the statement prepared by the Senator from Arkansas [Mr. FULBRIGHT]. I read the language from his explanatory statement:

> Congressional travel expenses: The Senate bill contained a provision, which was not in the House bill, modifying existing law regarding congressional use of foreign currencies. Existing law requires each congressional committee to make a consolidated report for publication in the CONGRESSIONAL RECORD showing its total itemized expenditures for foreign currencies for the preceding calendar year. The Senate bill expanded this requirement to include a report of dollar expenditures from appropriated funds and publication of the expenses of each member and employee of a committee.
>
> The conferees agreed to retain the requirement for reporting dollar expenditures and to insert clarifying language which was suggested by the House and which makes it plain that the expenditures to be reported are those incurred as a result of the official activities of members and employees of committees. The new language follows existing law in not requiring publication of reports of individual members or employees.

This is one of the provisions with respect to which the House conferees were quite insistent. We succeeded in getting some modification, but I invite the attention of the Senator from Delaware [Mr. WILLIAMS] to the fact that the first provision which went into the bill dealing with this use of foreign currencies originated in the House of Representatives. The House feels a protective interest in connection with this particular provision, and the House conferees felt that what they insisted on was better than what the Senate had proposed. The House conferees were not willing to go beyond the modification we were able to get, as referred to in the statement of the Senator from Arkansas [Mr. FULBRIGHT].

Mr. WILLIAMS of Delaware. The Senator referred to the feeling on the part of the House conferees that they have a protective interest. What does the Senator mean by "protective interest"?

Mr. SPARKMAN. As the Senator knows, I mean that Members of the House feel it is more or less a project of the House since the measure originated there, and they probably feel they gave thought to the legislation before the Senate did. I am not willing to concede that, because the subject has been discussed here for a good many years, but the first language which went in, as I recall, came from that source.

Mr. WILLIAMS of Delaware. I feel inclined to compliment Members of the House for feeling proud of what was perhaps their original "baby." However, I am wondering if the Senate conferees and the Senate should not likewise feel a great deal of pride in the fact that they approved this amendment unanimously, and I wonder if we should not insist on our amendment. I think the Senator from Alabama will agree with me that there is merit in the proposal that the American taxpayer should have an accounting of what we spend on any official trips. I say that as one who feels very strongly that official trips abroad have a constructive purpose and that when Members of Congress and members of the staff are on official business, expenses should be paid out of the Public Treasury. I support that principle entirely. But I likewise support the principle that when we come back from such official trips we should do just as we must do in private industry; namely, render an accounting for what we have spent of the taxpayer's money.

Mr. SPARKMAN. I am in complete agreement with the Senator from Delaware. I have often said that one of the best things we ever did was to authorize the use of a very small percentage of counterpart funds in this way. Instead of condemning what are so often referred to as "junkets," I think we ought to encourage Members of Congress to travel and visit other countries on official business.

I do not mean so-called junketing, but working. I believe it is well to use these funds for this purpose. I agree also with the Senator from Delaware that there ought to be a complete accounting. There is absolutely no justification for some of the loose handling of funds I have heard of. I have done a good bit of traveling, and I have used counterpart funds, but I have never seen the loose type of handling of these funds that is sometimes referred to by various columnists and other writers. It may be possible, but not if the spirit of the law is observed.

I surely agree with the Senator from Delaware that there ought to be a complete accounting. The House conferees apparently felt that their method of accounting is superior to that provided in the Senate language. As I said a few minutes ago, it is my understanding that they were adamant on this point.

I was not present in this particular conference meeting. I had gone to Alabama for the election. I was present at the conference committee meeting at the last session of the conferees. However, I was not there when this matter was considered. It is my understanding that the House conferees absolutely insisted upon that langauge, and the most our conferees could get was the modified language to which I called the Senator's attention in the statement of the Senator from Arkansas [Mr. FULBRIGHT].

Mr. WILLIAMS of Delaware. The provision is nothing more than a rewriting of the existing law except that it does include dollar expenditures.

Mr. SPARKMAN. It does include dollar expenditures.

Mr. WILLIAMS of Delaware. I agree fully with the Senator from Alabama that with the amount of money our Government is spending throughout the world it is not only important but essential that Members of Congress on occasion take official trips to familiarize themselves with the expenditures. However, I believe it likewise is important that we provide adequate accounting. I am confident that the overwhelming majority of those who make these official trips spend money just as conservatively as if they were spending their own money. We would be blind, however, if we did not recognize that some will abuse the privilege. With the present cloak of secrecy thrown around it the instances of abuse are reflections on those who conduct themselves properly.

Any foreign traveler, whether he be a Member of Congress or anyone else, who abuses that privilege is not a good ambassador for our country. In fact, a lavish spender is the worst kind of ambassador we could have. I believe that if we required an accounting we would eliminate much of the criticism which is directed against these congressional trips. I am wondering whether the Senator from Alabama agrees with me. If so and if the Members of the Senate feel it is an important amendment and has much merit, does not the Senator feel that we should send the conference report back to the House and insist on the Senate position, and that if we did so the House members might look at the matter in a different light?

Mr. SPARKMAN. It is my understanding it would be most difficult to get a further concession from the House conferees. I should dislike very much to see the conference report sent back to the House. I remind the Senator from Delaware that a Member of Congress, either of the House or the Senate, is not allowed to use counterpart funds unless he gets authorization from the chairman of his committee.

Furthermore, when he returns, he must make an accounting in detail to the committee that authorizes the expenditure. It is not published all over the country. Frankly, I do not know, but I have heard it said, that one reason why some Members of Congress do not want that information published is that one Senator might take a short trip, perhaps to Mexico—I am using that as an example—in which case only a few dollars would be spent, whereas another Member might visit 15 different countries. As that appears in the press, the only thing shown is the amount spent, not the extent to which the visitation was made. Therefore the publicity does not give a fair basis for comparison.

I will say to the Senator from Delaware that I was not present when his amendment was agreed to. Had I been here, I am sure I would have been one of those who voted for it, because I belive in strict, well-protected, accounting, I will say. I am told that the Senate conferees did their very best in the conference, but that the House was adamant on this particular provision.

Mr. WILLIAMS of Delaware. I assure the Senator from Alabama that I certainly was not sponsoring this proposal with the thought of holding any Member up to ridicule.

Mr. SPARKMAN. I realize that, of course.

Mr. WILLIAMS of Delaware. I do not believe that the press or the people back home would misinterpret these expenditures as referred to by the Senator. There is a difference, of course, between going to Mexico and going to several countries. The best example I know of to indicate that no misunderstanding would arise is that I believe six members of the Committee on Foreign Relations, of which the Senator and I are members, have upon their return rendered such an accounting to the people, and I have never seen any adverse comment in the press on their expenditures. On the contrary, several complimented them on the fact that these Members had made the trip and that they had rendered the accounting.

Mr. SPARKMAN. I may say to the Senator from Delaware that I have been on trips on two or three occasions, and that on those occasions the funds were handled by a staff member of the committee. I had nothing to do with the handling of funds at all. The staff member of the committee handled them, and a full accounting was made to the committee. There are ways by which that can be handled in a proper manner. I believe the majority of Members of Congress handle it that way.

Mr. WILLIAMS of Delaware. I did not mean to imply otherwise. The only point I am making is that the money spent is money which belongs to the taxpayers and that the taxpayers are entitled to an accounting.

Mr. SPARKMAN. Of course, I do not believe the Senator from Delaware can properly say that the taxpayers are not getting an accounting now. They are not getting it in the same detail the Senator from Delaware wishes. Each committee must give a report as to what that committee spends, and the committee can give as much other information as it desires to give—as to how many Members traveled and the extent to which they traveled. So far as the published account is concerned, it is a lump-sum accounting of the committee as a whole, showing what the committee spent.

The taxpayers are getting an accounting on the amount of counterpart funds spent. We now include the dollar expenditures also. I certainly hope that the Senator will not insist on disagreeing to the amendment, and that he will permit the conference report to be adopted, because I am assured that it represents the best that our conferees were able to do.

Mr. WILLIAMS of Delaware. Mr. President, when this bill, H.R. 11510, passed the Senate there was included by a vote of 68 to 0 an amendment the purpose of which would have required a public accounting by all Members of Congress of their expenditures, dollars or foreign currencies, which were made while they were traveling on official trips in foreign countries.

Sixty-eight Members of the Senate voted for this amendment, and of the 32 absentees 26 had their position stated in the CONGRESSIONAL RECORD as being in favor of the amendment; only 6 were not committed.

In the face of this unanimous approval on the part of the Senate of the principle that Members of Congress or committee employees should each render an accounting of expenditures in foreign countries, I cannot understand the reasoning of the Senate conferees in agreeing so readily to the elimination of this amendment.

It is true that in the bill as brought back by the conferees they did include a modification of the original amendment's language, but it is also true that this modification completely destroys the purpose of the original amendment as far as requiring any accounting from the individual Members of Congress is concerned.

I have checked with the Legislative Counsel, and it has been confirmed that the language as modified is, in effect, merely a rewritten version of the existing law and also that it will have the same practical effect as the present law.

In a memorandum prepared by Mr. Dwight Pinion, of the Legislative Counsel, he interpreted the conference amendment as follows:

> Since this change removes the language of the amendment which would have required that the consolidated reports show total itemized expenditures of individual Members and employees, it would appear that committee chairmen, in submitting these reports for publication, may continue to submit them in the same form as required by existing law.

I ask unanimous consent that the memorandum prepared by Mr. Pinion be printed at this point in my remarks.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM FOR SENATOR WILLIAMS OF DELAWARE

This memorandum is submitted in response to your request for information concerning the effect of the action of the conference committee on the mutual security bill on the Senate amendments to section 502(b) of the Mutual Security Act of 1954.

Under section 502(b), as contained in existing law, members and employees of a congressional committee are required to make itemized reports to the chairman of the committee of their expenditures of foreign currencies made available to the committee pursuant to such section. The chairman of the committee is required to prepare and submit annually for publication in the CONGRESSIONAL RECORD a consolidated report showing the total itemized expenditures of the committee and each subcommittee.

The Senate amendment changed section 502(b) in two respects:

1. It imposed a requirement that the reports required by the section include not only foreign currency expenditures but also dollar expenditures made from appropriated funds in connection with foreign travel.

2. It required that the consolidated reports submitted by committee chairmen for printing in the CONGRESSIONAL RECORD disclose not only the total annual itemized expenditures of the committee and each subcommittee, but also the total annual itemized expenditures of each member and employee of the committee.

The committee of conference adopted the first amendment without change, so that hereafter both the individual and the consolidated reports must include, in addition to foreign currency expenditures, dollar expenditures made from appropriated funds in connection with foreign travel.

With respect to the second amendment, however, the conferees modified the language of the amendment which described the consolidated report, and which originally read: "a consolidated report showing the total itemized expenditures during the preceding calendar year of the committee and each subcommittee thereof, and of each member and employee of such committee or subcommittee," by deleting the underlined words and substituting the words "incurred as a result of the official activities of the members and employees." Since this change removes the language of the amendment which would have required that the consolidated reports show total itemized expenditures of individual members and employees, it would appear that committee chairmen, in submitting these reports for publication, may continue to submit them in the same form as required by existing law.

It must be pointed out that the above conclusion is based entirely upon an examination of the language of the amendment and of the changes made in such language by the conference agreement. Since the final interpretation of any statutory language must take into consideration its legislative history, an indication of a contrary intent by the conferees, in the debate on the conference report, would necessarily require a reexamination of this conclusion. I would think that this should be particularly true in the case of a provision such as this which deals with the internal procedures of the Senate and House, and the interpretation of which, in the final analysis, will rest with the chairmen of the respective congressional committees.

Respectfully submitted.

DWIGHT J. PINION,
Assistant Counsel.

MAY 9, 1960.

Mr. WILLIAMS of Delaware. Mr. President, we are advised by the Senate conferees that the House has refused the Senate amendment which would have required an accounting of our expenditures of all public funds—dollars or foreign currencies—which congressional Members or their staffs spend while on official trips in foreign countries.

However, the Senate cannot place all the responsibility for the rejection of this amendment on the House of Representatives. If we want this amendment, we can reject the conference report and insist upon another conference, and then the Senate can instruct its conferees not to yield on this particular point.

In the present parliamentary situation, the only manner in which the Senate could reinstruct its conferees to insist upon this amendment requiring public accounting of congressional expenditures would be first to reject the conference report and then to follow that rejection with a motion requesting a new conference.

As one Member of the Senate, I shall refuse to vote for the conference report, which eliminates this amendment requiring public accounting of our expenditures on foreign trips.

I cannot conceive of Congress placing itself in a position to tell the overburdened American taxpayers that they must pay the expenses of the various trips taken by the Members of Congress or congressional employees around the world, but yet thumb their noses at the same taxpayers when they ask for an ac-

counting as to how much the trips cost or for what the money was spent.

I hope the conference report will be rejected so that the Senate may then adopt a motion to insist upon its amendment and the conferees be so instructed. I wonder if the Senator from Alabama will agree to this suggestion and make at least one more attempt to have the House accept the amendment.

Mr. SPARKMAN. The Senator from Delaware is aware, I believe, that the chairman of the committee, the Senator from Arkansas [Mr. FULBRIGHT] is away from the city, on an official trip, at the present time. He was the chairman of the Senate conferees. I am acting today in his place. I hope the Senator from Delaware will not insist upon this procedure, because the Senator from Arkansas is away. Even if the conferees were sent back to another conference, we could not function until the Senator from Arkansas had returned. Considerable delay would be caused. I hope the Senator from Delaware will not insist upon his request, but will let the Senate agree to the conference report.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. Mr. President, I ask for the yeas and nays on the question of agreeing to the conference report.

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

INCORPORATION OF FEDERAL MORTGAGE INVESTMENT COMPANIES

Mr. SPARKMAN. Mr. President, on behalf of myself, and the Senator from Indiana [Mr. CAPEHART], I introduce, for appropriate reference, a bill to provide additional financial facilities in the Federal National Mortgage Association, to provide for the incorporation of Federal mortgage investment companies, and for other purposes.

The bill is introduced by request, in order to provoke study and discussion. The idea of a central mortgage bank has been of great interest for a long time. As the present occupant of the chair, the distinguished Senator from Maine [Mr. MUSKIE], who is a member of the Subcommittee on Housing of the Committee on Banking and Currency, well knows, we have discussed the subject in committee many times. Considerable research has been done over the last few years, and now three of the great organizations interested in the matter—the National Association of Home Builders, the Mortgage Bankers Association, and the National Association of Real Estate Boards—have come forward with a suggested bill.

As I have said, I introduce the bill at their request at this time for the reason that hearings are now in progress in the Subcommittee on Housing concerning housing legislation for this year. The hearings have been running during this week, will resume on Monday, and will continue through next week.

Some persons will want to discuss this very kind of program in the course of the hearings, so I think it is well that a specific bill be before the Senate.

I have not had an opportunity to study the bill in all its details. I cannot say that I am familiar with all its features. I do endorse the central idea, and have done so for a long time.

I think it would mean much for the obtaining of needed credit and stabilization of the home mortgage market in this country if there were such an organization as the one which is proposed.

My introduction of the bill does not mean that I endorse every feature of it at all. I endorse the central thought, and hope that the bill may serve as a basis from which a satisfactory central mortgage program may be evolved.

Mr. President, I ask unanimous consent that a statement I have prepared concerning the bill may be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 3541) to provide additional financial facilities in the Federal National Mortgage Association, to provide for the incorporation of Federal mortgage investment companies, and for other purposes, introduced by Mr. SPARKMAN (for himself and Mr. CAPEHART) by request, was received, read twice by its title, and referred to the Committee on Banking and Currency.

The statement presented by Mr. SPARKMAN is as follows:

STATEMENT BY SENATOR SPARKMAN

I am introducing today, on request, a bill which should provide the basis upon which the Senate can begin to consider a proposal to which many of us have given long consideration and which has gained support in many quarters during recent years. It is a bill to provide additional financial facilities in the Federal National Mortgage Association, to provide for the incorporation of Federal mortgage investment companies, and thereby to establish by amendment of the Federal National Mortgage Association Charter Act and other statutes the framework for a central mortgage reserve facility, which many in the past have called a central mortgage bank.

The subject of a central mortgage reserve facility has been widely discussed and considered in general terms by private industry and committees of the Congress over a period of several years. During the hearings before the Subcommittee on Housing in the last session on "A Study of Mortgage Credit Over the Next Decade," a number of witnesses presented papers and testimony pointing emphatically to the need for this legislation. The report of the subcommittee submitted under Senate Resolution 221 had this to say on the subject:

"The Federal National Mortgage Association, as presently constituted and administered, cannot be expected to supplement and stabilize the flow of mortgage credit to the extent that may be desirable. If this supplementation and stabilization are to be objectives of Federal policy during the 1960's, it will be necessary to (1) reconstitute the Federal National Mortgage Association, or (2) change its administrative policies, or (3) create new institutions, such as a central mortgage bank, to operate in lieu of or in conjunction with the FNMA, or (4) a combination of these actions."

Heretofore, however, most discussions on this subject have been on the desirability—in effect, the necessity—of supplementing and stabilizing the flow of mortgage credit. Differences among private groups upon detail in the method of accomplishing this have gradually disappeared.

I am now informed that during the past several months three representatives each of the National Association of Home Builders, the National Association of Real Estate Boards, and the Mortgage Bankers Association have held frequent meetings to solve differences in detail in their thinking on this subject and to develop a sound bill, aimed at constituting a true central mortgage reserve facility, to which the industry could agree. I am pleased to be able to inform the Senate that such agreement has been accomplished and is expressed in the bill I have introduced. I am informed that it has the support of the National Association of Home Builders and of the National Association of Real Estate Boards and that, although the board of directors of the Mortgage Bankers Association has not yet met to act officially, the president and other representatives of MBA who attended the meetings from which this bill developed have approved it and state that it is in accord with the general policies of that organization.

Possibly the bill can be further improved as the views of other organizations and individuals are obtained at committee hearings. However I have introduced the bill at this time in order to bring it to the attention of all of those sincerely interested in improving the residential mortgage credit system and so that it may be discussed at hearings of the Subcommittee on Housing, now under way.

It is my hope that other Senators on both sides of the aisle will join with me in sponsoring the bill. I shall in the next few days submit a section-by-section analysis and further explanation of the bill.

RESTORATION OF ANNUITY RIGHTS

Mr. DIRKSEN. Mr. President, I move that the Senate proceed to the immediate consideration of Calendar No. 173, H.R. 4601.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 4601) to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Illinois.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill is open to amendment.

Mr. CLARK. Mr. President, House bill 4601 is identical with Senate bill 91, presently on the calendar, and reported from the Committee on Post Office and Civil Service a little more than a year ago. The bill has now been cleared for passage, which I hope will shortly be forthcoming.

The bill is a long one, but most of it is a reenactment of existing law.

The purpose of the bill is to amend an act passed in 1954, which prohibited the payment of annuities to Federal employees who had been convicted of a wide variety of specified offenses.

It is the view of the Senate Committee on Post Office and Civil Service, of the House of Representatives—as evidenced by its passage of the bill—of the Comptroller General, of the Attorney General, and of the Civil Service Commission that the 1954 law, which was enacted at the height of the witch-hunt atmosphere of that year, has had some unintended and unjust effects. The pending bill seeks to remedy the injustice.

No adverse testimony was heard by the committee, which held full public hearings. The committee was unanimous. The committee adopted amendments suggested by the Department of Justice and by the Civil Service Commission.

The bill would limit the application of the 1954 act to cases in which Federal Government employees have been convicted of offenses relating to the national security. I repeat that the bill deals with the payment of annuities to Federal employees.

The provisions of existing law against payment of Federal annuities or retired pay to Federal employees convicted of crimes involving the security of the United States would be continued in full force and effect and would be broadened by the terms of the pending bill.

Let me give the Senate a couple of examples of the harsh effects of the 1954 act which were entirely unforeseen by its original sponsors. Long-term Federal employees, entirely loyal to the country, as well as their innocent wives and children, have been denied substantial retirement benefits by virtue of minor offenses committed many years ago.

As of this date 189 persons have been denied Federal retirement benefits, worth more than $3 million, because of the 1954 act. Only 11 of those persons had been charged with or convicted of offenses which were related in any way to loyalty or security matters. The other 178 were denied Federal retirement benefits because of their involvement in postal infractions or similar nonsecurity offenses for which they had been punished previously according to law.

The Chairman of the Civil Service Commission, in his letter to the committee, stated, and I read from page 5 of the report:

> In the more than 34 years between the effective date of the original Civil Service Retirement Act (August 1920) and enactment of Public Law 769 on September 1, 1954, the concept of the act was that an employee who met the requirements specified therein was entitled to annuity regardless of reason for separation or other consideration.
>
> In other words, the Government guaranteed to the individual as part of his employment contract a defined retirement benefit upon his completion of a stipulated service period, payment of the required contribution, and attainment of a specified age or becoming disabled. If he met these conditions, a discharge for cause regardless of the reason, the commission of a crime, the loss of U.S. citizenship, etc., did not defeat the right already earned. When survivorship provisions were placed in the law, the same concept operated as regards survivors of deceased employees or annuitants.

Section 1 of Public Law 769 of the act of 1954 changed all this and barred the payment of an annuity to an employee and his survivors, if convicted of any one of the Federal criminal offenses specified in the act, and there was a long, long list of offenses, including offenses which had nothing to do with the national security. Section 2 of the 1954 act barred retirement benefits for failure to appear, testify, or produce records, or for making false or fradulent statements involving matters many of which were outside the realm of national security.

I have before me a list of hardship cases which would be redressed by passage of the bill, but I shall not take the time of the Senate to read them all. I shall read merely one.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. CLARK. I shall be glad to yield in a moment.

Mr. JAVITS. Would the Senator mind if I asked him a few questions?

Mr. CLARK. Would the Senator mind if I first completed my initial statement, which will take only about 3 minutes?

This involves a U.S. naval employee who was convicted in 1946 of theft of Government property of minor value and sentenced to 1 hour in the custody of the U.S. marshall. Ten years later, after completion of 35 years and 4 months of otherwise honorable service, he retired. He would have had an annuity with an estimated value of $34,000, for which he had paid $5,438 during the course of his employment, had it not been for the act of 1954. As a result of that act he lost his entire annuity.

Mr. President, the bill, in my judgment, merely does simple justice by restoring the concept and philosophy which existed in our retirement laws prior to 1954, permitting Federal employees to get the annuities they bargained for, unless they are convicted of offenses involving the national security.

I believe that is all I care to say at the present time. I would ask that the committee amendments may be dealt with en bloc before yielding to the Senators from Delaware and New York.

Mr. JAVITS. Mr. President, if the Senator will yield, I have no objection. I did not intend to oppose the bill. I merely wanted to ask some questions.

The PRESIDING OFFICER. The Chair will state that there are no committee amendments to the bill before the Senate.

Mr. CLARK. Mr. President, I regret that I made an error. We are dealing with the House bill, and not with the Senate bill.

I yield to the Senator from New York.

Mr. JAVITS. Mr. President, first I should like to say that this bill has incorrectly received the sobriquet "the Hiss bill." As a matter of fact, I understand from the Senator from Pennsylvania that the bill expressly excludes restoration of a pension to anybody like Hiss. Is that correct?

Mr. CLARK. That is correct. Mr. Hiss would not get his pension, because he was convicted of perjury in a trial involving questions related to the national security.

Mr. JAVITS. Would anyone else who had been convicted of an offense related to the national security be restored his pension?

Mr. CLARK. He would not.

Mr. JAVITS. I notice that the Comptroller General of the United States favors the bill, but I also notice that in the letter of the Civil Service Commission, which is found in the report at page 6, the statement is made:

> The Commission urges that S. 91, amended to incorporate the new language, be enacted into law.

Mr. CLARK. The new language was put in S. 91. It was also put into the bill which we are now considering, which is the House bill, H.R. 4601, and all the suggestions made in the communication from which the Senator from New York has read have been incorporated.

Mr. JAVITS. So it is fair to say that both the Civil Service Commission and the Comptroller General favor the bill. Is that correct?

Mr. CLARK. The Senator is entirely correct. Also the Department of Justice.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. CLARK. I had agreed to yield to the Senator from Delaware [Mr. WILLIAMS], but the two Senators can settle between themselves as to who should be recognized first.

Mr. WILLIAMS of Delaware. I am willing to let the Senator from Georgia proceed.

Mr. RUSSELL. The Senator from Delaware very kindly agrees that I may propound a question to the Senator.

I know that there are a great many hardship cases in this area that should be corrected, but I am very apprehensive this bill may go a little further than is necessary to take care of real, bona fide hardship cases. As a theoretical case, if some person employed by the Post Office Department were to steal $10,000 from the Government and be convicted of that offense, would it be necessary for him to make restitution before he could draw his retirement benefits?

Mr. CLARK. In the first place, such an employee is bonded. In the second place, the answer is "Yes."

Mr. RUSSELL. The Senator is sure that it would be necessary for deductions to be made from the retirement benefits equal to the amount for which the Government had not received restitution?

Mr. CLARK. Yes. I have in my hand a letter directed to me, under date of January 19, 1960, signed by Mr. Ruddock, of the Civil Service Commission, in response to an inquiry which I made.

I ask unanimous consent that the letter may appear in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. CIVIL SERVICE COMMISSION,
BUREAU OF RETIREMENT AND INSURANCE,
Washington, D.C., January 19, 1960.

Hon. JOSEPH S. CLARK,
U.S. Senate

DEAR SENATOR CLARK: In response to your interest in H.R. 4601, a bill to amend Public Law 83-769, denying Federal annuities to persons convicted of certain offenses against the United States, we present the following explanation of the existing right to collect a debt due the United States from annuity payable under the Civil Service Retirement Act.

In a long line of consistent decisions, the Comptroller General holds that money due the United States may be recovered from funds otherwise due and payable to the debtor under the Retirement Act. The right of the Government to apply retirement money to satisfy Government indebtedness has been upheld by the U.S. Circuit Court of Appeals for the 2d Circuit on February 4, 1941, in the case of *Edward E. Boerner* v. *United States* (117 Fed. 2d 387), by the U.S. District Court for the Southern Division of the Northern District of Alabama on June 24, 1943, in the case of *Bryan Watson* v. *United States*, and by the U.S. District Court for the Southern District of New York on May 18, 1944, in the case of *Emilio Marrero* v. *United States*.

The various agencies are kept aware of the availability of retirement benefits for offset. Procedure respecting the filing of Government claim against retirement moneys otherwise due and payable is outlined for the agencies in the Federal Personnel Manual. Pages R-5-75 and 76 of the Manual, covering this material, is enclosed for ready reference. Also enclosed is a copy of Standard Form 2805, the form specifically designed for requesting set-off against retirement money.

Sincerely yours,
ANDREW E. RUDDOCK,
Director.

Mr. CLARK. The letter states in part:

In a long line of consistent decisions, the Comptroller General holds that money due the United States may be recovered from funds otherwise due and payable to the debtor under the Retirement Act.

Not only would he have to make restitution, but also the Government could get the money from his retirement payments.

Mr. WILLIAMS of Delaware. If the Senator will yield, I think the Senator will find the man would repay the Government with its own money, which he would get from retirement. He would not have to pay the money back himself.

Mr. CLARK. The net result is that the man would get less by way of retirement. I read the language to the Senator.

The right of the Government to apply retirement money to satisfy Government indebtedness has been upheld.

Then there is given a long series of cases, and it is stated:

The various agencies are kept aware of the availability of retirement benefits for offset. Procedure respecting the filing of Government claim against retirement moneys otherwise due and payable is outlined for the agencies in the Federal Personnel Manual.

Mr. RUSSELL. Mr. President, I am glad to get that statement. I was concerned about the matter.

I should like to ask the Senator a question about section 5. As I understand it, the language is somewhat technical.

Mr. CLARK. I cannot hear the Senator.

Mr. RUSSELL. I refer to section 5, subsection (a). I have the Senate bill before me, but I assume the two bills are the same.

Mr. CLARK. I have the Senate bill before me, also.

Mr. RUSSELL. The reference is to a person who has been paid erroneously.

Mr. CLARK. It provides that he will have to refund the money to the United States.

Mr. RUSSELL. If the money is paid erroneously?

Mr. CLARK. Yes.

Mr. RUSSELL. In other words, if it has not come to light that such a person has defrauded the Government, and the person receives the payment, he would be subject to a civil claim for the return of that money?

Mr. CLARK. The Senator is correct.

Mr. President, I now yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, the Senator has quoted Mr. Ruddock, chief of the Retirement Division. I also have some reports which were furnished by Mr. Ruddock which give some specific examples of some of the individuals who would benefit by passage of the bill.

First, I wish to say that it may be that the law goes too far in regard to certain hardship cases. If so we should correct it. That does not mean we should open the barn door wide.

I shall refer to one individual who would receive a benefit under the bill. I shall not refer to him by name but shall use the claim number. The Senator can check the accuracy by that. It is claim No. 390939.

This man was an internal revenue agent. He was under investigation in connection with charges of accepting bribes. He was charged with accepting bribes for fixing cases for taxpayers. He was subpenaed to appear before a Federal grand jury in the southern district of New York. He refused to answer questions in the case in regard to his Government service on the ground that it might involve matters of self-incrimination. In other words he "took the fifth amendment." Under the present law that man is not entitled to retirement benefits. If the bill is passed he will be.

Mr. CLARK. I am sorry, but I cannot hear my friend very well. Will the Senator speak more slowly? I am a little deaf.

Mr. WILLIAMS of Delaware. I will do the best I can, because I want the Senator to hear this.

Under this bill, if passed, this internal revenue agent, who was charged with accepting bribes and who "took the fifth amendment" rather than answer the charges when asked questions in connection with his having accepted bribes, was discharged from the Service and barred from retirement benefits. Under this bill he would be eligible to receive $292 a month for the rest of his life and would be eligible to receive a retroactive payment of $13,084. The retroactive payment was computed as of April 30 of last year, and this lump sum amount would be increased for the intervening months.

Mr. CLARK. Will the Senator repeat the amount involved?

Mr. WILLIAMS of Delaware. The amount was $13,084 in retroactive payments and $292 per month, which could be paid to a revenue agent who "took the fifth amendment" rather than answer charges that he had been accepting bribes in connection with his official duties.

Mr. CLARK. The Senator makes a great hue and cry about the particular case. It sounds very good as the Senator points it out.

I wish to point out that this man to whom the Senator refers was never convicted of any offense against the national security. He served for 32 years and 3 months before the charges were brought against him. He exercised his constitutional right to "take the fifth amendment." I see no reason in the world why this man should not receive the money which he paid into the fund, and receive the benefits from it.

If the man had been convicted of a crime against the national security, I would agree with the Senator. Before the "witch-hunting" act of 1954 the man would have received the whole amount.

I disagree with my friend. I do not think that he has raised on the floor of the Senate a case about which we should get excited.

Mr. WILLIAMS of Delaware. I am sure the Senator disagrees. I suppose the Senator would likewise defend all of those labor leaders who "took the fifth amendment" before the McClellan committee.

Mr. CLARK. We are not talking about union labor leaders.

Mr. WILLIAMS of Delaware. We are talking about this Internal Revenue agent and his right to "take the fifth amendment" and still get full retirement.

Mr. CLARK. I have the floor, and I have not yielded.

Mr. WILLIAMS of Delaware. I will wait until the Senator finishes.

Mr. CLARK. We are not talking about labor union leaders. We are not talking about Jimmy Hoffa. We are not talking about Walter Reuther. We are not talking about Sherman Adams. We are not talking about a lot of other men who would not get pensions under the bill.

We are talking about a man who would have received a pension before 1954, a man who served 32 years and 3 months for the Government. He would have received a pension after he "took the fifth amendment," which he had a constitutional right to do, except for the 1954 act.

If my friend does not like that procedure, I suggest that he should introduce a bill to repeal the fifth amendment. Then perhaps we can cover this matter and convict the man of a crime against the national security, so that he will not get a pension.

Mr. WILLIAMS of Delaware. Has the Senator unwound?

Mr. CLARK. I will say also that the Civil Service Commission had full knowledge of this case before, speaking for the Eisenhower administration, it sent in its approval of the bill.

I now yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I seek the floor in my own right.

The PRESIDING OFFICER. The Senator from Pennsylvania has the floor.

Mr. BARTLETT rose.

Mr. CLARK. Mr. President, I yield to the Senator from Alaska.

RESALE OF CERTAIN SHIPS TO REPUBLIC OF CHINA—CONFERENCE REPORT

Mr. BARTLETT. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of today, p. 10205, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. BARTLETT. Mr. President, the conference agreed to the Senate amendment which would make the title consistent with the body of the bill.

The conference agreed to the Senate amendment authorizing an allowance to the purchaser of depreciation computed at the rate of 3½ percent per year from the date of default under the original contract to the time of repurchase under this legislation. Such depreciation, the conference agreed, would be computed on the statutory sales price before that statutory sales price is reduced by payments the purchaser has already made.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. BARTLETT. I am very grateful to the Senator from Pennsylvania for allowing me to interrupt.

Mr. CLARK. I thank the Senator.

RESTORATION OF ANNUITY RIGHTS

The Senate resumed the consideration of the bill (H.R. 4601) to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes.

Mr. CLARK. Mr. President, I yield the floor, and suggest it would be proper to have a third reading of the bill.

Mr. WILLIAMS of Delaware. Mr. President, I wish to discuss a few more of these cases. The Senate should know that, while we may pass the bill in the name of helping only a few individual employees who may have been convicted of minor violations of law, with the exception of those individuals who have been charged with treason we will be putting back on the retirement rolls, at the expense of the American taxpayers, and giving retirement benefits to, all the crooks and scoundrels who have been convicted during the past 10 years.

We will be putting back on the retirement rolls every public official who in the last several years has been convicted of any wrongdoing, such as embezzlement, bribery, forgery, or any other crime, in connection with his official duties.

That is the purpose of the bill before us. It makes no exception whatever but for cases involving national security. For example, there is one official who had rather serious charges placed against him in connection with his official duties. He was working in Alaska. He was a high official in the Alaskan Railroad, a Government agency.

Mr. CLARK. Mr. President, will the Senator yield for a question?

Mr. WILLIAMS of Delaware. I will yield in a moment. The Senator may sit down.

Mr. CLARK. Will the Senator give me the number? I can follow the presentation that way.

Mr. WILLIAMS of Delaware. I will tell the Senator about it. The Senator may sit and be patient. We have plenty of time.

This particular individual was charged with improper financial transactions in connection with his official duties. The man was indicted by a grand jury in Alaska. In order to escape prosecution, he did not "take the fifth amendment." What did he do? He "skipped the country." He went down into South America. Rather than come back to this country and stand trial for charges which were made against him, charges involving his official activities as an employee of the Government, he renounced his American citizenship. He was so determined not to come back and stand trial that he accepted citizenship in a South American country. This bill would restore the retirement benefits of a man who would renounce his American citizenship before he would stand trial to answer charges against him in connection with his official duty. I do not think we want to go that far. Certainly there is a higher code of ethics.

I recognize that when retirement benefits are taken from an individual, that in effect is an additional punishment. But do not forget that every one of these individuals who is convicted of a crime, whether it be bribery, embezzlement, or whatever it may be, gets back all of his contributions to the civil service retirement fund. Under existing law he gets back every dollar which has been taken from his pay envelope plus interest. He has all of his money back. All we said when we passed the 1954 law was that we would not put crooks on the retirement rolls of the taxpayers after they had violated their official trust.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. I am sure the Senator would not want to misinform the Senate on a matter of this importance, and I call his attention to section 3 of the bill, which reads:

> There shall not be paid to any person—
> (2) who wilfully remains outside the United States, its territorities and possessions, * * * for a period in excess of one year with knowledge of such indictment or charges, as the case may be * * * any annuity or retired pay—

And so forth. The man the Senator has been so excited about would not get his retirement because of the language I have just read.

Mr. WILLIAMS of Delaware. He can come back after the statute of limitations have expired, whereby he could not be prosecuted. I quote from a letter dated April 16, 1959, signed by Mr. Roger W. Jones, Chairman of the Civil Service Commission. He quotes this gentleman's name, his service record, and so forth, and then he goes on—

> If he is so barred, this bar would be removed by enactment of S. 91 unless the conviction (or other circumstance) involved the national security.

He was not charged with violating the national security. Surely he would not receive his benefits if he stayed out of the country. But he could come back after the statute of limitations would run. So far as any prosecution or any chance to prosecute this man is concerned, it would be gone. The witnesses would be gone. Why was this man included under the provisions of the bill? The Civil Service Commission has said that if the bill were enacted and the charges did not involve the national security, he would be eligible for restoration of his retirement benefits.

Do not overlook the fact that this man even went so far as to renounce his American citizenship to avoid facing prosecution.

Mr. CLARK. Mr. President, will the Senator yield for a question?

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. How does the Senator explain the provisions of section 3 of the

bill which I just read, which quite clearly seems to exclude the individual to whom he refers?

Mr. WILLIAMS of Delaware. Because he could come back. I directed a letter to the Civil Service Commission and referred to the individual by name. I have the letter here, if any Senator wishes to examine it. I can read the whole letter. This case is a matter of public record. I do not think this individual needs any particular protection. I will ask that the statement in connection with all the charges be put in the RECORD if the Senator wishes.

Mr. CLARK. Will the Senator be kind enough to give the Senate the number of the case?

Mr. WILLIAMS of Delaware. I do not have the number of the case, but I have the man's name.

Mr. CLARK. All I can say as a lawyer is that I entirely disagree with the Senator in his interpretation of section 3 of the bill. I do not think the man whom he described is covered.

Mr. WILLIAMS of Delaware. It is not the first time the Senator from Pennsylvania has disagreed with me or the Commission. I merely point out that the Commission said this individual could have his pension reinstated.

I shall read another case.

Mr. CLARK. Mr. President, will the Senator give the name of the individual or the civil service case number in the case?

Mr. WILLIAMS of Delaware. No; I shall not give the name in this case. It is the case of a postmaster who was charged with falsification of records and embezzlement of postal funds. The man was suspended from office, and the date of his separation was January 6, 1955. The man was convicted, and given a 3-year suspended sentence. If this bill passes he will be eligible to receive retirement benefits of $120 a month. He would also receive a retroactive payment of $3,220.

Mr. CLARK. The Senator realizes that if he is unwilling to give either the name of the individual or the case number, we cannot follow his argument. We have voluminous records here which I think would answer each of these cases, and if the Senator will give us neither the name nor the case number, we cannot follow him.

Mr. WILLIAMS of Delaware. I respectfully suggest that the Senator from Pennsylvania [Mr. CLARK], who is in charge of the bill, and other members of his committee who have checked these cases, should have given that information to the Senate. I shall be glad to yield to the Senator to permit him to tell of these cases himself and to describe the cases in his own language.

Mr. CLARK. The Senator is aware that if he would give us the case number, we could ascertain all the facts.

Mr. WILLIAMS of Delaware. Why does not the Senator from Pennsylvania, with the knowledge he has of these cases, insert them in the RECORD? Why do we have to pry the information loose?

Mr. CLARK. The Senator from Pennsylvania believes, though he may be wrong, that he has pretty effectively disposed of the two cases the Senator from Delaware has referred to so far, and if we had the benefit of knowing what the other cases were, we probably would have rebuttal of those, which would dispose of the matter. If the Senator is to read a mass of anonymous information and give us no opportunity to check our records, we shall have to remain silent. I am prepared to let the Senator from Delaware proceed.

Mr. WILLIAMS of Delaware. If the Senator thinks he has disposed of the cases mentioned, I shall go back to the first one he thinks he has disposed of and discuss it again. That was the case of the Internal Revenue agent. This Internal Revenue agent was charged by the Government with accepting bribes in his official duties, and he took refuge behind the fifth amendment. When he was asked to appear before a grand jury and answer questions in connection with having accepted bribes and refused to answer on the grounds of self-incrimination, certainly we have a right to accept the principle that there is some degree of guilt. If we do not, then Congress had better stop passing resolutions condemning or censuring various officials of the Teamsters Union who have plead the fifth amendment. After all, I thought we were laying down the principle that a man in holding a public office and spending public money had a duty to answer such charges. I say that any man—I do not care whether he be a Member of Congress or anyone else—charged with accepting a bribe in connection with his official duties has a responsibility to answer such charges.

The Senator from Pennsylvania [Mr. CLARK] can talk about constitutional rights, but I wonder if he would not be well advised to give some attention to the rights of the American taxpayers who, if this bill passes, must pay to this revenue agent, who took refuge under a plea of the fifth amendment, $13,084 in back retirement, and put him on the retirement payroll for the rest of his life at $292 a month.

I will give the case of another gentleman here who the Senator from Pennsylvania [Mr. CLARK] wants to restore to full retirement. This man was in the Quartermaster Corps, the procurement agency of the Department of the Army. This man was charged with the solicitation and acceptance of a bribe in violation of title 18, United States Code, section 202. He was removed from office. He was convicted and sentenced to 3 years in prison. Yet if we put this man back on the retirement rolls he would be eligible for retirement at $95 a month, and he would get a total of $1,457 in retroactive payment. These figures were computed as of April 30, 1959, and he would have another year's payment added to this figure for retroactive benefits. Remember, this man was convicted of solicitation and acceptance of a bribe in connection with his official duties.

Mr. KEATING. Mr. President, will the distinguished Senator yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. KEATING. Do I correctly understand from the distinguished Senator from Delaware that these are cases certified to the Senator from Delaware by the Civil Service Commission as individuals who would be entitled to these annuities under the bill in the form in which it is before the Senate today?

Mr. WILLIAMS of Delaware. The Senator is correct, and the figures I have quoted were furnished by the Civil Service Commission under date of April 30, 1959. As the Senator from Pennsylvania [Mr. CLARK] said, this bill has been on the calendar for a little more than a year, and I have not brought the figures up to date. Here are some of the retroactive amounts that will be paid under this bill. Here is one who would get $5,566; another would get $4,840; another $13,084; another $3,220; another $4,992; another $4,435; and another $10,274. Those are retroactive payments in addition to putting the individuals on a lifetime pension from here on out. That applies to every official who has been convicted of any charge or any irregularity in office, except crimes dealing with national security. I see nothing in the bill which provides that a man charged with embezzling $100,000 from the Government and who is serving time in the penitentiary cannot go back on the retirement rolls. There is nothing in the bill which provides that he must pay that $100,000 back except as it is deducted from his retirement checks. The Comptroller General only says he would rule that these payments could not be made until the individual concerned had paid back the amount which he had stolen from the Government.

The point I make is that a man who in his official capacity embezzles money of the Government or accepts a bribe does more than rob the Government of money. He takes from the Government certain prestige that cannot be restored. He destroys the confidence of the American people in their Government. That is the most serious result in a case like this.

I do not believe that our taxpayers will endorse the passing of this bill.

The Senator from Pennsylvania speaks about inequities. I call attention to the fact that if a GI in the military service goes a.w.o.l., or steals a few cigarettes, or is convicted of a minor charge, and gets a dishonorable discharge—and, incidentally, the pending bill does not touch this kind of situation—we take away from him all the retirement benefits he may have accumulated, and he loses all the benefits under the GI bill of rights. Furthermore, nothing is ever given back to him. That is what happens to the man in uniform even though he may have only been homesick and gone home. The pending bill does not correct that situation so far as any GI or any other person in the military service who has accumulated some retirement benefits is concerned.

A man in the military service may build up full retirement benefits, but if he gets in trouble, is court-marshalled, and receives a dishonorable discharge, he loses all those benefits. The pending bill would not restore those benefits to him.

Yet the bill before us proposes to restore these benefits to the civil service employees who are convicted of embezzlement, bribery, et cetera. This bill

would, in effect, say, "You can go to jail. You can take bribes. You can embezzle funds. However, after you have served your time in the penitentiary we will put you back on the retirement rolls for the rest of your life."

Mr. KEATING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. KEATING. As I understand, under existing law, a person who is barred, because of his misdeeds, from further employment in the Federal Government, gets back all the money he has paid into the retirement fund.

Mr. WILLIAMS of Delaware. Oh, yes. That is what the law provides now and properly so.

Mr. KEATING. In the case of Alger Hiss, that was true also; he got back the money he had paid into the retirement fund?

Mr. WILLIAMS of Delaware. Yes, even in the case of Alger Hiss. That is also true in the case of any other individual. He gets back all the money he has paid into the retirement fund, and he gets it back with interest. They are entitled to that. Congress included that provision in the bill because we said otherwise it would be confiscating their own money.

The existing law gives back to the individual all the money he has paid in. The only thing which the 1954 law took away was his claim against the U.S. Government for that part which the Government would contribute.

No one questions their right to a refund of their own contributions.

Mr. KEATING. I agree with the Senator's analysis, and believe that that is the correct action to take in all these cases in respect to money which has been paid in by the persons involved.

When the Senator refers to the lump-sum payments, he means the amounts which, since they have left the service, they would have received from the Government up to that date, if their service had been honorable.

Mr. WILLIAMS of Delaware. That is right. That is up to the date when the list I have before me was computed—namely, April 30, 1959. To all these figures it would be necessary to add another full year's computation at the rates to which they would be entitled.

The point I make is, why should we restore these convicted embezzlers and bribe takers to the retirement rolls?

I cite another case: On May 1, 1957, there was subpenaed before the Senate Permanent Subcommittee on Investigations a Government employee who was a clothing inspector in the Department of the Army. This gentleman refused to answer questions with respect to his service as a Government employee on the ground of self-incrimination. He took the fifth amendment.

If we pass this bill we shall glorify the action of this employee and give him a pension of $234 a month for the rest of his life. In addition, we would send him a check for $5,616 covering retroactive payments. This would be money taken out of the Federal Treasury.

Who says crime does not pay?

I cannot conceive that the Senator from Pennsylvania intended the provisions of the bill to go quite that far. I just cannot conceive that he would. Congress, by an overwhelming vote, stopped these payments in 1954.

I say again that there may be borderline cases, and I will cooperate in handling those cases, if there are some. However, the cases I have discussed are not borderline cases. They are cases involving officials and employees of the Government who failed to recognize that a public office is a public trust. Serious charges were brought against them, and they took the fifth amendment for fear that answering those charges would incriminate them. Then we have the case of a man charged with the embezzlement of funds from the mails. He was convicted. If the bill passes, we would give back to this man $2,121 in retroactive payments plus $94 per month. I do not know how much he embezzled, but embezzlement of funds from the mails is a serious crime.

Do we want to give this man a pension for the rest of his life? Remember he has already collected all his retirement fund contributions. There is no question about his being entitled to them. I support the principle that all the moneys he has paid into the retirement fund belong to him, but the part to which he is not entitled is the part the Federal Government has contributed to the fund. That is money paid by the taxpayers. We have no right to say to the taxpayers that they must continue to pay a person who betrayed their confidence as a public servant.

This bill being sponsored by the Senator from Pennsylvania [Mr. CLARK] singles out every fifth-amendment public official and restores them en bloc on the retirement rolls.

I have before me the case of another Internal Revenue agent. This one appeared likewise before the grand jury of the southern district of New York and refused to testify with respect to acts performed by him in his official capacity on the ground of self-incrimination. He was not convicted because he took the fifth amendment.

Does it make any sense to tell the American taxpayers that we are going to give a pension to a public official who comes before a congressional committee or a grand jury and refuses to testify by taking the fifth amendment?

We have criticized rather severely various officials of certain unions who appeared before congressional committees for taking the fifth amendment. The American people and Members of Congress and the press have been rather critical of men who, when they were brought before the McClellan subcommittee and asked questions in connection with the manner of their managing the funds of the union members practically thumbed their noses at the committee and took the fifth amendment.

We were all critical of and disgusted with those people. We said they had a responsibility to answer to the members of the union and to the public on how they had discharged their trust.

Do we, as public officials, have any less responsibility? I do not believe we do. Therefore, I think the bill before us today should be defeated. I think we have the votes to defeat the bill. And I will suggest that the bill be recommitted to the committee.

Mr. CLARK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I should like to have the attention of all Members of the Senate. The Senator from Delaware desires to offer a motion to recommit. Has he offered it?

Mr. WILLIAMS of Delaware. No, but I will.

Mr. JOHNSON of Texas. Will the Senator from Delaware make his motion now?

Mr. WILLIAMS of Delaware. Mr. President, I move that the bill be recommitted.

Mr. JOHNSON of Texas. Mr. President, on that motion, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. CLARK. Mr. President, would the Senator from Delaware be willing to enter into a unanimous-consent agreement that we speak for 15 minutes on each side?

Mr. JOHNSON of Texas. Oh, that is too long; the Senator from Delaware never speaks for more than 5 minutes.

Mr. WILLIAMS of Delaware. Mr. President, I shall not take too much time, but I will not enter into an unanimous-consent agreement because I wish to place in the RECORD a statement of what is being sought to be done by the bill.

I think this is a very important bill from the standpoint of policy. I cannot conceive of the Senate wanting to pass a bill which provides retroactive retirement benefits to every convicted crook and scoundrel discovered in the U.S. Government, whether in a Republican administration or a Democratic administration. I cannot understand that.

Congress overwhelmingly passed a law about 6 or 7 years ago providing that a person who was convicted—not charged, but convicted—of accepting bribes in connection with his official duties of Government or of embezzlement of Government funds, would lose his retirement benefits. That law gave such a person the right to reclaim all the money which he had paid into the retirement fund plus all the accumulated interest, but it repealed his retirement rights. But why repeal that law and now give him retroactive benefits dating from 1954 or 1955? I have already called to the attention of the Senate some of the benefits such persons would receive and have a long list of other cases. I said that we had been rather critical of many labor leaders who took the fifth amendment before the McClellan committee, when they were asked proper questions concerning how they had managed union funds. We criticize such persons, and properly so.

Now it is proposed to give full retirement benefits to public officials who took the fifth amendment, and some Senators see nothing wrong in doing so.

In one fifth amendment case which I mentioned earlier an internal revenue agent was under investigation concerning his having accepted a bribe from a taxpayer for fixing a tax case. He was subpenaed before a Federal grand jury in the southern district of New York and refused to answer questions with respect to his Government service on the ground of self-incrimination.

If this bill were passed, that man would get $292 a month for the rest of his life and retroactively would receive $13,084 in retirement benefits. That retroactive figure is computed only as of last April, and if the payments subsequent to April 30, 1959, were added to those figures it would result in a retroactive payment of $16,000 or $18,000.

Mr. President, who says that crime does not pay?

We had another Government official appear before the Senate Permanent Subcommittee on Investigations; and there he "took the fifth amendment" when he was asked questions about charges involving his official duties.

The bill would put that man back on the retirement rolls of the American taxpayers, at $234 a month; and, in addition, he would be given a check for $5,616 covering retroactive retirement benefits.

Another revenue agent in New York "took the fifth amendment," and this bill would put him back on the Federal retirement rolls.

Under this bill another convicted revenue agent would receive approximately $17,000 in retroactive payments. In just a moment I shall refer further to that case.

One man who was working for the United States Government executed, on standard form 84, an affidavit, at the request of his employer; and in the affidavit he concealed his past or his present membership in the Communist Party. Later he admitted he was a member of the Communist Party. He was removed from office. This bill would give him $7,715 in retroactive retirement benefits, and he would draw a monthly check of $153 for the rest of his life.

Mr. PASTORE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. PASTORE. If what the Senator from Delaware has said is true, I am amazed that the bill is now being considered at all by the Senate. But this afternoon I have been told that the Administration is supporting the bill. Is that correct?

Mr. WILLIAMS of Delaware. That is what I have been told by the committee, but that does not make the bill right so far as I am concerned.

Mr. DIRKSEN. Mr. President, let me say that I have no knowledge of these matters.

Mr. PASTORE. I should like to ask a question of the Senator in charge of the bill, who is supporting it.

Mr. CLARK. The introduction of the bill was requested by the Civil Service Commission, in a letter to Vice President NIXON, who referred it to the Democratic-controlled Senate Committee on Post Office and Civil Service, which thought the Civil Service Commission, the Attorney General, the Vice President, and the House of Representatives, all of whom have approved this bill—and the House has passed the bill—were correct.

The bill was reported by the unanimous vote of the Senate Committee on Post Office and Civil Service.

The first two cases my friend, the Senator from Delaware, raised, I was able to dispose of correctly, because I was able to obtain the names and numbers of the persons involved.

As for the other cases the Senator from Delaware has talked about, he has refused to give me the names and the numbers.

In the hour and one-half I have listened to him, I have heard nothing to make me believe that the Vice President, the Civil Service Commission, and the Attorney General were not correct.

Frankly, I have no personal interest in the bill, and neither do the other Democratic Members of the Senate Committee on Post Office and Civil Service.

This is an Eisenhower administration bill, which I reported.

Mr. PASTORE. Then I think the Senator should proceed.

Mr. WILLIAMS of Delaware. Mr. President, this may have been an Eisenhower administration bill or it may not, but it is still a bad bill. It was originally offered for the purpose of correcting certain inequitable treatment of a few Federal employees. But the bill as it is now before us would cover the waterfront, it would put back on the Federal retirement rolls every convicted Federal employee of the last several years, unless he had been convicted of treason.

For instance, one Treasury agent willfully made fraudulent statements in connection with a report he filed with the Department. He was convicted and sentenced to imprisonment for a year, and was fined $1,000. He received a suspended sentence. There is no question about his guilt. He was convicted of knowingly and willfully making false and fraudulent statements, but under this bill he would be eligible to $316 a month for the rest of his life and a retroactive payment of $17,822 from the Federal Treasury.

I do not think the American taxpayers want to give $17,822 to a convicted Treasury agent who knowingly and willfully filed false statements, and I do not think we want that done under the guise of correcting some little, minor inequity.

Certainly there are some marginal cases. I know of some of them, and I would go along with a measure to correct their inequities; but that is not the main objective of this bill. In supporting the bill the Senator from Pennsylvania called attention to one such case; it involved a minor charge against a man who had served a brief period in the custody of a marshal. In that case I do not think his widow should be penalized. We can correct such inequities, but in doing so let us not open the door so wide as to permit the putting back on the Federal payroll every former Federal official who defrauded the U.S. Government by embezzlement of public funds or of having accepted bribes.

Mr. PASTORE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. PASTORE. In view of what the distinguished Senator from Pennsylvania has said—namely, that the bill has the backing of the President of the United States, the Vice President, and the Civil Service Commission—does not the Senator feel that instead of moving that the bill be recommitted, it would be in order to move that the bill be sent back to the White House?

Mr. WILLIAMS of Delaware. That is what the Senator from Pennsylvania wants to do—send it to the White House for the President's signature.

Mr. PASTORE. Well, I will support that motion——

Mr. WILLIAMS of Delaware. But I do not think the bill as now reported to the Senate can be defended on such a basis. I do not care who may have been for the bill. I think it will ultimately be found that the administration only recommended the correction of certain minor inequities. However, as often happens, the bill was reported out in an entirely different form.

Frankly, I doubt that the administration will go along with the bill as it has been reported to the Senate. At least, if we return the bill to the committee, the committee can find out for sure what their position is.

Mr. DIRKSEN. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. DIRKSEN. The report on the bill indicates that the Bureau of the Budget, an arm of the executive, had no objection to sending up the bill. But that is not an endorsement by either that agency or by the President.

The Civil Service Commission did give the bill a recommendation.

Mr. CLARK. And so did the Vice President.

Mr. PASTORE. But there has been made here on the floor, this afternoon, an accusation that the bill would result in the making of payments of Federal funds to a galaxy of crooks and thieves. If that is true, I do not care how nicely or subtly we develop this very touchy and delicate issue.

Now it has been said this afternoon that the administration is behind the bill. But the Senator from Delaware has said the bill will be a handout to a list of thieves. If that is so, I want to know why the Civil Service Commission, an arm of the administration, is supporting the bill. Are they making it possible for us to provide a handout to a collection of crooks?

Mr. JOHNSON of Texas. Mr. President, who has the floor?

Mr. PASTORE. Mr. President, I do not care who has the floor; I have said what I had to say.

Mr. WILLIAMS of Delaware. Mr. President, I yielded to the Senator from Illinois [Mr. DIRKSEN].

Mr. JOHNSON of Texas. Mr. President——

Mr. DIRKSEN. I yield.

Mr. JOHNSON of Texas. Mr. President, I wish to ask the distinguished minority leader whether he has read the report of the Civil Service Commission, in which, in the next to the last paragraph, the former Chairman of the Civil Service Commission, Mr. Harris Ellsworth—formerly a colleague of ours, I believe, in the House of Representatives—said:

The Commission recommends that the attached draft of legislation be reported to the Congress and enacted into law.

Is the Senator from Illinois familiar with that?

Mr. DIRKSEN. Of course, Mr. Ellsworth was chairman of the Civil Service Commission; and that language speaks for itself.

But speaking for myself, it was not longer than an hour ago that the bill was called up. I called it up, in the absence of the majority leader. But I had not seen the bill.

Eighteen thousand bills and resolutions have been introduced thus far in the 86th Congress. I do not pretend to keep abreast of all of them; that would be a physical impossibility. So I simply say that I did not read the report, and I am not familiar with it.

Mr. JOHNSON of Texas. If the Senator from Illinois will read the report, I think he will find that the Commission recommends the bill.

Mr. DIRKSEN. But I do not believe a recommendation by the Commission that the bill be enacted into law makes it existing law. I wish to examine the bill, myself.

Mr. WILLIAMS of Delaware. Mr. President, I should like to say that I am not discussing at all who has recommended the bill or who has been opposed to the bill. I merely say that I think the bill is wrong. Frankly, I do not care who or which administration has endorsed it.

Mr. JOHNSON of Texas. Mr. President, if the Senator from Delaware will yield, I wish to make a brief statement.

Mr. WILLIAMS of Delaware. I yield.

Mr. JOHNSON of Texas. And then I shall yield the floor.

Mr. President, the distinguished senior Senator from South Carolina [Mr. JOHNSTON], the able chairman of the Committee on Post Office and Civil Service, has asked that I make the following statement for him:

STATEMENT BY SENATOR JOHNSTON OF SOUTH CAROLINA

The administration requested enactment of this measure to right a wrong done a number of years ago. Its enactment is supported by the U.S. Civil Service Commission, the Department of Justice, and the Comptroller General.

The House acted on the measure last year. Hearings were held in the Senate committee last year. There was no objection to the measure from any source.

I wish to commend the distinguished Senator from Pennsylvania [Mr. CLARK] for his devotion to duty in bringing the measure to a vote today. It is in his capacity as chairman of the Civil Service Subcommittee that he is acting. I am glad to support him at this time.

The distinguished chairman of the Civil Service Committee had to leave, and asked me to read that statement into the RECORD, and I have complied with the request.

Mr. PASTORE. I hope the majority leader will remain for one moment, so that I may make an observation.

Mr. JOHNSON of Texas. I will, for a moment.

Mr. PASTORE. If I may ask a question of the majority leader through the Senator who has the floor, Is it not a fact that if the allegations or accusations which have been made this afternoon by the Senator from Delaware are true, this is a reflection on the integrity of the committee, because what the distinguished Senator from Delaware says the bill does is to shelter and give a handout to a list of persons who have been convicted of stealing money from the Government? If what the Senator from Delaware has said is true, is it not a reflection on the committee and the Commission?

Mr. JOHNSON of Texas. And the Comptroller General.

Mr. PASTORE. And the President of the United States.

Mr. WILLIAMS of Delaware. Mr. President, I emphasize one point; namely, I am not trying to cast any reflections on the integrity of the committee or on any member of the committee or on any one who favors this bill. I am merely saying what the bill does and stating why I think it should be sent back to the committee. If anyone made a recommendation that the bill be passed, it may have been done as so many recommendations are made on bills, without knowing exactly how far it went. The fact is that I have been furnished by the Civil Service Commission the reports I have used here today. I have all that information here and can incorporate it in the RECORD if necessary. I will now yield to the Senator from New York [Mr. KEATING].

Mr. KEATING. Mr. President, will the Senator yield before using that information?

Mr. WILLIAMS of Delaware. Yes.

Mr. KEATING. I regret that the Senator from Rhode Island [Mr. PASTORE] is not here——

Mr. PASTORE. I am here.

Mr. KEATING. Very well. I want to correct what the distinguished Senator from Rhode Island has implied from the remarks of the distinguished Senator from Delaware.

Mr. PASTORE. Now wait a minute. There is no correction of any implication. I said if the accusations which are being made here this afternoon are true—that is what I said; if what the Senator from Delaware has said is true—this bill does cast a reflection on the integrity of this committee and a reflection on the integrity of every Senator who is supporting this particular bill—that is if what the Senator from Delaware has said is true.

Mr. KEATING. Mr. President, if the Senator will yield to me, I am sure, knowing the fairness of the Senator from Rhode Island, when the facts are brought to his attention he will not reach the conclusion which he has reached.

The Senator from Delaware, in his presentation here this afternoon, started his statement of listing these cases with the admission that there are probably inequities which have to be corrected and that legislation should be enacted to that end. He has pointed out a relatively few—I do not know how many there are in all—specific instances which, it is entirely possible, escaped the attention of the Commission when it referred the matter to us. In my judgment, if those instances are accurately stated—and I shall be happy to hear an explanation to the contrary—it makes it desirable for us to recommit the bill in order that it can be narrowed in its effect so as not to include those cases. It is no reflection on anyone either on the Civil Service Commission, or certainly on the committee, or any Senator supporting the bill now before us.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I will yield in a moment. First I wish to make a comment, and then I will yield to the Senator from Rhode Island. I emphasize what the Senator from New York has said. I am not finding fault with this bill because it has had or has not had the endorsement of the administration or of the committee. The Senator from Pennsylvania in presenting the bill called attention to a case which he said was a hardship. I agree with him that it needed correction. I am sure there are other cases which need correction. But what I am also saying is that in correcting those cases we should not go too far. This bill goes too far.

And I want to emphasize that it is not a question of whether I am correct or not. I appreciate the right of the Senator to raise the question, but I advise him that I have here on my desk for his examination, reports and cases that have been furnished by the Commission. They are the complete records of the cases I have discussed on the bill. I cannot help but think this bill goes further than was intended by the committee. That is the reason why I asked the Senator from Pennsylvania if he would agree to sending the bill back to committee for further examination.

I call attention to one other case; and there are many. This particular gentleman was charged with forgery of U.S. Treasury checks in violation of title 18, section 495, of the United States Code. He was charged with forgery and convicted in court; he was sentenced to 1 year in the custody of the Attorney General. There seems to be no question of his guilt.

If this bill is passed he will be eligible for $169 a month in retirement benefits from here on out, and he will retroactively receive a payment of $5,833. Surely that was not intended by the Senate committee.

Here is the case of another man who was charged with embezzlement of funds. He hid behind the fifth amendment. This is the case of a Treasury agent.

There are serious charges against several other top officials of Government, all of whom would be restored to eligibil-

ity for retirement benefits under this bill. Why?

Mr. PASTORE. Mr. President, will the Senator yield at that point?

Mr. WILLIAMS of Delaware. Yes.

Mr. PASTORE. Did not the Senator from Delaware cite an instance in which a Communist is going to be restored to his retirement benefits?

Mr. WILLIAMS of Delaware. Yes; I said that.

Mr. PASTORE. Now the Senator from Delaware seems to be softening up what he originally said.

Mr. WILLIAMS of Delaware. There are those who think I am not.

Mr. PASTORE. When I came into the Chamber the Senator was stating that a Communist would be given a pension. The Senator from Delaware made a great point of that case. I said if the committee has approved that, it is either a deplorable mistake or a reflection on the committee.

Mr. WILLIAMS of Delaware. You can make your own interpretation. I am not casting any reflection on anyone, but I am citing these particular cases wherein under this bill the convicted former public officials would be restored to full retirement benefits.

Mr. CLARK. Mr. President, will the Senator give me the number?

Mr. DIRKSEN. Mr. President, I must leave the Chamber for another assignment. Will the Senator yield to me?

Mr. WILLIAMS of Delaware. I yield to the Senator from Illinois.

Mr. DIRKSEN. I have made a check of this. Hearings were held on the bill 14 months ago, consisting of 27 pages. There are general statements. To be sure, there had been Government witnesses before the committee. However, it seems to me they could have very well listed all the cases and the amounts involved in the hearings themselves. I am advised that information appears in the CONGRESSIONAL RECORD. If it does, it has escaped my attention. However, the witnesses did not appear, in the very brief hearings on the bill, and give that information.

I think the wise procedure would be to send the bill back to the committee, and take another look at it. If it is a good bill, I am prepared to support it; but if there is merit in the point that the distinguished Senator from Delaware has made, I think it ought to be taken into account.

The other point I make is this: Is there any great urgency about this? Do we have to do it this afternoon? Should there not be an opportunity for a second look?

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Pennsylvania.

Mr. CLARK. This bill has been on the calendar now for 13 months, largely because of the objections of the Senator from Delaware. The committee has had a pretty careful look at it. I think the bill ought to be passed today. If the Senator from Delaware will permit me to suggest the absence of a quorum, I have a suggestion which might be acceptable to him, and which might resolve the issue. Would the Senator yield for that purpose?

Mr. WILLIAMS of Delaware. Yes; I will yield in just a moment——

Mr. CLARK. I suggest the absence of a quorum.

Mr. WILLIAMS of Delaware. Just a moment, before I yield for that purpose. In further reference to what the Senator from Rhode Island was saying, I wish to emphasize that I am not pulling these cases out of thin air. The complete documentation of each case is here for any Senator's examination. I have and will continue to withhold names.

Here again is the case of the man to whom I earlier referred as executing an affidavit on Standard Form 84 in which he concealed his past or present membership in the Communist Party. Such membership was later admitted. That is the description given me by the Civil Service Commission in this case.

If this bill is passed, based upon the report which I was given by the Civil Service Commission, he would be eligible for his pension.

One might ask, "Why did I not appear before the committee and testify?" I did not have the information before the bill was reported out of committee. This man who failed to state that he was a Communist but later admitted it, will get $7,715 retroactively and $153 a month from here on.

Mr. CLARK. I plead with my friend to give me the number. The Senator refers to these anonymous cases, and we cannot check them. I have at my desk a listing of every one of these cases, broken down in detail. This is the fifth time I have asked my friend to give me the number.

Mr. WILLIAMS of Delaware. I will give the Senator the number. When the Senator presented these cases, he pulled one or two cases out. He should have given us all these cases.

The number of this case is 386154. In addition, the Senator should tell us about the other cases in the records.

I will now yield to the Senator so that he may tell us about them if he wishes to, or if the Senator wishes to have me yield so that he may suggest the absence of a quorum while looking them up I will do so.

While the Senator is looking up that case, I will give him another one to look up.

Mr. PASTORE. Mr. President, will the Senator yield to me, for an observation?

Mr. WILLIAMS of Delaware. I yield.

Mr. PASTORE. I merely want to say to the distinguished Senator from Delaware, I find no fault with the recitation he is making this afternoon. I merely say that if the bill would permit what the Senator alleges it would permit, then I daresay the bill ought to go back to the committee and be reconsidered. That is my position precisely.

Mr. WILLIAMS of Delaware. That is correct. On that point we are in agreement.

Mr. PASTORE. Somebody is wrong. Both cannot be right.

Mr. CLARK. Mr. President, will the Senator yield? I have found the case.

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. I will ask my good friend from Rhode Island if he thinks the man involved in this case should not get a pension. If he does, perhaps we should not pass the bill.

These are the facts. This is case No. 386154. This man was an employee of the Post Office Department as a clerk. He had served for 25 years and 9 months. He executed in 1947 an affidavit on standard form 84 in which he concealed past or present membership in the Communist Party. Later on he admitted that he had once been a Communist. He was removed. The present value of his annuity is $17,000. The approximate refund due is $3,935.77.

I do not know what my friend from Rhode Island thinks. I think that fellow ought to get his pension back.

Mr. PASTORE. Well, I do not think so. [Laughter.]

Mr. CLARK. Mr. President, I should like to say another thing before I sit down.

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. This set of facts I have read is a very different set of facts from what my friend from Delaware attempted to persuade the Senate it was.

Mr. WILLIAMS of Delaware. Well, now, Mr. President, I resent what my friend the Senator from Pennsylvania has said. If the Senator will go back to check the RECORD he will find what I said was that the man filed form 84 and denied membership in the Communist Party and then later admitted it. That is all I said. I repeat it. The Senator from Pennsylvania has admitted that. If the Senator wants to put this man back on the retirement rolls, as a Communist, OK.

Mr. KEATING. Mr. President, before the Senator goes further will he yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. KEATING. I am certain that the distinguished Senator from Rhode Island feels the same way I do about this matter. It seems to me in such a case as this, when the Government has refunded to the man every penny he put in the funds, that the Government has done, certainly, all that should be done with respect to some man who has acted as this man has acted.

Mr. PASTORE. That is precisely what was done in this case, and precisely what is permitted under existing law.

Mr. KEATING. That is correct.

Mr. WILLIAMS of Delaware. That is correct.

Mr. PASTORE. That is about as far as we should go. That is all I am saying.

Mr. KEATING. I agree with the Senator.

Mr. WILLIAMS of Delaware. The Senator from Rhode Island and I are in agreement. I helped to write into the law the provision that the man should get his money back.

We have another case in respect to a man who was charged with forgery of U.S. Treasury checks. He will get retroactive retirement benefits under this bill of $5,833. This man is a convicted

forger, a man convicted of forging Treasury checks. Surely, the Senator from Pennsylvania [Mr. CLARK] does not want to put such a man back on the Federal payroll. Surely it was never intended by the committee that we should do that.

Then we had the case of the clothing inspector who was in the Quartermaster Corps. That man was charged with solicitation and acceptance of bribes in violation of title 18 of the United States Code.

Mr. CLARK. Mr. President, will the Senator yield? Will the Senator give me the number?

Mr. WILLIAMS of Delaware. Number 501668.

Mr. CLARK. I thank the Senator.

Mr. WILLIAMS of Delaware. He was charged with solicitation and acceptance of bribes in violation of title 18, United States Code, section 202. This man was convicted in the courts. I am not saying this man was guilty, but the court said he was guilty. He was sentenced to serve 3 years in the Federal penitentiary.

What would we do under the provisions of the bill if it is passed? We would give this man $95 per month for the rest of his life, and $1,457 as a retroactive retirement benefit. The reason the amount is smaller in this case is that the man did not have quite as long a Government service.

I always thought that we were holding up a different code of conduct. This is the case of a Government official who was guilty of soliciting and accepting bribes. He was convicted by a court. He was dismissed. The Government gave him back all of the money he had ever paid into the retirement fund plus all of the interest to which he was entitled. He has had all of that back.

Surely we are not going to put that man back on the retirement rolls and say that nothing was wrong.

As I pointed out before, if a GI is a.w.o.l. for too long a period of time he may receive a dishonorable discharge and may lose all of his benefits under the GI bill of rights and all of his retirement benefits. This bill would not restore those. Yet we are asked to provide that the public officials, whether under a Democratic administration or a Republican administration, be given restoration of all their retirement benefits.

I am not one of those who thinks a man goes wrong based upon his political affiliations. I have seen these things happen time and time again. We have seen discredited public officials in both political parties.

If men have violated their positions of trust as public officials by embezzlement or by accepting bribes they are not entitled to any retirement benefits when they leave the Government service. They do get the money they have paid into the retirement fund, but the American taxpayers should not be required to pay them retirement benefits as well.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Montana.

Mr. MANSFIELD. Do I correctly understand that the bill has the approval of the Civil Service Commission, of the Comptroller General, and of the President of the United States?

Mr. WILLIAMS of Delaware. The Senator from Pennsylvania has so stated. I have no reason to question that, because I have not asked. I do not support the bill.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. Have these cases which the Senator from Delaware has brought to the attention of the Senate this afternoon had consideration? Has the approval of these cases in this measure been given by the administration, in the persons of the Comptroller General, the Civil Service Commission, and the President of the United States?

Mr. WILLIAMS of Delaware. I do not understand the Senator's question. Does the Senator ask whether I got the information from one of those agencies?

Mr. MANSFIELD. No. Would those cases be included under the bill; and, if so, are they included under the bill with the approval of the administration?

Mr. WILLIAMS of Delaware. I do not know whether they are in the bill with the approval of the administration or not, but they are in the bill. I do not question the statement of the Senator from Pennsylvania that the administration requested legislation in this connection. I do not know. As I said before, I think there may be some cases where relief is needed but certainly not in the cases I have mentioned nor in the cases of the several others I have here.

Whether the administration or the committee knew of these specific cases being under the bill or not at the time the legislation was first recommended I do not know.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I will yield in just a moment.

I cannot think the administration did. I cannot think the members of the committee knew about them. I cannot conceive that they would have recommended the bill if they did.

This was called to my attention after the bill had been reported and I began to check into the matter. I ran down all of these cases. It took me two or three months to get all the information. That is why I asked that the bill be held up last year. This information is all confirmed by the Civil Service Commission.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. WILLIAMS of Delaware. The cases I am giving and the dollar figures, the amounts of money, the charges, and so on, were all furnished by the department.

I was further told by the Civil Service Commission that if the bill is passed it will restore the retirement benefits for every public official who has been convicted of any crime in the last 10 years unless their crimes involved treason or the security of the country. Not many of them did.

I did not ask the Civil Service Commission whether they were for the bill or against the bill. I was simply getting the facts as to what the bill would do and made up my own mind.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. As I understand the situation, the Civil Service Commission has approved this particular measure. If I correctly understand the Senator's remarks, he is in favor of the general provision, because he recognizes there are inequities. However, the Senator is opposed to inclusion of certain specific cases, to which he has invited the attention of the Senate. Is that correct?

Mr. WILLIAMS of Delaware. I said I thought there were cases in regard to which the law possibly goes too far, yes. I think the Senator from Pennsylvania cited one of those cases.

In checking the hearings, I found that some of the cases which were brought to the attention of the committee were cases on which I would favor having corrections. I do not think we want to put ourselves in the position of taking the last drop of blood from a man. But on the other hand, I do not want to vote a Government pension for every convicted crook, forger, embezzler, or bribe taker.

The bill before us would open the door wide. Surely, in an endeavor to correct a few cases we do not want to go all the way across the lot and restore to the retirement rolls, with retroactive retirement benefits, all of these various officials who have been guilty of such conduct as has been cited.

After all, Congress passed the law which restricted the payments. I think we were right in that action, and I do not want to see it reversed here today.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from New York.

Mr. KEATING. Mr. President, I do not know anything about the background of the bill. I think we have a responsibility, however. If the bill has been recommended to us as a result of a mistake by this administration, then whatever the reason is it seems to me that if the facts which the distinguished Senator from Delaware has presented to us are accurate—and they have not been challenged as yet—this is not the kind of legislation we should support. This bill needs further study in the committee and should be recommitted, in my judgment, unless this can be explained in some way.

Mr. CLARK. Mr. President, will the Senator yield so that I may answer a question raised by the Senator from Montana [Mr. MANSFIELD]?

Mr. WILLIAMS of Delaware. I yield to the Senator from Pennsylvania.

Mr. CLARK. Let me say to the Senator from Montana and the Senator from Rhode Island that I hold in my hand, as it used to be popular to say, 189 cases which are affected by this bill. This is the record sent to the Senate Committee on Post Office and Civil Service and sent also to the House Committee on Post Office and Civil Service with a detailed

record of each case, by the Civil Service Commission, on Civil Service Commission stationery, with the recommendation that the bill be drafted exactly as it was drafted and exactly as it passed the House, with the approval of the administration. Since my friend from Delaware raised this question about his precious little Communist, I have called the Civil Service Commission and they have pointed out to me something which I should have known but did not, that under the terms of the bill that precious little Communist would not get his pension back, because on page 9 of the Senate bill, which is identical with the House bill, the following provision is contained:

(b) There shall not be paid to any person who, prior to, on, or after September 1, 1954, knowingly and willfully, has made or makes any false, fictitious, or fraudulent statement or representation, or who, prior to, on, or after such date, knowingly and willfully, has concealed or conceals any material fact, with respect to his—

(1) past or present membership in, affiliation or association with, or support of the Communist Party, or any chapter, branch, or subdivision thereof, in or outside the United States, or any other organization, party, or group advocating (A) the overthrow, by force, violence, or other unconstitutional means, of the Government of the United States, (B) the establishment, by force, violence, or other unconstitutional means, of a Communist totalitarian dictatorship in the United States, or (C) the right to strike against the Government of the United States.

I am pretty sure if the Senator from Delaware had given me the courtesy of discussing these cases one by one instead of suddenly appearing with great surprise on the floor with a paper which he has largely treated as anonymous—because only about 20 minutes ago I persuaded him to give me the number of this case—we would be in a far better position on this bill than we are now.

Mr. WILLIAMS of Delaware. Mr. President, I remind the Senator from Pennsylvania that the particular case in connection with which he said the individual involved would not receive any benefits only further emphasizes the need to recommit the bill. I gave him the number of that case. He finally confirmed the facts. He had it among his 184 cases, and he confirmed on the floor of the Senate that that case involved a Communist and thought he should get these payments.

Mr. CLARK. The Senator is entirely incorrect. The Senator has misquoted me, I am sure inadvertently. I did not say these were cases that were covered by the bill. I said if I had my way that poor little Communist would get his pension back, but under this bill he would not.

Mr. WILLIAMS of Delaware. I realize that the Senator from Pennsylvania [Mr. CLARK] would like to see this "poor little Communist" get his pension back.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I will yield to the Senator from Pennsylvania [Mr. CLARK] in a moment. I ask him not to get excited. We have plenty of time. After all, I have a feeling a lot of taxpayers are not in a hurry to put this Communist, nor these fifth amendment crooks, nor these embezzling public officials, nor those who have accepted bribes, back on the public retirement rolls. I ask the Senator from Pennsylvania not to get in a hurry. We have time.

Mr. MANSFIELD. Mr. President, will the Senator yield so that I may ask a question of the Senator from Pennsylvania?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. I understand there are 184 cases altogether.

Mr. CLARK. One hundred and eighty-nine.

Mr. MANSFIELD. Have all those cases received the approval of the Civil Service Commission?

Mr. WILLIAMS of Delaware. Technically, no, some of them could be rejected, as I understand—and the Senator from Pennsylvania can correct me if I am wrong. The cases of those who could be eligible for restoration were furnished; and I am sure they are the same list of names the Senator from Pennsylvania has.

Mr. MANSFIELD. One hundred and eighty-nine?

Mr. WILLIAMS of Delaware. Each case would be decided on its merits, but these are the ones expected to apply, and it is assumed they would be eligible.

Mr. CLARK. The Senator is incorrect. May I correct the record? Each case was screened by the Civil Service Commission before it sent the material to the committee. There is a total of 189, of whom 11 would not be covered because their cases involve national security. The others would be, but every one of the other cases was considered by the Civil Service Commission and approved for coverage under the bill before the bill came to us.

Mr. MANSFIELD. Including the other cases mentioned by the Senator from Delaware [Mr. WILLIAMS] this afternoon?

Mr. CLARK. If I could identify them I would be happy to do so.

In passing, let me say that the Senator from Delaware, I am sure inadvertently, has made a great to-do on the floor today about cases which are clearly not covered by the bill, and in doing so I am afraid he has again, inadvertently and in perfect good faith, permitted thoughts to enter the minds of some Senators with respect to the bill which are not entirely correct.

Mr. WILLIAMS of Delaware. The Senator from Delaware does not accept the statement of the Senator from Pennsylvania. What I am doing is quoting the figures which were given to me by the Civil Service Commission, and if the Civil Service Commission does not know what it is talking about, it is time it should be checked. I am somewhat surprised to hear the Senator from Pennsylvania say that this list has been in his possession all these months and that he is still for the bill.

Mr. CLARK. The Senator is still misquoting me. I ask him to retract. I said no such thing.

Mr. WILLIAMS of Delaware. Do I understand the Senator from Pennsylvania does not have a list and he did not have it at the time?

Mr. CLARK. I said this list was in the hands of the committee; and my friend from Delaware very well knows that that is what I said. The Senator knows that often a Senator serving on a committee does not undertake to screen information which is given to the staff.

Mr. WILLIAMS of Delaware. If the information is in the hands of the staff and he did not examine it that is his fault. I will accept that statement, and I will concede the fact that the Senator from Pennsylvania had not seen it before if that is what he says. I will even accept the fact that he has not read the bill if he so insists. Frankly, I am inclined to think he does not know what is in the bill.

Mr. CLARK. Mr. President, will the Senator yield for a correction?

Mr. WILLIAMS of Delaware. I ask the Senator not to be in a hurry. We have plenty of time. I do not wish to get him excited. We are not going to give this money away too fast.

Mr. CLARK. I want the RECORD to show my appreciation to the Senator from Delaware for conceding for the first time this afternoon that something was incorrect. He made the statement that the Senator from Pennsylvania had not read the bill. I state to the Senate that I have read the bill, although I do not purport to be the great expert on it that the Senator from Delaware is.

Mr. DODD. Mr. President, will the Senator yield for a question?

Mr. WILLIAMS of Delaware. I yield for a question.

Mr. DODD. I ask the Senator from Delaware if he will permit me to ask the Senator from Pennsylvania to show us why the "precious little Communist" is not included in the bill. It does not appear to me.

Mr. CLARK. Does the Senator from Connecticut have before him the House bill or the Senate bill?

Mr. DODD. I have the House bill.

Mr. CLARK. I will point out the provision to my friend.

Mr. DODD. The Senator from Pennsylvania has been kind enough to point out to me paragraph (b) on page 9 of the Senate bill, which provides:

There shall not be paid to any person who prior to, on, or after September 1, 1954——

Mr. CLARK. "Prior to, on, or after." That is pretty comprehensive.

Mr. DODD. I think it does include such a case.

Mr. CLARK. I thank the Senator from Connecticut for his question. I think it is important the Senate should have this information.

Mr. WILLIAMS of Delaware. Lest there should be some misunderstanding, this particular individual had executed an affidavit on standard form 94, in which he concealed present or past membership in the Communist Party. Such membership was later admitted. He was removed from office. The serial number of the case is 386,154. I wrote a letter to the Civil Service Commission and asked it in connection with the cases listed what amounts would be paid in

retroactive benefits if approved under this bill. I have a letter signed by Andrew E. Ruddock dated April 13, 1959.

Mr. MANSFIELD. Mr. President, will the Senator yield before he reads the letter?

Mr. WILLIAMS of Delaware. I should like to complete my reading before I yield. This letter reads:

> We have compiled the additional information you requested in connection with S. 91, a bill to amend Public Law 769. The information appears in the attached report.

Turning to the attached report to the same serial number which is involved in this case, the Senator will observe No. 382,083. The man will get $164 per month, and his accrued annuity amounts to $10,798.

Mr. MANSFIELD. What was the last number? I thought the Senator was referring to the Communist case before and was going back to that case.

Mr. WILLIAMS of Delaware. I am.

Mr. MANSFIELD. The last three digits were 154.

Mr. WILLIAMS of Delaware. There are two cases. There is 386,154. This man was charged with executing an affidavit on Standard Form 84, in which he concealed past or present membership in the Communist Party. His membership was later admitted. In case 386,154 the retroactive annuity is given as being $7,715, and he will receive $153 a month.

I am not saying there may not be a mistake, but I am reading these figures correctly. Here they are. The Senator from Montana or the Senator from Pennsylvania can check them. I think this bill should go back to the committee.

In addition to these men there are ex-officials of the Treasury Department—and we had some former officials connected with executive agencies—who were convicted of accepting bribes in connection with their official activities, every one of them, with the exception of those who were convicted in connection with internal security, would go back on the retirement rolls retroactively.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. The reason why I asked for that case was that I understood the Senator from Pennsylvania to say that under the bill that man would not be eligible for any benefits in any manner, shape, or form.

Mr. WILLIAMS of Delaware. The Senator from Pennsylvania said that. However, if that is so, why did the Civil Service Commission put that man on the list? I asked them for all the information in connection with these people who would be affected by these bills.

The Senator from Pennsylvania has not questioned the fact that the bill would put these convicted former public officials back on the retirement rolls. We will leave out of consideration for the moment the Communists. One of them was an admitted Communist, and the other was charged with being one. However, let us forget them for the moment. Let us consider those who took the fifth amendment, and those who made fraudulent statements to the Government. They were Treasury agents charged with accepting bribes in connection with the discharge of their official duties. They were called before the grand jury and took the fifth amendment. Under present law, we give them back all the money they paid into the fund, plus interest, but they were denied retirement benefits. This bill would give one of them $13,084 in retroactive payments, and another one more than $17,000. Is that what the Senate wants to do?

Mr. President, surely we do not want to do this. I ask the Senator from Pennsylvania again if he will not take the bill back to committee in order that it can be properly checked and examined. The bill should go back to committee. I do not believe that the Senate wants to put these crooked former officials back on the retirement rolls.

I am willing to vote. I believe the yeas and nays have been ordered; however, I would prefer, if the Senator would agree, that the bill go back to committee. It is not proper legislation.

There is the case of another man who was charged with embezzlement and with conduct prejudicial to good discipline in the Navy. He was one of the chief accountants of the Federal Public Housing Authority. The bill would give him $8,111 in retroactive retirement benefits. These are serious charges. The purpose of our retirement system is to protect the bona fide Government employees in their old age. It provides pensions to which they are entitled and of which they can be proud. Therefore, we do not want to reduce this system to the point where every crook will be drawing payments from the Government.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. KEATING. Would the Senator tell us how many there are of these cases, in toto, which are similar to the ones he has presented?

Mr. WILLIAMS of Delaware. I have a large number of them here, but I have not counted them. I accept the count of the Senator from Pennsylvania. Those mentioned are the most glaring cases that were called to my attention. The Senator from Pennsylvania said he had 184 cases before the committee. No doubt, some of them are meritorious cases, but there are several cases that cannot be justified.

Mr. CLARK. Mr. President, will the Senator yield for a suggestion?

Mr. WILLIAMS of Delaware. I yield

Mr. CLARK. I wish to make a suggestion in all good faith to my friend from Delaware. He has stated certain facts with respect to certain cases. I have tended to controvert them. I wonder if the Senator from Delaware would be agreeable to a motion to set aside consideration of the bill until some day next week, so that the Civil Service Commission and the other members of the administration who support the legislation may have an opportunity to communicate through the committee with the Senate, so that we can bring this subject up for further consideration.

Mr. WILLIAMS of Delaware. The bill should go back to committee. Let these agencies testify in the usual manner. Then the committee can consider it. The committee can then report the bill back when it gets ready, and it can be motioned up at any time. I will go along with that suggestion.

Mr. CLARK. No; my proposal is——

Mr. WILLIAMS of Delaware. I do not believe that we can start to amend the retirement law on the floor of the Senate. That is what I am fearful of. I believe that after the Senator has checked with the administration, they may want to come to the committee with technical changes in the bill. Those changes may be good; however, we cannot properly amend a retirement bill on the floor of the Senate. I do not believe it is fair to the other Members of the Senate to do it that way. The matter should be considered by the committee. Administration officials should come before the committee and testify how far they intended to go and what they want to do. This matter can be worked out in committee, but the bill as it is should not be passed.

Mr. CLARK. I do not want to see the bill go back to committee, because I have a good deal greater confidence in the Civil Service Commission than the Senator from Delaware has. I believe that when they answer the questions of the Senator from Delaware, who is an honest and openminded man, he will withdraw his objection. I will say this, too. If the Civil Service Commission recommends as much as one amendment to the bill, I will join my friend from Delaware in moving that the bill be recommitted.

Mr. WILLIAMS of Delaware. If they do not recommend some amendments, I will join somebody in trying to defeat it. I will not support any bill that does this sort of thing. I will insist that the bill go back to committee. The committee should take all these matters into consideration.

I do not believe the Senator from Pennsylvania understood me. These are not idle charges concerning some phantom cases. These are not all fifth amendment charges. For instance, I have before me the case of the clothing inspector, who was charged with solicitation and acceptance of bribes, in violation of title 18, United States Code, section 202. He was convicted in court and sentenced to pay a fine of $500 and to be confined for 3 years in a Federal penitentiary.

I repeat the charge—solicitation and acceptance of bribes.

This bill would put him back on the retirement rolls and put him in good standing along with other Federal employees. That should not be done. Surely that is not the purpose of the Senator from Pennsylvania [Mr. CLARK]. This man was convicted of a serious charge. If the bill is passed, this man will collect $1,457 in retroactive retirement benefits. Then we have the case of the clothing inspector who had certain charges made against him. He appeared before the Senate Permanent Subcommittee on Investigations and refused to testify; he took the fifth amend-

ment. Do you want to restore this man's retirement benefits?

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. Will the Senator yield so that I may suggest the absence of a quorum?

Mr. WILLIAMS of Delaware. I yield for that purpose.

Mr. JAVITS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Illinois will state it.

Mr. DIRKSEN. Who has the floor?

The PRESIDING OFFICER. The Senator from Delaware has the floor.

Mr. DIRKSEN. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Illinois.

Mr. DIRKSEN. While the discussion of the bill was taking place earlier this afternoon, I uttered the hope that since the passage of the bill was not particularly urgent, perhaps it could be sent back to committee, that the Civil Service Commission representatives could be called back, and that a proper inquiry could be made into the specific cases which have been recited by the distinguished Senator from Delaware.

There is now pending, I believe, a motion to recommit the bill; and I believe the yeas and nays have been ordered on the question of agreeing to that motion.

I would respectfully suggest that consent be given to withdraw the order for the yeas and nays, if the distinguished Senator from Pennsylvania [Mr. CLARK] will undertake to agree that the bill go back to the committee, and that the committee take a further look at the matter, so the Senate will be fully advised with respect to all the facts.

Frankly, I am unclear in regard to the situation.

I was deeply impressed by the recital of some of these cases by the distinguished Senator from Delaware; and, notwithstanding the fact that the then chairman of the Civil Service Commission—that was in March 1959—asked that the bill be enacted into law, of course it is entirely possible that the Commission was not familiar with all the facts involved or to what extent the language of the bill, as it presently comes before the Senate—and I notice that there have been modifications—would carry us, and whether in trying to make provision for cases in which inequities seem to exist, the bill would also embrace those who should not be included in remedial legislation of this kind.

Mr. CLARK. I wonder whether the Senator from Illinois and the Senator from Delaware will join in a request that the order for the yeas and nays be withdrawn.

Mr. WILLIAMS of Delaware. All I want, Mr. President, is that the bill go back to the committee because I am confident that the bill should not be enacted in its present form.

If the Senator from Pennsylvania is agreeable to having the bill go back to the committee, I have no desire to call the other Senators back to the floor for a yea-and-nay vote. All I want is that the bill go back to the committee.

Mr. MANSFIELD. Mr. President, will the Senator from Delaware yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. I ask unanimous consent that the order for the yeas and nays be rescinded.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Delaware will state it.

Mr. WILLIAMS of Delaware. In order to achieve our objective, would it be best to return the House bill to the committee and to indefinitely postpone the further consideration of the Senate bill, or to return both the Senate bill and the House bill to the committee? Of course, the Senate bill could go back to the committee, anyway, if we removed it from the calendar.

In short, what would be the best course for us to follow in order to get the entire subject back to the committee?

The PRESIDING OFFICER. The Chair would suggest that the Senator from Delaware might wish to have both bills returned to the committee.

Mr. WILLIAMS of Delaware. Yes; I believe that would be the best course. Then the committee would be able to study the entire matter.

So, Mr. President, I now modify the motion so as to move that both Calendar No. 173, House bill 4601, and Calendar No. 133, Senate bill 91—the two companion bills—be recommitted to the Committee on Post Office and Civil Service.

Mr. MANSFIELD. Mr. President, will the Senator from Delaware withhold the motion, and be willing to trust to the good judgment of the Senator from Pennsylvania to make a request which may meet with the wishes of all concerned in this situation?

Mr. WILLIAMS of Delaware. The agreement we had with the Senator from Pennsylvania was that I would make this motion; and he was agreeable to it. I think the motion is a very proper one.

Mr. MANSFIELD. I think there will be no need for the motion. The Senator from Delaware can always make the motion a little later, if he thinks that necessary.

Mr. CLARK. Mr. President, I have no yen to stand on protocol; and I do not care who makes this motion.

I am presently prepared to support the motion, not because I do not think this administration bill is still a good one, not because I do not think there are adequate answers to each of the cases which my friend, the Senator from Delaware, has raised—answers which, in my judgment, have been made here on the floor.

But, Mr. President, as I have said before, this bill is not a measure sponsored by Members on my side of the aisle. It is a bill introduced at the request of the Vice President of the United States, who was asked to do so by the Republican Chairman of the Civil Service Commission. The bill has been passed unanimously by the House. In hearings conducted before the committees of both bodies, there were no objections to the bill.

In my judgment the Senator from Delaware has raised, more or less unilaterally, some questions which I think the Civil Service Commission, whose bill this is, has an obligation to answer before the Senate legislates.

Therefore, I shall not oppose the motion to recommit either or both of these bills to the committee; and, as the member of the committee in charge of the bill, I have just now instructed the members of the committee staff to communicate as soon as may be done with the Civil Service Commission, send the Commission a copy of the CONGRESSIONAL RECORD for today, ask the Commission to comment on the charges made by the Senator from Delaware, and advise our committee whether the Commission stands on the bill as drafted, or desires to propose some amendments, or desires that the bill be withdrawn.

Again I say this is a bill which, largely as a matter of courtesy, the majority members of the Committee on Post Office and Civil Service—believing the bill to be just, as did the House of Representatives—were happy to report at the request of the administration.

Mr. DIRKSEN. Mr. President, I am glad the distinguished Senator from Pennsylvania [Mr. CLARK] has acceded to the request that the bill go back to the committee.

But I ought to make the following statement a part of the legislative record: When the name of the Vice President is brought into the matter, I think it should be made abundantly clear that, so far as proposed legislation is concerned, he is only a transmittal officer. There is not a morning when I come to my desk that there are not a dozen communications from various agencies of the Government: "Be advised that we have this day sent to the Vice President" such and such bill—from the Treasury Department, from the Veterans' Administration, from the Civil Service Commission, from the regulatory agencies, from the Bureau of the Budget, and from every other agency of the Government. If the Vice President undertook to inform himself regarding every measure sent up here, obviously if he read 24 hours a day from now until doomsday he could not even begin to read all the proposed legislation.

A moment ago, I pointed out that up to the 1st of May, 14,000 bills and resolutions had been introduced in the House of Representatives, and a little more than 4,000 in the Senate. What a monumental horde of proposed legislation.

And how grateful the people of the country can be that, up to this good hour, only 453, including both private bills and public bills, have been engrossed and approved by the President of the United States and enacted into law. The people of the Nation can be everlastingly grateful that all this horde of measures has not found its way to the solemn statute books.

So I wish to say that the Vice President is a transmittal officer; that fact should be very definitely understood.

When the bill comes up with a recommendation from the Civil Service Commission, I do not apologize for the Commission, nor do I defend it, if I think it is wrong.

It remains to be seen whether the distinguished Senator from Delaware [Mr. WILLIAMS] has made a good case in connection with this matter. But since speedy action on this measure is not urgent, we can take some time, and we shall take a look.

I hope the committee will summon the present Chairman of the Civil Service Commission and others to testify before it; and I hope they will set out, in whatever hearings the committee holds, the names of those who would be the beneficiaries under the provisions of the bill, the payments they would receive by way of monthly annuities and retirement payments, why they were separated from the rolls, the nature of the violations, if any, whether they involve turpitude, and all the other facts to which I think the Senate is richly entitled.

Mr. MANSFIELD. Mr. President——

Mr. DIRKSEN. I yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, there is a great deal of merit in what the distinguished minority leader has just said. I think it should be pointed out, though, that the bill was sent up to Congress at the request of the administration, was drafted by the Attorney General, as I understand, and was proposed and supported by the Civil Service Commission. There has been a change in the leadership of the Commission. I am delighted the present Commissioner will be a witness and will testify.

I was also interested in what the minority leader said the the effect that about 14,000 bills and resolutions have been introduced in the House and Senate this year, and his further statement that, of those, something in the neighborhood of 400 had been passed, and that the American people should be grateful to the Congress for the discrimination shown.

I want the RECORD to show I am pleased that the minority leader has such good words and high hopes on the accomplishments of this Congress; and I am sure what he has said this afternoon will be repeated up and down the country. It is nice to see a Democratic-controlled Congress have the wholehearted support of the Republican leader in the Senate.

Mr. DIRKSEN. To show my distinguished friend from Montana how far I have gone in this matter, on Saturday and Sunday, on 15 television and 60 radio stations out in my part of the country, where I do a weekly program, I took as my text, "Little and Big; Much and Little," and I undertook to show the side of the so-called unglamorous work of the Congress.

Too often, in evaluating what the Congress has done, there are considered only major policy proposals; but there are many other matters that are a part of the congressional process. All those matters must be processed. All must be heard. Witnesses must be heard. Then the evaluation must begin.

So I have said what I stated not only on the Senate floor, and privately, but I have gone even to TV and radio stations to express my pride in that institution of Government of which I have been a part for more than 26 years.

I have sought to point out to my own people that when one talks about a "do-nothing Congress" or a "do-little Congress," or any other kind of a Congress, there are many matters that do not reach the headlines, but which are yet a part of our responsibilities.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. DIRKSEN. First I make one other comment. I think it was said this bill came with the support of the Attorney General. Certainly it was sent to the Congress by the Civil Service Commission. I read the letter and report indicating they urged the enactment of this measure. But, of course, Government agencies and the persons who speak for them can be fallible. Even Senators are fallible. Even Senators make mistakes. Not all the omniscience in the world is centered in the Senate Chamber. I freely and openly and in public confess what is in my soul, and admit my mistakes, because it makes it so much easier to deal with them when one is charged with them.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CLARK. There has been a little misunderstanding about the Civil Service Commission membership. It was the present Chairman of the Civil Service Commission who recommended this bill to our committee. I read very briefly two sentences from his testimony at a hearing over which I presided. Mr. Roger W. Jones, Chairman of the U.S. Civil Service Commission, said:

> May I conclude by reiterating the Commission's view that the amended S. 91—
>
> The bill we were considering today—
>
> would produce a result which is equitable and proper from the standpoint of the Government, as well as being fair to the employee and his survivors. I therefore urge upon Congress the desirability of early approval action.

That testimony was given over a year ago. Failure to have early approval was due to objections by the Senator from Delaware, which is entirely within his rights.

Mr. DIRKSEN. I do not know if that estimate by Mr. Jones is reiterated. I know Mr. Jones. He is, in my judgment, one of the most capable and diligent employees in government. He may be right. He may be wrong. But that would be no reason for the Senate going down the wrong road when it has an opportunity to take a second look. If there were any urgency about passing the bill, if the world was about to topple, or if one of Mr. Khrushchev's rockets was going to burst in the Senate Chamber, it would be a different matter. But there is time; and time and restraint are the saving grace of free government.

I am reminded of the historian who said, "It is not what goes on the statute books that counts, but what comes off that is finally the salvation of a free society."

Mr. President, I think I had better give up the floor before I start to philosophize.

Mr. MANSFIELD. Mr. President, I wish to make a parliamentary inquiry, but before I do so, again I am struck by something which the distinguished minority leader has said, relating to the historian who said that the idea was not to pass legislation, but to withdraw legislation, or words to that effect.

It seems to me, and I am sure my friend, the Senator from Illinois, will recall this, because he served in the House at that time, and it was before my time, a certain Congressman was sent here from New York City, and one of his promises was that he would repeal a bill a day. I do not think he was very successful. He did not last too long. But he was a very good Congressman. At least he seemed to follow the historic precedent laid down. But that is something easier to talk about than to do, I may say to the Senator from Illinois.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. Surely.

Mr. DIRKSEN. I remember that incident. I know the distinguished gentleman who adopted what I think is a very, very fine slogan. He did not get too far, unfortunately.

Mr. MANSFIELD. But he made a pretty good effort.

Mr. KEATING. Mr. President, if the Senator will yield, it must be admitted that he tried. He introduced about a bill a day, trying to repeal something. I think he should get an "E" for effort.

Mr. DIRKSEN. Yes. We will give him an "E" for effort.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the RECORD immediately prior to the vote on the motion the first two paragraphs from a letter dated April 16, 1959, signed by Roger W. Jones, in which is stated his explanation in regard to the bill. I will omit the balance of his letter because it refers to specific cases by name, and I see nothing to be accomplished by using the names.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

> DEAR SENATOR WILLIAMS: There is before me your letter of March 27 regarding application of S. 91, if enacted, to certain specific cases.
>
> This bill is intended to and will amend the existing bar in Public Law 768, 83d Congress, against annuity awards by limiting its application to crimes or actions involving the national security. It will not affect the Civil Service Retirement Act in any other way. For those persons whose annuity payments are barred because of conviction for embezzlement of Government funds or having accepted bribes or kickbacks while in public

office, enactment of S. 91 will restore their annuity rights.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. Is there before the Senate a motion to recommit the bill now under consideration?

The PRESIDING OFFICER. The motion is to refer the bill to committee. The Senate is dealing with a House bill. It is not a motion to recommit.

Mr. WILLIAMS of Delaware. Mr. President, that is correct, but my motion is intended to send both bills to the committee.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Delaware.

The motion was agreed to.

PRESIDENT EISENHOWER'S PROPOSED VISIT TO RUSSIA

Mr. COOPER. Mr. President, the press reported today that Nikita S. Khrushchev has expressed doubt whether President Eisenhower will be welcome in the Soviet Union next month. The press also stated that Mr. Khrushchev sidestepped the specific question of whether he would want President Eisenhower to postpone the visit. It is reported that he said:

> I would not like to comment. We can exchange views on that in Paris.

I should like to say that while the American people would like to see President Eisenhower welcomed in Russia, and I believe that he would be welcomed, as he has been in every country that he has visited, the "welcome," in my view, is not the essential purpose of his visit.

In my view there are two essential purposes of such a visit. They deal directly with the tensions, and with the issues which divide the United States and Russia, and which transcend any "welcome" by Russia as important as that may be.

One of the essential purposes of the trip is to afford the opportunity for President Eisenhower to continue his conversations with Mr. Khrushchev in the hope that they may find solutions of the fearful issues which threaten world security and peace.

A second purpose of the visit is to enable President Eisenhower to speak directly to the Russian people, as well as with Russian leaders—to tell them of the desire of the Government of the United States and its people for peace, their desire to settle issues, and their determination to maintain freedom. We gave Mr. Khrushchev this opportunity when he was in the United States. It may well be that Mr. Khrushchev does not want to give President Eisenhower the same free speech and the same opportunity of speaking directly to the people, or to give them the true facts about the United States-Soviet issues and the American position toward these issues.

The reported statement of Mr. Khrushchev is hypocritical. The American people felt no great warmth toward Mr. Khrushchev, either before he came, during his visit, or after the visit ended. Yet because there are grave issues, such as Berlin, Germany, disarmament, the cessation of nuclear tests accompanied by adequate inspection, which threaten security and peace, the President—large in mind and heart—invited Mr. Khrushchev to come to the United States to discuss these issues. The American people were generous enough to support the invitation. And, as I have said, Mr. Khrushchev spoke his piece about Soviet policy throughout the United States in public forums and through all our media of communication.

Let me say that this invitation was given to Mr. Khrushchev, his speeches were made, and discussions were held with the President and other members of our Government, and with Members of the Congress, even though the people of the United States had full knowledge of the Soviet record which has shocked free people every day since World War II. By inviting Mr. Khrushchev to the United States, the President and the American people did not approve the Soviet record. It is a record which includes the breach of its agreements with World War II allies—the United States, Great Britain, and France. We did not approve the breach of Russia's promise of self-determination for Poland, Hungary, and Bulgaria, or its seizure of Czechoslovakia. We did not approve its suppression and its murder of the people of Hungary, Poland, and East Germany, who sought to exercise the right of self-determination, which Soviet Russia, along with its allies, had promised. We did not approve Russia's flagrant breach of its promises of free elections for Germany, made during World War II, in postwar agreements, and again at the Summit Conference in 1955.

We did not approve Soviet Russia's support of Communist China, and North Korean aggression against South Korea and the United Nations itself. We did not approve its breach of promise to dissolve the Comintern and the Cominform, or its worldwide instruments of espionage and subversion, which it has used continuously in the United States and every free country. We did not approve Soviet Russia's imprisonment of the people who dared dissent against its policy, and particularly the imprisonment of great church leaders of the Catholic, Protestant, and Jewish faiths. We did not approve its system which denies the existence of God and of human dignity. And we do not approve any of these things today.

Yet, with full knowledge of the Communists record of flagrant disregard of written promises, of principles of international law and order, and of the decencies of mankind, our Government and the American people accepted Mr. Khrushchev and gave him full opportunity to present his country's views, because we want a solution of the dangerous issues which might bring a nuclear holocaust, and set back the long strivings of mankind for freedom and for peace.

In the face of the Russian record, it comes with poor taste for Mr. Khrushchev to suggest that the Russian people would not welcome the President of the United States. The true issue is not whether the President would be received with tumultuous demonstrations, whether ordered by the Soviet dictator or whether genuinely responsive to President Eisenhower, by the Russian people. The true issue is whether Mr. Khrushchev is willing to open the Soviet Union to the President, so that conversations may go forward toward the solution of the fateful and awful issues which threaten the world, and whether he is willing to give to the President of the United States the same opportunity to speak directly to the Soviet people as was accorded him upon his visit to the United States.

Mr. JAVITS. Mr. President, will the Senator from Kentucky yield?

Mr. COOPER. I yield.

Mr. JAVITS. First, I wish to associate myself fully with one of the most eloquent and intelligent statements I have ever heard on the subject of foreign policy in this or any other forum.

Second, I believe the Senator from Kentucky has rendered a real service, not only to the American people, but also to the whole free world, in saying what he has now said, and in putting the whole situation in focus, as he has.

We have talked about the Russian people and the American people. One must have faith in those people. The Senator from Kentucky has addressed an eloquent testimonial to the Russian people as to whether they really want peace—whether they want peace, not whether Khrushchev wants peace.

In my opinion, the President will be well received in the Soviet Union. I think such a visit by the President may afford one way for the people who cannot vote, and cannot speak, to show what they think about foreign policy and what they think about their love for peace.

I hope the President hears what the Senator from Kentucky has said, just as I hope the press will spread his statement to every corner of the free world, to the Soviet Union, too, and to all the countries of the Communist bloc.

I hope the President will make the trip.

Mr. COOPER. Mr. President, I appreciate the statement of the Senator from New York. I myself hope that the opportunity will come for the President to visit Russia. As I have said, I believe the real issue is not whether he receives a welcome, but simply whether Mr. Khrushchev is willing to give the United States the opportunity to continue negotiations toward a settlement of the issues, and whether he is willing to give the President of the United States the opportunity to speak directly to the Russian people.

DEMOCRATIC PARTY'S ADVISORY COMMITTEE ON FARM POLICY

Mr. GOLDWATER. Mr. President, it is distressing to see the Democratic Party's advisory committee on farm policy give up on America's farmers and the independent future of agriculture in this country.

The committee's report demonstrates a hopeless, negative attitude that bodes

no good for farmers. "Let us go back to programs that failed" seems to be their battle cry. The discredited multibillion-dollar Brannan plan is once more resurrected. How long can one beat a dead horse?

The advisory committee offers, as their only solution to the economic problems facing agriculture, a return to the old, discredited 90 percent of parity price support formula that destroyed markets at home and abroad, especially for cotton and tobacco, and built the present costly surpluses.

The committee offers even higher export subsidies that will lose us international friends in our great and continuing efforts for trade liberalization. America needs export markets.

Further, they want to reduce livestock production sharply by wrapping the control cloak around this great freedom-loving industry. All of this means reduced employment, less transportation, and less business.

In the final analysis, the advisory committee deals in generalities, neatly skirting if not ignoring such basic matters as the extent of the rigid controls that must be wrapped around this bureaucratic bauble.

The Congress, though tightly controlled by the Democrats for all but two of the last 27 years, has consistently refused to impose the tight and presumably effective controls on farmers envisioned by the advisory committee as a means of reducing production.

And to completely confuse the American farming public they conclude with an endorsement of the administration's conservation reserve program to take land out of production of crops in surplus—an endorsement that follows close on the heels of the Democratic-controlled House Appropriations and Senate Agriculture Committees' recommendation not to extend the soil bank program at all.

CONSTRUCTION AT MILITARY INSTALLATIONS

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1373, H.R. 10777, so that the bill will be made the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

ADJOURNMENT

Mr. MANSFIELD. Mr. President, I move that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 5 o'clock and 21 minutes p.m.) the Senate adjourned until tomorrow, Friday, May 13, 1960, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

THURSDAY, MAY 12, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Proverbs 10: 9: *He that walketh uprightly, walketh securely.*

Eternal and ever-blessed God, in the quiet of this noon hour, inspire us with one accord, to commune humbly and reverently with Thy spirit. May we surrender ourselves in glad and willing obedience to Thy light that has followed us all our way and to Thy love that will never let us go.

Forgive our sins and imperfections, the waywardness of our desires and the irresolution of our undisciplined wills, that we may know the strength of being clean and free.

Help us in these strange days of tension and pressures, when our minds and hearts are filled with anxieties and wistful longings, to lay hold of Thee with increasing tenacity of faith which alone will enable us to carry on faithfully and without fear.

Hear us in the name of our Lord and Saviour. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 1974. An act to authorize the construction of modern naval vessels.

The message also announced that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

S. 2778. An act to amend the act relating to the Commission of Fine Arts.

COMMITTEE ON BANKING AND CURRENCY

Mr. BROWN of Georgia. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have until midnight Saturday to file a report on the bill S. 2611.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

MEDICAL CARE FOR THE AGED

Mr. DULSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DULSKI. Mr. Speaker, I want to call attention today to a resolution of the Common Council of the City of Buffalo, N.Y., calling for the enactment of the Forand bill which provides medical care for the aged. Under unanimous consent I include this resolution at this point in the RECORD. The resolution follows:

RE LEGISLATION TO PROVIDE MEDICAL CARE FOR THE AGED UNDER THE SOCIAL SECURITY SYSTEM

Whereas there exists a real need for legislation to solve the problem of medical care for the aged; and

Whereas the high cost of medical care and hospitalization makes it difficult for our aged citizens to procure adequate medical care and attention after their earning capacity has greatly diminished or ceased; and

Whereas there is now pending in the Congress of the United States the Forand bill which would provide such benefits under the social security system: Now, therefore, be it

Resolved, That the Common Council of the City of Buffalo express its approval of the provisions of the Forand bill in dealing with the problem of providing adequate medical care for our senior citizens; and further

Resolved, That the President of the United States and the Congress of the United States, be requested to enact the Forand bill into law; and further

Resolved, That the city clerk be authorized and directed to forward certified copies of this resolution to the President of the United States, the Clerks of the Senate and House of Representatives of the United States, and to each legislator representing any part of the city of Buffalo in Congress.

Adopted April 19, 1960.

A POLITICAL LOOK AHEAD

Mr. MASON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MASON. Mr. Speaker, if the Democratic Party at their coming convention selects Senator LYNDON JOHNSON, of Texas, for their presidential candidate and Senator KENNEDY for their vice-presidential candidate—and I predict that will be the team—they will have selected the strongest team they could select.

Senator JOHNSON would carry the Southern States with him and Senator KENNEDY would carry the large cities of the North—Boston, New York, Philadelphia, Chicago, Detroit, and so forth. It would be a very difficult team to beat.

In order to stand a chance of defeating that team the Republican Party would have to team up NIXON and Rockefeller—the two most popular Republican leaders in the Nation—joining New York and California—the two most populous States of the Union. Both of these men are young, popular, glamorous, vote-getting campaigners who would give the Nation a fighting campaign such as we have not had for many a year.

What a campaign that would be—NIXON and Rockefeller versus JOHNSON and KENNEDY. I predict there will be few stay-at-home voters this fall if these two teams become the Republican and the Democratic battle leaders.

THE LATE ROBERT LEWIS RODGERS

Mr. FENTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FENTON. Mr. Speaker, it is with sorrow that I announce to the House the passing of our former colleague, Robert Lewis Rodgers.

Lew, as he was affectionately known here during his 8-year tenure in Congress, was called by his Creator on Monday at his home, 1219 West 10th Street, Erie, Pa.

Mr. Rodgers was first elected to the 76th Congress in 1938. Of the new Members at that time from Pennsylvania there remains Congressman CORBETT, Congressman VAN ZANDT, and myself.

It was indeed a pleasure and privilege to serve with Lew Rodgers. He was ever thoughtful of all his colleagues, was conscientious in the performance of his duties, and above all was true to his oath of office in supporting the Constitution and protecting the interests of his Government and the country he loved so well.

While serving the best interests of his country first, Lew was always mindful and alert to the needs of his district and his constituents. He established a fine reputation in Washington, and his memory will long be cherished by countless friends in all walks of life.

Robert Lewis Rodgers was born in El Dorado, Kans., on June 2, 1875. Upon the death of his mother in 1878 he was reared by his grandparents on a farm in Greene Township near Jamestown, Mercer County, Pa. He attended district school and Fredonia Institute. Lew enlisted in Company K, 15th Regiment, Pennsylvania Volunteer Infantry, and saw service in the war with Spain. He taught in the district schools and engaged in farming.

On March 20, 1908, Mr. Rodgers married the former Madge E. Cathcart, of Adamsville, Pa., who survives together with one son, Thomas, also of Erie.

After having engaged in the insurance and real estate business on October 31, 1914, Mr. Rodgers met with considerable success in this field. In 1938 he was elected to the 76th Congress to represent the counties of Crawford, Erie, and Mercer in Pennsylvania. He served in the three succeeding Congresses, his tenure being terminated at the conclusion of the 79th Congress in 1946. He served with distinction on the former Rivers and Harbors Committee, and the Public Buildings and Grounds Committee. During the 79th Congress he was the energetic whip of the Pennsylvania Republican Delegation.

Mr. Rodgers was very active in fraternal circles being a 33d degree Scottish Rite Mason. Previous to his election to Congress, for 10 years he was recorder of Zem Zem Temple, Ancient Accepted Order Nobles of the Mystic Shrine. He was a past president and secretary of the Erie Rotary Club.

My sympathy is extended to Mrs. Rodgers, her son Thomas, and other loved ones. We know that God will give them fortitude to carry on in their hour of sorrow and the days ahead.

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the life and character of Robert Lewis Rodgers.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

MUTUAL SECURITY ACT OF 1960

Mr. MORGAN. Mr. Speaker, I call up the conference report on the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. BOW. I object, Mr. Speaker.

The SPEAKER. The Clerk will read the conference report.

The Clerk read the conference report.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 1593)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "That this Act may be cited as the 'Mutual Security Act of 1960'.

"STATEMENT OF POLICY

"SEC. 2. Section 2 of the Mutual Security Act of 1954, as amended, which is a statement of policy, is further amended by adding at the end thereof the following:

"'(f) It is the sense of the Congress that inasmuch as—

"'(1) the United States favors freedom of navigation in international waterways and economic cooperation between nations; and

"'(2) the purposes of this Act are negated and the peace of the world is endangered when nations which receive assistance under this Act wage economic warfare against other nations assisted under this Act, including such procedures as boycotts, blockades, and the restriction of the use of international waterways;

assistance under this Act and the Agricultural Trade Development and Assistance Act of 1954, as amended, shall be administered to give effect to these principles, and, in all negotiations between the United States and any foreign state arising as a result of funds appropriated under this Act or arising under the Agricultural Trade Development and Assistance Act of 1954, as amended, these principles shall be applied, as the President may determine, and he shall report on measures taken by the Administration to insure their application.'

"CHAPTER I—MILITARY ASSISTANCE

"Military assistance

"SEC. 101. Chapter I of the Mutual Security Act of 1954, as amended, which relates to military assistance, is amended as follows:

"(a) In section 103, which relates to authorizations, insert the following new subsection (d):

"'(d) The value of programs of equipment and materials for American Republics, pursuant to any authority contained in this chapter other than section 106, in any fiscal year beginning with the fiscal year 1961, shall not exceed $55,000,000. For the purposes of this subsection, the value of nonexcess equipment and materials shall be as defined in section 545(h) of this Act, and the value of excess equipment and materials (as excess is defined in section 545(e) of this Act) shall mean the acquisition cost to the Armed Forces of the United States of such equipment and materials.'

"(b) In section 105(b)(4), which relates to conditions applicable to military assistance, strike out the last sentence.

"CHAPTER II—ECONOMIC ASSISTANCE

"Defense support

"SEC. 201. Title I of chapter II of the Mutual Security Act of 1954, as amended, which relates to defense support, is amended as follows:

"(a) In the first sentence of section 131(a), which relates to the authority of the President to furnish defense support, insert immediately before the period at the end thereof the following proviso: ': *Provided*, That either all documents, papers, communications, audits, reviews, findings, recommendations, reports, and other material which relate to operations or activities under this title are furnished to the General Accounting Office and to any committee of the Congress, or any duly authorized subcommittee thereof, charged with considering legislation, appropriations, or expenditures under this title, upon request of the General Accounting Office or such committee or subcommittee as the case may be, or the President certifies that he has forbidden the information to be furnished pursuant to such request and gives his reasons for doing so'.

"(b) In section 131(b), which relates to general authority, strike out '1960' and '$751,000,000' and substitute '1961' and '$675,000,000', respectively.

"(c) In section 141, which relates to conditions of eligibility for assistance, strike out 'No such assistance' in the second sentence and substitute 'No defense support or military equipment and materials'.

"(d) In section 142(a), which relates to agreements, strike out 'No assistance' in the introductory clause and substitute 'No defense support or military equipment and materials'.

"Development loan fund

"SEC. 202. Title II of chapter II of the Mutual Security Act of 1954, as amended, which relates to the Development Loan Fund, is amended as follows:

"(a) Amend section 201, which states the purposes of the Development Loan Fund, as follows:

"(1) In the last sentence, after 'to develop their economic resources' insert 'and free economic institutions', and after 'to increase their productive capabilities' insert 'in agriculture as well as in industry'.

"(2) At the end of the section, add the following new sentences: 'The Congress recognizes that the accomplishment of the purposes of this title in rapidly developing countries requires the development of free economic institutions and the stimulation of private investment, local as well as foreign, in the field of housing. It is the sense of the Congress that, consistent with the other purposes of this title, special consideration should be given to loans and guarantees to stimulate activities in this field.'

"(b) Amend section 202, which relates to general powers of the Development Loan Fund, as follows:

"(1) In clause (3) of the first sentence of subsection (b) insert 'or free economic institutions' after 'economic resources'.

"(2) At the end of the section, add the following new subsection:

"'(c) The Fund shall not allocate, reserve, earmark, commit, or otherwise set aside,

funds aggregating in excess of $50,000 for use in any country under this title unless (1) an application for such funds has been received for use in such country together with sufficient information and assurances to indicate reasonably that the funds will be used in an economically and technically sound manner, or (2) the President determines with respect to each such allocation, reservation, earmarking, commitment, or set-aside that it is in the national interest to use such funds pursuant to multilateral plans.'

"(c) In section 205(a), which relates to management, powers, and authorities, strike out 'Under Secretary of State for Economic Affairs' in the first sentence and substitute 'Secretary of State'.

"Technical cooperation

"SEC. 203. Title III of chapter II of the Mutual Security Act of 1954, as amended, which relates to technical cooperation, is amended as follows:

"(a) In section 304, which relates to authorization, strike out '$179,500,000' and '1960' and substitute '$172,000,000' and '1961', respectively.

"(b) Amend section 306, which relates to multilateral technical cooperation and related programs, as follows:

"(1) In subsection (a), which relates to contributions to the United Nations Expanded Program of Technical Assistance and related fund, strike out '$30,000,000' and '1960' and substitute '$33,000,000' and '1961', respectively.

"(2) In subsection (b), which relates to contributions to the technical cooperation program of the Organization of American States, strike out '1960' and substitute '1961'.

"(c) In section 307, which relates to advances and grants, insert '(a)' immediately after 'SEC. 307. ADVANCES AND GRANTS; CONTRACTS.—', and at the end thereof add the following:

"'(b) The President shall arrange for a nongovernmental research group, university, or foundation to study the advisability and practicability of a program, to be known as the Point Four Youth Corps, under which young United States citizens would be trained and serve abroad in programs of technical cooperation. Not to exceed $10,000 from funds made available pursuant to section 304 of this Act may be used to help defray the expenses of such a study.'

"(d) Repeal section 308, which relates to the International Development Advisory Board.

"Special assistance and other programs

"SEC. 204. Title IV of chapter II of the Mutual Security Act of 1954, as amended, which relates to special assistance and other programs, is amended as follows:

"(a) In section 400(a), which relates to special assistance, strike out '1960' and '$247,500,000' and substitute '1961' and '$256,000,000', respectively.

"(b) In section 401, which relates to the United Nations Emergency Force, strike out '1960' in the second sentence and substitute '1961'.

"(c) In section 402, which relates to earmarking of funds, strike out '1960' in the first sentence and substitute '1961'.

"(d) In section 403, which relates to responsibilities in Germany, strike out '1960' and '$7,500,000' in the first sentence and substitute '1961' and '$6,750,000', respectively.

"(e) Insert after section 403 the following new section 404:

"'SEC. 404. INDUS BASIN DEVELOPMENT.—The Congress of the United States welcomes the progress made through the good offices of the International Bank for Reconstruction and Development toward the development of the Indus Basin through a program of cooperation among south Asian and other nations of the free world in order to promote economic growth and political stability in south Asia, and affirms the willingness of the United States, pursuant to authorities contained in this and other Acts, to participate in this significant undertaking. In the event that funds appropriated pursuant to this Act are made available to be used by or under the supervision of the International Bank for Reconstruction and Development in furtherance of the foregoing purposes, such funds may be used in accordance with requirements, standards, or procedures established by the Bank concerning completion of plans and cost estimates and determination of feasibility, rather than with requirements, standards, or procedures concerning such matters set forth in this or other Acts; and such funds may also be used without regard to the provisions of section 901(b) of the Merchant Marine Act of 1936, as amended (46 U.S.C. 1241), whenever the President determines that such positions cannot be fully satisfied without seriously impeding or preventing accomplishment of such purposes: *Provided,* That compensating allowances are made in the administration of other programs to the same or other areas to which the requirements of said section 901(b) are applicable.'

"(f) Amend section 405, which relates to migrants, refugees, and escapees, as follows:

"(1) In subsection (c), which relates to contributions to the program of the United Nations High Commissioner for Refugees, strike out '1960' and '$1,100,000' and substitute '1961' and '$1,300,000', respectively.

"(2) In subsection (d), which relates to the continuation of activities undertaken for selected escapees, strike out '1960' and '$5,200,000' and substitute '1961' and '$3,500,000', respectively.

"(g) In section 406, which relates to children's welfare, strike out '1960' and substitute '1961'.

"(h) Amend section 407, which relates to Palestine refugees in the Near East, to read as follows:

"'SEC. 407. PALESTINE REFUGEES IN THE NEAR EAST.—There is hereby authorized to be appropriated to the President for the fiscal year 1961 not to exceed $16,500,000 to be used to make contributions to the United Nations Relief and Works Agency for Palestine Refugees in the Near East. In determining whether or not to continue furnishing assistance for Palestine refugees in the Near East, the President shall take into account whether Israel and the Arab host governments are taking steps toward the resettlement and repatriation of such refugees. It is the sense of the Congress that the earliest possible rectification should be made of the Palestine refugee rolls in order to assure that only bona fide refugees whose need and eligibility for relief have been certified shall receive aid from the Agency and that the President in determining whether or not to make United States contributions to the Agency should take into consideration the extent and success of efforts by the Agency and the host governments to rectify such relief rolls. The President shall include in his recommendations to the Congress for fiscal year 1962 programs under this Act a report concerning the progress made toward the rectification of the relief rolls as well as toward the repatriation and resettlement of the refugees by the governments directly concerned. Whenever the President shall determine that it would more effectively contribute to the relief, repatriation, and resettlement of Palestine refugees in the Near East he may expend any part of the funds made available pursuant to this section through any other agency he may designate.'

"(i) Section 409, which relates to ocean freight charges, is amended as follows:

"(1) In subsection (a), after 'such nations and areas' insert ', or, in the case of such nations and areas which are landlocked, transportation charges from the United States ports to designated points of entry in such nations and areas,'.

"(2) In subsection (c), strike out '1960' and '$2,300,000' and substitute '1961' and '$2,000,000', respectively.

"(j) Amend section 411, which relates to administrative and other expenses, as follows:

"(1) In subsection (b), which relates to certain expenses of administering nonmilitary assistance, strike out '1960' and '$39,500,000' and substitute '1961' and '$40,000,000', respectively.

"(2) In subsection (c), which relates to administrative and other expenses of the Department of State, strike out 'to' after 'appropriated' and substitute 'for expenses of'.

"(k) Section 412, which relates to the President's special education and training fund, is repealed.

"(l) In section 419(a), which relates to atoms for peace, strike out '1960' and '$6,500,000' and substitute '1961' and '$3,400,000', respectively.

"(m) Add the following new section after section 420:

"'SEC. 421. LOANS TO SMALL FARMERS.—It is the policy of the United States and the purpose of this section to strengthen the economies of underdeveloped nations, and in nations where the economy is essentially rural or based on small villages, to provide assistance designed to improve agricultural methods and techniques, to stimulate and encourage the development of local programs of self-help and mutual cooperation, particularly through loans of foreign currencies for associations of operators of small farms, formed for the purpose of joint action designed to increase or diversify agricultural productivity. The maximum unpaid balance of loans made to any association under this section may not exceed $25,000 at any one time; and the aggregate unpaid balance of all loans made under this section may not exceed $10,000,000' at any one time.

"CHAPTER III—CONTINGENCY FUND

"SEC. 301. Section 451(b) of the Mutual Security Act of 1954, as amended, which relates to the President's special authority and contingency fund, is amended by striking out '1960' and '$155,000,000' in the first sentence and substituting '1961' and '$150,000,000', respectively.

"CHAPTER IV—GENERAL AND ADMINISTRATIVE PROVISIONS

"SEC. 401. Chapter IV of the Mutual Security Act of 1954, as amended, which relates to general and administrative provisions, is amended as follows:

"(a) Section 502, which relates to use of foreign currency, is amended as follows:

"(1) Subsection (b) is amended as follows:

"(i) Insert after the word 'expended' in the proviso the words 'and the amounts of dollar expenditures made from appropriated funds in connection with travel outside the United States'.

"(ii) Amend the second sentence to read as follows: 'Within the first sixty days that Congress is in session in each calendar year, the chairman of each such committee shall prepare a consolidated report showing the total itemized expenditures during the preceding calendar year of the committee and each subcommittee thereof, incurred as a result of the official activities of the members and employees of such committee or subcommittee, and shall forward such consolidated report to the Committee on House Administration of the House of Representatives (if the committee be a committee of the House of Representatives or a joint committee whose funds are disbursed by the Clerk of the House) or to the Committee on Appropriations of the Senate (if the com-

mittee be a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate).'

"(2) At the end of the section, add the following new subsection:

"'(c) It is the sense of the Congress that prompt and careful consideration should be given to participation by the United States in an internationally financed program which would utilize foreign currencies available to the United States to preserve the great cultural monuments of the Upper Nile. Accordingly, the President is requested to submit to the Congress on or before March 1, 1961, his recommendations concerning such a program.'

"(b) Section 504(d), which relates to small machine tools and other industrial equipment, is repealed.

"(c) In section 505(a), which relates to loan assistance and sales, insert after the first sentence the following new sentence: 'Commodities, equipment, and materials transferred to the United States as repayment may be used for assistance authorized by this Act, other than title II of chapter II, in accordance with the provisions of this Act applicable to the furnishing of such assistance.'.

"(d) In section 513, which relates to notice to legislative committees, insert before ', and copies' in the the last sentence the following: 'and under the last clause of the second sentence of section 404'.

"(e) Amend section 517, which relates to completion of plans and cost estimates, as follows:

"(1) Insert '(a)' immediately after 'SEC. 517. COMPLETION OF PLANS AND COST ESTIMATES.—'.

"(2) Add the following at the end of such section:

"'(b) Plans required under this section for any water or related land resource construction project or program shall include a computation of benefits and costs made insofar as practicable in accordance with the procedures set forth in Circular A–47 of the Bureau of the Budget with respect to such computations.'

"(f) Amend section 523, which relates to coordination with foreign policy, by adding the following new subsection:

"'(d) Whenever the President determines that the achievement of United States foreign policy objectives in a given country requires it, he may direct the chief of the United States diplomatic mission there to issue regulations applicable to members of the Armed Forces and officers and employees of the United States Government, and to contractors with the United States Government and their employees, governing the extent to which their pay and allowances received and to be used in that country shall be paid in local currency. Notwithstanding any other law, United States Government agencies are authorized and directed to comply with such regulations.'

"(g) Amend section 527, which relates to employment of personnel, as follows:

"(1) In subsection (c), which relates to employment of personnel outside the United States, strike out 'Director' in the introductory clause and substitute 'President'; and insert before the period at the end of paragraph (2) the following new proviso: ': *Provided further*, That Foreign Service Reserve officers appointed or assigned pursuant to this paragraph shall receive in-class promotions in accordance with such regulations as the President may prescribe'.

"(2) In subsection (d), which relates to appointment of alien employees outside the United States, strike out ', at the request of the Director'.

"(h) Section 531, which relates to security clearance, is amended to read as follows:

"'SEC. 531. SECURITY CLEARANCE.—The standards and procedures set forth in Executive Order Numbered 10450, as amended or supplemented, shall apply to the employment under this Act by any agency administering nonmilitary assistance of any citizen or resident of the United States.'

"(i) In subsection (c) of section 533A, relating to the Inspector General and Comptroller, strike out paragraph (9) and renumber paragraphs (10) and (11) as paragraphs (9) and (10), respectively.

"(j) In section 534(a), which relates to reports, strike out 'six months' in the first sentence and substitute 'fiscal year'.

"(k) In section 537(a), which relates to provisions on uses of funds, amend paragraph (3) to read as follows:

"'(3) contracting with individuals for personal services abroad: *Provided*, That such individuals shall not be regarded as employees of the United States for the purpose of any law administered by the Civil Service Commission;'.

"(l) In section 537(c), which relates to construction or acquisition of facilities abroad, strike out '$2,750,000' and substitute '$4,250,000'.

"(m) Add the following new section immediately after section 551:

"'SEC. 552. ASSISTANCE TO CUBA.—No assistance shall be furnished under this Act to Cuba after the date of enactment of the Mutual Security Act of 1960 unless the President determines that such assistance is in the national and hemispheric interest of the United States.'

"CHAPTER V—TECHNICAL AMENDMENTS REFLECTING NEW LIMITS OF UNITED STATES

"SEC. 501. The Mutual Security Act of 1954, as amended, is amended as follows:

"(a) In section 205(c), strike out 'continental' in the twelfth clause of the first sentence.

"(b) In section 411(d), strike out 'the continental limits of'.

"(c) In section 527(c), strike out 'the continental limits of' in the introductory clause.

"(d) In section 527(d), strike out 'the continental limits of'.

"(e) In section 530(a), strike out 'the continental limits of'.

"(f) In section 537(a), strike out 'continental' in the last proviso of paragraph (5) and in paragraphs (13) and (17); and strike out 'the continental limits of' in paragraph (10).

"CHAPTER VI—AMENDMENTS TO OTHER LAWS

"SEC. 601. Title II of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1721 and the following), which relates to famine relief and other assistance, is amended as follows:

"(a)(1) In section 202, strike out 'The' at the beginning thereof and substitute the following: 'In order to facilitate the utilization of surplus agricultural commodities in meeting the requirements of needy peoples, and in order to promote economic development in underdeveloped areas in addition to that which can be accomplished under title I of this Act, the'.

"(2) The amendment made by this subsection shall expire June 30, 1961.

"(b) In section 203, which relates to delivery of relief supplies, in the third sentence after the words 'designated ports of entry abroad' insert ', or, in the case of landlocked countries, transportation from United States ports to designated points of entry abroad,', and before the period at the end of such sentence insert the following: ', and charges for general average contributions arising out of the ocean transport of commodities transferred pursuant hereto may be paid from such funds'.

"SEC. 602. Section 501(b) of the Mutual Security Act of 1959 (73 Stat. 256), which relates to international cooperation in health, is repealed.

"SEC. 603. Section 3(a) of Public Law 403, Eightieth Congress, as amended (22 U.S.C. 280b), which relates to United States membership in the South Pacific Commission, is amended by striking out '$75,000' and substituting '$100,000'.

"SEC. 604. The President shall have a study made of the functions of, and the degree of coordination among, agencies engaged in foreign economic activities, including the Department of State, the International Cooperation Administration, the Development Loan Fund, the Export-Import Bank, and the Department of Agriculture, with a view to providing the most effective means for the formulation and implementation of United States foreign economic policies. The President shall include in his presentation to the Congress of the fiscal year 1962 mutual security program his findings and recommendations resulting from such study.

"CHAPTER VII—CENTER FOR CULTURAL AND TECHNICAL INTERCHANGE BETWEEN EAST AND WEST

"SEC. 701. This chapter may be cited as the 'Center for Cultural and Technical Interchange Between East and West Act of 1960'.

"SEC. 702. The purpose of this chapter is to promote better relations and understanding between the United States and the nations of Asia and the Pacific (hereinafter referred to as 'the East') through cooperative study, training, and research, by establishing in Hawaii a Center for Cultural and Technical Interchange Between East and West where scholars and students in various fields from the nations of the East and West may study, give and receive training, exchange ideas and views, and conduct other activities primarily in support of the objectives of the United States Information and Educational Exchange Act of 1948, as amended, title III of chapter II of the Mutual Security Act of 1954, and other Acts promoting the international, educational, cultural, and related activities of the United States.

"SEC. 703. In order to carry out the purpose of this chapter the Secretary of State (hereinafter referred to as the 'Secretary') shall provide for—

"(1) the establishment and operation in Hawaii of an educational institution to be known as the Center for Cultural and Technical Interchange Between East and West, through arrangements with public, educational, or other nonprofit institutions;

"(2) grants, fellowships, and other payments to outstanding scholars and authorities from the nations of the East and West as may be necessary to attract such scholars and authorities to the Center;

"(3) grants, scholarships, and other payments to qualified students from the nations of the East and West as may be necessary to enable such students to engage in study or training at the Center; and

"(4) making the facilities of the Center available for study or training to other qualified persons.

"SEC. 704. (a) In carrying out the provisions of this chapter, the Secretary may utilize his authority under the provisions of the United States Information and Educational Exchange Act of 1948, as amended.

"(b) The Secretary may, in administering the provisions of this chapter, accept from public and private sources money and property to be utilized in carrying out the purposes and functions of the Center. In utilizing any gifts, bequests, or devises accepted there shall be available to the Secretary the same authorities as are available to him in accepting and utilizing gifts, bequests, and devises to the Foreign Service Institute under the provisions of title X, part C of the Foreign Service Act of 1946, as amended. For the purposes of Federal income, estate, and gift taxes, any gift, devise, or bequest accepted by the Secretary

under the authority of this chapter shall be deemed to be a gift, devise, or bequest to or for the use of the United States.

"(c) The Secretary shall make an annual report to the Congress with respect to his activities under the provisions of this chapter, and such report shall include any recommendations for needed revisions in this chapter.

"SEC. 705. There are authorized to be appropriated, to remain available until expended, such amounts as may be necessary to carry out the provisions of this chapter.

"CHAPTER VIII—HEMISPHERIC CENTER FOR CULTURAL AND TECHNICAL INTERCHANGE

"Statement of purpose

"SEC. 801. The purpose of this chapter is to promote better relations and understanding between the United States and the other nations of the Western Hemisphere (hereinafter referred to as 'the Hemisphere') through cooperative study and research, by establishing in Puerto Rico a Hemispheric Center for Cultural and Technical Interchange, either as a branch of an existing institution of higher learning or as a separate institution, where scholars and students, in various fields from the nations of the the Hemisphere may meet, study, exchange ideas and views, and conduct other activities primarily in support of the objectives of the United States Information and Educational Exchange Act of 1948, as amended, and title III of chapter II of the Mutual Security Act of 1954 and other Acts promoting the international educational, cultural, and related activities of the United States.

"Establishment of Center

"SEC. 802. In order to carry out the purposes of this chapter the Secretary of State (hereinafter referred to as 'Secretary'), after consultation with appropriate public and private authorities, may, on or before January 3, 1961, prepare and submit to the Congress a plan and program for—

"(1) the establishment and operation in Puerto Rico of an educational institution to be known as the Hemispheric Center for Cultural and Technical Interchange through arrangements to be made with public, educational, or other nonprofit institutions;

"(2) grants, fellowships, and other payments to outstanding scholars and authorities from the nations of the Hemisphere as may be necessary to attract such scholars and authorities to the Center;

"(3) grants, scholarships, and other payments to qualified candidates from the nations of the Hemisphere as may be necessary to enable such students to engage in study at the Center; and

"(4) making the facilities of the Center available for study to other qualified persons on reasonable basis."

And the Senate agree to the same.

THOMAS E. MORGAN,
A. S. J. CARNAHAN,
CLEMENT J. ZABLOCKI,
ROBERT B. CHIPERFIELD,
WALTER H. JUDD,
Managers on the Part of the House.

J. W. FULBRIGHT,
THEODORE FRANCIS GREEN,
JOHN J. SPARKMAN,
ALEXANDER WILEY,
BOURKE B. HICKENLOOPER,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

The Senate struck out all of the House bill after the enacting clause and inserted a substitute amendment. The committee of conference has agreed to a substitute for both the House bill and the Senate amendment. Except for clarifying, clerical, and necessary conforming changes, the differences are noted below:

INTRODUCTION

The House bill authorized an appropriation of $1,318,400,000 for fiscal year 1961. The Senate amendment authorized an appropriation of $1,405,500,000. The committee of conference adjusted the individual program amounts and agreed on a total authorization of $1,366,200,000 for fiscal year 1961. The authorization agreed upon is a reduction of $39,300,000 from the Senate amount and an increase of $47,800,000 over the House figure.

There were five amounts in the House bill from which the Senate amendment differed. On two of them the Senate receded—defense support, for a reduction from the Senate figure of $25 million; and special assistance, a reduction of $4 million. The two Houses split the $400,000 difference for the U.N. High Commissioner for Refugees and agreed to a final figure of $1,300,000. On the amount for Palestine refugees, the Senate receded from its position cutting off unobligated funds, and the House managers reduced their figure by $2 million with the understanding that approximately $6,500,000 of unobligated funds would be made available. For the contingency fund the difference between the House bill and the Senate amendment was $55 million. On this the House increased its figure by $50 million and the Senate cut its figure by $5 million.

Fiscal analysis of mutual security program for fiscal year 1961

[In thousands of dollars]

Program	House bill (1)	Senate amendment (2)	Conference substitute (3)	Adjustment against House bill (4)	Adjustment against Senate amendment to House bill (5)

Total	1,318,400	1,405,500	1,366,200	+47,800	−39,300

[1] Authorization contained in the Mutual Security Act.

[2] This total does not include unobligated balances of prior year appropriations requested to be continued available. Unobligated funds of approximately $6,500,000 which the administration proposal and House bill would have made available for use in 1961 are to revert to the Treasury. Although the Senate amendment authorizes a 1961 appropriation of $3,500,000 more than the House bill and the administration request, it will result in a total availability of $3,000,000 less.

[3] Does not include unobligated balances from prior year appropriations amounting to $6,500,000 which are authorized to be continued available.

MILITARY ASSISTANCE TO LATIN AMERICA (SEC. 101)

The House bill amended section 105(b)(4) to limit the aggregate amount of funds which might be obligated or reserved for military assistance to Latin America in fiscal year 1961 to the total for fiscal year 1960. The ceiling included training as well as materiel but did not apply to "excess" materiel or to reimbursable transactions under sections 103(c) and 106.

The Senate amendment added a new section 103(d) to limit the value of programs of military materiel beginning with fiscal year 1961 to $55 million. This ceiling included "excess" as well as nonexcess materiel and also applied to reimbursable transactions under section 103(c), which are financed with military assistance funds. It did not apply to training or to reimbursable transactions under section 106, which are not financed with military assistance funds. The Senate amendment also provided that in no case should any reimbursement to the Department of Defense and the military services for excess equipment exceed the usual value of excess equipment as determined under section 545(h).

The committee of conference was in agreement that U.S. assistance to the American Republics in the form of military materiel should be progressively reduced and that a ceiling should be imposed on the use of mutual security funds for this purpose. The managers on the part of the House accepted the language of the Senate amendment, except for the deletion of a provision relating to reimbursement for excess equipment which did not in any way alter the requirements already in effect under sections 522(c) and 545(h) of the Mutual Security Act.

The provision as agreed upon sets an annual limitation of $55 million beginning with the fiscal year 1961. This ceiling includes excess as well as nonexcess materiel and reimbursable transactions financed with military assistance funds. It does not apply to training or to reimbursable transactions under section 106.

SUBMISSION OF DOCUMENTS AND INFORMATION TO THE CONGRESS (SEC. 201(a))

The House bill added a proviso to section 131(b) of the Mutual Security Act of 1954, as amended, requiring that all documents relating to defense support operations be furnished upon request to the General Accounting Office or any authorized congressional committee. The Senate amendment did not contain a provision on this subject.

The Senate amendment, however, included a provision striking out the existing language of section 537(f) of the Mutual Security Act of 1954, as amended, which specifies the information to be submitted to Congress in connection with certain types of economic assistance and substituted for this provision a new requirement, outlining information to be submitted to the Congress in relation to military assistance.

The managers on the part of the House accepted a compromise according to which the provision of existing law relating to economic assistance, section 537(f), was retained while the new language contained in section 401(j) of the Senate amendment was deleted.

In addition, the provision in section 201(a) of the House bill was amended so as to require that if a request for any document or material is denied by the Executive, the President must certify that he has forbidden the furnishing of such document or material.

The Committee of Conference recognizes that the separation of powers under the Constitution makes it impossible for the Congress to infringe the prerogatives of the Executive by legislative action and that consequently this provision would serve to indicate the will of the Congress but that it could neither prescribe nor limit the constitutional powers of the Executive.

INCREASING DEVELOPMENT LOAN FUND EMPHASIS ON DEVELOPMENT OF FREE ECONOMIC INSTITUTIONS AND ON ENCOURAGEMENT OF PRIVATE INVESTMENT IN HOUSING (SEC. 202 (a) AND (b))

The Senate amendment added to the purposes of the Development Loan Fund the development of free economic institutions and the development of agriculture as well as industry. It also required the Development Loan Fund to take into consideration the contribution of any proposed financing activity to the development of free economic institutions. The Senate amendment also expressed the sense of the Congress that the Development Loan Fund should give special consideration to loans and guarantees to stimulate the development of free economic institutions and private investment in the field of housing in rapidly developing countries.

In addition, the Senate amendment included an expression of the sense of Congress that the Development Loan Fund should assist in the development of self-liquidating pilot housing projects in the American Republics.

The House bill contained no similar provisions.

The managers on the part of the House accepted the Senate provisions relating to the stimulation of private investment in housing on a worldwide basis and the other provisions broadening the purposes of the Development Loan Fund.

The Senate conferees, in accepting the deletion of the Senate provision relating to housing projects in Latin American countries, emphasized the fact that existing law already provides adequate authority for establishing or assisting in the establishment of savings and loan type institutions in foreign countries and for guaranteeing private U.S. capital for investment in private housing in Latin American countries.

The committee of conference was in agreement as to the desirability and the importance of encouraging the development of self-liquidating pilot housing projects in the American Republics and calls the attention of the Executive to the need for greater emphasis on this type of activity.

DEVELOPMENT LOAN FUND SPECIAL ADVANCE COMMITMENTS (SEC. 202(b)(2))

The House bill added a new section 202(c) which prohibited the Development Loan Fund Board of Directors from formally allocating, committing, reserving, setting aside, or earmarking funds in excess of $50,000 for use in any country unless an application or applications in excess of the amount to be committed for loans in such country had been received, supported by engineering, financial, or other data, or unless the President personally determined it to be in the national interest to use such funds pursuant to multilateral plans.

The Senate amendment contained no provision on this subject.

The managers on the part of the House accepted an amendment to the House provision, which requires that before funds are allocated by the Development Loan Fund "sufficient information and assurances" must have been received "to indicate reasonably that the funds will be used in an economically and technically sound manner" in place of the more specific language contained in the House bill.

The committee of conference agreed that the limitation on advance allocations, reservations, earmarks, commitments, or setasides by the Fund definitely applies to any formal action by the Fund's Board of Directors which would either bind the Fund or constitute a basis for representing to the Congress that a given sum cannot be used for other purposes. It does not mean that the Fund's staff cannot, or should not, as prudent bankers, informally discuss priorities of various proposals with prospective borrowers, or internally prepare work programs and give special attention to applications from key countries. It should be noted here that just last year the Congress directed in section 202(b) of the Act that the Fund "in its operations shall recognize that development loan assistance will be most effective in those countries which show a responsiveness to the vital long-term economic, political, and social concerns of their people, demonstrate a clear willingness to take effective self-help measures." Obviously assistance to projects and programs in such countries are to be given priority.

Secondly, the information and assurances called for are those appropriate to forming a judgment that the allocation will result in economically and technically sound uses. These would include an appraisal of the competence and past performance of the entities submitting the applications and their understanding that loans be available only for projects and programs which meet the requirements of section 517. Depending on the development need involved, the Fund will continue to be available to finance such specific projects as dams, industrial enterprises, and development banks and loans for programs which may either be a group of related projects or portions of overall plans or programs for economic development.

POINT FOUR YOUTH CORPS (SEC. 203(c))

The House report accompanying the bill included an endorsement of the Point Four Youth Corps and expressed the committee's desire for a comprehensive survey of the possibilities of developing a program for using the services of American youth under the mutual security program. The Senate amendment to the House bill included a specific provision requiring the President to arrange for such a study by a nongovernmental group and authorized the use of not more than $10,000 from technical cooperation funds to help defray the expenses of the study. The managers on the part of the House accepted the Senate language.

ARMAMENTS FOR THE NEAR EAST (SEC. 204(a))

The House bill amended section 400(a) of the act to express the sense of Congress that money made available for special assistance should not be used by any nation in the Near East to purchase armaments. The Senate amendment did not contain this language. While sympathetic to the overall objectives, the committee of conference decided that the implications of the language might make more difficult the achievement of our foreign policy objectives in that area.

INDUS BASIN—50–50 SHIPPING REQUIREMENT (SEC. 204(e))

The House bill added a proviso at the end of the second sentence of the new section 404 which authorizes the waiver of the 50–50 shipping requirement in connection with U.S. participation in the development of the Indus Basin. This proviso required that compensating allowances be made in the administration of other programs to the same area to which the 50–50 shipping requirement is applicable. The Senate amendment did not contain a comparable provision.

The committee of conference considered the possibility that, since the Indus Basin development project involves a period presently estimated at 10 years, it might be impossible at some future date to make compensating allowances on shipments under other programs to the same area.

The managers on the part of the House, therefore, accepted an amendment which extends the scope of compensating allowances to include shipments not only to the

same area but to other areas. This broadening of the provision in the House bill should assure fulfillment of the objectives of the 50–50 shipping requirement on a worldwide basis.

PALESTINE REFUGEES (SEC. 204(h))

The House bill deleted the proviso in section 407, which earmarked a percentage of the funds for resettlement and repatriation, and amended section 407 to authorize an appropriation of $18.5 million for contribution to the United Nations Relief and Works Agency for Palestine Refugees (UNRWA), which, together with the use of reappropriations, would permit a total contribution of $25 million.

The Senate amendment deleted the proviso in section 407 and amended section 407: (1) to authorize an appropriation of $22 million and to bar reappropriation of unobligated funds heretofore or hereafter appropriated under section 407; (2) to provide that after January 1, 1961, the U.S. contributions should not be used for relief programs except for refugees who had been certified as to need and eligibility after July 1, 1960; and (3) to require the President in the next fiscal year presentation to submit specific recommendations with respect to a program for the progressive repatriation and resettlement of refugees and for reducing the U.S. contribution to UNRWA.

The committee of conference agreed that the United States shall make progressive reductions of its annual contributions to the United Nations Relief and Works Agency for Palestine Refugees in the Near East, that there shall be a consistent effort to rectify the Palestine refugee rolls in order to assure that only bona fide refugees in need are included, and that a continued and vigorous effort shall be made toward the repatriation and resettlement of the refugees by the governments directly concerned.

The managers on the part of the House accepted a compromise which authorizes an appropriation of $16,500,000 for the fiscal year 1961. This amount, together with the $6,500,000 previously appropriated for resettlement but not used, would authorize for fiscal year 1961 a total of $23 million, which is $2 million below the total amount for this purpose in the House bill and $1 million above the total amount contained in the Senate amendment. It also expresses the sense of the Congress with respect to the rectification of the refugee rolls and directs the President to include in his recommendations to the Congress for fiscal year 1962 a report concerning the progress made toward rectification of the relief rolls and toward the repatriation and resettlement of the refugees.

TRANSPORTATION CHARGES TO LANDLOCKED COUNTRIES (SECS. 204(i) AND 601(b))

The committee of conference accepted a Senate amendment to section 409(a) which relates to ocean-freight charges to permit payment of transportation charges to points of entry in landlocked countries.

At present there is authority to use mutual security funds to pay ocean transportation for voluntary agency shipments to "ports of entry" in foreign countries. There is no authority, however, to pay overland transportation to points of entry in landlocked countries which do not have ports. The adoption of the Senate amendment will remove an inequity which a few countries suffer solely on account of geography.

The committee of conference accepted a similar amendment to section 203 of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480). The new language will authorize the payment of overland transportation charges to landlocked countries on title II and title III shipments.

LOANS TO SMALL FARMERS (SEC. 204(m))

The House bill added a new section 421 which stated it to be the policy of the United States to strengthen the economies of underdeveloped nations and to provide assistance designed to improve agricultural methods and techniques and encourage programs of self-help, particularly through loans of foreign currencies to associations of small farm operators. The new section 421 also imposed certain monetary ceilings on loans made under that section.

The Senate amendment contained no provision on this subject.

The committee of conference accepted the provision of the House bill with an amendment to the first sentence in which the word "for" was substituted for the word "to" in reference to associations of operators of small farms. This amendment is intended to make clear that loans of foreign currencies for such associations are not expected to be made directly by agencies of the United States, but would instead be made through agencies or institutions of foreign governments.

CONGRESSIONAL TRAVEL ACCOUNTING (SEC. 401(a)(1))

The Senate bill amended section 502(b), which requires an itemized reporting of congressional travel expenditures in foreign currencies, in two particulars. The new Senate language broadened the provisions of existing law to require itemized reporting of "the amount of dollar expenditures made from appropriated funds in connection with travel outside the United States." The Senate amendment also provided that the reports on congressional travel, which are published annually in the CONGRESSIONAL RECORD, should include the names of each Member and employees incurring local currency or dollar travel expenses. The committee of conference accepted the Senate language with an amendment. The language agreed upon tightens the provisions of existing law and makes it clear that the funds to be reported include both local currencies or dollars from appropriated funds expended "as a result of the official activities of Members and employees of congressional committees or subcommittees," and that committee chairmen, in complying with the provisions of section 502, submit annually for publication in the CONGRESSIONAL RECORD consolidated reports which show the total itemized expenditures in appropriated dollars and local currencies of the Members and employees of their committees and subcommittees.

CULTURAL MONUMENTS OF UPPER NILE (SEC. 401(a)(2))

The Senate amendment added a new section 502(c) which provided that if the President found that U.S. participation in an internationally financed program to preserve the cultural monuments of the Upper Nile would promote U.S. foreign policy, he might, notwithstanding section 1415 of the Supplemental Appropriation Act, 1953, and subject to congressional approval, contribute certain U.S.-owned foreign currencies for this purpose of a value not to exceed 33⅓ percent of the total cost of the program. It also provided that no such currencies might be used unless the President was satisfied the remaining cost would be borne by other nations.

The House bill contained no provision on this subject.

The managers on the part of the House accepted a substitute in the nature of a compromise, expressing the sense of the Congress that consideration should be given by the United States to participation in an internationally financed program which would utilize foreign currencies available to the United States to preserve the cultural monuments of the Upper Nile and requesting the President to submit to the Congress on or before March 1, 1961, his recommendations concerning such a program. The language agreed to does not commit the United States to any course of action nor does it authorize any use of foreign currencies.

WATER RESOURCES PROJECTS (SEC. 401(e))

The House bill added a new section 517(b) which required nonmilitary flood control, reclamation, and other water and related land resource programs or projects proposed for construction to be examined by qualified engineers financed under the Mutual Security Act in accordance with the general procedures prescribed in Circular A–47 of the Bureau of the Budget. The House language also called for a determination of the benefits and costs and the submission of a copy of the determination to the Congress and prohibited the undertaking of any such program or project on which the benefits do not exceed the costs and which does not otherwise meet the standards and criteria used in determining feasibility of similar domestic programs and projects in accordance with Circular A–47. The Senate amendment did not contain any provision on this subject.

The committee of conference agreed to the principle of using the procedures set forth in Circular A–47 with respect to the computation of benefits for any water or related land resource construction project or program that is hereafter planned pursuant to the requirements of section 517. The latter section already prohibits the makfng of an agreement that obligates more than $100,000 until technical, financial, and other plans have been worked out and a reasonably firm estimate of the cost to the United States has been made. The committee of conference recognized that the kind of statistics and cost-and-earning-potential data on hand in the United States necessary to make the computations required by Circular A–47 may not always be available in the underdeveloped countries. Hence the conferees agreed to the application of the standards "insofar as practicable" in order that foreign policy objectives of the United States would not be unduly impeded.

PAY OF EMPLOYEES IN LOCAL CURRENCY (SEC. 401(f))

The Senate amendment added a new section 523(d) which authorized Ambassadors to regulate the extent to which officers and employees of U.S. Government agencies and contractors abroad might receive their pay and allowances abroad in dollars or in local currency.

The House bill contained no provision on this subject.

The managers on the part of the House accepted the Senate provision with a number of clarifying amendments in the belief that this authority might increase the ability of the United States to prevent blackmarket operations on the part of overseas personnel. The Committee of Conference agreed that, as the amendment relates to contractors and contract employees, it applies only with respect to future contracts.

The language of the provision is sufficiently flexible and permits discretion in its application so as to assure that no undue hardship will be imposed on American military and civilian personnel serving overseas.

EMPLOYMENT OF PERSONNEL

The House bill amended section 527(b) of the act which relates to employment of personnel, to increase by four the number of positions that may be compensated, up to and including grade 15, without regard to the Classification Act of 1949. The Senate

amendment did not contain any provision on this subject. The committee of conference accepted the Senate position that improved administration of the mutual security program can only be achieved through the employment of competent top-level managerial personnel.

PROMOTION OF ECONOMIC DEVELOPMENT (SEC. 601(a)(1))

The House bill amended section 202 of Public Law 480 to authorize the use of surplus agricultural commodities on a grant basis to meet the requirements of needy people and to promote economic development in underdeveloped areas.

The Senate amendment contained no provision on this subject.

The committee of conference accepted the House provision with an amendment limiting the authorization to the period of one year. The managers on the part of the House accepted this limitation in the belief that a trial period of a year would not impede the operation of the program and would provide an opportunity to evaluate whether a longer range authorization would be desirable.

CONTRIBUTIONS TO SOUTH PACIFIC COMMISSION (SEC. 603)

The committee of conference accepted the language of the Senate amendment which amended section 3(a) of Public Law 403, 80th Congress. The new language raises the ceiling of $75,000 to $100,000 in appropriations authorized for our annual contribution to the South Pacific Commission.

The U.S. assessed contribution to the 1960 budget of the Commission will be about $70,000, or 12.5 percent of the total contribution. A majority of the member governments have expressed an interest in intensifying the work of the Commission, especially in the field of health. They are prepared to support an increase in the Commission's budget which would require the United States to exceed the present ceiling of $75,000. The adoption of the new language will permit the United States to support needed and well-planned increases in the budget of the Commission for the next several years and, at the same time, bear its share of the apportioned expenses at a relatively small additional cost. The peoples of three territories administered by the United States benefit from the activities of the Commission.

STUDY OF COORDINATION OF FOREIGN ECONOMIC OPERATIONS (SEC. 604)

The managers on the part of the House accepted the Senate amendment, with an amendment, requiring the President to have a study made of the functions of, and the degree of coordination among, agencies engaged in foreign economic activities, including the Department of State, the ICA, the Development Loan Fund, the Export-Import Bank, and the Department of Agriculture. The purpose is to provide the most effective means for the formulation and implementation of U.S. foreign economic policies. The President is required to include his findings and recommendations resulting from the study in his presentation to the Congress of the mutual security program for fiscal year 1962.

During the last decade various departments and agencies have embarked upon economic assistance programs. While each of the programs, whether grants, loans, or sales, is directed toward the strengthening of our foreign policy, there is increasing concern that they are not sufficiently coordinated or integrated to provide the unity of purpose necessary to achieve their common objective. Some are operated within the Department of State; others are outside the Department. It is the expectation of the committee of conference that the study will result in a larger measure of coordination or integration within the executive branch in the formulation and implementation of our foreign policy.

CENTER FOR CULTURAL AND TECHNICAL INTERCHANGE BETWEEN EAST AND WEST (CH. VII)

The committee of conference agreed to the language in the Senate amendment providing for the authorization of an appropriation to establish a Center for Cultural and Technical Interchange between East and West. The activities to be carried out by the center are those that will support the objectives of the United States Information and Educational Exchange Act of 1948 (the Smith-Mundt Act) and other acts promoting the international, educational, cultural, and related activities of the United States.

Last year the Congress directed the Secretary of State to submit to Congress before January 3, 1960, a plan and program for the establishment in Hawaii of an educational institution, for grants, fellowships, and other payments to outstanding scholars and to qualified students from the nations of the East and the West.

The Secretary of State filed a comprehensive report, as required. The language in the bill will permit the Secretary of State to carry out the recommendations contained in the report through any appropriate Federal or State agency or department. The establishment of such a center is in keeping with the objectives of the mutual security program and will constitute a significant contribution toward better understanding between the people of Asia and the Pacific area and of the United States.

HEMISPHERIC CENTER FOR CULTURAL AND TECHNICAL INTERCHANGE (CH. VIII)

The committee of conference agreed to the language in the Senate amendment designed to promote better relations and understanding between the United States and other nations of the Western Hemisphere by establishing in Puerto Rico a hemispheric center for cultural and technical interchange. The objectives of the center would be consonant with the objectives of our several international educational and cultural programs.

The new language authorizes, but does not require, the Secretary of State to make a study on all aspects of the proposed project and to submit a plan and program for the center and its activities and functions before January 3, 1961.

This section does not carry an authorization for an appropriation. The study will be financed from funds available to the executive branch.

THOMAS E. MORGAN,
A. S. J. CARNAHAN,
CLEMENT J. ZABLOCKI,
ROBERT B. CHIPERFIELD,
WALTER H. JUDD,
Managers on the Part of the House.

CALL OF THE HOUSE

Mr. TABER. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently, no quorum is present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 87]

Anderson, Mont.	Bonner	Canfield
Barden	Buckley	Cederberg
Blitch	Burdick	Celler
	Burke, Ky.	Chelf
Davis, Tenn.	Metcalf	Spence
Durham	Miller, George P.	Sullivan
Fogarty	Mitchell	Taylor
Holifield	Montoya	Thompson, Tex.
Jackson	Moorhead	Trimble
Johansen	Morris, N. Mex.	Vinson
Kelly	Porter	Walter
Kilburn	Powell	Williams
Landrum	Scherer	Willis
Lindsay	Scott	Withrow
McGovern	Shelley	Young
McMillan	Smith, Kans.	
Macdonald		

The SPEAKER. On this rollcall 384 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

MUTUAL SECURITY ACT OF 1960

The SPEAKER. The question is on the conference report.

Mr. BOW. Mr. Speaker, I make a point of order against the conference report on the ground that the conferees have gone beyond the range of the difference between the two Houses, particularly as it relates to section 407 of the bill. The conference report comes back, on the item of Palestine refugees, Near East, with a figure of $16,500,000. The figure in the House-passed bill was $18,500,000 and in the Senate-passed bill $22 million. My point of order is, Mr. Speaker, that the conferees have gone beyond the range of the difference between the two Houses.

The SPEAKER. The jurisdiction of conferees when they have before them an amendment in the nature of a substitute as we now have before us, is governed by clause 3, rule XXVIII, of the Rules of the House. This clause provides:

> Whenever a disagreement to an amendment in the nature of a substitute has been committed to a conference committee it shall be in order for the managers on the part of the House to propose a substitute which is a germane modification of the matter in disagreement, but their report shall not include matter not committed to the conference committee by either House.

The case before us, the House bill H.R. 11510, contained an authorization of $18,500,000 for contributions to the United Nations Relief and Works Agency for Palestine Refugees in the Middle East. The Senate amendment in the nature of a substitute authorized $22 million for this same purpose. The language proposed by the committee of conference reduces the authorization to $16,500,000.

The Chair would like to point out that where a figure or sum is involved, the general rule is that the conferees are confined within the limits set by the figure included in the House bill and that in the Senate amendment. But this general rule is not applicable where the Senate has struck out all after the enacting clause and inserted an amendment in the nature of a substitute. In this case, clause 3 of rule 28 is applicable, and the conferees may report a germane modification of the matter in disagreement. The Chair thinks the conferees have reported a germane modification and, therefore, overrules the point of order.

The question is on the conference report.

The question was taken, and the Speaker announced that in his opinion the ayes appeared to have it.

Mr. ADAIR. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. HARDY. Mr. Speaker, before the question was put, I was trying to get recognition to ask the chairman of the Committee on Foreign Affairs if he would not yield to me some little time. I wonder if we could not return to that situation so that might be done.

The SPEAKER. The Chair thinks it is pretty late for that. The question has been put. At the proper time the gentleman from Pennsylvania had the right to yield time. He did not, and the Chair put the question.

Mr. HARDY. Mr. Speaker, I was trying to get recognition before the Chair put the question.

The SPEAKER. If the gentleman addressed the Chair, the Chair did not hear him. The Chair doubts that the gentleman addressed the Chair. He might have been addressing the gentleman from Pennsylvania.

Mr. HARDY. If the Speaker will permit, I most assuredly did address the Chair. I am sorry the Chair did not hear me.

The SPEAKER. The Chair has already stated that the gentleman from Pennsylvania had control of the time. The Chair has nothing to do with the time.

Mr. MORGAN. Mr. Speaker, I was on my feet, and I fully intended to use the time.

The SPEAKER. The gentleman is recognized.

Mr. MORGAN. Mr. Speaker, on behalf of the managers on the part of the House I present the conference report on the Mutual Security Act of 1960.

The bill which we submit is a compromise. There were 38 points of difference between the House bill and the Senate bill which were considered by the conference. With respect to these differences, the Senate receded on 13, the House receded on 10, and 15 were compromised by modifying the language of the House or Senate bills, or both.

The House conferees did not prevail in everything they tried to preserve in the House bill, but I firmly believe that they did not surrender on any vital provision.

There were five differences in the money authorizations in the two bills. On two of these, defense support and special assistance, the Senate receded and accepted the House figures. This was a total concession of $29 million on the part of the Senate.

In the case of the authorization for the United Nations High Commissioner for Refugees, the conference split the difference. The House went down $200,000 and the Senate went up $200,000.

The authorization for Palestine refugees is rather complex because the carryover of certain unobligated funds is involved, but the net result of the conference is that the House went down $2 million and the Senate came up $1 million.

The House authorization for the contingency fund was $100 million and the Senate figure was $155 million. The House conferees finally agreed to a figure of $150 million for this item. That means that the House went up $50 million. The action of the managers on the part of the House in this matter was influenced by contemporary events. The short period which has elapsed since the mutual security bill was considered by the House has served to emphasize the fact that contingencies are one of the most important aspects of our foreign policy. During this short period we have seen the student revolution in Korea, the disturbances in Turkey, and the loss of a U.S. plane over the territory of the Soviet Union. Each of these situations undoubtedly will have an impact on our foreign policy, and it is very likely that significant adjustments in the mutual security program will result. It is the sincere judgment of the managers on the part of the House that this is not the time to make a drastic reduction in the contingency fund.

The net result is that the total authorization agreed to by the conference is $1,366,200,000 which is an increase above the total in the House bill of $47,800,000 and a decrease below the total in the Senate bill of $39,300,000.

The modifications made in the House bill are, as they inevitably must be, the result of give and take. The Senate bill, for instance, increased the authorizations for U.S. contributions to two international organizations—the South Pacific Commission and the United Nations Food and Agriculture Organization. The House accepted one of these increases, that for the South Pacific Commission, which involved increasing a $75,000 ceiling to a ceiling of $100,000, and refused to accept the increase in the ceiling for the Food and Agriculture Organization, which involved a figure of $3 million.

In several cases, the compromise language agreed to, in the judgment of the House conferees, actually improved the House bill. For instance, in the case of the 50–50 shipping requirement relating to the carrying of cargo financed under U.S. aid programs in U.S. vessels, the provision accepted by the conference gives greater protection to U.S. shipping than the language approved by the House. The bill as finally approved provides that compensating adjustments to assure the attainment of the objectives of the 50–50 shipping requirement are to be made in the administration of other programs not only to the same area but also to other areas. As a result, this permits necessary adjustments to be made on a worldwide basis.

In conclusion, let me state again that there were 38 points of difference between the House bill and the Senate bill, and that under our Constitution we have a legislature of 2 equal bodies. There is no way in which the House can impose its will on the Senate and no way in which the Senate can dictate to the House. It is necessary to compromise, and it is the sincere conviction of all of the managers on the part of the House that the best possible compromise has been agreed to.

Mr. CHIPERFIELD. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Illinois.

Mr. CHIPERFIELD. Mr. Speaker, the committee of conference on the mutual security bill—H.R. 11510—was confronted with 38 differences between the House and Senate bills. Many of these were on matters of far-reaching policy and to reach agreement presented a real problem. It is one thing to compromise differences in amounts but quite another to agree on fundamental principles in a program as complex as this one.

I wanted to congratulate and commend to the House the diligent work of the distinguished gentleman from Pennsylvania, Dr. MORGAN, chairman of our committee, as well as Dr. JUDD, of Minnesota, and Mr. ZABLOCKI, of Wisconsin, in upholding the House position. I know of no Member of the House or Senate who has greater knowledge of the details of this program than these gentlemen. Their outstanding work, I believe, resulted in bringing back to the House a bill which, in my judgment, is better than either the House or Senate version.

The authorization agreed upon reduced the Senate amount over $39 million and increased the House figure about $47 million.

The House had originally cut the contingency fund by $75 million and the conferees restored $50 million of this amount. I believe this was a wise move as we are all aware of the new tensions arising in Korea, Turkey, and the plane incident since the passage of the bill by the House.

The distinguished gentleman from Virginia [Mr. HARDY] had adopted in the bill two important amendments; one requiring the submission of documents and information to the Congress, and the other requiring certain conditions be met before obligating funds under the Development Loan provisions of the act. The substance of both of these amendments were retained. The committee of conference recognized in the first amendment the prerogatives of the Executive in withholding information. However, it is not within the province of your conferees to determine the constitutionality of this issue. The conferees modified language of the other amendment to allow a reasonable flexibility.

I believe the conferees' action limiting the military assistance to American republics is a step in the right direction as it was felt this form of aid should be progressively reduced.

I was glad the conferees on the part of the House adopted a Senate amendment providing for a study to develop the program for the Point 4 Youth Corps. Even the severist critics of mutual security who had personally investigated this particular program had only admiration for its work.

Numerous other provisions were adopted which, I believe, will improve the bill including the most difficult problem of Palestine refugees, fulfillment of the objective of 50–50 shipping requirements on a worldwide basis, transportation to landlocked countries, loans to small farmers, and so forth.

Wholly aside from humanitarian and altruistic motives the main purpose of the mutual security bill is through military and economic aid to maintain the security of the United States and the free world from communistic aggression and thereby maintain the peace. Equally important as maintaining this powerful deterrent against war is to guard against surprise attacks and to know what we would be confronted with in case of aggression.

Our defense and intelligence agencies are charged by law with knowing and advising what endangers our security, whether it is behind the Iron Curtain or elsewhere. In carrying out these responsibilities it may result in embarrassing situations such as the present one. But it would be extremely hazardous, if not fatal, if we did not know the dangers with which we are confronted. I fully approve of what is being done.

The mutual security bill provides outside of our own defensive forces the best means to maintain the peace.

On the whole, I believe this conference report is the best that could be obtained and I urge its adoption.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. GROSS. Was there in the House bill the establishment or first steps toward the establishment of a Point 4 Youth Corps?

Mr. MORGAN. No. I want to say to the gentleman from Iowa that the House report carried a recommendation that a study of the Point 4 Youth Corps should be made by the Committee on Foreign Affairs. The Senate version of the bill carried a requirement for a study, as the gentleman knows, and authorized the use of $10,000 of technical assistance funds for this purpose. The House adopted the Senate amendment.

Mr. GROSS. Does the gentleman envisage that the establishment of this youth corps will blossom out into another multimillion-dollar enterprise?

Mr. MORGAN. No. All that is authorized is a study to be made by a non-Government foundation or a university. Programs similar to the point 4 youth program are now operating on a small scale in several of the countries in southeast Asia. I think the Pilcher committee mentioned it as one of the very good parts of the mutual security program.

Mr. GROSS. I note in the conference report provision for cultural monuments of the Upper Nile; a center for culture between the East and the West, and a hemispheric center for culture. What is all this culture going to cost; does the gentleman have any idea?

Mr. MORGAN. The item of the cultural monuments of the Upper Nile, of course, was in a Senate amendment. It is not going to cost a dime. There was an authorization to use foreign currencies in the Senate bill and the House conferees were successful in removing this authorization and changing the language to request the President to study the matter and submit recommendations.

Mr. GROSS. What about the rest of it—the East-West Cultural Center?

Mr. MORGAN. The East-West Cultural Center, as the gentleman knows, was included in the mutual security bill that passed last year. A study was authorized to be made. The study was made and reported back by the Secretary of State on January 1 of this year. This amendment is the result of the study made and the recommendation by the Secretary of State.

Mr. GROSS. Does the gentleman have any idea what these things are going to cost, for example, the cultural center in Puerto Rico?

Mr. MORGAN. The cultural center in Puerto Rico is not going to require the use of any mutual security funds this year. This is just an authorization for a study and provides no authorization of an appropriation.

Mr. REUSS. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. REUSS. Mr. Speaker, with reference to the Point Four Youth Corps question raised by the gentleman from Iowa [Mr. GROSS], I wish to commend the managers on the part of the House for adopting the language of the Senate. That language directs the President to arrange for a nongovernmental research group or foundation to study the advisability and practicability of a Point 4 Youth Corps, in which young Americans would have a chance voluntarily to serve their country abroad in technical assistance programs. I think that, if properly studied—and I may say there are at least three major American universities ready on request to make such a study—there is every indication that private foundations will fund that study, which means it will not cost the taxpayers anything if the study is made. And if the Congress at the next session chooses to adopt the recommendations of that study, a new and affirmative note in our foreign economic aid program can be struck. I commend the committee for giving the point four youth idea a chance to be born.

Mr. MORGAN. I recognize that the gentleman from Wisconsin has done a great deal of work on this Point 4 Youth Corps amendment. He introduced a bill on this subject which received very careful consideration by the Committee on Foreign Affairs. As a result of our inquiries the Executive also explored the matter and submitted recommendations. The committee has been very sympathetic to the idea and I assure the gentleman that we will await with interest the report when it is ready.

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. EDMONDSON. There are several of us who have been much concerned about the business engineering standards on some of the public works projects in this foreign aid program. I am disturbed by the fact that the committee amendment which was brought out in the bill when it first passed the House on that point is considerably modified by the conference report, particularly by the fact that the conference language does not contain any provision that qualified engineers make a study, or that the benefit-cost determinations be supplied to the Speaker of the House and to the Senate; and, furthermore, it does not contain a prohibition against the project being built when that project does not meet the benefit-cost standards for projects in the United States.

Is it the intention of the committee to require that those standards be met on those projects, and to require that engineers make cost studies that we require in the United States?

Mr. MORGAN. This provision was incorporated in the House bill by the Foreign Affairs Committee. It was taken to conference in good faith, and the amendment adopted by the conference was the result of compromise after full discussion, during long sessions in the conference. I am sure that the amendment takes in all prescribed in Circular A–47 of the Bureau of the Budget except for adding the words "as far as practicable." It gives the President some flexibility in dealing with projects in the less developed countries.

Mr. EDMONDSON. I think the amendment as adopted represents progress, but I would like the gentleman to assure us, if he can, that the benefit-cost determinations will be available to the Congress on those projects in the future.

Mr. MORGAN. I can assure the gentleman as far as I am concerned that I will work to that end.

Mr. ADAIR. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. ADAIR. Would the gentleman say, with respect to this exhaustive information to which reference was just made, that it was the intent of the conferees that the provisions of Circular A–47 should apply insofar as practical?

Mr. MORGAN. Yes, sir.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. BENTLEY. I would like to ask the chairman about this new section, which I understand has been inserted by the Senate, 523(d), on page 7 of the conference report. This section reads:

(d) Whenever the President determines that the achievement of U.S. foreign policy objectives in a given country requires it, he may direct the chief of the U.S. diplomatic mission there to issue regulations applicable to members of the Armed Forces and officers and employees of the U.S. Government, and to contractors with the U.S. Government and their employees, governing the extent to which their pay and allowances received and to be used in that country shall be paid in local currency. Notwithstanding any other law, U.S. Government agencies are authorized and directed to comply with such regulations.

I would like to ask whether the ambassador in any given country is authorized to issue regulations applicable to all members of all U.S. military forces.

Mr. MORGAN. Only when the President so determines and directs.

Mr. BENTLEY. In other words, our ambassador would be able to issue regulations governing the pay of Army officers throughout any foreign country?

Mr. MORGAN. Only under the direction of the President of the United States.

Mr. BENTLEY. The Ambassador could under direction of the President of the United States?

Mr. MORGAN. Under the direction of the President of the United States.

Mr. BENTLEY. But how would that be worked out?

Mr. MORGAN. The President would give directions.

This amendment was put in by the other body as a direct result of black-market operations which went on in Turkey in which a number of military personnel apparently were involved. The amendment is very flexible. It gives the President authority and flexibility so that I do not think the condition described by the gentleman can occur. This is simply an effort to try to correct the black-market practices such as went on in Turkey.

Mr. BENTLEY. In other words, if the financial situation in any country is such as to warrant it, he may by reason of this amendment have authority to direct all military contingents in that country in the matter of whether they be paid in dollars or local currency or a combination of both, depending upon the circumstances.

Mr. MORGAN. That is quite correct, but the President directs both the Pentagon and the State Department.

Mr. BENTLEY. I am just wondering if this were not an example of an encroachment of the State Department on the military, the State Department taking precedence of the military.

Mr. MORGAN. The President is still Commander in Chief of the Armed Forces. I am sure he makes the decisions.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield.

Mr. VANIK. I would like to ask the chairman of the committee, in the report, I note that the Senate amendment also expressed the sense of Congress that the Development Loan Fund should give special consideration to loans and guarantees to stimulate the development of free economic institutions and private investment in the field of housing in rapidly developing countries.

I also note in the current issue of the National Savings and Loan Journal that the Development Loan Fund has just made a $2 million housing loan to a privately owned savings and loan association in Lima, Peru, known as the Association Mutual de Creditos para Vivienda Peru which was founded by Pedro Beltran, Prime Minister and Minister of Finance of Peru.

Is it the sense of your committee that these loans for housing development should be made to banks or institutions owned by prime ministers or executives of Latin American states?

Mr. MORGAN. Of course, these loans should be properly administered; but this is a sense amendment. It gives the Development Loan Authority no new powers.

Mr. VANIK. Mr. Speaker, it is this kind of administration of the law which makes it difficult for a Member of Congress to explain his vote and compels him to apologize for it.

Mr. MORGAN. Mr. Speaker, I yield 5 minutes to the gentleman from Virginia [Mr. HARDY].

Mr. HARDY. Mr. Speaker, first of all, let me express my appreciation to the gentleman from Pennsylvania for yielding this time to me in order that I may bring to the attention of the House certain language contained in the statement of the managers on the part of the House.

I refer to the passage, commencing on page 13 of the conference report, under the heading "Submission of Documents and Information to the Congress (Sec. 201(a))" which describes the action of the conferees with respect to my amendment, unanimously adopted by the House, which requires the executive branch to furnish complete and accurate information to the General Accounting Office and committees of Congress with respect to the expenditure of defense support funds.

The Senate version contained no such language, and the conferees compromised by accepting the language of my amendment with a proviso that the President might deny requests for documents or information by certifying "that he has forbidden the information to be furnished pursuant to such request and gives his reasons for doing so."

Mr. Speaker, the paragraph of the statement which disturbs me most appears at the top of page 14 and reads as follows:

> The committee of conference recognizes that the separation of powers under the Constitution makes it impossible for the Congress to infringe the prerogatives of the Executive by legislative action and that consequently this provision would serve to indicate the will of the Congress but that it could neither prescribe nor limit the constitutional powers of the Executive.

Mr. MEADER. Mr. Speaker, will the gentleman yield at that point?

Mr. HARDY. I yield to the gentleman from Michigan.

Mr. MEADER. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. MEADER. Mr. Speaker, it seems to me that what is particularly unfortunate about this language is that it refers to the "prerogatives of the Executive," but fails to mention the prerogatives of Congress. Article I, section 1 of the Constitution vests all legislative powers in the Congress.

It is clearly settled that the legislative power includes the power of inquiry—*McGrain* v. *Daugherty* (273 U.S. 135 (1927)). Since the language to which I object makes no reference to the congressional power of inquiry, it appears to accept what has been advanced by many in the executive branch of the Government as the "doctrine of Executive privilege." There has been a great deal of loose thinking and loose talk by executive agents under the label "Executive privilege" to justify increasing truculence in the executive agencies in flouting legitimate requests of congressional committees, as well as the General Accounting Office, for information concerning the conduct of the public business.

Mr. Speaker, let me hasten to say that I do not believe it is within the power of the Congress, nor within the power of Congress itself, for that matter, to divest the Congress of any authority vested in it by the Constitution of the United States. That power is inalienable.

What disturbs me is that leaders of the Congress itself unwittingly or inadvertently should lend credence to unfounded executive claims of "privilege" by including this phraseology in a formal document which becomes a part of the legislative history of the Mutual Security Act. It seems to support a claim of Executive privilege advanced by officials in the executive branch which inures to the apparent enhancement of the power of the executive branch and the diminution of the power of the Congress.

Mr. Speaker, I wish there were some way to delete or amend the paragraph of the conference report which is objectionable. Upon inquiry, however, I am informed that the parliamentary situation is such that the only way this proposition could be repudiated is by rejection of the entire conference report itself. Since this remedy might be rather drastic to cure one defective paragraph of the statement of the managers when the other compromises of the conference committee by and large meet the approval of both Houses, there seems to be no action open to Members of the House except to attempt to clarify the ambiguity or possible misconstruction of this passage by contesting the erroneous implication in this discussion of the conference report and by issuing a caveat to future conference and other committees to exercise caution in accepting any representations from executive agents concerning limitations on the legislative power of inquiry.

Mr. Speaker, I have discussed this matter on a great number of occasions, and my remarks appear in the CONGRESSIONAL RECORD as follows:

March 10, 1958, remarks on Attorney General's testimony re Executive privilege, CONGRESSIONAL RECORD, volume 104, part 3, pages 3848 to 3854.

March 31, 1958, remarks on Executive privilege, including Meader-Rogers correspondence, CONGRESSIONAL RECORD, volume 104, part 5, pages 5857 to 5859.

April 16, 1958, remarks during debate on amending section 161, Revised Statutes, CONGRESSIONAL RECORD, volume 104, part 5, pages 6548 to 6573.

July 14, 1958, remarks on "Congressional Investigations," including Gerald D. Morgan's California Law Review article, CONGRESSIONAL RECORD, volume 104, part 10, pages 13744 to 13749.

June 18, 1959, remarks on Hardy amendment to Mutual Security Act, CONGRESSIONAL RECORD, volume 105, part 9, page 11307.

July 21, 1959, remarks on Foreign Operations Subcommittee activities, CONGRESSIONAL RECORD, volume 105, part 11, pages 13971 to 13925.

July 28, 1959, remarks on Hardy amendment to mutual security appropriations bill, CONGRESSIONAL RECORD,

volume 105, part 11, pages 14531 and 14532.

September 7, 1959, remarks re Mollenhoff article on Executive privilege, CONGRESSIONAL RECORD, volume 105, part 14, page 18432.

In addition, Mr. Speaker, the Special Subcommittee on Government Information of the House Committee on Government Operations has made a study of secrecy in Government including the attempted withholding of information by executive agencies from committees of Congress and the General Accounting Office. The Government Operations Committee has repeatedly repudiated the so-called doctrine of Executive privilege to withhold information from Congress, and in its report issued January 25, 1960, in conclusion 6, on page 3 of that report, said the following:

> The refusal to furnish the General Accounting Office the MATS report it requested was based upon an assertion of "Executive privilege" claimed to arise from the separation of powers in the Constitution (pp. 45 to 47). The committee believes there is no foundation whatever for the alleged doctrine of "Executive privilege" to withhold information from the Congress or its agency, the General Accounting Office. Thus, there is a clear violation of section 313 of the Budget and Accounting Act of 1921 (pp. 49 and 52 to 55).

Mr. Speaker, I do not wish to discuss this issue at length at this time, but I do think it is important to point out that all of us, particularly the leadership of both the House and the Senate, have a responsibility to be continually vigilant and jealous of the prerogatives and powers of the body of which we are a part and to arise and defend those powers when they are under attack by a coordinate branch of the Government.

I can understand the President, the Attorney General or any of the 2½ million employees of the executive branch of the Government attempting to expand executive powers and to limit congressional powers, particularly those powers whereby the Congress may scrutinize the stewardship and the discharge of their trust of Federal officials, their exercise of broad statutory powers, and their administration and expenditure of public funds. It is only natural that they should seek to be free from accounting to the Congress, to the General Accounting Office, or to the general public.

What I cannot condone, however, is indifference on the part of the Congress to executive flouting of congressional authority. The congressional power of inquiry is well established as an inherent part of the legislative power. To me it is fantastic to claim that the congressional investigative power is plenary when applied to private persons and the business community, but impotent when applied to public affairs, public officers, and the expenditure of public funds.

Mr. HARDY. I thank the gentleman from Michigan for his very lucid remarks which go right to the heart of the matter.

I note that the Senate version of the Mutual Security Act contained no such language as my amendment, and that the conferees compromised by accepting a proviso that the President might deny requests for documents or information by certifying "that he has forbidden the information to be furnished pursuant to such request and gives his reasons for doing so." I do not at this time oppose the compromise in the statutory language even though I consider it undesirable, but I sincerely hope that it was not the intention of the managers for the House, by their remarks at the top of page 14 of the conference report, to indicate support of the alleged doctrine of Executive privilege. Claims and denials of this doctrine have been made for many years and I feel sure that there was no intention to attempt to resolve the issue, at the expense of the powers of Congress, by a casual aside in a conference report.

Mr. MORGAN. Mr. Speaker, I appreciate the gentleman from Virginia [Mr. HARDY] and the gentleman from Michigan [Mr. MEADER] calling attention to certain phraseology in the statement of the managers that might be taken to imply congressional approval of the so-called doctrine of Executive privilege to withhold information from the Congress.

While I appreciate the possibility that the language may be so construed it was certainly not my intention, and I do not believe it was the intention of any of the other conferees, to pass judgment on this constitutional question. The conferees were simply trying to arrive at a compromise between House language which had no limitations on the requirements to provide information, and the absence of any language whatsoever on this subject in the Senate version.

What we determined was that, as a matter of policy, the Congress would not at this time insist upon requiring information in those cases, expected to be very few in number, where the President was personally convinced that the information should not be furnished and was willing publicly to state his reasons.

Mr. HARDY. I thank the gentleman. I felt certain that that was the situation.

Mr. FASCELL. Mr. Speaker, will the gentleman yield?

Mr. HARDY. I yield to the gentleman from Florida.

Mr. FASCELL. Mr. Speaker, I commend the distinguished chairman of the Committee on Foreign Affairs, the gentleman from Pennsylvania [Mr. MORGAN], for making it clear that the conference committee by the adoption of the language in section 201(a) did not desire or intend by legislative act to grant authority to the President or concede that he has constitutional authority to withhold information of this type from the Congress.

The conference report, commenting on section 201(a), states that the conferees recognize "that the separation of powers under the Constitution makes it impossible for the Congress to infringe the prerogatives of the Executive by legislative action." This is true; Congress cannot modify the President's constitutional powers. But the President is not the sole arbiter of his own powers. He derives his powers from the Constitution and the laws enacted by Congress. When he ignores the Constitution and the laws, he may be curbed by action of Congress or the courts. He swears to uphold the laws and is under special mandate of the Constitution to enforce the laws.

The "Executive privilege" to withhold information from Congress is administrative folklore, created by Presidents and Attorneys General, simply by repeated assertions. It appears nowhere in the Constitution. No court decision has ever recognized it. On the contrary, the courts frequently have used language similar to that of the recent Watkins case of 1957:

> The power of Congress to conduct investigations is inherent in the legislative process. That power is broad. It encompasses inquiries concerning the administration of existing laws as well as proposed or possibly needed statutes. It includes surveys of defects in our social, economic, or political system for the purpose of enabling the Congress to remedy them. It comprehends probes into departments of the Federal Government to expose corruption, inefficiency, or waste (354 U.S. 178).

Section 201(a) was amended by the House of Representatives on April 21, 1960, to provide for the right of access to reports and documents by both the General Accounting Office and appropriate committees of Congress. But the conference report appears to give the right to the President to refuse such requests. Left unclarified, this might have emasculated the right-of-access amendment which was offered by my distinguished colleague the gentleman from Virginia [Mr. HARDY] and unanimously adopted by the House.

It is a matter of simple logic. If the President has such an inherent constitutional power, it need not be spelled out by statute. If he does not have the power, it is clear that the Congress does not grant it to him in this specific instance.

The conference report says:

> This provision would serve to indicate the will of the Congress * * * that it could neither prescribe nor limit the constitutional powers of the Executive.

I am sure we do not wish to fritter away the constitutional right of the Congress to sit in constant watchfulness over the executive branch.

The Constitution provides that Congress shall do all things "necessary and proper" to carry out its powers "and all other powers vested by this Constitution in the Government of the United States or in any Department or officer thereof"—article I, section 8, clause 18.

Dean Wigmore, in his great work on evidence, condemned those who assert a broad "Executive privilege" to withhold information. He said:

> The lawful limits of the (Executive) privilege are extensible beyond any control, if its application is left to the determination of the very official whose interest it may be to shield a wrongdoing under the privilege. (8 Wigmore on Evidence, sec. 2378a.)

The adoption of the conference report amendment cannot create an "Executive privilege" but it may create the monster which has been conjured forth by a faulty interpretation of the Constitution. It is a pernicious doctrine, rooted in the theory of "the divine right of kings," and sooner or later, like that

ancient fraud on the people, it must finally be laid to rest.

Mr. Speaker, I congratulate the chairman of the committee for having the courage in this colloquy to make it absolutely clear as a matter of legislative intent that the conference committee by the adoption of the language in section 201(a) and by the remarks on this section appearing on pages 13 and 14 of the conference report on H.R. 11510, does not create or grant and does not intend to create or grant a privilege to the President of the United States to withhold any of the information required to be furnished under section 201(a) to the Congress, its committees and subcommittees, and the General Accounting Office; and further that such language in the bill and report does not admit, concede, or recognize, nor does it intend to admit, concede, or recognize, that the President in fact or in law has an alleged "Executive privilege" to withhold such information from the Congress, its committees, and the General Accounting Office.

Mr. CHIPERFIELD. Mr. Speaker, will the gentleman yield?

Mr. HARDY. I am glad to yield to the gentleman from Illinois, the distinguished ranking member of the Committee on Foreign Affairs.

Mr. CHIPERFIELD. Mr. Speaker, I wish to associate myself with the position of the chairman of our committee, the gentleman from Pennsylvania [Mr. MORGAN]. In my remarks I said "it is not within the province of our conference to determine the constitutionality of this issue."

Mr. HARDY. I thank the gentleman.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. HARDY. I yield to my friend, the gentleman from Minnesota.

Mr. JUDD. Mr. Speaker, as one of the House conferees, I also want to concur in what has been said by the chairman. This is a constitutional question on which our committee of conference was not trying to pass judgment one way or the other. We were merely describing a situation that exists. We were trying to make it plain that we want the executive branch to make this information available to the Congress; but we do not in this act seek to compel it to do so.

Mr. HARDY. I thank the gentleman.

Mr. MONAGAN. Mr. Speaker, will the gentleman yield?

Mr. HARDY. I yield to the gentleman from Connecticut.

Mr. MONAGAN. Mr. Speaker, I am pleased to have the clarification of the language of the conference report which has been offered by the gentleman from Pennsylvania [Mr. MORGAN]. No one disputes the constitutional separation of the powers of the executive and the legislative branches, but it is the capricious assertion of privilege of withholding pertinent documents on the part of the Executive that has concerned the Hardy committee and other committees of the Congress.

The investigative function of Congress is too important to be curtailed by ex parte bureaucratic decisions. Congress is not only entrusted, but is charged with overseeing the operations of Government agencies and it is important that no curtailment of the Congressional powers be acquiesced in, even by implication.

For that reason, I welcome the clarifying statement of the distinguished chairman of the Committee on Foreign Affairs. It will make clear that in accepting the language of the conference report, the House, in no way, surrenders its claim to adequately exercise its investigative powers and to require responsible production of pertinent documents by the Executive.

Mr. HARDY. I am grateful to the gentleman from Illinois [Mr. CHIPERFIELD] and the gentleman from Minnesota [Mr. JUDD] for their comments on this important matter. Both of these gentlemen served on the conference and they speak with authority on what the conference intended.

I want to thank also the gentleman from Connecticut [Mr. MONAGAN] who is a valuable member of my subcommittee as well as the gentleman from Florida [Mr. FASCELL] who is so well informed about this subject.

I appreciate particularly the remarks of the gentleman from Pennsylvania [Mr. MORGAN]. His position as always carries great weight with me. He has clarified the matter considerably, and I believe that, in light of his statement and the comments of our other colleagues, the House need have no concern that its rights have been infringed in this provision. With this explanation, I shall support the conference report.

Mr. MORGAN. Mr. Speaker, I yield such time as he may desire to the gentleman from Texas [Mr. WRIGHT].

Mr. WRIGHT. Mr. Speaker, when this bill was before the House, I congratulated the committee upon the inclusion of the language which appeared on page 11 of the House bill.

That language, conforming in large part to an amendment I had supported 2 years ago, required that all nonmilitary water development projects financed under the Mutual Security Act for foreign lands comply with the same benefits-costs requirements of economic feasibility which apply to domestic projects.

At that time I stated that if this language were to be deleted or materially weakened in conference, it would be my intention to oppose this bill on final passage.

For the reasons expressed by me at that time, and because of the serious weaknesses pointed out a few minutes ago by the gentleman from Oklahoma [Mr. EDMONDSON] in the section as finally approved in conference, I shall be compelled to vote against adoption of this conference committee report.

Mr. O'HARA of Illinois. Mr. Speaker, I wish to congratulate the chairman of the Committee on Foreign Affairs, Dr. MORGAN, and the other House conferees on bringing back to the House a conference report for which all can vote with good conscience. I am especially happy that the statement of policy in regard to freedom of navigation in international waterways which originated in the House Committee on Foreign Affairs remains intact in the bill that will now go to the President for his signature. I think all of us followed with interest the attempt in the other body to delete or to render weak and meaningless this statement of policy in the House bill, and it was a source of great satisfaction to all who truly believe that international waterways should be open to the ships of all nations that the attempt in the other body to delete or to make meaningless the language of the House failed. As a member of the House Committee on Foreign Affairs I wish especially to commend the very able and modest gentleman from New York [Mr. FARBSTEIN] for the outstanding contribution he made in assisting in the drafting of this statement of policy and in effectively championing it in our committee. I am sure I am speaking the sentiment of all the members of the committee when I say that no one on our committee is held in higher esteem than the gentleman from New York, and his modesty and his personal self-effacement, forgetting himself in his greater devotion to a cause in which he believes, are not the least of his virtues as appraised by his fellow members on the committee.

Mr. MORGAN. Mr. Speaker, I yield 5 minutes to the gentleman from Indiana [Mr. ADAIR].

Mr. ADAIR. Mr. Speaker, I have requested this time to propound a question to the managers on the part of the House. I would like to address it either to the gentleman from Pennsylvania or the gentleman from Minnesota. A number of members of the committee and of the House are concerned about the matter of advance commitments made in the Development Loan Fund. I share that concern. There was apparently a practice growing up among those in charge of that Fund of making allocations of money before specific worthwhile projects were presented by the requesting country. We felt that that was bad practice. We felt that it unduly tied up the funds that were available to the Development Loan Fund. Therefore I am asking either of the gentlemen what the action of the conferees was with respect to that practice.

Mr. JUDD. Mr. Speaker, if the gentleman will yield, the best statement I can give on that is to call attention to the third paragraph on page 15 of the statement by the House conferees. We worked on that language very carefully to clear up this very point. The Development Loan Fund is in a dilemma. Nobody wants it to go out, as the gentleman has well said, and tie up or allocate funds for projects that are still only in the dream stage. On the other hand, we ourselves last year and again this year directed the Development Loan Fund to give priority to certain types of projects in certain countries, because they are of greater importance to our own foreign policy. We did not want to put the Development Loan Fund in a straitjacket that would prevent it from doing properly what we have directed it to do. We wanted to give it authority to make informal working plans, and we expect it

to do so. The staff itself must be able to sit down and say, "Now, if we have $100 million, and that is all we have, where are the places and what are the projects in which the amount can be loaned to the greatest advantage for the foreign policy of the United States, if there are economically sound and carefully studied projects that will pay back the loans, if the country survives?" The staff and the managers of the Fund ought to make this sort of informal and tentative probings in making their own plans.

But under the amendment no action could be taken by the Board that would tie up or earmark or commit funds for projects until there are thoroughly worked out plans and sufficient data to show that the projects are economically sound, and such plans and data are available to the Fund as it considers definite applications from specific countries. Thus we hope we can avoid the former practice to which the gentleman objects, and at the same time not prevent the Development Loan Fund from doing properly what it ought to do.

Mr. ADAIR. In other words, the gentleman is saying that studies could be made, research could be undertaken, but no definite earmarking or allocating or setting aside of funds would be made until a worthwhile and justifiable project was presented?

Mr. JUDD. Yes. Let me read for the record two sentences from the statement of the managers on the part of the House:

> The limitation on advance allocations, reservations, earmarks, commitments, or set-asides by the Fund definitely applies to any formal action by the Fund's Board of Directors which would either bind the Fund or constitute a basis for representing to the Congress that a given sum cannot be used for other purposes. It does not mean that the Fund's staff cannot, or should not as prudent bankers, informally discuss priorities of various proposals with prospective borrowers, or internally prepare work programs and give special attention to applications from key countries.

Mr. ADAIR. I thank the gentleman.

Mr. Speaker, I think that the conferees have worked well and diligently within the framework of the bills that they had before them. I think, however, that the conference report now before us contains the same shortcomings, the same failures to which many of us objected before. Therefore, I feel that the vote upon this should be in the negative.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ADAIR. I yield.

Mr. GROSS. No matter how thick or thin the slices, this foreign handout bill, calling for the spending of $1.366 billion is approximately $48 million more than the already rich bill that went out of the House not so long ago. It is not in keeping with the administration's professed position in behalf of austerity, frugality, and economy in Government.

Mr. ADAIR. It is higher by that amount than the bill that left the House.

Mr. MORGAN. Mr. Speaker, I yield such time as he may require to the gentleman from Maine [Mr. COFFIN].

Mr. COFFIN. Mr. Speaker, I wonder if the chairman of the committee would be willing to tell the House what was the final version of the section to which we gave some attention on the House side, section 421, Loans to Small Farmers.

Mr. MORGAN. This amendment was adopted in the Committee on Foreign Affairs and in the conference was adopted intact except for the change of one word, the word "to" being changed to the word "for." It tightened up the amendment to make sure the money was not directly loaned by American Government officials, but was loaned through local agencies.

Mr. COFFIN. In the gentleman's opinion it in no way weakened the provision?

Mr. MORGAN. No, I think it strengthened it.

Mr. COFFIN. I thank the gentleman.

Mr. MORGAN. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

The question was taken; and on a division (demanded by Mr. ADAIR) there were—ayes 108, noes 60.

Mr. ADAIR. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 240, nays 138, not voting 54, as follows:

[Roll No. 88]

So the conference report was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Hébert for, with Mr. Williams against.
Mr. Buckley for, with Mr. Young against.
Mr. McCormack for, with Mr. Scott against.
Mr. Vinson for, with Mr. Bonner against.
Mr. Fogarty for, with Mr. Morrison against.
Mr. Lindsay for, with Mr. Scherer against.
Mr. Kilburn for, with Mr. Johansen against.
Mr. Taylor for, with Mr. Withrow against.
Mr. Anfuso for, with Mr. Smith of Kansas against.
Mr. Walter for, with Mr. Barden against.
Mr. Celler for, with Mr. Baring against.
Mr. Shelley for, with Mr. Thompson of Louisiana against.
Mr. George P. Miller for, with Mr. Willis against.
Mrs. Kelly for, with Mr. McMillan against.
Mrs. Sullivan for, with Mr. Thompson of Texas against.
Mr. Trimble for, with Mr. Flynn against.

Until further notice:

Mr. Burdick with Mr. Canfield.
Mr. Montoya with Mr. Cederberg.
Mr. Morris of New Mexico with Mr. Jackson.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

COMMITTEE ON APPROPRIATIONS

Mr. CANNON. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tomorrow night to file a privileged report on two appropriation bills, military construction and legislative.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. TABER reserved all points of order on both bills.

COMMITTEE ON RULES

Mr. BOLLING. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

SUBCOMMITTEE ON LEGISLATIVE OVERSIGHT

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Legislative Oversight may be permitted to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

FEDERAL HIGHWAY ACT OF 1960

Mr. DELANEY. Mr. Speaker, I call up House Resolution 520 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10495) to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill and continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. DELANEY. Mr. Speaker, I yield myself such time as I may require, after which I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

Mr. Speaker, House Resolution 520 provides for the consideration of H.R. 10495, to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes. The resolution provides for an open rule, waiving points of order, with 2 hours of general debate.

H.R. 10495 is the usual biennial authorization for the fiscal years of 1962 and 1963 for the A–B–C Federal-aid highway program and for the several classes of Federal domain roads. It is deemed necessary to authorize funds for these fiscal years for both the Federal-aid primary and secondary highway systems and their extensions within urban areas so that the several States may prepare their plans, including the all-important financing arrangements required to match the Federal-aid funds, and to permit apportionment of such funds in accordance with law for future highway contruction.

The amount of the funds authorized in the bill for the A–B–C program for each of the fiscal years is identical with the amount authorized for the fiscal year ending June 30, 1961. The authorization for fiscal year 1961 provided for $925 million for the A–B–C program, and H.R. 10495 would provide the same amount for fiscal years 1962 and 1963.

The Committee on Public Works was convinced by the testimony it received that the amounts in this bill for the A–B–C program provide an adequate basis for the continuation of this vital program at or near the level contemplated at the time of enactment of the Federal-Aid Highway Act of 1956. In order to be successful, this program must be continued on an orderly basis from year to year.

The A–B–C highways extend into every county of the United States. They include both primary and secondary roads, and their extensions within urban areas. The present extent of the primary system is 260,170 miles, including 237,117 miles in rural areas and 22,993 in urban areas. The secondary system, by far the larger of the two in terms of linear miles, consists of 570,399 miles, including 559,248 rural miles and 11,151 urban miles. At the present time the total A–B–C highways embrace approximately 790,000 miles and carry about 48 percent of the total of all highway traffic in this country, and traffic on these roads can be expected to increase over the next few years.

Mr. Speaker, I urge the adoption of House Resolution 520.

Mr. ALLEN. Mr. Speaker, I have no requests for time.

Mr. DELANEY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. FALLON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10495) to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 10495, with Mr. DELANEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. FALLON. Mr. Chairman, I yield myself such time as I may desire.

Mr. Chairman, the bill before the House, H.R. 10495, is to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes.

Let me state at the outset that the effect of this legislation is to continue Federal policy without change, insofar as the so-called A–B–C highways are concerned. This is the biennial bill providing for the continuation of the long-established Federal-aid highway program for the fiscal years 1962 and 1963. In considering this legislation, the Committee on Public Works has taken the position that there should be no change in the present level of authorizations at this time, inasmuch as it is anticipated that the next Congress will deal in a comprehensive and detailed way with the entire Federal-aid highway program.

Since 1956, the Congress has followed the policy of increasing the amounts authorized for A–B–C highways—the Federal-aid primary and secondary systems and the urban extensions—in annual increments of $25 million. This incremental increase was contemplated to be continued until A–B–C authorizations reached $1 billion annually. Such an increase is necessary to keep the program in balance. However, the present bill does not call for any incremental increases in the A–B–C program, but, in-

stead, authorizes an amount for each of the 2 fiscal years, 1962 and 1963, identical to the $925 million which was authorized for fiscal 1961.

The committee agreed to this departure from established policy with considerable reluctance, in view of the demonstrated need for the enlargement of the A–B–C construction program.

Two factors made it seem desirable to hold the A–B–C authorizations down to the current level:

First. The anticipated income of the highway trust fund is not sufficient to finance any increase in the A–B–C program without reducing the interstate program by an equivalent amount. Progress on the Interstate System has already been slowed down by the financial pinch, and it was felt that it would be unwise to force a further slowdown on Interstate work.

Second. In 1958, the Congress enacted legislation providing a $400 million emergency fund for use in the A–B–C highway construction as an antirecession measure. For this reason, the A–B–C program is somewhat ahead of the schedule contemplated in 1956, while the Interstate program is behind schedule.

The needs of the A–B–C system are urgent. It is by no means the intent of the present legislation to freeze the rate of progress on the A–B–C program to current levels. It is my hope, and I believe the hope of a majority of the members of the Committee on Public Works, that the A–B–C program will be accelerated at least until the $1 billion a year level is reached. The long-range needs of the A–B–C program should be considered in conjunction with the consideration of the needs of the Interstate System as a part of the legislative package which we hope to enact in 1961.

I do not believe that we can afford to stretch out our highway program. The price of land, the price of labor, and the price of many materials used in highway construction are all increasing. During the past three and a half years there has been practically no increase at all in the level of prices paid to highway contractors. However, it seems apparent that the cost of highways will never be less than it is now, and that the Federal investment in highways at current prices is a good buy.

It is true, also, that the Nation is paying a high price, in terms of economic waste and in terms of lives lost in highway accidents, as the price of inadequate roads. The proved safety record of modern roads, as contrasted with the record of obsolete roads, indicates that many lives could be saved by the timely construction of adequate highways.

The A–B–C system, extending into every county of the United States, must be developed along with the Interstate System if we are to have a complete, integrated network of modern highways and secondary roads in the country.

When the 1956 Highway Act was passed, our population was about 167 million, we owned 65 million motor vehicles, and we drove those vehicles about 623 billion miles. By 1976, our population will have increased to 234 million—an increase of 37 percent. But motor vehicle registrations will have increased to 114 million—up 74 percent—and annual travel will have increased to 1.2 trillion vehicle miles—up 93 percent.

The figures of $925 million authorized for the fiscal years 1962 and 1963 is the minimum figure that can be used at this time to keep the ABC program moving at a smooth pace.

Under H.R. 10495 there would be authorized $925 million for the fiscal year 1962 and $925 million for the fiscal year 1963 for the ABC highways, in the usual 45–30–25 ratios. This would make available the following sums each year:

Primary system	$416,250,000
Secondary system	277,500,000
Urban extensions	231,250,000

As introduced, H.R. 10495 also provided for 2-year authorizations for certain other highways at the same level as has been provided for fiscal 1961, as follows: For forest highways, $33 million; for forest development roads and trails, $30 million; for park roads and trails, $18 million; for parkways, $16 million; for Indian reservation roads and bridges, $12 million; and for public lands highways, $3 million.

The Committee on Public Works approved an amendment to the bill increasing the proposed authorization for forest development roads and trails to $35 million for fiscal 1962 and to $40 million for fiscal 1963.

Section 4 of the bill includes a total of five technical amendments to section 23, United States Code. These can best be described as "housekeeping" amendments, noncontroversial in nature, dealing with administrative procedures. The amendments are explained in detail in the report accompanying the bill.

Approximate apportionment of $925,000,000 of Federal-aid primary, secondary, and urban highway funds for fiscal year 1962–63, pursuant to H.R. 10495

MARCH 3, 1960.

[Millions of dollars]

State	Primary ($416.3)	Secondary ($277.5)	Urban ($231.2)	Total ($925)
Alabama	8.4	6.5	3.0	17.9
Alaska	22.1	14.8	.1	37.0

Approximate apportionment of $925,000,000 of Federal-aid primary, secondary, and urban highway funds for fiscal year 1962–63, pursuant to H.R. 10495—Continued

MARCH 3, 1960.

[Millions of dollars]

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield to the gentleman from West Virginia.

Mr. BAILEY. Would the gentleman mind explaining to the committee why the large disparity between primary and secondary authorizations?

Mr. FALLON. It is done on a formula basis. It has not been changed. It is the same under this act today as all other legislation that was passed on highways.

Mr. BAILEY. The gentleman must realize that with the construction of our interstate highways we have a particular problem to connect up the secondary roads with the main highways, not only the primary but the interstate highways. There is every evidence that we will not have sufficient funds, and the majority of the people who would like to get to the modern highways would still be denied the right of access to those roads.

Mr. FALLON. I think the committee and the Congress recognized that problem in 1956 when they put into effect that the A-B-C roads, that is, the primary and secondary roads, would be increased each year until it reached a billion dollars.

Mr. BAILEY. The gentleman must know that we are pretty well along with our program of construction of primary roads. The interstate highways are going to eliminate the necessity for much of that primary work.

Mr. FALLON. That is correct.

Mr. BAILEY. But there is nothing available, apparently, for connecting up our ordinary farm-to-market, our secondary roads, with the primary and the Interstate System. I think consideration should be given to increasing that item for secondary roads.

Mr. FALLON. I thank the gentleman.

Mr. WRIGHT. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield to the gentleman from Texas.

Mr. WRIGHT. It is not anticipated that the rate of construction authorized under this bill would require the levying of any additional taxes?

Mr. FALLON. No, there are no additional taxes required to finance the program for 1962 and 1963.

Mr. WRIGHT. I thank the gentleman.

Mr. GRAY. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield to the gentleman from Illinois.

Mr. GRAY. I want to take this opportunity to congratulate the gentleman from Maryland [Mr. FALLON] for bringing in a very good bill, particularly the section increasing the amount of money for forest trails. I think it is a very wise increase and will be utilized to the best advantage all over the country. I have the honor of representing the district in southern Illinois that has the great Shawnee National Forest. We are increasing our timber activities each year and we hope to be able to make the forest yield more profits from the sale of timber because it not only puts more money in the Federal Treasury but 25 percent of the funds go to local counties in lieu of taxes. Many of the school districts near the Shawnee Forest are having a difficult time getting by because of the loss of tax money due to the large acreage taken from the tax base. The only means of supplementing is from the 25 percent share of revenues from the sale of timber.

The $15 million increase for 2 years in forest trail funds will give us and other national forests a chance to build new access roads in order to expand our timber operations through increased sales. Mr. Chairman, in closing I want to publicly state that it has been a great honor to serve on the Subcommittee on Roads under the distinguished chairmanship of the gentleman from Maryland [Mr. FALLON], and I appreciate his sincere interest and help in providing adequate authorizations for a sound highway program. Thank you.

Mr. AUCHINCLOSS. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I wish to commend the gentleman from Maryland for his very fine statement. As usual he is most competent in handling the road legislation. He knows a great deal about this project, and he works very hard on this problem. I might add that it is a great pleasure to work with him. I would like to say also that the gentleman from Ohio [Mr. SCHERER], who is the ranking member of the Roads Subcommittee of the Committee on Public Works, is unable to be here today because of illness and wishes to express his regrets.

Now, Mr. Chairman, I yield 10 minutes to the gentleman from Florida [Mr. CRAMER].

Mr. CRAMER. Mr. Chairman, this is a relatively noncontroversial bill with one possible exception, which I will mention in just a few moments.

I, too, want to join in the accolades being paid to our very fine Roads Subcommittee chairman, the gentleman from Maryland [Mr. FALLON], who has been the champion of this highway program and is the father of the Interstate and Defense Highway Act of 1956. He and the gentleman from Ohio [Mr. SCHERER], as the ranking minority member, have done a magnificent job on this bill, acknowledging what the realities are. All of us, obviously, would like to bring before this committee a bill with the full authorization of $975 million, which was contemplated at least in the bill which passed the House in 1956—although that statement of policy was stricken out in conference before the bill was finally passed—that we could bring a bill before the House that would provide for an annual increase of $25 million per year until $1 billion is reached—for the fiscal year 1962 and again an increase of $25 million, meaning $975 million for 1963. But the realities of the situation must be acknowledged. What are those realities? The realities of the situation, and the reason why the authorization for the fiscal years 1962 and 1963 are pinpointed and retained at $925 million, which is the authorization for fiscal years 1960 and 1961, is that there is just not enough money in the trust fund to pay in full the authorizations for the A–B–C system and also for the Interstate System. Also, Congress has failed to provide new revenues to bolster the trust funds. The A–B–C system is calling under this bill for $925 million for 1962 and 1963.

I wish to point out to the committee a very important fact. If there were greater authorizations for the A–B–C system provided for 1962 and 1963, it would have to come out of Interstate System's moneys because the A–B–C system has the first call on the highway trust funds. Therefore, if this authorization had been increased above the $925 million suggested figure, then it would, obviously, have to come out of some other highway program, meaning the Interstate System, because it has second call on the trust fund. Therefore, acknowledging the Interstate System has already been cut back and will be cut back during 1962 and 1963 by about 20 percent as the result of lack of funds coming in and also the increased cost of construction, recognizing that that will be cut about 20 percent, it obviously would make little sense to increase that cut in the Interstate System further by increasing disproportionately above the $925 million the authorizations for the A–B–C system. So those are the facts of life. The administration recommended $900 million in these A–B–C authorizations. The committee ended up with what I thought was a reasonable compromise of $925 million. There were other bills introduced. The gentleman from Pennsylvania [Mr. CLARK] introduced a bill for $975 million. All of us would like to have been able to go along with an authorization of that size, but as I say, the committee acted responsibly and acknowledged the facts of life by accepting a reasonable figure and thus not an unreasonable cut into the Interstate System money.

One reason why we are in this situation in addition to that is that in the 1958 "scare of recession" the Congress made available an additional $400 million for expenditures on the A–B–C system. That is another reason why the trust fund is short of money at the present time. This $400 million expended in 1958, incidentally, means the A–B–C system is actually ahead of the suggested $25 million annual increase schedule today.

Of course, the A–B–C is composed of primary and secondary and urban systems, which are naturally essential. If the Interstate System roads are to be useful, we have to have feeder highways leading to them.

Next year there will be two major significant reports made to the Public Works Committee. They are reports with regard to a safety and use study being made on certain Illinois highways at the present time. That will deal largely with construction. The second report deals with the question of long-range completion of this program, long-range cost and financing of it, and the proper and equitable allocation of costs to the different taxpayers who support this program.

So those two reports will be before the Public Works Committee next year, and at that time we will have another opportunity to take a look at the entire ABC system authorization.

Also, we will look at the Interstate System financing and authorizing problems, and at that time make determination on a long-range basis as to authorizations.

There are a couple of other matters I would like to discuss. The bill authorizes an appropriation of $33 million for 1962 and 1963 for various highways; $3 million for public land highways. The President has recommended that this should, instead of coming out of the general fund, properly come out of the trust fund, in that they are of the same purpose and usage as the primary and secondary road systems. There is no justification for their coming out of the general fund under these circumstances.

There is only one point in controversy in the bill, the question with regard to the committee putting into the bill an additional $5 million in 1962 and an additional $10 million in 1963 for the forest development roads and trails. That amendment, which appears on page 3 of the bill, was made in the full Public Works Committee. It was not approved by a subcommittee, but it was approved by only a two-vote majority in the full committee. The reason why the minority report that is filed, dissenting views, objected to increasing by $15 million the forest development roads and trails for 1962 and 1963 is that we found ourselves in the position of adding $15 million to expenditures, and to that extent budget-busting proposals—$5 million in 1962 and $10 million in 1963, which will mean $15 million expenditures, out of the general fund.

The significant thing is that this is one of the only substantial areas where there was any increase made in authorizations in this bill. The reason why the minority objected to an increase of $15 million is that obviously it comes out of the general fund and not from road user taxes or the trust fund and thus out of the taxpayers' pockets. Secondly, it makes little sense, if we are to have a cutback in the field of primary, secondary, and

urban, as well as interstate roads on the one hand, how can we justify increasing the forest development roads and trails at the same time?

Mr. Chairman, I suggest, then, that so far as this bill is concerned, with that one exception the minority is in wholehearted support of the bill. It is an absolutely essential bill to be passed at this time.

Some may ask why do we put through an authorization bill in 1960 for 1962 and 1963? The reason is that already allocations or allotments of funds are being considered and soon will be made to the States for 1962 so they can do their advance planning for the construction of these highways, for the money that will be available in 1963, and it is essential that the States know now what allocations or allotments will be available for those future years. It is the position of the subcommittee, certainly my position, that we cannot afford to have any holdup on cutback in the A–B–C program; and, as the distinguished chairman of the subcommittee said, this will continue authorizations at the present level, existing under present legislation.

Mr. Chairman, in further explanation, H.R. 10495 continues the division of authorization set forth in previous Federal-aid highway acts as follows: 45 percent for projects under the Federal-aid primary system; 30 percent for projects on the Federal-aid secondary system; 25 percent for projects on extensions of Federal-aid primary and Federal-aid secondary systems with urban areas.

As usual the bill provides for authorizations for various classifications of Federal highways as follows:

For forest highways, $33 million for the fiscal year ending June 30, 1962, and $33 million for the fiscal year ending June 30, 1963. Increase of $3 million each fiscal year.

For forest development roads and trails, $35 million for the fiscal year ending June 30, 1962, and $40 million for the fiscal year ending June 30, 1963. Increase of $5 million fiscal year 1962; $10 million fiscal year 1963.

For park roads and trails, $18 million for the fiscal year ending June 30, 1962, and $18 million for the fiscal year ending June 30, 1963. Same as fiscal years 1960 and 1961.

For parkways, $16 million for the fiscal year ending June 30, 1962, and $16 million for the fiscal year ending June 30, 1963. Same as fiscal years 1960 and 1961.

For Indian reservation roads and bridges, $12 million for the fiscal year ending June 30, 1962, and $12 million for the fiscal year ending June 30, 1963. Same as fiscal years 1960 and 1961.

For public lands highways, $3 million for the fiscal year ending June 30, 1962, and $3 million for the fiscal year ending June 30, 1963. Same as fiscal years 1960 and 1961.

The attention of every Member of the House is called to the statement of supplemental views appearing in the committee's report, pages 10 to 12.

I trust the bill will be favorably acted upon.

Approximate apportionment of $925,000,000 of Federal-aid primary, secondary, and urban highway funds for fiscal year 1963, pursuant to H.R. 10495

[Millions of dollars]

State	Primary ($416.3)	Secondary ($277.5)	Urban ($231.2)	Total ($925.0)
Alabama	8.4	6.5	3.0	17.9
Alaska	22.1	14.8	.1	37.0
Arizona	6.0	4.0	.9	10.9

Mr. FALLON. Mr. Chairman, I yield such time as he may desire to the gentleman from Missouri [Mr. CARNAHAN].

Mr. CARNAHAN. Mr. Chairman, I rise in support of the highway construction authorization bill, H.R. 10495. This is the usual biennial fund authorization for the fiscal years 1962 and 1963 for the Federal-aid highway program and for several classes of Federal domain roads. It is a 2-year authorization and deals with primary and interurban roads. It is felt necessary to authorize funds for 2 fiscal years so that the States may make their plans, arrange for financing these projects, and to allow for the apportionment of these funds in accordance with law for future highway construction.

The authorization for fiscal year 1961 has been $925 million for this program. This authorization which we are now considering provides for identical amounts of $925 million for fiscal years 1962 and the same amount for 1963. Of this amount, 45 percent is available for projects under the Federal-aid primary system; 30 percent for projects under the Federal-aid secondary system, and 25 percent for projects on extensions of Federal-aid primary and Federal-aid secondary systems within urban areas.

Mr. Chairman, this A–B–C highway system extends into every county of the United States including both primary and secondary roads, and their extensions within urban areas. There are presently 260,170 miles in the primary system. This includes 237,117 miles in rural areas. The secondary system is by far the largest and consists of 570,399 miles of which over 559,000 are within rural areas. At the present time the total A–B–C highways embrace around 790,000 miles and carry about 48 percent of the total of all highway traffic in this country. With the normal increases in traffic over the next few years it is felt that the authorizations called for in this bill represent a minimum figure needed to keep the program moving at a smooth pace and to try and avoid any possible breakdown in this most vital operation. This pace is however not sufficient to adequately meet the demands of a fast increasing highway traffic.

For the State of Missouri this authorization means that over the next 2 fiscal years there will be allocated the following sums each year for the purposes noted: First, for its primary road system the State of Missouri is allocated the sum of $11.1 million in each of the next 2 fiscal years; second, for its secondary road system the State is allocated for each of the next 2 fiscal years the sum of $7.5 million; and third, for its urban connective road system the allocation for each of the next 2 fiscal years is $7.5 million.

The remainder of my remarks, Mr. Chairman, are directed to a subject close to the heart of those of us who live in the wonderful Ozark Water Wonderland which comprises most of my congressional district—the authorization for forest highways and forest development roads and trails. We who live in this water wonderland amid the great forests of the Ozarks are keenly aware of the vital importance that forest roads and trails play in the proper development and utilization of our forests. I endorse wholeheartedly the proposals in this bill which increase funds for the purpose of building access roads and trails and I congratulate my colleagues, the gentlewoman from Idaho, Congresswoman PFOST, and the gentleman from California [Mr. JOHNSON] for offering this amendment while the bill was in committee. Over the past few years funds for this needed project have been somewhat stabilized at a figure of around $30 million. The increases called for in this authorization bill are set at a figure of $5 million in 1962 and at $10 million in 1963. This is a modest sum for the expansion of such a vitally needed service.

It is these access roads, or the lack of them as the case may be, that makes it possible or impossible for our forests to be properly managed. Such important items as the marketing of timber, the distribution of these forest products, salvage cutting, protection from fire, insects and disease are vitally connected to the question of the adequacy of roads within these areas. There is yet an additional phase of this program which is

aided by the building of proper roads—the recreational use of our forest lands.

Mr. Chairman, the long-range objective of this provision in the bill is obvious—to have and maintain a system of roads and trails at a level adequate to make it possible to properly utilize the expected demands of these great forest areas within the Nation. This provision of the bill will indeed enhance the value of both the timber and other resources of our forests. I urge adoption of this bill as reported by the committee.

Mr. FALLON. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. KLUCZYNSKI].

Mr. KLUCZYNSKI. Mr. Chairman, I want to compliment the gentleman from Maryland [Mr. FALLON], father of the interstate highway program, the greatest public works program in the history of the world. Through his leadership in sponsoring a better highway program thousands of lives will be saved, and millions of dollars in property damage.

Mr. Chairman, although I am from the Midwest, and, as you know there are no forests in the city of Chicago, I am familiar with this problem because of being a member of the Committee on Public Works and also a member of the Subcommittee on Roads. From testimony presented I am thoroughly convinced that the moneys we put into forest development roads is not an expenditure but is an investment which is repaid many times over in increased receipts to the Government from the sale of timber.

Again, Mr. Chairman, it is a pleasure for me to serve with a gentleman like Mr. FALLON of Maryland.

Mr. McFALL. Mr. Chairman will the gentleman yield?

Mr. KLUCZYNSKI. I yield.

Mr. McFALL. I would like to commend the gentleman from Illinois for his statement on forest roads. I know that he as a long-time member of this committee understands this problem from his long history of distinguished legislative experience. I wish again to commend his statement.

Mr. AUCHINCLOSS. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, it has been a privilege to serve during the past 6 years as a member of the Roads Subcommittee of the House Public Works Committee under the very able leadership of the gentleman from Maryland [Mr. FALLON]. In my opinion, without any question, Mr. FALLON is the most authoritative highway expert in this body. Under his leadership the Congress of the United States has enacted into law the most important far-reaching interstate highway program that is now making possible a great speedup in the construction of highways throughout the United States in an effort to meet the needs of traffic and to decrease the loss of life. The gentleman from Maryland [Mr. FALLON] has made a great contribution to highway safety in this country and to the more rapid movement of people in suburban and urban areas, from the places where they live to the places where they work. The gentleman from Maryland deserves the commendation of this body and of the citizens of this country.

We have before us today the extension for 2 additional years of the so-called ABC road program which provides Federal aid to State primary and State secondary roads. This in the past has been a noncontroversial program. We are extending it at the same rate that has been previously authorized for the fiscal year 1961, that is, $925 million. This program, of course, requires matching by the States on a 50–50 basis. There has been some discussion of an amendment which was adopted in the committee to increase the funds for forest roads and trails.

Let me say that we have adequate justification for this increase in the testimony of representatives of the Forest Service who came before our committee. Of all the authorizations contained in this bill this is the one authorization upon which there is a specific monetary return to the U.S. Treasury.

During the last year for which statistics are available, the year 1959, the Forest Service testified that we have received from the forests of this country an amount of $122 million. These receipts will be enhanced by proper development of forest roads and trails.

Under the procedure followed by the Forest Service, if they have asked for bids on a national forest selective logging contract, and the bidders have to construct the roads to serve the area which will be logged, then the bidders reduce the amount of their bids by the amount of the cost of building the roads.

If, on the other hand, those roads are available, then the bids are increased by that amount. For that reason this amendment does not represent a net budgetary loss of $5 million in the fiscal year 1962 and $10 million in the fiscal year 1963 because we will have increased returns from those contracts to the Federal Government.

In addition to that, all of those who are familiar with our great national forests know that one of the greatest menaces to our national forests today is forest fires. Hundreds of thousands of acres are lost per year from that great danger. One of the biggest reasons why so many acres are lost is because we have inadequate access roads to get to the place where the fire is burning. Through this increased authorization it will make it possible for our firefighting units to get to those fires sooner and to attack them more rapidly with a greater chance to put them out more quickly, resulting in a great saving in the forests of this country.

I do not think anyone feels more discouraged than someone who goes through the great national forests and sees thousands of acres completely denuded because of the ravages of a forest fire. This will reduce those ravages.

I think the amendment is a desirable one. I supported it in committee, and I intend to support it here on the floor.

I urge approval of H.R. 10495.

Mr. FALLON. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. JOHNSON].

Mr. JOHNSON of California. Mr. Chairman, I want to take this opportunity to congratulate the chairman of the Committee on Public Roads. I happen to be a member of the Public Works Committee. The gentleman from Maryland [Mr. FALLON] showed me every courtesy when I appeared before his subcommittee in support of the amendment that has just been referred to.

I want to speak briefly in support of the amendment adopted by the committee. In the United States we have 180 million acres of Forest Service land. It is a vast resource which is underdeveloped and not much used at this time. This is spread over approximately 41 States of the Union. In California we have approximately 25 million acres of Forest Service land. In order to bring about proper utilization of our lumber products it is very necessary that we allow adequate funds to provide for these access roads and trails, because there are many areas within our national forests that have not been cut over. It is virgin timber, and it is going to waste. The more we open these forests the more dollars are returned to the Federal Government and the greater this vast resource is protected.

I think the major item that the forest people have to consider is control of disease within the forests, which results in more damage each year than do the fires.

The gentleman from California [Mr. BALDWIN] has pointed out that we have had serious losses due to fire in our national forests. Providing these access roads and providing these trails will give our Forest Service personnel an opportunity to control the diseases within our forests.

I might say also that these access roads are very important to our livestock people. They are very important to our mining people. And today we are trying to provide recreation areas within the national forests to provide for the care of approximately 90 million visitors a year. So I think you can all see that we do have a real job to do in opening up our forests with these access roads and trails.

Now, I think the Congress has been very kind in years past, long before my coming to the Congress, in allowing these necessary appropriations to be increased. During the years 1954, 1956, 1958, and again in 1960 we were and are very much concerned with this item, and we are very much in support of the increase allowed by the full committee. I think when that bill was passed by the full committee, with the amendments in it, there were only one or two objections to it going to the floor in that manner. I want to say that the $5 million authorized as an increase over what was recommended in the initial bill will be available in 1962; the $10 million that was authorized over the authorization will be available in 1963. I know that the Forest Service will do a very good job in presenting a case before the Committee on Appropriations to show that the Federal Government will reap a return upon this investment. I am very happy to say that this is one agency of our Government, under the jurisdiction of the Secretary of Agriculture, that is self-supporting.

Mr. JONES of Alabama. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of California. I yield to the gentleman from Alabama.

Mr. JONES of Alabama. As I understand, the increase of these funds for the forest highways is to implement the sustained yield program in the national parks.

Mr. JOHNSON of California. That is quite true.

Mr. CLEM MILLER. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of California. I yield to the gentleman from California.

Mr. CLEM MILLER. Have not past studies shown that this is only about 50 percent of what we could use in the way of funds to develop in a proper way the national program for national forests sent up from the Agriculture Department last year?

Mr. JOHNSON of California. To the best of my knowledge, I think the Secretary of Agriculture has asked for more than we have asked for here in these particular items.

Mr. CLEM MILLER. And these are very minimal requests for increased appropriations?

Mr. JOHNSON of California. Yes. Based upon past experience, I think these increases are very nominal for the proper development of these great resources.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. CRAMER. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. ROBISON].

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I will be happy to yield to my colleague.

Mr. TABER. It appears to me that there is a general authorization here instead of an authorization for appropriations out of the trust fund which was created by the act of, I think, 1956. What does the gentleman think about that?

Mr. ROBISON. If the gentleman would permit me, I yield to my colleague from Florida.

Mr. CRAMER. I would say to the distinguished gentleman from New York that the title specifically provides—and I stand to be corrected by the chairman of our subcommittee if I am wrong—"for the construction of certain highways in accordance with title 23 of the United States Code." I believe that incorporates the 1956 Highway Act. Of course, that would be the governing factor as to where the money comes from, and that 1956 act specifically provides that A–B–C moneys shall come from the trust fund. I ask the gentleman from Maryland if that is not correct.

Mr. FALLON. That is true. It specifically says in section 3 that the money that comes for the development of forest roads—that category of roads—comes from section 101, title 23 of the United States Code. And that comes out of the general fund.

Mr. CRAMER. And that is the same procedure that has been followed in the past?

Mr. FALLON. That is correct.

Mr. CRAMER. Those specific categories coming out of the general fund?

Mr. FALLON. That is correct.

Mr. ROBISON. Mr. Chairman, reserving my objections to the committee amendment that has already been discussed, I rise in support of H.R. 10495, and I commend the contents of the committee report and the supplemental views of certain minority members, in which I joined, to the study of my colleagues.

There is no need for me to take the further time of this committee in outlining again the problems we faced and the conclusions we reached. In arriving at the compromise that we have, our committee has again indicated its full awareness of the fact that this vast Federal-aid highway program, which got under way in 1956, is the single most important public works program not only in the history of this Nation but in the history of the world as well.

I was not a Member of this body in 1956, so I do not share with many of my senior colleagues on our committee in the responsibility for justifying the decision to undertake a program of this magnitude. However, I do fully share with them, and with you all, in the responsibility for doing all within our power to insure that the dream thus expressed is brought to its full fruition. If we are able to do so, all the objectivity, wisdom, and willingness to rise above petty politics we possess will be required of us. I hope we will not be found lacking, and the fact that there was this year the self-evident desire to search out the reasonable compromise that H.R. 10495 truly represents is a most encouraging sign.

Mention is made in the report, and has been made on the floor today, concerning the various reports that we will have for consideration next year. The arrival of these long-awaited studies presages long and exhaustive work on the part of our committee when the 87th Congress convenes. In the course of that work, I feel I must also say that I most sincerely hope that the question of reimbursement of those several States, like my native State of New York, that have contributed mileage built at their own expense to the Interstate System without just compensation therefor will be fully explored. I have introduced H.R. 7512 in this Congress, seeking to reestablish the equitable principle of eventually making such reimbursement. There are other bills before our committee presenting various other approaches to this same problem. I now know it is unlikely that there will be action on any of them this year, and in view of the broader base of information we will have before us next year to act upon, perhaps it is just as well. It is interesting to note, however, that in the early days of the program there was almost unanimous committee support for the principle of such reimbursement, and that it has only been as our basic financial problem has been steadily magnified that such support has dwindled away. Thus, I must say again, that I would hope we will not eventually permit the cost of doing equity to blind us to the principle of equity. I realize that there is ample room for dispute over the method of reimbursement as well as over the principle itself, but all that we ask and all we can expect, who believe we are right on this proposition, is to have our cause fairly presented and fully considered.

Before closing, I too, would like to say a word about our chairman of the Roads Subcommittee, the distinguished gentleman from Maryland, the Honorable GEORGE H. FALLON. It is not for me to intervene in any way in the decision to be reached by the people of his party in the district he so ably represents. However, I think it is proper for me to express my hope that they will afford him the opportunity of returning to office this year because, in my judgment, our committee has need of his experience, his fairness, his judgment, and his capabilities.

I have been a member of this committee for 3 years now, and I feel I would also be remiss if I did not express my appreciation of what a privilege that has been. I wish to also congratulate and commend the staff of our committee, including its able chief clerk, Mrs. Margaret E. Beiter; the chief counsel, Mr. Richard J. Sullivan; the diligent minority counsel, Mr. Robert F. McConnell; our splendid engineer-consultant, Mr. Joseph R. Brennan; and the members of our clerical staff. Without their help and assistance I am certain that the committee would not be able to function as well as it now does.

I urge the passage of H.R. 10495.

Mr. FALLON. Mr. Chairman, I yield 5 minutes to the gentlewoman from Idaho [Mrs. PFOST].

Mrs. PFOST. Mr. Chairman, I would like to join my colleagues in commending the chairman of the Subcommittee on Public Roads, Mr. GEORGE FALLON, for the very excellent work he has performed in committee on the bill before us for consideration today. It has been my privilege to serve on the Public Works Committee for the past 2 years, and I have had an opportunity to work closely with the gentleman from Maryland [Mr. FALLON], the chairman of the subcommittee, and have personal knowledge of his dedicated service. He was extremely courteous to me when I appeared before his subcommittee in behalf of an increase in funds for forest roads and trails, and he has always been most helpful on other committee matters. He is a conscientious chairman and a very able member of the committee. I wish to compliment him at this time.

Mr. Chairman, there has long been a need in this country for a well-rounded road and trail development program for the approximately 181 million acres of forests managed by the Government.

The committee has been generous in the past by providing authorizations for increasing amounts, and today the bill before the House carries an amendment that would make additional funds available for such projects. The amendment would boost the funds from $30 to $35 million for fiscal 1962 and from $30 to $40 million for fiscal 1963. These funds represent a sound business investment for the Government. Receipts from timber

sales which would be made accessible by such roads would more than offset the additional funds provided for in the amendment.

My district—the First District of Idaho—until Alaska was admitted to statehood, contained more national forests than any other congressional district. It has long been recognized by Forest Service officials that the access road problem in the northern part of Idaho is very acute.

For many years, the harvesting of timber was limited to the most accessible and better stands. These were heavily cut. Since most of the lower elevation lands are not in the national forests, but rather are privately owned, they were not cut under sustained yield.

Today, as Members of Congress know, the demands for timber are steadily increasing. Science has given to wood and its byproducts hundreds of new uses in our everyday world. But lack of proper roads and trails has limited the timber harvest.

In north Idaho, there are 6.8 million acres of national forests with a sustained yield allowable cut of 600 million board feet annually. Last year only 370 million board feet were harvested, or only about 60 percent of the allowable cut.

The same story of—shall we call it—underproduction, also prevailed in the southern part of Idaho, which is in region 4 of the Forest Service. There are 13½ million acres with a sustained yield cut of 330 million board feet there. Last year, these forests marketed 240 million board feet of timber, or approximately two-thirds of the allowable cut.

Thus, I think that it can easily be seen that a substantial increase can be effected in the amount of timber marketed with the right kind of roads and trails. In Idaho, alone, Treasury revenues could be increased by more than $3 million annually by providing necessary access roads in the national forests.

I might give as another example Clearwater National Forest. This area has an allowable cut of 170 million board feet, of which only 60 percent was marketed last year. On this forest, the Government constructed only 5.4 miles of roads in 1959. This forest has 735 miles of roads in it, but to complete the road system a total of 6,900 miles will be required.

Only about 10 percent of the Clearwater Forest road needs have been met so far. At the present rate, I think that it will take decades to do the necessary road development work.

I might also mention, Mr. Chairman, that a recent survey showed that there is 25 million board feet of cull trees in our north Idaho forests. These old growth forests should be opened and, under sustained yield, converted to healthy forests. This same situation is true over most of Idaho.

Then, too, we should keep in mind that the new Government-built access roads would help smaller lumber companies to obtain timber contracts in competitive bidding with large corporations. At the present time, roadbuilding costs often prevent small companies from even submitting their bids.

This is the dollar-and-cents side of the ledger, and I think the figures are all in favor of carrying out the program as amended. There is also the other and, perhaps, equally important side of the picture, which must be kept in mind.

The new access roads, for example, would benefit farmers and ranchers in transporting their 6 million head of livestock to national forest ranges. They would greatly aid forest firefighters in putting out blazes which annually burn out more than 200,000 acres of valuable timber in the Nation.

And the new roads would open up tourist attractions in the wonderful mountain fastnesses for vacation-minded America to enjoy. The Forest Service tells me that some 81.5 million Americans use our national forests for recreation every year. And this figure is increasing from year to year.

I hope that Members of this body will approve the amendment. Keep in mind that the cost of the roads will be self-liquidating and thus there will be no real expense to the taxpayers. They represent a good, solid investment for Uncle Sam in the country's expanding future.

Mr. ULLMAN. Mr. Chairman, will the gentlewoman yield?

Mrs. PFOST. I yield to the gentleman from Oregon.

Mr. ULLMAN. I want to congratulate the very able gentlewoman from Idaho on her fine statement. I also want to congratulate the committee and its chairman [Mr. FALLON] for coming before us with this excellent bill. I am particularly pleased with the increase in funds for roads and trails. In my opinion, this is an exercise in real statesmanship in the administration of our forest lands.

Mr. Chairman, I am one of the 22 Members for whom my good friend, the gentleman from California [Mr. JOHNSON], spoke when he appeared earlier this year before the Public Works Committee and asked for the increased authorizations for forest roads and trails which it is now proposed to delete from the committee's bill. My interest in this problem is very real. There are more than 9 million acres of national forest in my district. I also think it is fair to say that I have a certain amount of experience with regard to the problems concerning forest roads and trails and of the need for a more adequate program in this regard.

We asked the committee to authorize $40 million for fiscal 1962 and $50 million for fiscal 1963. Even this, you will recognize, is short of the annual investment of $60 million which would be required for full implementation of the program for the national forests. We were pleased, naturally, when the committee recommended an increase, though it was somewhat smaller than we had asked. It is now proposed to eliminate even this increase. Let me furnish you with five solid reasons for keeping these funds in the bill.

First. Increased forest roads and trails are needed to make timber sales more efficient, more competitive, more democratic, and more profitable to the Government. Timber sales from the national forests are not up to desirable or programed levels and a major reason for this fact—which, I would point out, results in the wasting of these public resources—is the inadequacy of access road facilities. Furthermore, the result of increasing dependence on timber purchasers for construction of access roads is not to save the Government money, but to cost it money. Experience shows that only the largest purchasers can and will bid on combined road-and-timber proposals and this means that usually only one bid is received. The resulting lack of competition means more cost for the roads and less revenue from the timber sales. And most important, to my mind, is the fact that this practice tends to freeze out the smaller timber buyers—a tendency which is contrary to our established policy and tradition of giving small business a fair break.

Let me cite several examples from my own district. One sale of 97 million board feet was appraised for $1,768,000. Road costs were estimated at $824,000 or about half the value of the timber itself. It is not surprising to note that there was only one bidder at this sale and that it was sold under auction at the appraised price.

In another sale of 91 million board feet, the appraised price was $1,808,000. Road costs were $385,000 and again there was only one bidder with a sale at the appraised price.

A third sale involved 54 million board feet with an appraised price of $1,174,000. The road was estimated to cost $234,000. Needless to say, there was only one bidder.

These examples reflect a general situation. In sales running between 10 million and 25 million board feet, the average cost of roads was $93,000 compared to an average appraised price for the timber of $178,000. The average bid price of these sales was $272,000, or a 53 percent increase over the appraised price. In the next larger class with sales running between 25 million and 50 million board feet, the average cost of roads rose to $178,000 per sale. The average appraised price was $319,000. The average bid price was $444,000, or a 39 percent increase over the appraised price. In sales involving more than 50 million board feet, the difference between appraised and bid price narrows with extreme rapidity. At the same time, the number of bidders is generally reduced to one per sale.

These examples demonstrate a number of serious shortcomings in private purchaser construction of the more expensive type of access roads. All such roads require larger sales, but when such sales are made, competition is greatly lessened. The result is the loss to the Government of financial increments accruing through a possible higher price for timber and a possibly lower bid for the construction of the roads.

Another sale of 21 million board feet adequately demonstrates this conclusion. The timber was appraised at $468,000 while road construction costs were esti-

mated at only $27,000. On this sale, there were three bidders and the timber was sold for $525,000. In other words, the Government received $57,000 over the appraised price.

Thus, when sales are of such a size that actual bidding is possible, the price received represented the lowest price for road construction and the highest price for timber. But such sales can only be made if the Forest Service is allowed to build the more expensive roads.

Second. Increased forest roads and trails are necessary to keep the national forests on a basis of financial self-sufficiency. If use for nonreimbursable purposes continues to grow—as we know it will and as we want it to—increasing revenues from the sale of renewable resources will be essential to pay the cost. More adequate access facilities are needed to make possible the normal growth of those revenues and the increases recommended by the committee are a necessary step toward that goal.

Third. More adequate forest roads and trails means savings both in the cost of fighting forest fires and in reduction of timber losses which stem from such fires. It has been estimated that the total cost of forest fires on the national forests—in terms of damage and in terms of expenditures to fight them—amounted to about $70 million last year. Better access road systems cut the costs of fire-fighting and make the job more efficient, thus saving the Government money on both counts.

Fourth. Increasing recreational use of the national forests means greater needs in terms of access roads. Visits to these forests have more than doubled in the last 5 years, from 40 million persons in 1955 to an expected 81 million this year. This is an encouraging and wonderful thing. Recreation is one of the important uses of this public resource. But, obviously, this increased use requires increased access facilities and only if we provide the necessary roads and trails can the full benefit of our national forests be enjoyed by all of the people who want to do so. After all, Mr. Chairman, the national forests belong to the people and they should be available to the people.

Fifth. Finally, increased revenues from the renewable resources of the national forests will mean increased revenues flowing to local government and to meet such needs as those which are so pressing in education. Again, the basic fact is that expenditures on our national forests represent an investment and one of the best investments which we can make. This, as I have tried briefly to show, is particularly true of expenditures on forest roads and trails.

Mr. CRAMER. Mr. Chairman, we have no further requests for time.

Mr. FALLON. Mr. Chairman, I yield 3 minutes to a member of the committee, the gentleman from Pennsylvania [Mr. CLARK].

Mr. CLARK. Mr. Chairman, I rise to support the bill H.R. 10495 and also to compliment our chairman on the effective way he has presented this bill to our committee, and also the members of the committee. I wish at the same time to state that the funds provided for forest roads and trails by the Public Roads Committee result from the effective factual presentation made by one of our colleagues, the gentleman from Montana [Mr. METCALF].

I need not detain you further with these remarks concerning a man whom we know and respect as a conservation leader in our Nation.

It was in early January before the Congress had even convened that LEE METCALF started to work on this vital element of the road bill. I say to my colleagues, LEE METCALF constantly stresses that these forest roads bring development to the forest areas in the 40 States that have national forests. LEE METCALF proved effectively that these forest roads are a key to helping private enterprise and small business to work together with our Government in the development of our natural resources.

Mr. Chairman, I wish at this time to put in the RECORD a telephone conversation I had with LEE METCALF stating he is supporting the highway bill. This was a telephone conversation to me from Montana this morning.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

STATEMENT OF HON. LEE METCALF ON H.R. 10495, FEDERAL HIGHWAY ACT OF 1960

Mr. METCALF. Mr. Chairman, I support H.R. 10495, the Federal Highway Act of 1960, as reported. I was among those appearing before the Committee on Public Works urging an increase in the amounts authorized for forest roads and trails. As you know, the committee increased the authorization from $30 million a year to $35 million for fiscal 1962 and to $40 million for fiscal 1963.

This item will provide roads needed for timber management, fire and disease control, watershed development and management and recreation.

The budgets of the past few years have not permitted progress in timber sales. Montana national forests have an allowable cut of 825 million board feet. In the past few years, an average of less than 50 percent of the allowable cut has been sold. The major reason is the lack of access roads to this timber.

There are two ways to build these roads. One is by direct appropriation. The other is by the timber purchaser, who then deducts the estimated cost of road construction from the price paid for public timber.

When timber purchasers build these roads, public timber is sold in large blocks—too large for a small or medium-sized operator to handle. Then there is generally only one bid—at the appraised price, minus the estimated cost of the road.

The taxpayers stand to benefit, in cash on the timber, by having several bidders. They stand to benefit by having the main line road built under separate contract, bid upon by road builders, for experience shows that the road builders generally offer to do the job for 10 to 20 percent less than the engineers' estimated cost.

These large sales make it impossible for the smaller operators to secure timber. Since estimated cost of a road built by a timber operator is deducted from the price he pays for the timber, this means less return to the Public Treasury from a public resource and, in turn, less money for the rural school and road systems in the counties in which the forests are located. As you know, these counties share in the income from the national forests. In addition, road construction by timber purchasers is outside the control of Congress.

We lose all around when we don't appropriate the money for forest development roads. We lose millions of board feet of timber, deteriorating in inaccessible areas. We spend large sums, and risk the lives of parachuting firefighters, to control fires in these roadless areas. Smaller firms cannot buy timber if they are also burdened with expensive road construction, so they fold. The fewer the bidders, the lower the price the public gets for its timber. Road construction by the purchaser shuts out the road contractors and the union labor they employ.

The statement in the minority report on this bill that this increase is "primarily for the benefit of some big lumber companies" demonstrates abysmal ignorance of the integral part these roads play in the development, management, and use of our public forests. In fact, this program is opposed by the big timber companies because they oppose development and growth of small and medium-sized firms such as two recent new industries which have come to Montana—the new lodge pole mills at Phillipsburg and White Sulphur. These mills, operated by experienced small timbermen from Oregon, are in Montana because of our rich supply of timber, made available as a result of past actions by Democratic Congresses in increasing funds authorized for timber development.

I plead with the House to support its committee which stated: "Every cent invested in timber access roads * * * returns in full the investment made by the Federal Government."

Mr. FALLON. Mr. Chairman, I yield 3 minues to the gentleman from Vermont [Mr. MEYER].

Mr. MEYER. Mr. Chairman, I can attest from my own professional experience as a forester that money put into road construction in the national forests will certainly bring back much more both in the form of forest products and in other uses of the forest than we would ever put into the course of construction. Therefore, to me this is fundamentally an investment in something worthwhile that will produce revenue for the Government and for the people in general.

In connection with the general road-building program, my State of Vermont is a State that has very few people, but a great number of miles of roads to build on a per capita basis. For that reason, our costs are high and we have a lot of trouble building those roads. I would like to ask the gentleman from Maryland about the percentage of contributions by the Federal Government for the primary and secondary system. I notice there is going to be a review of the program starting in January of next year. Does the gentleman from Maryland believe that the percentage paid by the Federal Government might be increased? I know that this would help a State such as mine very much. Starting in January of next year, does the gentleman from Maryland believe that consideration would be given to raising the percentage of contribution by the Federal Government for the primary and secondary systems because in States like mine we have a great deal of trouble raising our share of funds?

Mr. FALLON. It may well be brought out in the hearings and study that our committee will start in January of 1961.

But I cannot guarantee to the gentleman that there would be any change unless the hearings would justify such a change.

Mr. MEYER. I would like to ask the gentleman if, in the consideration of this in the future, some weight would be given to my remarks because I know it would help a State like Vermont a great deal if the percentage of the Federal contribution is raised.

Mr. FALLON. I can say to the gentleman from Vermont, when the hearings start, if the gentleman would apply to testify before the committee, we would be delighted to hear him as we have heard all other Members who have wanted to testify.

Mr. MEYER. I thank the gentleman.

Mr. FALLON. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. CLEM MILLER].

Mr. CLEM MILLER. Mr. Chairman, I join my colleagues in support of this legislation, H.R. 10495, and particularly those sections providing for forest roads and trails. We are asking for a modest increase here. Ample studies have been conducted over the past years by this body and the other body, which indicate that the level of expenditures for forest roads should amount to approximately $60 million a year while we are only seeking $35 million here—and it should continue to rise within 5 years to approximately $90 million a year. All of this money would be more than repaid by the timber users. It has been emphasized that there is a benefit from the point of view of timber sales, fire and insect control. As the gentleman from Illinois [Mr. KLUCZYNSKI] spoke so eloquently in behalf of this bill, it should be noted that there are benefits for the people of Illinois. The people of Illinois come to our forests and use them. These forest roads are not just for timber sales, insect and fire control. They are also available for recreational uses for the people of the entire United States. I can attest to the fact that the automobiles in my congressional district summer after summer from outside the State of California far outnumber the local automobiles. Therefore, the increase for forest roads is of tremendous importance to those in the urban areas as well as those who have national forests in our districts. This increase in the forest roads and trails should be supported by Congressmen representing urban districts as well as by those of us who represent districts containing national forests. They stand to gain just as much or more for their citizens as we do.

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMPSON of New Jersey. Mr. Chairman, I have in mind a proposal which would amend title 23 of the United States Code, relating to federally assisted highway programs, to provide that we retain the concept of direct routes between principal metropolitan areas referred to in section 103(d) of that title, but at the same time would require that, wherever practicable, such federally assisted highways must preserve or increase to the maximum extent possible established historical, residential, and property values.

I have long been interested in this subject, having become concerned with the preservation of a number of historic sites and buildings in New Jersey, including Morristown National Historical Park and the Ford Mansion there which was Gen. George Washington's winter headquarters for his New York campaign.

The situation is so bad in Morristown, N.J., that at one point Secretary of Commerce Sinclair Weeks directed the U.S. Commissioner of Public Roads to give his personal attention to the Route 202 issue in that lovely New Jersey city.

In a letter made public at the time by our distinguished colleague, the gentleman from New Jersey [Mr. FRELINGHUYSEN], Secretary Weeks said he had discussed the present alinement across property of Washington's headquarters with the Bureau of Public Roads in an effort to secure an alinement, and I quote, "which will minimize property damage and, if possible, eliminate any encroachment on a national park."

The letter declared that the National Park Service was firmly opposed to the proposal of the New Jersey State Highway Department which would cut off two triangles from the Morristown National Historical Park.

The National Park Service proposed, instead, that the new highway be taken out of Morristown altogether.

The Director of the National Park Service, Conrad L. Wirth, wrote as follows:

> We oppose this plan on the basis of its justifiable distraction from historic park features that were associated with the very birth and recognition of this country as a Nation.
>
> We cannot concur in the present State plans and must disapprove the use of Federal lands under our jurisdiction for highway purposes.
>
> I am certain that in the long run the people of New Jersey and the country as a whole would be better served if the new highway could bypass entirely the historic town of Morristown.

National Park Director Conrad Wirth, according to reports published in the newspapers in New Jersey also urged that consideration be given to alternate routes completely removed from the site and features of Morristown National Historical Park as well as the historic town setting which surrounds them.

These reports have been published in newspapers in New Jersey such as the Morristown Daily Record which have been made available to me by Mayor J. Raymond Manahan of Morristown. Here I read from one of these reports:

> TRENTON.—State Highway Commissioner Dwight R. G. Palmer was skeptical when asked last night about the decision of the National Park Service not to allow the highway to touch the historical park.
>
> "How much of Washington's Headquarters is hallowed ground," he snapped. "Washington didn't sleep out on the lawn every night."
>
> Palmer, frankly critical of the Park Service's action, said he was confident our legislative representatives in Washington will defer to the judgment of the highway department and the bureau of roads in the alinement of FAI 104.
>
> He said the department would not ask for an act of Congress to get the road across the property but indicated there would be no barrier to taking (George Washington) school grounds.
>
> He said if the highway is placed outside of town, "We'll have to cut the heart out of the town with a feeder road."
>
> "I feel certain," he concluded, "that once this circus is over, the populace will commend us for our action."

Another newspaper story from the Morristown Daily Record is headlined "Route 202 Due To Go Through Town—Little Chance of Any Change in Line Seen," and it goes as follows:

> TRENTON—State Highway Commissioner Dwight R. G. Palmer and a top aid told 150 people from Morristown and vicinity yesterday that though the new FAI 104 (Route 202) was not yet finalized as going through Morristown, that is exactly where it will go in all probability.
>
> At a hearing on the new road, Palmer and Chief Engineer Otto Fritchie answered objections, principally from Morristownians, and indicated (1) the Federal Bureau of Roads requires that the highway go where traffic is the greatest; and (2) traffic is greatest in Morristown.
>
> Mayor J. Raymond Manahan, spokesman for the Morristown group, declared that local citizens are "fighting for their residential lives" and warned that if the route goes through town, "we will be a deserted village."
>
> Lawrence B. Howell, president of the board of trustees of the Washington Association, which operates Washington's Headquarters, Dr. Francis Ronalds, coordinating superintendent of the parks, and Harvey Cornell, of the National Park Service, which owns the land, all opposed the route.
>
> Dr. Ronalds said quietly: "To me, it's a horror."
>
> Former Mayor W. Parsons Todd called the alinement "extremely unfortunate."

I include here, as part of my remarks, a letter under date of May 3, 1960, from Mayor Manahan of Morristown transmitting the newspaper articles from which I have been quoting:

> TOWN OF MORRISTOWN, N.J.,
> *May 3, 1960.*
>
> Congressman FRANK THOMPSON, JR.,
> *House Office Building,*
> *Washington, D.C.*
>
> DEAR FRANK: In reply to your communication of April 29, 1960, concerning Mr. Palmer's remarks in connection with the Morristown National Historical Park, I am forwarding to you a scrapbook which contains all of the press releases concerning the proposed new highway. I have specifically marked a page which carries the story of Mr. Palmer's remarks questioning the amount of land that could be termed "hallowed ground." I will forward additional information to you in the near future.
>
> When you have completed your research with the scrapbook, would you please arrange to have it returned to me.
>
> With kind personal regards, I am,
> Yours very truly,
> J. RAYMOND MANAHAN,
> *Mayor.*

In a recent newsletter of mine I praised New Jersey State Highway Commissioner Dwight R. G. Palmer, who is certainly one of the ablest men in New Jersey and, indeed, in the Nation. There has been no scandal in New Jersey's highway building program, and this program is certainly a model for other States. However, I felt constrained to point out that Commissioner Palmer has made very clear his utter lack of concern with the dwindling number of historic

sites and buildings in New Jersey, and his determination to encroach upon the Morristown National Historical Park.

The Newark Evening News of April 27, 1960, carried a story from United Press International which reported that Commissioner Palmer had said there was not a single example to back up my newsletter statement.

I have, therefore, read from these newspaper articles on the situation at Morristown and let the facts speak for themselves.

This lack of interest and concern in historic structures is shocking. A nation with no regard for its past will have little future worth remembering. The Reader's Digest in January 1959 warned that "studies indicate that at least 25 percent of the finest historic and architectural monuments that existed in the United States in 1941 have been destroyed."

The Reader's Digest article, which was authored by Blake Clark, one of its senior editors, reported that the concrete cloverleaf is fast becoming our national flower, and warned that "many communities may not attempt to save their historic places until it is too late." This magazine, which is to be commended for its interest in historic preservation, added that "In the next few years 41,000 miles of new highways will charge through some of our last surviving wilderness areas, through major cities, along historic old roadways."

It is my sincere belief that the Congress must deal with this problem now, before it is too late.

I now turn to a quite similar situation facing the people of the District of Columbia.

Here, by reason of pressures from the Federal Highway Administrator, controlling 90 percent of the funds that would be used, the District of Columbia is presently making surveys and other preparations for construction of an $111 million freeway on a routing generally known as the Wisconsin Avenue corridor between Pooks Hill in Maryland and the Inner Loop. This Northwest Freeway—to be designated route 70–S—has been declared undesirable by a majority of the District Commissioners and the Chief of the District Highway Department and is deemed unnecessary by the engineering consultant to the mass transportation survey. The Maryland State Roads Commissioner has also declared his opposition to this route. If actually constructed, this route would, according to the Nothwest Committee for Transportation Planning, of Washington, D.C. (a) cost the Government—Federal, District of Columbia, and Maryland—more money than the alternative route proposed by the District and Maryland highway departments; (b) permanently harm many premium residential areas of Northwest Washington, Chevy Chase, and Bethesda; (c) permanently harm many primary educational and charitable institutions, including Woodrow Wilson High School, Sidwell Friends School, the Washington Home for Incurables, Phoebe Hearst Elementary School, Dumbarton College, and Our Lady of Lourdes School; (d) deface the valuable park facitilities through which it will pass, including Fort Reno Park, Melvin C. Hazen Park, Glover-Archbold Park, and Rock Creek Park; and (e) increase the tax burden of residents of the District of Columbia by condemnation of a minimum of $22.4 million of property bearing an assessed valuation for tax purposes of at least $8 million.

At this point I would like to quote a paragraph or two from an April 29, 1960, survey of the Northwest Freeway controversy prepared by the Northwest Committee for Transportation Planning:

> The proposed link for Interstate Route 70–S is being pushed over the unanimous opposition of citizens' associations representing the residential areas through which it would pass, and in spite of the fact that the official engineering studies indicate that such a route is not needed. Expert opinion is agreed that the route will not solve traffic congestion problems in the Northwest. Most of the experts called by the Joint Senate and House Committee on Washington Metropolitan Problems (Bible committee), which studied the mass transportation survey, testified that a rapid rail transit system such as that being proposed for Washington in the Bible bill (S. 3193) will make any such freeway unnecessary.
>
> The Northwest Freeway received its original impetus from the Chairman of the National Capital Planning Commission and the National Capital Regional Planning Council, Harland Bartholomew (NCPC) and Donald E. Gingery (NCRPC), who succeeded in having these bodies overrule the advice of their engineering consultants to the extent of including the freeway in the "Transportation Plan—National Capital Region" submitted by the President to Congress in July 1959. Public opposition to the freeway, expert testimony before the Bible committee in November 1959 against the "auto-dominant" features of the transportation plan, and the route's inherent engineering drawbacks persuaded the District of Columbia Commissioners to maintain their previously expressed opposition to the Northwest Freeway as the Route 70–S link. District Highway Director Harold Aitken therefore initiated cost studies for the route recommended by the engineering consultants to the NCPC. This route would bring Route 70–S to the Inner Loop via the B. & O. Railroad right-of-way and the area of Sixth Street NW. At this stage, however, Bertram D. Tallamy, the Federal Highway Administrator, intervened and announced that he would only approve a route down the Wisconsin Avenue corridor so that the District of Columbia Government is now placed in the dilemma of either submitting plans for a route it does not want or else forfeiting a multimillion-dollar grant from the highway trust fund.

Commenting publicly on the Wisconsin Avenue corridor, which is being forced on Washington because of what the Washington (D.C.) Evening Star calls "the dictatorial decision of the Bureau of Public Roads," Senator FRANCIS CASE, of South Dakota, has publicly declared that—

> It seems to me that as far as possible the routing of a link of the Interstate System through a city—and particularly the Capital City—should cure a blight rather than create one. Offhand, it is my opinion that any overhead throughway similar to the Whitehurst Freeway, if run through a good residential section, would blight the property on both sides to a serious degree.
>
> On the other hand, it seems to me that if the route should go through an area which is marked for redevelopment or slum clearance, to the extent that the construction results in clearance and improvement, a second benefit will flow from the money expended.
>
> And, at the same time, an overhead freeway through a well-developed residential section would seem to be more costly than acquiring the right-of-way through an area marked for reconstruction.

And then the distinguished Senator from South Dakota, who is ranking minority member of the Senate Public Works Committee, made the following statement which is the basis for the amendment which I have offered:

> I recognize that the Bureau of Public Roads in passing upon route proposals must operate within the directive of the laws relating to the Interstate System—in this instance, perhaps noting particularly that relating to a "direct route." However, if it should be demonstrated that greater benefits from the Federal dollar spent would result by deviating from the shortest line concept, it should not be too difficult to pass authorizing legislation where the Nation's Capital is concerned.
>
> We have to recognize that if the taxable valuations within Washington are reduced by elimination of or injury to well-developed areas, the pressure increases on Congress to make a larger annual payment to the District. So, it could be that although the cost to the highway trust fund might be less on the shortest route possible, the ultimate cost to the Federal Treasury might not be.

I have discussed my amendment with the Assistant General Counsel of the Bureau of Public Roads, R. L. May, who advised me that it is consistent with the general policy of the Federal Bureau of Public Roads. In addition, he called my attention to the last sentence of the last paragraph of subsection B, section 101, title 23—Public Law 85–767—which reads as follows:

> It being the intent that local needs to the extent practicable, suitable, and feasible shall be given equal consideration with the needs of interstate commerce.

It is high time that greater attention was given to this significant sentence by all public officials concerned with the Federal highway program and here I refer to the State highway officials as well as the officials in charge of the program at the national level.

In a number of highly important acts, the Congress has spelled out our Nation's policy of preserving and protecting historic American buildings and sites for the inspiration and benefit of the people of the United States.

State and Federal highway officials should take a cram course in these enactments.

America's history is of growing concern to our people, and unless the present course is altered, and altered drastically, we may soon find that there is none of it left standing in visible form.

Carl Sandburg, Lincoln scholar, poet, and philosopher, has summed it up brilliantly in these words in his book, "Remembrance Rock"—

> If America forgets where she came from, if the people lose sight of what brought them along, if she listens to the deniers and mockers, then will begin the rot and the dissolution.

Mr. FALLON. Mr. Chairman, I would like to thank the members of the submittee for the fine cooperation shown me in writing this bill. Particularly I would

like to compliment the gentleman from Ohio [Mr. SCHERER], who is unable to be here today, for his fine cooperation and contribution to the legislation that comes out of our committee at all times.

I have no further requests for time, Mr. Chairman.

The CHAIRMAN. The Clerk will read.

Mr. FALLON. Mr. Chairman, I ask unanimous consent that the bill be considered as read and open for amendment at any section.

The CHAIRMAN. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The bill is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Federal Highway Act of 1960".

AUTHORIZATION

SEC. 2. For the purpose of carrying out the provisions of title 23 of the United States Code the following sums are hereby authorized to be appropriated:

(1) For the Federal-aid primary system and the Federal-aid secondary system and for their extension within urban areas, $925,000,000 for the fiscal year ending June 30, 1962, and $925,000,000 for the fiscal year ending June 30, 1963. The sums authorized in this paragraph for each fiscal year shall be available for expenditure as follows:

(A) 45 per centum for projects under the Federal-aid primary system;

(B) 30 per centum for projects on the Federal-aid secondary system;

(C) 25 per centum for projects on extensions of Federal-aid primary and Federal-aid secondary systems within urban areas.

(2) For forest highways, $33,000,000 for the fiscal year ending June 30, 1962, and $33,000,000 for the fiscal year ending June 30, 1963.

(3) For forest development road and trails, $30,000,000 for the fiscal year ending June 30, 1962, and $30,000,000 for the fiscal year ending June 30, 1963.

(4) For park roads and trails, $18,000,000 for the fiscal year ending June 30, 1962, and $18,000,000 for the fiscal year ending June 30, 1963.

(5) For parkways, $16,000,000 for the fiscal year ending June 30, 1962, and $16,000,000 for the fiscal year ending June 30, 1963.

(6) For Indian reservation roads and bridges, $12,000,000 for the fiscal year ending June 30, 1962, and $12,000,000 for the fiscal year ending June 30, 1963.

(7) For public lands highways, $3,000,000 for the fiscal year ending June 30, 1962, and $3,000,000 for the fiscal year ending June 30, 1963.

DEFINITIONS

SEC. 3. For the purposes of section 2 of this Act each of the following terms shall have the same meaning as is given it in section 101 of title 23 of the United States Code:

(1) Forest development roads and trails;
(2) Forest highway;
(3) Indian reservation roads and bridges;
(4) Park roads and trails;
(5) Parkway;
(6) Public lands highways;
(7) Federal-aid primary system;
(8) Federal-aid secondary system;
(9) Urban area.

AMENDMENTS TO TITLE 23

SEC. 4. (a) Subsection (c) of section 129 of title 23, United States Code, is amended by striking out "under prior Acts".

(b) The first sentence of section 203 of title 23, United States Code, is amended by striking out "Funds now authorized" and inserting in lieu thereof "Funds authorized".

The CHAIRMAN. The Clerk will report the first committee amendment.

Mr. CRAMER. Mr. Chairman, I ask unanimous consent that committee amendments 1 and 2 be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read committee amendments 1 and 2, as follows:

Page 2, beginning on line 16, after the word "trails," strike out "$30,000,000" and insert in lieu thereof "$35,000,000".

Page 2, beginning on line 17, after the word "and" strike out "$30,000,000" and insert in lieu thereof "$40,000,000".

Mr. CRAMER. Mr. Chairman, I rise in opposition to the amendments.

Mr. Chairman, I am not going to labor the point. I discussed it in general debate, but there is a difference of opinion with regard to the inclusion of an additional $5 million for forest development roads and trails for the fiscal year 1962, which is amendment number one, and $10 million increase, from $30 million to $40 million, both amendments being considered en bloc. That means an increased general fund expenditure in the amount of $15 million over a 2-year period.

Where does this money come from? This comes from the general fund; from the taxpayers' pockets. Let us not have any doubt about that fact, about these amendments, which will increase the 1962 budget by $5 million and the 1963 budget by $10 million. So we are talking about general funds authorization in the amount of $15 million.

Let me briefly mention the latest increases that have been made with regard to forest development roads and trails. Let me say at the outset there is no one who is more in favor of the proper and necessary development of forest highways and trails and who realizes better the benefits that come from them. But I pose this question: Are those benefits any greater than those flowing from the A–B–C system? Are they any greater than the benefits from the Interstate System, that will save 3,500 lives when completed? Of course, if we are going to appropriate an additional $15 million, then you go to the further question, if we are going to authorize that much more money, could we not justify just as well or better the spending of that amount on the A–B–C system or on the Interstate System, if we are going to spend more money out of the general fund?

So I think that question has to be answered; and my reply to it, so far as I am concerned, looking at the equities of the situation, looking at the financial problem and being dedicated to a balanced budget, and with regard to this forest highway problem, and recognizing the value of the arguments of those who proposed the amendment, that this is in effect a self-liquidating highway construction phase of the matter which, of course, to some extent may be true, but we still get back to the same result, that it means an increase of $15 million in appropriations.

It has been suggested that these highways have earned $122 million through the cutting of timber, and so forth, recreation, and what have you, $122 million last year. I do not know how much net that is; that, apparently, is the gross; I do not see any testimony in the hearings as to what the net earnings have been, or whether that has been taken into consideration.

Let me trace what the authorizations have been in the past years, what the increases have been, and then you can perhaps better decide whether or not this authorization as proposed by the subcommittee is warranted. The subcommittee did not make these increases. The subcommittee retained the funds of $30 million a year and did it because it was of necessity having to keep the A-B-C system on the present authorization of $925 million a year. As a matter of fact, of necessity, last year there was also a cutback of $400 million in the Interstate System from $2.2 billion to $1.8 billion. Recognizing realities, we went along with present authorizations, but the subcommittee did the same thing with regard to forest development roads and trails.

In 1954 and 1955 Congress authorized $22.5 million for these forest development roads and trails. In 1956–57 it went up to $24 million. In 1958–59 it went up to $27 million. In 1960–61 it went up to $30 million. So there has been an increase of one-third in this between 1954 and 1960.

Again, in 1958, in the so-called Recession Act there was an increase of an additional $5 million.

What is being proposed is an increase over and above that one-third increase over the last 6 years for an additional increase of $15 million: $5 million in 1962, and $10 million in 1963; or, in effect, nearly a 100-percent increase to $40 million in 1963 over $22.5 million in 1965.

Mr. McFALL. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield.

Mr. McFALL. Would not the gentleman agree, however, that the increase in the budget that he spoke of is an illusory one in view of the fact that every time the amount has been increased in this manner the money has come back to the Treasury through receipts from the timber that has been sold, sufficient money to cover the entire increase? And the gentleman, I think, would agree that that would be the case this time as well.

Mr. CRAMER. I say to the gentleman that probably there would be some increased money in return. There is nothing however, in 1961 to show what proportion of the additional expenditure would come back in net earnings to the Federal Government which incidentally go into the general fund.

The point is it actually means an increase in appropriation to the amount of $15 million, and at this time I do not think it is justified.

Mr. JOHNSON of California. Mr. Chairman, I move to strike out the last

word and rise in support of the amendments.

Mr. Chairman, I want to say that every dollar we are asking for here will be more than repaid to the Federal Government. I think the Federal Government at the present time is spending much more than we are asking in allowing these funds to come from the timber receipts, the actual sales of timber. They are setting aside so much of the funds today for the construction of these roads for the operator who is the successful bidder, and he himself constructs these roads.

The more we open up these forests with the funds we are requesting in the way of access roads, the more we provide in the way of multiple benefits to the forests themselves. I think we have only to look at one benefit, and that is the competition that takes place in connection with the bidding for this timber, because approximately 95 percent of the receipts of the Forest Service come from the sale of timber. If you will study the matter as I have and take into consideration the returns to the Federal Government you cannot help but support the amendments that were adopted by the committee. Therefore, I ask that the amendments be agreed to.

Mr. McFALL. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of California. I yield to the gentleman from California.

Mr. McFALL. Is it not true also that in this case this money comes out of a general fund and will be reimbursed through timber sales? It has no relation to a necessity for a cut in the trust fund, nor to the necessary cut in the ABC system because of the condition the trust fund will be in. In other words, there is no relation between those items?

Mr. JOHNSON of California. That is right. This is an amount that comes from the general fund. Every bit of this proposed appropriation comes from the general fund. It is not a part of the trust fund item.

Mr. CLEM MILLER. Mr. Chairman, I rise in support of the pending amendments.

Mr. Chairman, I take this opportunity to respond to a point made by the gentleman from Florida [Mr. CRAMER] regarding the increases that have occurred from year to year in these forest road appropriations. He called attention to the increases from year to year and it looks like a frightening amount when you consider the matter in percentages, but when you come to dollars it is an insignificant amount. Even the percentage increases are readily explained if you consider that our national forests have not been developed for sustained yield at a very speedy rate. In the First District of California, the Six Rivers National Forest is only beginning to feel the effects of our road program. The cutting circles are only now reaching their sustained yield potential—a short time ago it was 35 percent, and right now it is only 75 percent. A greatly expanded road program is needed to reach our optimum cut. Even if there is a substantial increase from year to year in the road construction programs we are only now beginning to make a dent in the huge backlog of requirements. It is only in very recent times that we are beginning to cut in our national forests on a sustained yield basis. We have so far to go that percentage increases are no index of a proper spending level at all.

Last year the Department of Agriculture brought down to us the program for the national forests. It was astounding to me to see how the budget recommendations made by the administration to implement this program has fallen so far short of its goals. I believe, therefore, that the percentage increases give an incorrect picture of what is actually happening in the national forests and should not be regarded as an adequate index when we come to vote on these amendments. The amendments are necessary in order that the sustained yield operations recommended by the administration itself can be fulfilled.

Mrs. PFOST. Mr. Chairman, I rise in support of the amendments.

Mr. Chairman, as a woman and one who manages our family's budget, there is no one more aware than I am of the urgent need for saving dollars when it comes to the taxpayers' money. I always have, and will continue to be 100 percent for slicing every possible bit of fat out of the budget.

But the amendments that have been made to the bill before us—which would increase the funds for forest roads and trails development during the next 2 fiscal years—would not in fact be adding to the overall cost of the budget. In the long run, they would more than pay for themselves. I think that Uncle Sam stands to make money on the deal and, to me, that sounds like good, solid business practice.

This does not come out of the trust fund. It must be justified again before the Appropriations Committee.

Building these new access roads and trails would be a genuine aid to economic development in those States which contain many thousands of Government-managed forests. In Idaho, for example, we have more than 20 million acres of national forests. Figures collected by the U.S. Forest Service show that we are harvesting just a little more than half of the timber potential in the State.

New access roads would greatly step up the timber yield and in turn the revenues to the industry, the State and the Federal Government would be considerably increased. The Government now shares in these timber proceeds. The miner's expression, "There's gold in them thar hills," can easily apply to the economic potential awaiting us in our national forests.

I also want to underline the point that modern logging methods and the careful supervision by Forest Service officials would prevent wasteful practices. Our experts report that it would help the overall health of many square miles of our national forests if the ripe timber were culled out, thus giving the young trees a chance to grow tall and straight.

I therefore urge adoption of the amendments.

The CHAIRMAN. The question is on the committee amendments.

The committee amendments were agreed to.

The CHAIRMAN. The Clerk will report the last committee amendment.

The Clerk read as follows:

Page 4, line 3, insert:

"(c) The second sentence of subsection (a) of section 205 of title 23, United States Code, is amended by striking out 'construction'.

"(d) Section 210 of title 23, United States Code, is amended by adding at the end thereof the following new subsection:

"'(g) If the Secretary shall determine that it is necessary for the expeditious completion of any defense access road project he may advance to any State out of funds appropriated for defense access roads transferred and available to the Department of Commerce the Federal share of the cost of construction thereof to enable the State highway department to make prompt payments for acquisition of rights-of-way, and for the construction as it progresses. The sums so advanced shall be deposited in a special fund by the State official authorized by State law to receive such funds, to be disbursed solely upon vouchers approved by the State highway department for rights-of-way which have been or are being acquired and for construction which has been actually performed under this section. Upon determination by the Secretary that funds advanced to any State under the provisions of this subsection are no longer required, the amount of the advance which is determined to be in excess of requirements for the project shall be repaid upon his demand, and such repayments shall be returned to the credit of the appropriation from which the funds were advanced.'

"(e) Section 305 of title 23, United States Code, is amended by striking out 'under the Federal-Aid Highway Act of 1956,' and inserting in lieu thereof 'to carry out this title'."

The committee amendment was agreed to.

Mr. JONES of Alabama. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JONES of Alabama: On page 5, after line 7, insert the following:

"(f) Subsection (a) of section 114 of title 23, United States Code, is amended by adding at the end thereof the following new sentence: 'On any project where actual construction is in progress and visible to highway users, the State highway department shall erect such informational sign or signs as prescribed by the Secretary, identifying the project and the respective amounts contributed therefor by the State and Federal Governments.'"

Mr. JONES of Alabama. Mr. Chairman, this amendment has been circularized among the committee and, as far as I know, has been agreed to by all the members of the subcommittee.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from Florida.

Mr. CRAMER. Mr. Chairman, on behalf of the minority, I accept the amendment. I think it is a very fine one. Actually, it is one that should have been in the bill before, providing for notification to the general public to the effect that Federal moneys are included in highway construction where road signs are erected by the State. And, I

congratulate the gentleman for his usually very learned fashion in suggesting such an amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from Iowa.

Mr. GROSS. How many of these signs is it proposed to erect, and how much will they cost?

Mr. JONES of Alabama. Well, the cost of the signs that are erected on Federal highways under construction is not borne by the Federal Government.

Mr. GROSS. Who is going to pay for them if the Federal Government is not?

Mr. JONES of Alabama. The State Highway Department pays for them entirely.

Mr. GROSS. This is authorizing the placing of the signs; is that all it does? It directs them to do it?

Mr. JONES of Alabama. It prescribes the designation of the highway system, whether it is primary, secondary, or interstate, and how much Federal funds are available for the construction of the project.

Mr. GROSS. Is this going to be on a par with Civil Defense when that agency erected huge signs on many highways saying, "This road will be turned over in the event of an emergency?" Does anyone think a highway will not be taken over by the military if needed in an emergency?

Mr. JONES of Alabama. It has nothing to do with civil defense.

Mr. GROSS. Will it be that kind of a boondoggle?

Mr. JONES of Alabama. It is not going to involve the expenditure of Federal moneys.

Mr. GROSS. Well, somebody is going to pay for it. I would like to know who.

Mr. BALDWIN. Mr. Chairman, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from California.

Mr. BALDWIN. Actually, at the present time signs are erected on each Federal interstate highway project, but they simply are general signs saying "Construction is in progress." And, a great number of people think it is a State construction program and they think the money is coming from the State. Since it is interstate, they are entitled to know that a portion of these funds is coming from the tax dollar.

Mr. GROSS. Would there be any way to put on those signs how many billions have been spent on the foreign handout program?

Mr. JONES of Alabama. Well, I do not know whether the House would be ready to accept that kind of a proposition, in connection with the highway program.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama [Mr. JONES].

The amendment was agreed to.

Mr. TABER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TABER: On page 2, line 2, after "areas" and before the comma, add "out of the highway trust fund."

Mr. TABER. Mr. Chairman, I asked a question awhile back as to whether or not these appropriations could be out of the trust fund. Frankly, I am afraid there might be a construction that they would be not taken out of the highway trust fund. Therefore, I have offered this amendment which will unquestionably tie it in. That amendment relates only to the $925 million item which appears on lines 2 and 3.

Mr. FALLON. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. FALLON. Mr. Chairman, I do believe that what the gentleman is trying to do with his amendment is in the basic law. However, I see no objection to spelling it out in this bill.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. CRAMER. Mr. Chairman, I agree with the distinguished chairman of the subcommittee. What this does is refer specifically to the highway trust fund as it relates to subsection 1 of section 2, dealing only with the A–B–C system. Clarifying it in that manner I think is certainly in order.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. TABER]

The amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. DELANEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 10495) to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, pursuant to House Resolution 520, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. FALLON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

RETIRED PAY RECOMPUTATION ACT OF 1960

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 506 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11318) to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the Act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the Act of May 20, 1958. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. THORNBERRY. Mr. Speaker, I yield myself such time as I may consume, after which I yield 30 minutes to the gentleman from Idaho [Mr. BUDGE].

Mr. Speaker, House Resolution 506 provides for the consideration of H.R. 11318, to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1958. The resolution provides for an open rule, with 2 hours of general debate.

In May of 1958 the Congress enacted legislation based, in part, upon the recommendations of the Cordiner committee. This legislation resulted in very substantial increases in basic pay for the senior officers and the senior noncommissioned officers on active duty in the uniformed services.

The objective, of course, was to increase the attractiveness of a service career for young officers and thereby reduce the alarming turnover among outstanding junior officers who were leaving the armed services.

The 1958 Pay Act set up a substantially improved active career pattern for both officer and enlisted personnel; however, it departed from previous pay acts in its application to retired personnel.

In the past, retired personnel of the armed services have normally participated in pay advances or reductions granted to or levied against active duty personnel.

At the time the 1958 legislation was being considered, the Department of De-

fense recommended no increase for retired personnel.

The Committee on Armed Services felt that retired personnel should at least receive a cost-of-living increase. As a result, the committee recommended, and the Congress adopted, a 6-percent cost-of-living increase for all retired personnel regardless of the laws under which they were retired.

The 1958 act has accomplished many of its objectives. There has been, in both officer and enlisted categories, an increase in retention of specially skilled personnel. However, there has been a mounting concern from many quarters as to the wisdom and the eventual effect on the armed services of the departure from traditional retirement pay procedures that was embodied in the 1958 act.

Military personnel for many years have been considered lifetime members of the military service to which they belong. Even after they are retired from the service of which they are a member, they are subject to military discipline and, under certain circumstances, can be recalled to active duty voluntarily or involuntarily.

Their retirement pay is always based on basic pay, exclusive of allowances. The maximum retirement pay is 75 percent of basic pay, but a considerably lesser percentage of total active duty pay and allowances.

Authorized allowances for housing and subsistence are based upon the Government's obligation to provide quarters for a service member and, if otherwise qualified, for his dependents, or a cash substitute in lieu thereof. Subsistence is based upon the concept that the Government must either furnish food in kind or a cash allowance in lieu thereof. Allowances do not follow an individual into retirement—no retirement pay is based upon the allowances received by the individual while serving on active duty.

This proposed legislation in fiscal year 1961 will increase retirement costs from an estimated $775 million to $806 million. By 1965 the present projected retirement cost will exceed $1,175 million. By 1980, military retirement costs, without further pay increases, will exceed $3 billion.

It should be stated, however, that retirement costs reflect the size of the active duty forces. There is invariably a lag between the increase in size of the retired list.

Enactment of H.R. 11318 is recommended by the Department of the Defense, and the Bureau of the Budget interposes no objection.

Mr. Speaker, I urge the adoption of House Resolution 506.

Mr. Speaker, I know of no opposition to the rule and reserve the balance of my time.

Mr. BUDGE. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, this bill came to the floor with the unanimous report of the Committee on Armed Services. I think, however, that the Congress should begin to examine some of these built-in expenditures that recur every year. Now we are placed in a position where the retired pay of the retired military is in the neighborhood of $1 billion per year, which must be provided by tax money. It is estimated that by the fiscal year 1970 that figure will be $3 billion per annum. That has nothing to do with this particular bill, but I think it is something Congress should keep in mind in enacting any future legislation.

Mr. Speaker, I know of no opposition to the rule.

Mr. THORNBERRY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

Mr. KILDAY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11318) to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1958.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11318, with Mr. DELANEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. KILDAY. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, this bill is unanimously reported by the Committee on Armed Services. The title of the bill adequately expresses its purpose. I believe that it would be valuable to the membership to review briefly the history of the military retirement system because then I think it will be more easily understood why we feel it to be important that this bill be enacted.

At the time our Constitution was adopted we had previously had a military force operating under the Articles of Confederation. After our system of Government went into effect, the officers of the Military Establishment were, of course, nominated by the President and confirmed by the Senate. But, not being appointed for a definite period of time, they were appointed for a continuing period of time, so that it developed that there was no termination as to the appointment and they continued on indefinitely.

This became very important in 1861, at the outbreak of the Civil War. At that time we had on duty in the military establishment many superannuated officers, because there was no retirement system and no means by which officers could be required to leave active duty notwithstanding age or physical condition.

It is reported that at that time there were four regiments of artillery, for instance, and that the colonels in command of them were all incapacitated for field service, yet they remained in command. There were also a number of naval officers who had been confined to institutions, but were still carried on the active list.

The most significant example of all, of course, was Gen. Winfield Scott who in 1849 had been one of our two commanders in the Mexican War and who was still the commanding general of the U.S. Army. He was greatly advanced in age and suffering from dropsy and gout. In those days, of course, a general who could not mount a horse was under a severe handicap and General Scott could not mount a horse. So in 1861, in an attempt to revitalize the Federal Army, a retirement system was adopted. It provided for retirement of those persons with over 40 years of service upon their application and gave the President power to direct that officers of that length of service be retired. At that time the retired pay in the Military Establishment was related to the active duty pay and constantly since 1861, retired pay has been a percentage of the current military pay received by the military. We have done that in each pay bill from the beginning. That is, we have permitted those persons previously retired to recompute their retired pay on the new higher rate. With one exception, which I will refer to in a moment, that has been done. In the pay bill of 1958, the recommendation which came to us from the Department of Defense was that those previously retired receive no increase whatever. We were operating under a budgetary ceiling. However, because it was agreed that there had been a material increase in the cost of living there was another provision in the bill which granted a 6 percent cost-of-living increase to those already retired.

In other words, the Committee on Armed Services recommended, and the House passed and it became a law, that those previously retired would receive a 6-percent increase. That became the law, as I said, and has continued to be the situation since June 1, 1958. That is, those retired prior to June 1, 1958, received a 6-percent increase; those retired after June 1, 1958 compute their retired pay on the new rates. This has proven to be very upsetting to morale because of the traditional system under which retired personnel except for the period 1922–1926, have computed their retired pay on the current pay rates. It is obvious why those persons previously retired feel they have been deprived of a vary valuable and a traditional right. Those on active duty are also very deeply concerned about this situation. We all know what happens to a person on a fixed income because of inflation. The active duty personnel feel they have lost a most valuable and traditional right—real security for the future in that heretofore they had a retirement system which was geared to the existing pay scales so that they could look to their retirement with a feeling of security.

The President in his budget message this year used this language:

Traditionally, rates of pay for retired military personnel have been proportionate to

current rates of pay for active personnel. The 1958 Military Pay Act departed from this established formula by providing for a 6-percent increase rather than a proportionate increase for everyone retired prior to its effective date of June 1, 1958. I endorse pending legislation that will restore the traditional relationship between retired and active duty pay rates.

The President in his fiscal 1961 budget message requested that funds be made available to pay the additional amount so that it has been budgeted by the President.

The Department of Defense, after an investigation of the matter, stated to the committee that it "believes the net result would be of significant value by increasing the morale, efficiency, and effectiveness of our active duty career personnel as well as avoiding discrimination against retired personnel who served their country faithfully and well."

The Secretary of Defense informed the committee as follows:

Undoubtedly, there is merit in the assertion that morale in the active forces will be further enhanced by restoring the increase to those receiving retired pay under the same law but retired prior to June 1, 1958.

The Defense Department does not desire any discrimination to exist against our retired personnel and particularly those officers who bore the brunt of senior responsibility in command during wartime, many of whom did so with great distinction, patriotism, and heroism.

The bill will do exactly what I have stated. Of course the number of people to be affected by the bill is already established. Therefore the cost of the bill, while recurring, will recur at a lower amount each year, because as those retired members pass on no others will enter. It is only those persons who retired prior to June 1, 1958, and are paid under the Career Compensation Act of 1949 who are affected. So that while the cost is material, about $33 million for fiscal 1961, it will reduce each year thereafter.

In all instances where pay scales are established within the body of the statute itself, it is most difficult so say what is going to happen to each individual. However, we have included in the report exactly what happens to the various pay scales, based upon typical years of service, and an analysis of average pay increases for those reasons with those years of service. I would request that for any specific determination of what would go to any particular individual, that you refer to the report, because it is set out in complete detail.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield.

Mrs. CHURCH. I would like to ask the gentleman whether in any sense this will cause any change in the amount paid to the widows and minor children of officers after death.

Mr. KILDAY. The Survivors Benefits Act is based upon a percentage of the active duty pay. So, while this bill does not do that, it has been automatic. In other words, the wife and children of a deceased service member, or one who dies with service-connected disability, draws $112 per month, plus 12 percent of the base pay of the service member computed on the latest pay rate.

Mrs. CHURCH. I rose because of my interest in the surviving widow and minor children, since I understood the gentleman to say that the effect of the bill would taper off as each officer dies.

Mr. KILDAY. Well, it tapers off because the survivor does not draw the same amount as an active duty personnel, and the bill is applicable only to retired personnel.

Mr. BATES. Mr. Chairman, I yield such times as he may desire to the gentleman from Pennsylvania [Mr. GAVIN].

Mr. GAVIN. Mr. Chairman, the purpose of this bill is to allow those who compute their retired pay under the rates set forth in the Career Compensation Act of 1949 and who retired before June 1, 1958, to recompute their retired pay in accordance with the rates contained in the Military Pay Act of 1958.

Since the establishment of the military retirement system in 1861 there has been, with one exception, a continuing and vital relationship between active duty pay and retired pay. This one exception took place in 1922 when pay increases were granted to all military personnel, except retired officers. Four years later, in the 1926 Pay Act, the Congress restored the normal relationship between the two types of pay for the officers affected by the earlier act.

During the economy period of the early 1930's, the pay cuts imposed upon active duty personnel were extended to retired personnel. This action and the 1926 action, together with the fact that retired persons are not only subject to trial by court-martial but also to recall, point up that retired personnel do indeed remain part of the Military Establishment.

I think we should also bear in mind that many persons on the retired list are not there by choice. Retired status has been imposed upon them, not because they are incompetent or unable to perform arduous duty, but because this country has to keep the military services young, dynamic and ready for any eventuality.

Their devotion and dedication during their careers was predicated upon the certainty that they would receive that percentage of the active duty pay of the grade and length of service which is prescribed by law. This has always been one of the strong points in selling a military career to either the recruit or the young officer.

Military pay rates have always been set so as to consider retired pay as earned pay, but payment is deferred until the individual has earned his right to apply for retirement.

I strongly urge passage of H.R. 11318 and believe it will have a marked effect on the morale of all service personnel, active and retired, and keep faith with those who served loyally and well and kept faith with our country in trying times.

Mr. BATES. Mr. Chairman, this bill received unanimous approval of our committee. It merely restores to retired personnel the rights and privileges which were exercised for many years, starting in 1861.

Mr. Chairman, the purpose of H.R. 11318 is to return to the traditional system of military retired pay from which we departed in the Pay Act of 1958.

Although the group involved is relatively limited and will grow smaller as death takes its toll over the years, it is important that we take this move as a reassurance and an incentive to the young men now in the service who we hope will make a career of the military profession. This was the basic purpose of the 1958 Pay Act and it is also the basic purpose of the bill now before us.

If our country is to be defended properly, we must have a force in being capable of instant action.

We can no longer depend on the time required for the mobilization of citizen armies; we must have armed services composed in good measure of career professional military personnel. It is important that we continue to provide the traditional incentives for that career.

Except for temporary departures, military retired pay has always been based on current active duty pay scales. This has provided the assurance that whatever the change in the cost of living, retired personnel need not fear that they will be forgotten with a retired pay which has lost its purchasing power.

This assurance is important for two reasons.

In the first place, military retired pay is not a pension. It is more in the nature of a retainer pay. Unlike retired people in other fields of endeavor, the retired military are not separated from their service. They are still members, although inactive, and have always so regarded themselves, as they are in fact in law. We must keep in mind that they are still subject to the regulations of their services and also to the Uniform Code of Military Justice.

In time of war or national emergency, retired personnel are subject to recall to active duty. These obligations are real and they are borne with pride by our devoted retired personnel.

Of equal importance as a reason for our system of military retired pay is the nature of the military profession itself. By far the greater number of combat personnel are not trained in skills which can be translated into civilian occupations.

It is essential that these officers and enlisted personnel go through their careers without having to worry about learning another occupation on the side in order that they may be able to support themselves and their families upon retirement.

I think we must face the fact that the military profession is a young man's game, especially for the senior commissioned officers, and we must necessarily place them on the retired list at a time when their family responsibilities are at their highest. If we are to demand and receive the complete dedication which our career military personnel should give their jobs we must see to it that any doubt as to their family's security after retirement does not arise.

Mr. Chairman, I yield such time as he may desire to the gentleman from Florida [Mr. CRAMER].

Mr. CRAMER. Mr. Chairman, I rise in support of the bill, having introduced similar legislation myself, in H.R. 6357. The objective of my bill was to remove all inequities that resulted from the 1958 Career Compensation Act, and to remove all discrimination—a bill to restore the traditional relationship between active duty pay and retired pay for members of the uniformed services.

My bill, in general, provided that in order to eliminate discrimination, a member of a uniformed service retired before June 1, 1958, would have his retired pay computed on the same basis as those who retire in the future.

This is only fair, equitable and just—what we are accomplishing in this bill before the House today, H.R. 11318.

Mr. BATES. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, I rise in support of the bill H.R. 11318. This bill simply corrects the inequity that developed as the result of the passage of the 1958 act and restores the original relationship between retired military personnel and active duty personnel.

This bill is important, I believe, because retired military personnel will feel assurance that they will continue in this traditional relationship. I am glad the Committee has brought this bill before us today and I hope it is adopted by unanimous vote.

Mr. KILDAY. Mr. Chairman, I ask unanimous consent that the gentleman from Georgia [Mr. VINSON] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. VINSON. Mr. Chairman, today the House will consider proposed legislation which will restore a tradition of basing retired pay for members of the Uniformed Services on the basis of existing pay scales—a tradition that was in effect, with only one exception, from 1861 to 1958. This will be accomplished through the enactment of H.R. 11318.

The best way to describe the purpose of this bill is to quote the title, which states that it is a bill "to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1948."

Retainer pay goes to fleet reservists who are, for practical purposes, retired, but have not yet completed a total of 30 years of service. Retired pay goes to retired personnel.

On May 20, 1958, the Congress enacted into law the Pay Act of 1958, to be effective June 1, 1958.

You will recall that this act was based, in part, upon the recommendations of the so-called Cordiner Committee.

In 1958 the Nation was aroused by the loss of skilled personnel from our Armed Forces.

Officers were not seeking regular commissions, and many officers with regular commissions were resigning long before reaching retirement age.

Enlisted personnel were reenlisting in specialties in which we had surplus numbers; but enlisted personnel who possessed specialties in short supply were reenlisting at an alarmingly low rate.

Thus, the Congress enacted into law the Pay Act of 1958.

Now that act provided very substantial pay increases for the senior officers in our armed services and for our senior noncommissioned officers. The objective was to increase the attractiveness of a service career.

In plain language, the law provided higher pay for the senior grades so that younger officers would have something to look forward to insofar as pay is concerned.

As a matter of fact, the Chiefs of Staff of the Army and Air Force, the Chief of Naval Operations, and the Commandant of the Marine Corps, for example, received a 46 percent increase in basic pay; lieutenant generals averaged a pay increase of 28 percent; major generals, 29 percent; brigadier generals, 31 percent; colonels, 20 percent; lieutenant colonels, 16 percent; majors, 11 percent; captains, 10 percent; first lieutenants, 6 percent; and even second lieutenants with over 2 years of service received a 6 percent increase.

Two new enlisted grades were created, E–8, or first sergeant, and E–9, or sergeant major, which provided pay increases of 21 percent and 41 percent respectively, above the pay which previously existed for an E–7, or sergeant first class. Other enlisted grades were also increased.

We were losing good men, and the new law was passed to keep them.

The proposal submitted to the Congress in 1958 by the Department of Defense recommended substantial increases in basic pay for certain personnel, but it contained no recommendation for any increase whatsoever for those men on the retired list.

The Defense Department proposal did recommend, however, a temporary 6-percent cost-of-living increase for certain active-duty personnel.

The Committee on Armed Services revised the proposals to a considerable extent, and, in addition, recommended to the House that all persons retired for any reason whatsoever, receive a 6-percent cost-of-living increase.

This proposal eventually became law.

As a result, we created two different categories of retired personnel who are paid under the same law.

Since the 1958 Pay Act merely changed the pay scales of the Career Compensation Act, but became effective on June 1, 1958, and was not applicable to anyone retired prior to June 1, 1958, we created a situation in which we had two categories of retired personnel retired for the same degree of disability, or with the same length of service, in the same grade or rank, but receiving substantial differences in retired pay.

Now, how is this possible?

Well, I stated that we increased the pay of a colonel, for example, by 20 percent, and we increased the pay of a sergeant first class by 11 percent.

A colonel retired with 30 years of service on May 1, 1958, now receives retirement pay in the amount of $644 a month. Before the Pay Act of 1958, he received $608 a month.

You will recall that we gave him a 6 percent cost-of-living increase.

Therefore, we increased his retired pay by 6 percent of $608. The net result was to give him retired pay in the amount of $644 a month.

But a colonel retired after June 1, 1958, the day the Pay Act became effective, because of the substantial increase of 20 percent in the basic pay scales of a colonel, receives $738 a month.

Thus, there is a difference of $94 a month—for the same rank and the same length of service.

An E–7, or sergeant first class, with 23 years of service, for example, retired prior to June 1, 1958, received $183 a month. The 1958 Pay Act gave him a 6-percent increase in retired pay, raising him to $194 a month. But the E–7, or sergeant first class, who retired after June 1, 1958, receives $201 a month. Thus, there is a difference of $7 a month—for the same rank, same length of service, and quite likely, the same responsibility.

You can see, therefore, that we have two types of personnel who are paid under the same law, served in the same grade, have the same length of service, may have assumed the same responsibility, and may have fought in the same wars, but who have substantial differences in retired pay because one retired prior to June 1, 1958, and the other after that date.

Now what the bill H.R. 11318 will do is to put all personnel who are paid under the same law in the same status insofar as entitlement is concerned.

In other words, all officer and enlisted retired personnel who are paid under the Career Compensation Act and who have the same grade and length of service or degree of disability, will receive the same retired pay except that those who received a cost of living increase in 1958, which may exceed the amount of the increase in the pay scales, will continue to receive the greater amount provided by the cost of living increase.

Now what are we talking about in terms of numbers?

Well, the bill applies to about 118,000 persons. There are 114,000 in the Armed Services, and about 4,000 in the Coast Guard, the Coast and Geodetic Survey and the Public Health Service.

I should mention here that the Army, Navy, Air Force, and Marine Corps, as well as the Coast Guard, Coast and Geodetic Survey, and the commissioned officers of the Public Health Service, are all paid under the pay scales contained in the Career Compensation Act.

Insofar as the armed services are concerned, that is, the Army, Navy, Air Force, and Marine Corps, 49,884 officers will receive a pay increase under the proposed legislation, and 64,274 enlisted personnel.

However, the increased pay resulting from the enactment of the proposed legislation will vary considerably among officer grades and enlisted grades. The following breakdown indicates who among the retired personnel will get increases, as well as the average amounts they will receive in each grade and the number of people affected:

OFFICERS

Retired pay grade	Rank	Total personnel and additional average annual increase	Retired pay grade	Rank	Total personnel and additional average annual increase
	CS, CNO, CMS, and CJCS.	11 will get $4,586 more per year.	O–5	Lieutenant colonel	10,177 will get $526 more per year.
O–10	General	41 will get $3,191 more per year.	O–4	Major	11,036 will get $103 more per year.
O–9	Lieutenant general	126 will get $2,394 more per year.	O–3	Captain	2,556 will get $83 more per year.
O–8	Major general	817 will get $1,918 more per year.	O–2	1st lieutenant	2,143 will get $38 more per year.
O–7	Brigadier general	1,130 will get $1,416 more per year.	O–1	2d lieutenant	1 will get $25 more per year.
O–6	Colonel	12,933 will get $1,035 more per year.		Total officers (including warrant officers).	49,884.

ENLISTED

E–7	Sergeant, 1st class	50,186 will get $113 more per year.	E–1	Recruit	53 will bet $10 more per year.
E–6	Staff sergeant	7,141 will get $19 more per year.		Total enlisted	64,274.
E–5	Sergeant	3,169 will get $47 more per year.		Grand total (officers, enlisted, and warrant officers).	114,158.
E–4	Corporal	2,543 will get $22 more per year.			
E–3	Private, 1st class	516 will get $4 more per year.			
E–2	Private	666 will get $6 more per year.			

The proposed legislation will cost $33,600,000 in fiscal 1961.

We all know that military retirement costs are increasing at a substantial rate.

In fiscal 1961, without the proposed legislation, retirement costs for the Department of Defense will amount to $775 million, and with the proposed legislation will increase to $806 million.

This amount will increase each year as the total number of retired personnel increase.

The total number of retired personnel will increase, because we have maintained a force since World War II far in excess of that which existed prior to World War II. We expanded our military structure in 1939 and 1940, and after World War II maintained an average strength in excess of 2,500,000. We are now 20 years away from 1940, and retirement costs will begin to increase as the number of personnel on the retired list increases.

This is a deferred cost of national defense.

Now what is the justification for the proposed legislation from the viewpoint of morale, tradition, precedent, equity, and fairness?

Well, we adopted the first retirement system for our Armed Forces in 1861. And we geared the retirement pay to the active duty pay.

For many, many years the retirement pay of service personnel has been based upon the years of service that an individual contributes to the Nation, multiplied by 2½ percent times the basic pay of his grade. Let me explain that further.

Let us take the basic pay of a colonel with 26 years of service. His basic pay is $985 a month, but he receives a subsistence allowance and a quarters allowance which increases his total monthly pay to $1,169.

If he retires with 26 years of service, he will receive 26 years times 2½ percent, which amounts to 65 percent of his basic pay, that is 65 percent of $985.

This gives him $640 in retired pay per month.

In other words, he cannot include any of his allowances for the purpose of computing his retired pay.

Allowances do not follow an officer or enlisted man into retirement.

And for that matter, neither does flight pay, nor any other special pay such as proficiency pay or personal money allowances for the very senior officers.

Now this has been the system for many years.

For years people who have joined the Armed Services have felt that one of the advantages of being a member of the Armed Services is that their retired pay would always be multiplied against existing pay scales, regardless of what they were. If they went up, their pay went up; if the pay scales went down, their retired pay went down.

Thus, if the Congress increased basic pay, the man on the retired list felt that he would also receive the same increase in proportion to his years of service.

This system of wedding together retired pay to existing pay scales continued from 1861 to 1922, or 61 years.

In 1922, Congress enacted a general pay increase, and left out the officers then on the retired list. But the Congress corrected that situation 4 years later, in 1926.

In 1949 we did change the disability retirement system and this, of course, was justified in view of the evidence disclosed by the Committee on Armed Services with regard to the abuses that existed in the disability retirement system.

Prior to October 12, 1949, an officer could be retired for disability if he was found unfit for full duty.

It did not make any difference how disabled he was. If he was unfit for full field duty, he was retired for disability and received 75 percent of his basic pay, tax free, for the rest of his life.

After October 12, 1949, we made disability retirement applicable not only to officers, but also to all enlisted personnel; and in addition, we changed the system. We said that hereafter persons retired for disability would compute their retired pay based upon their degree of disability, or their years of service, whichever gave them a greater amount.

Degree of disability is determined by using Veterans' Administration standards.

The Veterans' Administration does not make the examinations, but the standards used by the Veterans' Administration determine the degree of disability.

Those who had been retired for disability prior to that date were given the choice of choosing to keep their old retired pay, which was 75 percent of the pay scales in existence prior to October 12, 1949, or qualifying for the new pay scales on the basis of the determination made as to their degree of disability or length of service under the Career Compensation Act.

We thus changed the system of disability retirement in 1949. But those previously retired for length of service, or 75 percent disability, were allowed to compute their retired pay under the new and increased active duty pay scales. This proposal, H.R. 11318, makes no attempt to change the disability retirement system by one iota. We think that system is sound and should not be changed.

But in 1958, because of the position of the Department of Defense, the Congress did not allow the existing pay scales to be made applicable to those on the retired list who were being paid under the same law. Congress limited retired personnel to a cost-of-living increase.

That is what the proposed legislation will correct.

The President stated in his budget message that he favors this legislation and indicated that funds will be requested for fiscal 1961 to cover the costs.

The Department of Defense now strongly endorses the proposed legislation, as do various veterans organizations, as well as the Reserve Officers Association, Retired Officers Association, and other organizations. Many State legislatures have adopted resolutions asking Congress to pass this bill.

This bill simply carries out the traditional policy established by the Government in 1861 of computing retired pay on the basis of the active duty pay scales, whatever they may be, and whether they go up or down.

In only one instance in the past, except for the change in the disability retirement system, has Congress departed from this concept.

In other words, from 1861 to 1958, except for a 4-year period from 1922 to 1926, the policy of the Government has been to compute retired military pay on the basis of existing active duty pay scales.

Let me remind the House that retired personnel are still members of the Armed Forces. They are subject to court-martial, and under certain conditions they may be called to active duty without their consent.

This bill is sound. It is only right and proper that these retired personnel should have their retired pay based on present active duty pay scales.

The bill has been unanimously approved by the Armed Services Committee and I urge its passage.

Mr. KILDAY. Mr. Chairman, I yield 2 minutes to the gentleman from Maryland [Mr. FOLEY].

Mr. FOLEY. Mr. Chairman, I rise to support the bill and to point out that on January 22, 1959, I introduced a companion measure, H.R. 3164.

I believe this legislation is equitable and, therefore, support it.

Mr. KILDAY. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. MCFALL].

Mr. MCFALL. Mr. Chairman, I rise in support of the legislation. I feel it is equitable and necessary. I commend the committee for bringing it to the floor.

Mr. KILDAY. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. COHELAN].

Mr. COHELAN. Mr. Chairman, some 65,000 retired enlisted men and some 50,000 retired officers in the Army, Navy, Marine Corps, and Air Force will receive retired pay equal to that of their fellows who retired after June 1, 1958, as a result of passage of the measure before the House today, H.R. 11318.

Basically this is an equalization measure which corrects an existing situation in which military personnel retired, for example, on May 30 or 31 of 1958 receive benefits substantially lower than those retired a few days later. The correction thus made reestablishes past procedure by which retired armed services personnel have participated in pay adjustments for active duty personnel. This past procedure was changed in 1958 when, at the time of the passage of the 1958 Pay Act, the Department of Defense recommended that increases not be extended to retired personnel. Now the Department of Defense has restudied its earlier position and, in the words of Secretary of Defense Gates, "after further consideration now believes it only equitable and fair to reestablish the traditional relationship between active-duty pay and retired pay."

I have introduced one of the more than 40 bills similar to H.R. 11318 because I have the honor to represent a considerable number of individuals who were affected by the inequity in the 1958 Pay Act and because, as a member of the Armed Services Committee, I have come to be aware of the importance of this and other commitments to both the efficiency and the economical operation of our armed services.

Faced with the necessity of maintaining vast military forces requiring more and more skilled personnel, our commitments of various kinds—and retirement benefits is one of the most important of these—are essential to our being able to compete for top manpower. The Federal Government's failure in 1958 to continue its past practice of improving retirement scales along with active-duty scales has had at least some undesirable effect in that it caused military personnel to take a cold look at this job advantage.

It is necessary that all understand that military retirement pay is somewhat different than other retirement benefits, in that retired military personnel are not really cut off. In our report on this measure—House Report No. 1513—the Armed Services Committee points out:

> Even after they are retired from the service of which they are a member, they are subject to military discipline and, under certain circumstances, can be recalled to active duty voluntarily or involuntarily.

Mr. Chairman, as I have said, I have introduced legislation similar to H.R. 11318. I urge that it be passed today.

Mr. KILDAY. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. CLEM MILLER].

Mr. CLEM MILLER. Mr. Chairman, I rise in support of the legislation for which I introduced a companion measure.

Mr. BATES. Mr. Chairman, I yield to the gentleman from California [Mr. GUBSER] such time as he may desire.

Mr. GUBSER. Mr. Chairman, I have introduced a similar bill. I support the present legislation. In view of the fact that there is no opposition to the bill I shall not impose upon the time of the membership by speaking at length in favor of it, but merely say I hope it will be supported by unanimous vote.

Mr. BATES. Mr. Chairman, I ask unanimous consent that the gentleman from Washington [Mr. HORAN] may extend his remarks at this poiont in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. HORAN. Mr. Chairman, I want to voice my support for this legislation which I feel is so necessary to correct the inequities involved in the present retirement pay system. I sponsored a similar measure to H.R. 11318 because I realize the injustices involved in the present system.

I believe the passage of this bill will provide more of an incentive for our young men and women who might be considering the military service as a career. Also, it seems to me that it is only right that we provide a more realistic and adequate retirement system for retired members of the uniform services who have devoted their skills and qualifications in protecting and defending America for so many years.

Mr. RIVERS of South Carolina. Mr. Chairman, I am pleased to add my voice in support of H.R. 11318.

Enactment of this proposal will eliminate an injustice that could seriously affect the morale of our Armed Forces.

With but one exception, previous laws pertaining to active-duty pay increases, as well as decreases, have followed the time-honored concept that retired pay shall be based on the existing active-duty pay scales.

Public Law 85–422, at the insistence of the Congress, authorized a 6-percent cost-of-living increase for persons on the retired list. This was better than had been recommended by the Department of Defense, but the new law departed from the basic principle that retired pay should be based on active-duty pay scales.

Enactment of H.R. 11318 will primarily affect those persons who were combat leaders in time of war. It will prevent a situation from continuing wherein many of those who retire in the future will not have assumed the responsibilities of those who served in combat positions in time of war, but will receive more retired pay.

H.R. 11318 is also a belated recognition of the fact that the Military Pay Act of 1958 was deficient in not extending to retired military personnel the pay scales established by that law.

This bill will restore the traditional relationship which, down through the years, has been maintained between the active-duty pay scales and the retired pay scales. The temporary deviation from this tradition which occurred in 1958 should be speedily remedied. This action will have two important effects:

First, it will treat our retired persons in the way they should have been treated in 1958; second and most important, it will reestablish the principle that future adjustments in active-duty pay scales will be accompanied by corresponding increases in retired pay.

Mr. MACK. Mr. Chairman, the Military Pay Act of 1958 had the unfortunate effect of denying its full benefits to many retired officers of the Armed Forces who served under fire in two great wars.

As I am sure all of us understand this resulted from severing the traditional relationship that had existed for many years between retired pay and active duty pay.

As sponsor of a companion bill to H.R. 11318, I take this opportunity to congratulate our colleague the gentleman from Texas [Mr. KILDAY] and the other members of the Committee on Armed Services for their wise and painstaking solution of this problem.

This is a good bill, a fair bill, and one which I wholeheartedly support.

Mr. KILDAY. Mr. Chairman, inasmuch as there are no further requests for time I ask that the bill be read for amendment.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That, notwithstanding any other provision of law except section 6483 of title 10, United States Code, a person entitled to retired pay or retainer pay under the rates of basic pay in effect under the Career Compensation Act of 1949 before June 1, 1958, is entitled to retired pay or retainer pay based on the rates in effect on the effective date of this Act or the retired pay or retainer pay to which he was entitled on the day before the effective date of this Act, whichever is greater.

SEC. 2. This Act becomes effective on the first day of the month following the month in which it is enacted.

SEC. 3. No person is entitled to any increase in retired pay or retainer pay because of the enactment of this Act for any period before the effective date of this Act.

The CHAIRMAN. There being no amendments, under the rule the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. DELANEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11318, to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1958, pursuant to House Resolution 506, he reported the same back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. KILDAY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. KILDAY. Mr. Speaker, I ask unanimous consent that I may include extraneous matter in the remarks I made on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. McGown, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8042) entitled "An act to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11510) entitled "An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes."

GRAND VALLEY FEDERAL RECLAMATION PROJECT (COLORADO)

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5098) to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That upon the expiration of the contract between the United States, the Grand Valley Water Users' Association, and the Public Service Company of Colorado, dated June 19, 1931, as amended, the Grand Valley Water Users' Association, with the approval of the Secretary of the Interior, is authorized to enter into a contract or contracts for the sale or development of any power or power privileges in the Grand Valley Power Plant, Grand Valley reclamation project, Colorado. Any such contract shall provide, among other things, that annual net power revenues from the plant, minus the annual operation and maintenance cost of delivering the power water, will be applied in the following order: (a) On the aggregate of the annual sums due and payable by the association to the United States as provided in article 12, paragraphs (c), (d), and (e), of contract numbered Ilr–644 between the United States and the association, dated January 27, 1945, until such time as the obligation under said contract has been paid in full; (b) on all obligations incurred for the rehabilitation of the project works; (c) as the association may direct.

With the following committee amendment:

Page 1, strike out all after the enacting clause and insert the following: "That upon the expiration of the contract between the United States, the Grand Valley Water Users' Association, and the Public Service Company of Colorado, dated July 2, 1959, the Grand Valley Water Users' Association, with the approval of the Secretary of the Interior, is authorized to enter into a contract or contracts for the sale or development of any power or power privileges in the Grand Valley Power Plant, Grand Valley reclamation project: *Provided,* That such sale or development of power or power privileges shall be without expenditure of funds by the United States. Any such contract shall provide, among other things, that annual net power revenues from the plant, minus the annual operation and maintenance cost of delivering the power water, will be applied in the following order and manner: (a) on the aggregate of the annual sums due and payable by the Association to the United States as provided in article 12, paragraphs (c), (d), and (e), and article 22, paragraph (a) (ii), of contract numbered Ilr–644 between the United States and the Association, dated January 27, 1945, until such time as the obligation under said contract has been paid in full; (b) in any year in which the net power revenues exceed the aggregate of the annual sums due and payable under said contract between the United States and the Association, and after the obligation under said contract has been paid in full, against the total obligations incurred for the rehabilitation of the project works under contracts between the United States and the Association now existing or hereafter entered into: *Provided,* That such application shall not reduce the annual sums payable by the Association under such rehabilitation contracts; and (c) as the Association may direct."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. ASPINALL. Mr. Speaker, the purpose of this legislation is to permit the continued operation of the small existing powerplant of the Grand Valley Federal reclamation project in Colorado after the expiration of the present interim contract. This interim contract expires on December 31 of this year and, therefore, enactment of this legislation is necessary during this session of the Congress.

This small powerplant is a most unusual Federal powerplant in that it was constructed and is operated without any expenditure of Federal funds. This legislation provides that it would continue to be operated without the expenditure of Federal funds.

A little history showing how this powerplant happened to be built may be of interest to Members. The Grand Valley Federal reclamation project was one of the first projects initiated under the Federal Reclamation Act of 1902. It was authorized in 1912 and the first irrigation water was delivered by it in 1915. When the project was initially constructed the Grand Valley Water Users Association which operates the project requested the Bureau of Reclamation to include a powerplant to assist the project financially. The original plan for the project contemplated such a plant but the studies by the Bureau of Reclamation indicated that power development was infeasible and the plant was not constructed as a feature in the original project. Later, with the Orchard Mesa Irrigation District as a unit of the project, an opportunity arose for changing the location of the proposed powerplant and thereby increasing the power head and improving feasibility. The association went back to the Bureau of Reclamation with the revised plan and again asked for the power development. But the Bureau again turned down the request of the association for construction.

Having failed to get the Bureau of Reclamation to build a powerplant, the Grand Valley Water Users Association undertook to make its own arrangements for construction of the plant. It was

able to get legislation approved in 1931 authorizing the power development and successfully negotiated a contract with the Public Service Co., of Colorado for the operation of the plant. The contract entered into in June 1931, to which the United States was also a party, provided, first, for construction of the powerplant by the United States with funds advanced by the company; second, operation of the powerplant and disposal of the power by the company; and third, annual payments by the company to the association during the 25-year contract term with such payments to be applied to the irrigation construction obligation of the association to the United States. The company was also required to pay that portion of the irrigation project operation and maintenance expenses which was attributable to furnishing power water to the plant. The 1931 contract expired in 1959 and a short-term interim contract will be in effect only through December 31 of this year.

Now, a little more about what H.R. 5098 does. It authorizes the Grand Valley Water Users Association to enter into a contract or contracts for continued operation of the powerplant and disposal of the power after the present interim contract expires. It is expected that the association will continue to contract with the same company, the Public Service Co., of Colorado, under essentially the same arrangements that presently exist. The bill provides that the revenues which the association receives from the power operations shall be applied, first, to its irrigation construction obligation to the United States until such obligation has been paid in full; second, to the association's obligation to the United States for rehabilitation of project works under contracts now existing or hereafter entered into and, third, as the association may direct.

It appears that all revenues received by the association in the foreseeable future from the power operations will be needed in connection with the construction and rehabilitation obligations of the association to the United States.

The one point of disagreement between the water users and the Bureau of Reclamation related to whether the authority to contract should be limited. The Bureau recommended that it be limited to 25 years while the water users thought that the authority to contract should be without any time limitation, thereby giving them the benefit of the revenues from power operations so long as there were any revenues available. The committee went along with the water users in this matter and the bill before you today has no time limitation. It seemed to the committee that under the circumstances surrounding this development the association should have continued use of the net revenues to financially assist the irrigation project without any string attached. This determination of the committee is based upon the fact that this small powerplant was built strictly on the energy, plans, and financing arrangements by the water users themselves and has not cost the Federal Government one penny nor will it cost the Federal Government anything in the future.

While H.R. 5098 involves a relatively minor matter, its enactment at this time is urgent in order that the power operations of the small Grand Valley powerplant may continue and the water users receive some financial assistance therefrom.

HEADQUARTERS SITE FOR MOUNT RAINIER NATIONAL PARK

Mrs. PFOST. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 1358) to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes.

The SPEAKER. The question is on the motion offered by the gentlewoman from Idaho.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill S. 1358, with Mr. DELANEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. GROSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy-six Members are present, not a quorum.

The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 89]

Anderson, Mont.	Fogarty	Montoya
Anfuso	Frazier	Moorhead
Auchincloss	Giaimo	Morris, N. Mex.
Barden	Gilbert	Pilcher
Baring	Green, Oreg.	Porter
Bass, Tenn.	Healey	Powell

Accordingly, the Committee rose; and the Speaker pro tempore, Mr. MCCORMACK, having resumed the chair, Mr. DELANEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill S. 1358, to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes, and finding itself without a quorum, he had directed the roll to be called, when 370 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mrs. PFOST. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, Mount Rainier National Park, in the State of Washington, which is the subject of this legislation, is one of the best known and most frequently visited of our great national parks. In 1959, more than 1,100,000 persons visited the park.

This legislation deals specifically with administrative facilities at the park rather than with the boundaries of the park itself. The existing headquarters facilities, located within the park boundaries, are inadequate and obsolete and there is insufficient suitable land at the existing location to permit proper development. Also, the winter snows at the present location are such that it has never been properly adapted as a site for living quarters of the park personnel and their families.

Because of these conditions, the new proposed site would be located at a lower elevation near the town of Ashford, some 6 miles from the park entrance. The legislation is necessary because of the location of the land outside the park boundaries.

Acquisition of real estate, under the measure, is limited to 300 acres of land. Negotiations are under way under which the desired real estate could be acquired without a financial payment, by means of an exchange for public lands not needed by the Government. It has been agreed with the committee by the National Park Service that a copy of the agreement, by which the exchange of lands would be consummated, will be filed with the Committee on Interior and Insular Affairs before it is executed. One of the advantages of this program is that the present headquarters site at Longmire, which is within park boundaries, will become available for public use to which it is more suited. As my colleagues know, Mission 66 is a program to improve public-use facilities in our national park system. Through enactment of this measure and provision of necessary funds, this development can take place in keeping with the increasing visitations that are expected at Mount Rainier National Park.

It is the judgment of the Committee on Interior and Insular Affairs that the new park headquarters site should be authorized through the enactment of this legislation.

Mr. ASPINALL. Mr. Chairman, will the gentlewoman yield?

Mrs. PFOST. I yield to the gentleman from Colorado, the distinguished chairman of the full Committee on Interior and Insular Affairs.

Mr. ASPINALL. Is it not true that the reason this legislation comes before the committee at this time is because of the necessity of authorizing the construction of certain facilities outside of the park area?

Mrs. PFOST. The gentleman is correct.

Mr. ASPINALL. If these facilities are built within the park area and the site is not adequate to do the job, the Park Service can go ahead and request funds without further authorization?

Mrs. PFOST. That is correct.

Mr. ASPINALL. This legislation has nothing to do with station facilities?

Mrs. PFOST. The gentlemen is correct. Testimony was given during the hearings that the site in Mount Rainier is at times flooded, and in the winter time the deep snow is a handicap to the park personnel and their families who reside there.

Mr. GROSS. Mr. Chairman, will the gentlewoman yield?

Mrs. PFOST. I yield to the gentleman from Iowa.

Mr. GROSS. Simply because the Park Service asks for funds does not mean that the Committee on Appropriations will necessarily give them the funds, is that not correct?

Mrs. PFOST. The gentleman is correct.

Mr. ASPINALL. Even if Congress does approve it and the Executive approves it and the bill becomes law, that does not necessarily mean that the Committee on Appropriations will put out the funds immediately; it may wait until it sees fit to appropriate the funds, is that correct?

Mrs. PFOST. That is correct.

Mr. CHENOWETH. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the gentlewoman from Idaho, chairman of the Subcommittee on Public Lands, has fully explained the need for this legislation. This bill had the unanimous support of the Subcommittee on Public Lands and the full Committee on Interior and Insular Affairs. I know of no opposition to the bill. I think everyone is agreed that these new headquarters are necessary, and I urge the passage of the bill.

Mr. Chairman, I now yield 5 minutes to the gentleman from Washington [Mr. TOLLEFSON].

Mr. TOLLEFSON. Mr. Chairman, this proposal comes down from the Department of the Interior. The bill was introduced by request. As has been explained very ably by the gentlewoman from Idaho, the situation is that the buildings which are several in number are old, dating back as far as 1910. They are all substandard, wooden buildings, and need to be rehabilitated.

It was the opinion of the Department of the Interior and, more particularly, the Park Service, that rather than spend the money rehabilitating these substandard buildings, new ones ought to be constructed, and if new ones were to be constructed, the Park Service felt that the new headquarters site should be outside of the park boundary rather than within the park boundary.

The present location of the existing facilities is about 6 miles inside the park entrance at a point near the Nisqually River. The bulk of the buildings, if not all of them, are constructed on land below the level of the river itself. The area has been flooded in the past and undoubtedly in the future will be flooded again. The only reason more floods have not occurred is on account of the dike, which is expensive to put in and maintain.

I may very frankly say to the committee that I was opposed to the legislation at the outset, not so much on the ground that new facilities were not needed, but simply because I felt if any money was to be spent in the park it should be spent first for a new inn up at Paradise Valley, which is within the park boundaries.

The inn up there—and I take this opportunity to acquaint the Members with the situation—is more than 40 years old and ought to be torn down because it is unsafe. For that reason I formerly objected to this proposal, feeling that the money should be spent on a new inn. However, instead of my taking a dog-in-the-manger attitude, I concede that new facilities are needed. Either we build them in the park or outside the park. Because of the lack of available area within the park, I do not think there is any doubt—there is none in my mind—that the new facilities ought to be outside where the severe winter weather does not affect them so much, and where the severe winter weather will make living conditions for some 27 families, Park Service employees, who live there more comfortable.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. TOLLEFSON. I yield to the gentleman from Colorado.

Mr. ASPINALL. Of course, as I understand, this does not have anything to do with the repair or rehabilitation or the building of new facilities at Paradise Inn. That comes under the Park Service.

Mr. TOLLEFSON. That is correct.

Mr. ASPINALL. It is true, however, that the present Longmire site will not take care of the new headquarters and also serve the visitors that are expected to go into that area.

Mr. TOLLEFSON. This is true. That is one of the reasons the Park Service has to have the new facilities placed outside the park entrance.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. TOLLEFSON. I yield to the gentleman from Iowa.

Mr. GROSS. I am trying to find a copy of the hearings on this bill. Were there no hearings?

Mr. TOLLEFSON. Yes, there were hearings. I do not know why they are not here. I am sorry I cannot enlighten the gentleman on that. There were hearings.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield further?

Mr. TOLLEFSON. I yield.

Mr. ASPINALL. This is one of a group of several small bills or bills authorizing small projects. Hearings were held, of course. The hearings are available, if any Member of the Congress wishes to come to the committee and look them over. It is not the habit of the committee of which I am chairman to publish and put the Congress of the United States to the expense of publishing hearings on small bills. Usually these bills pass either by unanimous consent or they pass under suspension. The report is a true statement of the hearings held by the committee.

Mr. TOLLEFSON. I thank the gentleman for that comment.

I want to emphasize one point which I do not think I emphasized sufficiently. The average annual snowfall in the wintertime is about 4 or 5 feet. And, of course, it drifts in this area, and as a consequence the living conditions of the 27 families who live there throughout the winter—and this is more than a couple of months, I assure you—are very uncomfortable. There are no stores or school facilities or church facilities, and as a consequence the families must run down to the next nearest town and the children commute back and forth to the nearest school, which is some 16 miles away.

Mr. Chairman, I trust that the committee will approve the bill.

Mrs. GREEN of Oregon. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to apply the present headquarters site in Mount Rainier National Park to public use for which it is more suitable and to provide an efficient operating base for the park, the Secretary of the Interior is authorized to provide a park headquarters in the general vicinity of Ashford, Washington, and for such purpose to acquire in this vicinity, by such means as he may deem to be in the public interest, not more than three hundred acres of land, or interest therein.

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, this is a bill to provide for the spending of $2,356,000 for a new headquarters in Mount Rainier National Park. The gentlewoman from Idaho was correct when she said that this is purely for buildings for administrative purposes. The Government already has a headquarters in Mount Rainier National Park and there is no showing that those buildings are not adequate.

It is stated in the report that there is some flooding; that there has been two so-called floods in 10 years. Let me say that floodwater drives some of the people off the Cedar River which runs through my district at least twice in 10 years. But I do not come in here crying for an appropriation of $2½ million simply because some people are inconvenienced once or twice in 10 years.

If the Federal Treasury were in a good position, if we were not faced with very serious financial problems, I would not be opposed to this kind of legislation. But so far as I am able to discover these headquarters are adequate as of now. If we are going to have any kind of financial sanity in this Government of ours, we have got to stop spending $2½ million for purposes of this kind.

Mr. TOLLEFSON. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. TOLLEFSON. The gentleman stated that there was no showing that the present facilities at Mount Rainier were inadequate. The statement of the Acting Secretary of the Interior, con-

tained in his letter which is included in this report, states:

The present headquarters development at Longmire is totally inadequate and obsolete.

This is his opinion, of course, but I should like to concur in that opinion. This area is within my congressional district. I have seen these facilities many times and I can assure the gentleman that they are obsolete and inadequate.

Mr. GROSS. I believe the gentleman from Washington said a moment ago that one of the reasons for new quarters is to make the employees more comfortable; did he not say that?

Mr. TOLLEFSON. With the headquarters site being moved out of the park, the employees also would be moved out of the park and will have the opportunity to rent their own facilities down at Ashford, where this would be located.

Mr. GROSS. In other words, they would be more comfortable.

Mr. TOLLEFSON. That is not the primary consideration. It is a contributing factor, but not the primary consideration. The primary consideration is the inadequacy and the obsolescence of the present headquarters facilities.

Mr. TABER. Mr. Chairman, will the gentleman yield for a question?

Mr. GROSS. I am glad to yield to my friend from New York.

Mr. TABER. I wonder from whom this piece of land would be purchased, on which it is proposed to erect these headquarters; how big it is, and what the lay of it is.

Mr. GROSS. I have not the slightest idea. I have seen no hearings; there are no hearings available.

Mr. TABER. Does not the gentleman think those questions ought to be answered?

Mr. GROSS. I should be glad to yield for the purpose of someone answering the question.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. ASPINALL. Of course, when the gentlewoman from Idaho made her statement she said that the lands which would be secured for the headquarters site would be from public lands. It would be a matter of exchange of properties that may be necessary. In other words, the property on which the new headquarters is to be provided would not cost the Government, as such, any money, because it would simply be public land which at the present time is being used for other purposes.

The gentleman is throwing the matter of the need of these facilities into a situation which does not meet with very easy understanding. The gentleman from Minnesota [Mr. LANGEN], one of the finest members we have had come to our committee, was very careful to ferret out as much information on such matters as he could. He asked the representative from the Park Service, Mr. Scoyen, as follows:

Do the present headquarters provide, in some manner, all of these buildings at the new site that you are contemplating?

Mr. Scoyen, of the Park Service, said:

Yes, but most of them are very old. Some are 30 and 40 years old and were somewhat of a temporary nature to start with.

As I pointed out, we cannot afford to put in additional investment because of the threat it will be flooded out at any time.

Mr. LANGEN. How old are the facilities in the present site?

Mr. SCOYEN. They vary a great deal, but I would say there has been nothing new put in there since, probably, about 1935 or 1936.

Mr. LANGEN. What will happen to those facilities? Is there any salvage there? Will they serve any other purpose or are they just to be abandoned?

Mr. SCOYEN. There are a few residences up on safe land above the stream we will maintain to house employees who will be operating the visitor's center and campground and other facilities there, but the rest of the buildings will be removed.

Mr. LANGEN. What has been the flooding period there? How often?

Mr. SCOYEN. I think three times in about the last 7 years we have had to evacuate our employees there under the threat of flood and the last time was just last December.

I can show you a photograph here which illustrates that situation if you would like to see it.

We had the photograph.

In other words, as stated here on the floor, it will be necessary to rebuild these headquarters facilities. The question is, when are they going to be rebuilt?

Mr. GROSS. At some future time.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. GROSS. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. ASPINALL. The gentleman is correct, some future time. Even if we pass this authorizing legislation now it would not go into effect until after it had been considered by the Appropriations Committee.

May I say to my friends on the committee that when we have over a million people visiting an area such as this in the season, that is the summer and fall of the year, we must see to it that they are provided with the necessary administrative personnel. A million people; that is a number not to be laughed at.

Mr. GROSS. Is there any question as to whether there is a sufficient number of administrative personnel now?

Mr. ASPINALL. There is no question as to the sufficiency of the numbers at the present time. However, with the increase there will be necessity for more personnel. Not only that, there will be a necessity to provide a camping ground, and the only place you can provide a camping ground is the present site. It cannot take care of both operations.

Mr. GROSS. All I am asking is that this thing be deferred until we can show some signs of disposing of some of this $290 billion of debt. This can only be done by cutting out unnecessary expenditures, no matter how desirable, and I think this is a good place to begin.

Mr. ASPINALL. I can understand the gentleman's position, but when these matters come before the committee of which I am chairman we see to it that the case is disposed of expeditiously. We bring it to the floor of the House and the House is the final judge. I think we have made a case on this bill.

Mr. GROSS. With all due respect, I think some of these bills have been overly expedited, and I think this is one of them.

May I point out again that a great deal is made of the alleged flooding of the present headquarters, twice in the last 10 years, according to the report, neither of which apparently did much damage. In the report it is said,

The existing headquarters building which is not likely to be destroyed by flooding would be converted to a visitor's center.

So this flood danger is not apparently what some people would like to make it.

Mr. Chairman, I am opposed to this bill because I do not think Congress ought to spend nearly $2,500,000 for this purpose at this time. I insist the present headquarters is adequate until the financial situation of this Government improves.

LEGISLATIVE PROGRAM FOR NEXT WEEK

Mr. HALLECK. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I take this method of taking the floor to inquire of the majority leader as to the program for the balance of this week and next week, if he can tell us about it at this time.

Mr. McCORMACK. I intend to ask unanimous consent at the end of today's business to go over until Monday. After this bill there are a couple of other minor bills. If both of them get by, I would like it, or one of them, whatever the House wills on that; but it would help out, because I like to give Members having bills on which rules have been reported their day in court. I know that as we go along at this time some of these bills that are important to certain areas and to the Members representing those areas and which might not, perhaps, be of more general importance are liable to be caught in the squeeze of legislative business. But, of course, I want to be as fair to all Members as I can to give them their day in court.

So if the pending bill is disposed of, then another bill or both of them, namely H.R. 6851 and H.R. 8226, can come up. Either one of them or both of them, and I would like to get them out of the way although I would not be terribly disappointed if that was not the case.

As to the program for next week:

Monday, that is Consent Calendar day.

Then there are three bills to be taken up under suspension:

H.R. 11602, amending certain laws in relation to Hawaii.

H.R. 10500, the incentive pay bill relating to the Navy and to those brave officers and men on nuclear powered submarines—the kind of men who did this remarkable job, particularly on the *Triton*, which has made history and brought fame to the United States.

S. 2611, amending the Small Business Investment Act of 1958.

Then there is the military construction appropriation bill for 1961.

On Tuesday, the Private Calendar will be called.

Then there is the legislative appropriation bill for 1961.

Following that the bill H.R. 7155, the San Luis unit of the Central Valley project, which will be considered for general debate only.

There are primaries in Maryland and Oregon. The Maryland primary takes place on Tuesday and the Oregon primary on Friday. I realize that that presents some complications.

With reference to Calendar Wednesday, I am informed that the bill, H.R. 10128, will be called up by the Committee on Education and Labor under the Calendar Wednesday rule. That is the School Construction Assistance Act of 1960.

Mr. HALLECK. Mr. Chairman, if the gentleman will yield at this point, am I correct in understanding that the Committee on Banking and Currency would still have another call on Wednesday?

Mr. McCORMACK. No; it is my understanding that the Committee on Banking and Currency which was called last week will not be called on the coming Calendar Wednesday.

Mr. HALLECK. Then, of course, the next committee to be called is the Committee on the District of Columbia before the Committee on Education and Labor is called.

Mr. McCORMACK. That is right. The Committee on the District of Columbia.

Mr. HALLECK. If my colleague will permit me, I do not mean to interrupt except to say that this matter has been definitely asserted here as to the probable action on Wednesday. It is my information that hearings have been scheduled before the Committee on Rules for next week on the school construction bill. Does this mean that the effort to obtain a rule will be abandoned in favor of the Calendar Wednesday operation?

Mr. McCORMACK. I wish my friend would address that question either to the gentleman from New Jersey [Mr. THOMPSON] or to the gentleman from West Virginia [Mr. BAILEY] because they both have told me that they do not want Calendar Wednesday dispensed with, and under those conditions, of course, I would not ask unanimous consent to dispense with the business in order on Calendar Wednesday of next week.

Mr. HALLECK. It seems to me to be a little unusual, if not highly unusual, that in spite of the fact hearings have been scheduled by the Committee on Rules and publicly announced, that an attempt will be made to resort to Calendar Wednesday. It would seem to me to be in the best interest of legislative procedure to present the matter before the Committee on Rules in hearings and then see what action the Committee on Rules takes. If such a practice is not to be followed, then in my opinion we might as well abolish the Committee on Rules and forget about it. I see a few people applaud on the other side—and you may be enjoying this—but I just happen to believe that the Committee on Rules is a very important part of the House of Representatives and that it performs a useful function. So far as I can discover, it has not been too remiss in its operation so far this session.

Mr. THOMPSON of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield.

Mr. THOMPSON of New Jersey. I certainly agree, and I will concede that the Committee on Rules has not been, as the gentleman from Indiana says, "too remiss"—it has been slightly remiss. Our information is that as of the time that the Committee on Education and Labor met in regular session this morning, that there was contemplated, for an indefinite time, perhaps next week, a hearing.

The gentleman would seem to imply that Calendar Wednesday, which is provided for in the rules of the House, and is a perfectly ethical, moral, and valid rule, should be used. This bill has been before the Committee on Rules five times. The gentleman from West Virginia has made numerous personal requests. In the face of that we avail ourselves of the rules of this body instead of an indefinite announcement.

We would be delighted to have a rule on Tuesday and take it up under the rule; we prefer that. But hearings are not quite the same as a rule.

Mr. McCORMACK. Then, I take it that if a rule were granted the gentleman would not object to not taking it up for a week or two.

Mr. HALLECK. If I may interpose for a moment, I read in the papers this morning a report which I have every reason to believe is accurate, there had been a consultation between the Speaker and the chairman of the Rules Committee and that hearings were to be had on Tuesday of next week.

Let me say this to some of you who now seem to think the Calendar Wednesday is to be available for all of these occasions without regard to any Rules Committee action, I recall early in the session when the leadership was dispensing with Calendar Wednesday in respect to the civil rights bill, and a great drive was made and speeches made, hours long, that everybody should sign the discharge petition to bring the civil rights bill to the floor. In connection with that I said a rule would be granted, and a rule was granted, in the proper way; and with proper debate that took something over a week, and not one day, the civil rights bill of 1960 was enacted into law.

Mr. THOMPSON of New Jersey. The fact is the gentleman could have objected.

Mr. HALLECK. That is the orderly procedure that ought to be followed, as far as I am concerned.

Mr. THOMPSON of New Jersey. If the gentleman will yield, we have followed it, but the gentleman from New Jersey and the gentleman from West Virginia, I believe, will be more than willing if a rule is granted before Wednesday to take it up under the rule; we prefer that.

Mr. HALLECK. The members of the Rules Committee may have some idea about that too.

Mr. THOMPSON of New Jersey. But failing that we are using Calendar Wednesday.

Mr. HALLECK. I do not know what is going to happen. It may be a real interesting time.

I now yield to the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. As the gentleman knows, I am announcing the program for the information of the Members and being informed that Calendar Wednesday is going to be availed of, I naturally advise the Members that the Calendar Wednesday rule will be exercised next week and the School Construction and Assistance Act of 1960 will be brought up. What might happen between now and then I do not know. As far as I know, they want it brought up. Is that correct?

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. There are members of the Committee on Education and Labor here. What I would like to know is whether the Committee on Education and Labor instructed the chairman or the chairman of the subcommittee to bring the bill up. Under the rules of the House can anyone other than the chairman of the commitee call up a bill under the Calendar Wednesday rule?

Mr. McCORMACK. My understanding is that the chairman of the committee in the absence of instructions from the committee is the one to do it, but the committee may authorize and direct some other member to do it.

Mr. HOFFMAN of Michigan. Does not the rule say that the chairman of the committee, when the calendar is called, and so forth?

Mr. McCORMACK. That is a matter that would be passed upon at the time. I am not undertaking to make a ruling, but my understanding is that the committee can authorize and direct someone to call up the bill on Calendar Wednesday. That, however, is a matter that will have to be passed upon by whoever is presiding, if the question is raised.

Continuing, assuming Calendar Wednesday is exercised, then on Thursday, Friday, and Saturday there is H.R. 7155, the San Luis unit of the Central Valley project.

Then there is H.R. 5, the Foreign Investment Incentive Tax Act of 1959. A good part of the debate on that bill has already taken place. I understand that there are a couple of amendments to be offered.

Then there is H.R. 2331, national parks, involving the C. & O. Canal in Maryland that I had on the program today. I want the gentleman from Maryland [Mr. FOLEY] to know that I had no knowledge that the bill was not going to be called up today. I want the RECORD to show that because when I give my word I try to keep it. I have no criticism to offer except I had no knowledge and I was surprised when I came in and found out that the bill was not going to be brought up.

That is the program for next week. There is the usual reservation that conference reports will be brought up at any time and any further program will be announced later.

May I say to the gentleman from Indiana, not agreeing with everything the gentleman said about Calendar Wednesday but, nevertheless, recognizing that it is a rule that is advisable and necessary but to be resorted to only in extreme cases, I hope between now and Wednesday a situation will exist where the leadership may be satisfied that a rule will come out of the Rules Committee.

Mr. HALLECK. I would like to make one observation in respect to the program next week. It is noted here that there are primaries in Oregon on Friday. It has also been called to my attention that a Wisconsin State convention is being held on that same day. I would express the hope that for the protection of the Members from both of those States we might arrange matters so that Friday of next week will be open.

Mr. McCORMACK. May I suggest to the gentleman, I do not want the RECORD to show that I can recognize conventions because, as a matter of fact, there is a convention next Thursday in one of our States. A Member on my side of the aisle came to me about it. It is pretty tough to arrange a legislative program. I am trying to do the best I can, having due regard for the necessities of all the Members. But it is hard in trying to get along with a program and to at the same time protect Members on rollcalls when there are primaries. But wherever there is a State convention I cannot commit myself that nothing will happen that day in connection with rollcalls. Certainly, I will make every effort to try and harmonize the proceedings of the House with the necessities of some Members in connection with State conventions.

Mr. HALLECK. I appreciate the gentleman's remarks, and I commend the gentleman. He has been fair. I want to assure him that as far as I am concerned I will cooperate in every way I can.

Mr. McCORMACK. I cannot make a promise to any Member that on Monday or Tuesday, in light of our recent experience, there will not be rollcalls. I shall try to protect them and will ask unanimous consent for them to go over. Whenever Calendar Wednesday is exercised, I want it understood they will go over until Thursday. Of course, I do not want to clutter up Wednesday with rollcalls. If any Member objects they will have to take place on the day when the bills come up.

The last time it happened, and I am not criticizing anyone, we did not expect the first rollcall, but the right was exercised by a Member. I am sorry. The second one we did not expect a rollcall on. If I had known there was going to be a rollcall on the second resolution I would have seen to it that it was not called up on that particular day. But as far as I can reasonably expect I do not expect a rollcall so far as next Tuesday is concerned.

In connection with primaries between now and the end of the session, I cannot make any promise there will not be rollcalls. I will do everything, however, to cooperate with the Members in having them postponed. But as far as next Monday and Tuesday are concerned, I want to frankly state I will have to ask that they go over until Thursday.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from West Virginia.

Mr. BAILEY. As chairman of the subcommittee that handled this legislation, I made repeated requests of the Committee on Rules for a date for a hearing on the rule. No later than yesterday I called on the chairman of the Committee on Rules. I got no assurance that it would be held on Tuesday. There was a possibility that it might be held sometime next week. Some days ago I made a formal request on the Majority Floor Leader that he not move to dispense with Calendar Wednesday but keep it open. If Calendar Wednesday is kept open and if the Committee on Rules has met and granted a rule, we would prefer to proceed under the rule rather than use Calendar Wednesday. But, in the event there is no rule, we want Calendar Wednesday left open.

Mr. HALLECK. Let me inquire of the gentleman from West Virginia: As I understand, you have two school construction or Federal aid to education bills up before the Committee on Rules. Which one do you want a rule on? Which one do you want to call up? Will you call up the Metcalf $4 billion bill or the other?

Mr. BAILEY. H.R. 10128, which is the lesser in expenditure and spread over a greater period of time. It is partially the administration bill. It is a compromise bill, if the gentleman cares to know it.

Mr. McCORMACK. Mr. Chairman, if the gentleman will yield further, I am asking this for the benefit of the Members. Assuming a rule is reported out or a reasonable expectation that would satisfy the gentleman and the proponents of the bill and assuming that a rule is reported out before Wednesday, the gentleman does not mean that the rule has to be called up on Wednesday. Then the leadership can program the rule in the future. Of course, that would not be the remote future, you could rely on me, but, at least, that would mean that if the leadership did not want to bring it up until next week or the week after, that would be agreeable; is that correct?

Mr. BAILEY. If a rule is granted, you can have Calendar Wednesday.

Mr. HALLECK. I think I probably ought to say at this juncture, and with that I will desist, that I have served on the Committee on Rules for a great many years. I was proud to serve on that committee. I was here for a time when the Committee on Rules was pretty much stripped of its power and authority under certain new rules adopted by the House of Representatives. It was soon discovered that that rule was not in the public interest. Now, when I served on the Committee on Rules, I must say to the gentleman from West Virginia that as a member of the Committee on Rules, having understood that hearings would be initiated next week, I would have been just a little slow to rush in and report out a rule by Tuesday with no hearings being held under the circumstances that now exist.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from West Virginia.

Mr. BAILEY. Before I had been a Member of this House a period of 1 month, they invoked Calendar Wednesday procedure on me on legislation coming from the Committee on the Judiciary to suspend a decision of the United States Supreme Court. They convicted 184 of the major fire insurance companies of this country. They set it aside and gave them a moratorium of 18 months. Of course, I was not here long enough to know what Calendar Wednesday was, but I got 139 votes.

Mr. HALLECK. The gentleman is always persuasive, and we all recognize that. As I remember, the last Calendar Wednesday we had before was in 1950, when we had the FEPC bill. But, I have been here when Calendar Wednesday was invoked, and at the time it was invoked the House adjourned. I do not know what might happen again.

Mr. THOMPSON of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. I might point out in the gentleman's reference earlier to a time when the Committee on Rules was rather stripped of its power, that this was not a rule respecting Calendar Wednesday, which has been a part of the procedure of this House since 1910. I might say I am at a bit of a loss to understand the gentleman's reluctance to consider a bill which the President recommended and which calls for $325 million less than the President recommended.

Mr. HALLECK. We will argue the merits or demerits of the bill when the time comes.

The CHAIRMAN. The time of the gentleman from Indiana [Mr. HALLECK] has expired.

The Clerk will report the first committee amendment.

The Clerk read as follows:

Page 1, line 5, strike out "an efficient operating base" and insert "a headquarters."

The committee amendment was agreed to.

Mr. JONES of Missouri. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to try to get a little more information about this bill which calls for $2,356,000 which we are proposing to authorize for this park. I would like to ask the chairman of the committee, if I may, does not this park produce some revenue either from admissions or concessions, or something like that?

Mr. ASPINALL. Mr. Chairman, if the gentleman will yield to me, it is my understanding that this particular facility follows the line that most national park facilities follow. They do charge an admission for entrance into the park area; that is correct. As far as concesssions are concerned, there is only one primary concessionaire in the park at this time.

That is the one that operates the Paradise Inn. The Paradise Inn has not been paying any money. The return from that concession is practically nil.

Mr. JONES of Missouri. I have no objection to national parks. I think they are fine. But here is one where you are charging an admission, where you do have a concession, and where it seems there should be the possibility of a return at least to pay some of the expenses. I cannot see why some of these facilities should not be more self-sustaining.

Another question: The gentleman says they are going to move this headquarters near a town, as I understand it.

Mr. ASPINALL. That is correct, a small community just outside the park boundary.

Mr. JONES of Missouri. The gentleman was not explicit in saying whether these 300 acres were already owned by the Government in some land-use facility. The gentleman left the impression the 300 acres were already owned by the Government.

Mr. ASPINALL. I did not intend to leave that impression. I intended to leave the thought for the gentleman that the 300 acres would be Government-exchanged land, if necessary.

Mr. JONES of Missouri. But the gentleman did not answer the gentleman from New York when he asked who owned the 300 acres of land.

Mr. ASPINALL. The present owner is the Weyerhauser Lumber Co. which has used this land for some time. But as I understand, the exchange will be made by the Department of the Interior for public lands elsewhere to the Weyerhauser company, and they in turn will give their title to these 300 acres to the Government.

Mr. JONES of Missouri. This is the Weyerhauser Lumber Co.?

Mr. ASPINALL. That is right.

Mr. JONES of Missouri. That is one of the big companies operating out west. And they are going to trade some land off for some timber up north?

Mr. ASPINALL. The gentleman is correct. That is in the hearings.

Mr. JONES of Missouri. It looks as though we are in for another skinning there.

Mr. ASPINALL. If the gentleman will yield, just how?

Mr. JONES of Missouri. I have never seen the Government yet trade any land to a private individual and come out ahead. That is my point. I am just wondering how much the Weyerhauser Lumber Co. had to do with promoting this deal. I am just a little leery of it, combined with the fact that we have not had a chance to see these hearings and the fact that we are proposing to spend $2,356,000. I think we ought to go a little slow on it and I am glad that the gentleman from Iowa [Mr. GROSS] and the gentleman from New York [Mr. TABER] have pointed out some of these things. In these times I think it is well for us to spend our money for some of the more essential things, but if things can be postponed, let us wait until we get this national debt down a little bit.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield.

Mr. ASPINALL. The gentleman comes from an area where there is very little public land. The gentleman from Colorado, now speaking, comes from an area where Uncle Sam owns approximately 70 percent of all the land area. May the gentleman from Colorado advise his friend from Missouri that the gentleman from Colorado does not know of any instance where the Federal Government has come out on the short end when these transfers are made.

Mr. JONES of Missouri. I had no intention of leaving any impression or making any intimation that I was inferring that any member of the committee or of the Congress was in on this at all. If there was any such inference assumed from what I said, I certainly want to state publicly that I had no such intention of casting any reflection on any Member of Congress. But I do know that some of the people representing the Government in these deals usually come out on the short end of the horn. I have observed that over a long period of years. I am just afraid that might happen here. I do not like this trading. I think we ought to find out what the value of this land is and, if we need it, buy it.

I would also add, that if, as statements of members of the committee indicate, none of the authorized funds would be used for purchase of land, it appears that $2,356,000 would be a rather substantial sum to spend for the building of facilities to be used as the headquarters for this park. The statement in the report that the expenditure necessary for building new facilities at the new location would be only slightly more than what would be necessary to rehabilitate existing facility would appear to be much more indefinite than I would like to consider on an authorization of this size.

Mr. HOFFMAN of Michigan. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am all for conservation and think the Government should buy more land, own more parks. I always have felt that way. But there is a time for everything.

This morning my mail was heavy with a demand that I support this bill that came out of the Committee on Post Office and Civil Service. An increase in the compensation of all Federal employees. So I got a copy of the bill. Did you see all those increases of pay therein?

Then there is the effort to bring up the Federal aid to education bill. That takes more money. Almost every teacher in my district is pounding me on the back to vote for that bill; and that calls for millions. What are we to do?

All the old folks want and many need more money to buy food or clothing or shelter or all three. Everyone wants more money and there is not enough to go around. What are we to do about it? Print it? Some say yes. But what will it buy if we do that?

If we give the money for parks, all right. Some group must take less, which one? I like parks. I like to hunt and fish. It is a personal matter with me. But I cannot vote to appropriate the same dollar two or three times. There is not money enough to pay all demands.

Then, we voted all this money the other day for foreign aid. We might well have saved some of it—for aid for our own folks.

That mountain or that land will still be there. There is no likelihood any private individual will want it. Is there any private organization after it? If not, then I think we should save our money now and vote for the things we must vote for rather than spend it on what might well be called a recreation area.

Mr. TOLLEFSON. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield to the gentleman from Washington.

Mr. TOLLEFSON. The gentleman said he approved of the Government's buying property for a park. This bill does not provide for the purchase of any land by the Federal Government. It provides for an exchange of land between the Bureau of Land Management and some private concern.

Mr. HOFFMAN of Michigan. It calls for $2 million, does it not?

Mr. TOLLEFSON. Yes.

Mr. HOFFMAN of Michigan. You give that $2 million to improve a park. We cannot then give it to the postal employees, we cannot give it to the schoolteachers, we cannot give it to the people that are hard up for something to eat, we cannot give it to people who are in need and will vote in November. I intend going to look after myself if I know how to, and I am in grave doubt about the wisdom of spending dollars needed now, by others, for a park which will still be around later.

Mr. TOLLEFSON. I want to correct the impression the gentleman may have that the Government was going to purchase the property outside the park. That is not the case. It calls for an exchange of property, an exchange to be reviewed by the Department of the Interior.

Mr. HOFFMAN of Michigan. Which is now being criticized by the Moss subcommittee for exchanging land in Arizona. I am in favor of parks and all that, but not before November next. First, let us take care of present needs. We can take care of pleasures later and after necessities have been satisfied.

The Clerk read as follows:

SEC. 2. The headquarters site provided pursuant to this Act shall constitute a part of Mount Rainier National Park and be administered in accordance with the laws applicable thereto.

The CHAIRMAN. There being no further amendments, under the rule the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. DELANEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Com-

mittee, having had under consideration the bill (S. 1358) to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes, pursuant to House Resolution 508, he reported the bill back to the House with an amendment, adopted in Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the third reading of the bill.

The bill was ordered to be read the third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 263, nays 83, not voting 87, as follows:

[Roll No. 90]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Auchincloss.
Mr. Anderson of Montana with Mr. Budge.
Mr. Metcalf with Mr. Scherer.
Mr. Williams with Mrs. May.
Mr. Gilbert with Mr. Kilburn.
Mr. Powell with Mr. Taylor.
Mr. Morrison with Mr. Alger.
Mr. Vinson with Mr. Wainwright.
Mr. Pilcher with Mr. Baker.
Mr. Nix with Mrs. Bolton.
Mr. Barrett with Mr. Mason.
Mr. Moorhead with Mr. Lindsay.
Mr. Philbin with Mr. Fino.
Mr. McGovern with Mr. Becker.
Mr. Burke of Kentucky with Mr. Derounian.
Mr. Burdick with Mr. Canfield.
Mr. Thompson of Louisiana with Mr. Smith of Kansas.
Mr. Baring with Mr. Bow.
Mr. Bonner with Mr. Glenn.
Mr. Doyle with Mr. Gubser.
Mr. Fallon with Mr. Jackson.
Mr. Morris of New Mexico with Mr. Westland.
Mr. Montoya with Mr. Cederberg.
Mr. Willis with Mr. Bentley.
Mr. Scott with Mr. Johansen.
Mr. McDowell with Mr. Lafore.
Mr. Porter with Mr. Bosch.
Mr. Macdonald with Mr. Withrow.

Mr. ROONEY, Mr. GAVIN, and Mr. KEARNS changed their vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

SALE OF VESSELS TO REPUBLIC OF CHINA

Mr. GARMATZ. Mr. Speaker, I call up the conference report on the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. PRICE). Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 1600)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate to the text of the bill and agree to the same.

That the House recede from its disagreement to the amendment of the Senate to the title of the bill and agree to the same.

EDWARD A. GARMATZ,
LEONOR K. (Mrs. JOHN B.) SULLIVAN,
GEORGE P. MILLER,
THOR C. TOLLEFSON,
WILLIAM K. VAN PELT,
Managers on the Part of the House.

WARREN G. MAGNUSON,
E. L. BARTLETT,
ANDREW F. SCHOEPPEL,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1 type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

The House bill provided that the sales price of the two vessels authorized to be sold should be the statutory sales price less payments already made from 1948 to 1951 on account of the purchase of four vessels.

The Senate amendment provided that the sales price of the two vessels should be the statutory sales price less payments already made from 1948 to 1951 on account of the purchase of four vessels and less depreciation computed at the rate of 3½ per centum per annum from the date of default under the original contract to the date of sale under this Act.

The action of the conference would accept the method for determining the sales price provided in the Senate amendment.

The amendment of the Senate to the title of the bill was also accepted by the conference in order to make the title consistent with the body of the bill.

EDWARD A. GARMATZ,
LEONOR K. (MRS. JOHN B.) SULLIVAN,
GEORGE P. MILLER,
THOR C. TOLLEFSON,
WILLIAM K. VAN PELT,
Managers on the Part of the House.

The conference report was agreed to.

A motion to reconsider was laid on the table.

LIBRARY OF CONGRESS

Mr. HAYS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the joint resolution (H.J. Res. 352) to authorize preliminary study and review in connection with proposed additional building for the Library of Congress, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out all after the resolving clause and insert "That the Architect of the Capitol, under the direction and supervision of the Joint Committee on the Library, is authorized and directed to prepare preliminary plans and estimates of cost for an additional building for the Library of Congress.

"SEC. 2. The Architect of the Capitol is authorized, under the direction of the Joint Committee on the Library, to make such expenditures as may be necessary to carry out the provisions of this resolution, and there is hereby authorized to be appropriated for such purpose the sum of $75,000."

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

PERSONAL ANNOUNCEMENT

Mr. DOYLE. Mr. Speaker, I was present during the rollcall a few minutes ago but was in conference on an emergency matter, and I do not believe the RECORD shows my voting "aye," which I would have done if I had heard my name.

The SPEAKER pro tempore. The gentleman is not recorded.

Mr. DOYLE. I ask to be recorded, because I was in conference with the gentleman from California [Mr. HOSMER] all through that rollcall, right in the seat where I usually sit.

The SPEAKER pro tempore. Did the gentleman vote?

Mr. DOYLE. I did not vote.

The SPEAKER pro tempore. If the gentleman did not vote, he cannot be recorded.

Mr. DOYLE. Then, Mr. Speaker, I should like the RECORD to show that had I voted I would have voted "aye."

ADJOURNMENT UNTIL MONDAY NEXT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

SIGNING OF ENROLLED BILLS AND JOINT RESOLUTIONS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until May 16, 1960, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

POSTPONEMENT OF ROLLCALLS UNTIL THURSDAY NEXT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that any rollcalls, with the exception of quorum calls and rollcalls on rules or questions of consideration, or rollcalls on any previous question if it takes place on any of the votes, on any bills that may be brought up on Monday, Tuesday, or Wednesday of next week, be postponed until Thursday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

RULE OF LAW—THE ROAD TO PEACE

Mr. REECE of Tennessee. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. REECE of Tennessee. Mr. Speaker, the urgent message from the valiant citizens of Berlin, circulating last week in American newspapers and periodicals, should have brought home to all citizens of this country the great importance to the free world of Berlin, serving as a bright beacon of encouragement and hope amidst the dark sea of enslaved humanity trapped behind the Iron Curtain and so desperately longing for the light of freedom. The Berlin appeal served to emphasize the recommendation to the three Western heads of government of the NATO foreign ministers that the German people themselves be given the opportunity to decide by an internationally supervised plebiscite the question of reunification. This is a timely reminder that the right of a people to self-determination is a recognized principle and an established rule of international law. A brief glance at the new African and Asian members of our family of nations will make us aware of its overwhelming importance. Today, the right to self-determination can no longer be denied to any people on earth. We Americans may take special pride in the fact that it is a President of the United States, Woodrow Wilson, who will always be known in history as the champion of this right and as the chief architect in bringing about its incorporation into the law of nations.

THE PROBLEM OF GERMANY, INCLUDING BERLIN

Many of us may approach the forthcoming summit conference with little expectation wondering whether, aside from a possible minor advance in the area of an arms agreement, much of anything will come of it. Nevertheless, this should not obscure the solemn warning uttered by Under Secretary Douglas Dillon in a major foreign policy statement on April 20:

The central issue confronting the Soviet Union and the Western nations at the summit is the problem of Germany, including Berlin. No issue on earth today is more critical. It involves the immediate fate of two and a quarter million West Berliners and the ultimate destiny of about 70 million Germans. It bears directly upon the future stability of central Europe and the possibility of a lasting European peace. The issue of Germany and Berlin, if it cannot be resolved through negotiation, may involve the gravest of all issues: the issue of peace or war.

Mr. Khrushchev has taken on a new twist: To see him posing with an air of self-righteousness as an innocent victim of American "spy aggression" is surely a sight to behold. After all, the Iron Curtain with its manifold devilish paraphernalia, with its watchtowers and playing searchlights, its barbed-wire obstacles and high-voltage traps, its evacuated and leveled "dead" zone, ghastly bare of life, except for hunter-killer patrols using bloodhounds to track down human beings that might dare to escape from the Communist "paradise"—all this is not of our making. But it creates suspicion, and free world apprehensiveness is caused not so much by what we know as by what we do not know about the Soviet octopus. If Khrushchev goes into a tantrum over a single plane on an intelligence flight, what about his trawlers and submarines prowling close to our coastal shores? What about the

permanent establishment on foreign territories of Kremlin-directed organizations of information and subversion?

It seems to be a standard preconference technique of the Soviets that the Kremlin, on the eve of an important meeting with Western leaders, springs a surprise motion, designed to cause confusion in the Western camp and force responsible Western statesmen to consult their foreign offices, perhaps their legislative leaders, and recheck positions with each other. By offering last-minute changes, such Soviet maneuvering invariably aims to split the Western Alliance. The spy aggression may have been a windfall for Khrushchev. What other surprise will be sprung is anybody's guess. That something of the sort is being kept in the wings of the stage, one may be reasonably sure.

Mr. Khrushchev has repeatedly called the Berlin situation abnormal and during a recent visit to Indonesia is quoted as having said:

> We are trying to secure peace, and we still have not eliminated all the vestiges of the last war. We are striving to do away with these leftovers and to convince our former allies of the necessity of concluding a peace treaty with Germany.

Of course, this is nothing original and will startle no one. Eleven years ago in a policy statement on Germany, Dean Acheson, then Secretary of State, raised the same question as to a permanent settlement of the German problem with these words:

> How long must we be satisfied with interim measures when the people of all countries desperately desire a genuine and lasting peace?

But he cautioned:

> There are certain principles, the observance of which is essential, in our view, to any satisfactory solution of the German problem and which we shall have to keep firmly in mind in whatever the future may bring.

Mr. Acheson listed among the principles the assurance to the German people that the U.S. Government will agree to no general solution for Germany into which the basic safeguards and benefits of freedom would not be absorbed.

The foreign policy of this Government has often been criticized as being too rigid. Bold and imaginative steps are demanded and more flexibility is advocated. But these are just glittering catchwords to attract the unsuspecting mind. Flexibility? Maybe. But no flexibility of principles; because their flexibility is just a cloak for disreputable appeasement, is shortsighted, dangerous, and leads straight down the road to catastrophe. Yet the question is being frequently asked: Can the West produce an idea not negative, but positive, a dynamic idea for peace which neither sacrifices justice nor provokes aggression?

OUR PEACE GOAL IS WRITTEN IN ATLANTIC CHARTER

I would say that such a dynamic idea for peace does exist. For instance, there is the Atlantic Charter, signed by the President of the United States and the British Prime Minister on August 14, 1941, wherein they solemnly and in the face of the world announced "certain common principles in the national policies of their respective countries," among them: first, their countries seek no aggrandizement, territorial or other; second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned; third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them. In spite of Teheran, Yalta, and Potsdam, I think that this Government has lived up to the letter and spirit of the Atlantic Charter. It has repeatedly emphasized that it did not, and will not, seek "aggrandizement, territorial or other." In a radio and television address as recently as February 21, 1960, President Eisenhower declared:

> After the two world wars and the Korean war, the United States did not annex a single additional acre, and has sought no advantage of any kind at the expense of another. * * * Our desire is to work * * * in the building of a universal peace with justice.

SOVIET PEACE GOALS ARE BROKEN PROMISES

Now let us read about the Soviet peace goals and see what action followed. On November 6, 1941, Mr. Stalin announced:

> We have not nor can we have such war aims as the seizure of foreign territories or the conquest of other nations, irrespective of whether European peoples and territories or Asiatic peoples and territories * * * are concerned. * * * We have not nor can we have such war aims as the imposition of our will and our regime on the Slavic and other enslaved peoples of Europe. * * * Our aim is * * * to accord them the possibility of arranging their lives on their own land as they see fit, with absolute freedom.

You will observe in Mr. Stalin's language a similarity to the Atlantic Charter the text of which seems to have influenced it. It was not surprising, therefore, that, when the Atlantic Charter was incorporated into the United Nations Declaration, the Soviet Union joined 25 other nations, including Poland, in acceding to it and reaffirmed its principles by signing it at a solemn ceremony in Washington, D.C., on January 1, 1942.

But the Soviet Government did not stop there. Stalin reaffirmed these principles time and again. On February 23, 1942, he denounced as "a stupid lie and witless slander" any intention "to exterminate the German people and destroy the German state. Hitlers come and go, but the German people and the German state remain."

On May 1, 1942, Mr. Stalin again proclaimed the Soviet goal for a peace with these words:

> We do not set ourselves the aim of seizing foreign countries, of conquering foreign peoples. Our aim is clear and noble. * * * We want to liberate our brothers, the Ukrainians, Moldavians, Byelorussians, Lithuanians, Latvians, Estonians, and Karelians.

The Soviet Government even went to incorporate these aims in another international treaty, binding themselves and their pact partners solemnly to its terms. By the Anglo-Soviet treaty concluded for 20 years and signed on May 26, 1942, in London by the Soviet Foreign Commissar, Mr. Molotov, and the British Foreign Secretary, Mr. Eden, both parties agreed to act in the future in accordance with "the two principles of not seeking territorial aggrandizement for themselves and of noninterference in the internal affairs in other states."

Now, did the Soviet Government live up to the "clear and noble aim" which it so solemnly proclaimed? Or did Mr. Khrushchev, when he denounced his master—after the latter's corpse lay safely in a coffin—indict Stalin for not having lived up to it and has he perhaps since been making hasty amends? Quite to the contrary, the Soviet Government has pursued an unabashed policy of aggrandizement and has imposed its rule by force on more than 100 million people in a dozen countries that were free and independent in 1939.

Yet in his article in the October 1959 issue of Foreign Affairs Mr. Khrushchev, in the face of all evidence, continued to profess:

> Our desire for peace and peaceful coexistence * * * springs from the very nature of Socialist society. * * * The Soviet Union and the other Socialist countries * * * have * * * no need to pursue an expansionist policy of conquest. * * * Peaceful coexistence * * * signifies the repudiation of war as a means of solving controversial issues. * * * Apart from the commitment to nonaggression, it also presupposes an obligation on the part of all states to desist from violating each other's territorial integrity and sovereignty in any form and under any pretext whatsoever.

Lenin, the idol of all Communists, once advised, "if need be, to resort to all sorts of strategisms, maneuvers, and illegal methods, to evasion, and subterfuge." He added:

> As long as capitalism remains we cannot live in peace. In the end one or the other will triumph—a funeral requiem will be sung over the Soviet Republic or over world capitalism.

And his loyal disciple, Khrushchev, told an American TV audience on September 17, 1955:

> If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engels, and Lenin, he is deceiving himself cruelly. Those who expect this to happen may just as well wait for a shrimp to learn how to whistle.

I do not question Mr. Khrushchev's assurance that he will continue to "tread the line" laid down by Lenin, including the latter's above quoted advice. The result is evident. During the years since the Communist regime began to rule over the people of Russia, three U.S. Presidents and seven U.S. Secretaries of State conducted more than 20 high-level talks with their opposite numbers in the Soviet Government. The conferences resulted in 40 agreements involving specific Soviet promises, 37 of which have been cynically violated. A fully-documented study of nearly 1,000 Soviet treaties, made public in 1955 by the U.S. Senate Subcommittee on Internal Security, revealed that the Soviet Union had broken its word to almost every country to which it ever gave a promise.

KHRUSHCHEV LEARNED POLITICS IN 1939–40—SEEKS WAR SPOILS

Khrushchev engineered the Berlin crisis, threatening the allied position, then hinted of a settlement on the terms that we should give up our rights while he would give up his threats—until he sees his next chance. What a striking similarity to Hitler's conduct leading up to the Munich conference, the results of which encouraged the Nazi dictator to believe that the democracies were weak and decadent. Could it be because Khrushchev won his spurs in the Kremlin hierarchy during the era of the Nazi-Soviet conspiracy? This conspiracy led to the fourth partition of Poland and to the rape of the three valiant Baltic nations.

For reasons of his own, Khrushchev is rather touchy on the subject; but this should not deter us from remembering that, in 1939, Poland fell victim to the avarice not of one, but of two dictators, Hitler and Stalin. Some time ago, when in an expansive mood, Khrushchev remarked that—

> Stalin had concluded the pact with Hitler for the sole reason to entangle the latter in war acts against the other capitalist states.

We have no reason to doubt it. Khrushchev was then eagerly listening to "his master's voice" and doing his bidding.

Today the world knows that less than 4 weeks after the signing in Moscow of the Nazi-Soviet nonaggression pact, and in accordance with an appended secret protocol, the Kremlin rulers had joined their Nazi allies in finishing off an already defeated nation and playing the ignoble role of the vulture that devours a prostrate body. The feeling of self-satisfaction among the ruling clique, including Khrushchev, in the Kremlin is vividly reflected in the gleeful account given on October 31, 1939, to the Supreme Soviet U.S.S.R. by Molotov:

> One well-aimed blow again Poland, first by the German and then by the Red Army, and already there wasn't anything left of this ugly offspring of the Versailles Treaty which had existed by oppressing non-Polish nationalities.

And a few months later, already eyeing the Baltic nations, Molotov declared:

> The so-called rights and interests of the little nations are just so much small change in the hands of the imperialists. Therefore, it is not only crazy but actually criminal to conduct a war to destroy Hitlerism and call it a fight for democracy.

The political archives of the Kremlin are not open to us. However, I have little doubt that Mr. Khrushchev's thoughts during those days coincided in sentiment, if not in words, with those of Molotov. In view of the record of Nazi-collaboration it may be puzzling that the Kremlin boss, dutifully echoed by Communist puppets in other places, time and again sounds off against the purported existence in West Germany of neo-Nazis and neo-militarist groups. The purpose of raising and manipulating the Kremlin-made bogy of German revanchism is obviously to bamboozle the United States and its Western allies into accepting the crude imperialist Soviet domination over half of the European Continent.

While the United States—and I might here include our wartime Western allies—did not annex a single additional acre, the Soviet Government has broken its promises and treaty obligations and, helped by its Communist accomplices, has illegally expanded in a Drang nach Westen and gobbled up peoples and territories. The goal of the present Soviet propaganda drive is to force the free nations of the West to acquiesce in the status quo behind the Iron Curtain. Since more than 2 years Khrushchev has been engaged in a desperate effort to blackmail the United States and its allies into recognizing as permanent the Soviet Russian cruel domination over all these once-free nations of central and eastern Europe.

The Soviets want to get away with their ill-gotten war spoils and this requires a considerable act of razzle-dazzle on the part of Khrushchev.

KARL MARX ON RUSSIAN TACTICS—SOVIETS KNOWN AS MAXIMALISTS

It seems as if we were constantly a little stunned and tongue-tied at Khrushchev's verbal assaults against the United States and the Western Alliance. A keen observer of the Russian scene once reported from London to a New York paper that, while the Russians are counting on the fears of the Western Powers, they exaggerate their demands as far as possible so that later they can show to be generous by being apparently reconciled with a less ambitious goal. This report did not come over the wires yesterday. It was written 104 years ago, in 1856, by the London correspondent of the New York Tribune, Dr. Karl Marx, otherwise known as the founder of communism. Present-day Russian Communists seem to be running true to the description given by their founder-father.

In the early days of the Soviet regime the Bolshevist Party used to be known as the Maximalists. This may have been an English mistranslation of the Russian "bolshoi" or "bolshevik." Nevertheless, it reveals the correct definition of Soviet strategy. The Kremlin always advances maximal demands. They are truly Maximalists and always have been. It has brought them handsome profits. Western irresoluteness, Western indecision, Western eagerness to get off dead center and make a fresh approach to the problem has frequently added up to meeting halfway the demands of the Maximalists, to buy appeasement for a short spell, only to be soon confronted with new demands of the Maximalists.

Mr. Khrushchev contended that the present situation of Berlin is abnormal.

Very well; have we forgotten the normal place of Berlin within Germany and Europe? Berlin has never been situated in East Germany, has never been surrounded by a flood of Russian communism and Soviet armed might. This is abnormal, indeed. Berlin has been the very center of Germany with from 300 to 400 miles of German soil extending to the southeast, respectively, to the northeast of that metropolis. This is the normal situation. The artificial separation from more than 2 million fellow citizens in West Berlin of 1 million East Berliners is abnormal. Their joint action to choose the form of government under which they will live would be normal.

BERLIN'S LEGAL SITUATION: INTERALLIED PROTOCOL OF 1944

And what is the legal situation? The Soviet claim of the Berlin metropolitan district being part of the Soviet zone of occupation is false and plain bluff. Our Department of State has recently pointed to the protocol between the United States, the United Kingdom, and the Soviet Union, signed at London on September 12, 1944, which makes it clear beyond the shadow of a doubt that the Berlin area is not a part of the Eastern zone. The document had previously been published in the volume containing the minutes of the Yalta Conference.

The signature of the Soviet plenipotentiary, F. Gusev, on that document was not a concession of any sort; the exclusion from the Soviet Zone of Berlin had actually been proposed by him to the European Advisory Commission 7 months before when on February 18, 1944, he submitted a document paragraph (d) of article 15 of which provided for the establishment of a separate Berlin zone to be occupied jointly by the armed forces of the three powers.

The protocol of September 12, 1944, is of interest in more than one respect: It shows that East Berlin is definitely not a part of the Soviet Zone and that the Communist zonal regime with present headquarters in the Berlin suburb of Pankow is in fact squatting outside of the area over which it acts as puppet rulers. It also shows that the Eastern zone, then about to be occupied by the Soviet armed forces, comprises all of Germany east of the present zonal boundaries, excepting Greater Berlin, but including the whole of East Prussia, Pomerania, and Silesia. Those who advocate that the United States and its Western Allies acquiesce in the Polish annexation of the German provinces east of the Oder-Neisse line are unwittingly promoting the Soviet squeeze game. A recognition of the Oder-Neisse line as boundary would mean that the zonal boundaries of the protocol of September 12, 1944, have been superseded, which in turn would mean that Greater Berlin is no longer an area outside of the Soviet Zone, which in turn would expose the 2¼ million West Berliners to grave danger. I do not think that any responsible citizen of the United States is prepared to advocate this course.

BERLIN'S LEGAL SITUATION: LONDON PROTOCOL OF 1871 AND LEAGUE OF NATIONS COUNCIL RESOLUTION OF 1935

But what about the status of Berlin? Can one country unilaterally terminate its international agreement and step out from under, leaving the other partners to the agreement to hold the bag? I do not think so. This question has long been decided and has led to the establishment of an important principle of present-day international law. Accordingly the policy of this Government has been that "treaties can lawfully be modified or terminated only by processes prescribed or recognized or agreed upon by the parties to them." In fact, Russia had

something to do in bringing this recognized principle of international law about. In the 1860's, Russia attempted to repudiate certain sections of the Treaty of Paris which had ended the Crimean War. The representatives of the signatory powers, after meeting in London, signed the London protocol of January 17, 1871, which reads as follows:

> The plenipotentiaries of north Germany, of Austria-Hungary, of Great Britain, of Italy, of Russia, and of Turkey, assembled today in conference, recognize that it is an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty, nor modify the stipulations thereof, unless with the consent of the contracting powers by means of an amicable arrangement.

France, another signatory to the Paris Treaty, acceded to the London protocol on March 13, 1871.

This principle of international law was reaffirmed in 1935. On March 16, 1935, the Nazi government of the German Reich promulgated a military law which violated its obligations under the Versailles Treaty. The Council of the League of Nations upholding "that it is an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty nor modify the stipulation thereof unless with the consent of the other contracting parties," declared on April 17, 1935, "that Germany has failed in the duty which lies upon all members of the international community to respect the undertakings which they have contracted," and condemned "any unilateral repudiation of international obligations."

The Soviet Union was then a member of the League of Nations. It was since 1934, a member of the League Council and thus helped to invoke and reaffirm this essential principle of the law of nations. Therefore, Mr. Khrushchev cannot now unilaterally repudiate the international agreement on Berlin, unless he wishes to emulate Hitler of 1935. It has sometimes been stated that treaties are made upon the tacit assumption that a vital change of circumstances will justify the unilateral denunciation of a treaty; or in its Latin wording: conventio omnis intelligitur rebus sic stantibus. This maxim, actually a consideration of equity originating in medieval canon law has been brought into international law in the late 16th century by the Anglo-Italian jurist, Alberico Gentili. However, an exhaustive study of a Harvard research group came to the conclusion that, according to the preponderance of opinion among the publicists:

> One party to a treaty may not, under the rule of rebus sic stantibus, unilaterally declare its obligations thereunder to have ceased to be binding, whether or not a request has previously been made.

KHRUSHCHEV'S WAR "REMNANTS": POLAND, BALTIC NATIONS, EASTERN GERMANY

Mr. Khrushchev has also assured us that he is "striving to do away with the leftovers" of World War II. He will surely find us ready to cooperate with him in this task, though I have some doubt whether his auspicious words will be followed by actual deeds.

There are quite a number of remnants left in the wake of the Second World War. Let us start with the beginning, in 1939, and with Poland. The Soviet Union at that time illegally occupied and, since, has annexed the eastern part of Poland. If Mr. Khrushchev really wants to remove the vestiges of the last World War, I ask him to remove from eastern Poland the Soviet armed forces and political agents and withdraw behind the prewar Soviet Russian boundary. Justice demands that this area should first be restored to Poland. However, if thereafter a plebiscite under international, preferably United Nations, supervision should be held to decide the ultimate future of the area, that is, whether the people of the area wish to remain with Poland, may be a later problem. First must come its restoration to Poland. Of course, there still is a question to be faced. As was pointed out in this House on September 1, last year, by the gentleman from Illinois [Mr. PUCINSKI], Khrushchev has been the military and administrative head of the Soviet occupation forces in the eastern part of Poland when it was seized almost simultaneously with Hitler's invasion of Poland in 1939. Quoting the gentleman from Illinois:

> It was under Khrushchev's direction that some 2 million Poles, mostly women and children, were deported to slave labor camps in Siberia. It was also under his administration in eastern Poland that 15,000 gallant Polish Army officers were taken to Katyn and massacred.

This question must be answered by Khrushchev and restitution must be made.

Another remnant of the last war, dating back to 1940, concerns the three valiant Baltic nations, Estonia, Latvia, and Lithuania. They have been occupied by Soviet armed forces and illegally annexed. The restoration of their sovereignty which they enjoyed prior to invasion by the Soviets will remove another vestige of the last war. Of course, there are also some questions left that will have to be answered by Mr. Khrushchev. Tens of thousands of peaceful and law-abiding citizens of the three Baltic nations, men, women, and children, have been murdered, raped and/or deported. These crimes cannot be just swept under the rug. They demand restitution. The latest Soviet census figures dealing with the Baltic nations are being carefully scrutinized and the population figures given are being carefully checked against the last pre-Soviet figures so as to ascertain whether Mr. Khrushchev and his government has committed the crime of genocide and should be so charged and indicted.

I would like to point with pride to the policy of this Government which has steadfastly refused to acquiesce in the rape of these three small nations. I believe that not a single year has passed in which we have failed to renew our protest against the illegal annexation of the three nations and to repeat our pledge to these gallant peoples that they will not be forgotten and that we shall not rest until their freedom is restored. We continue to recognize the diplomatic and consular representatives of Estonia, Latvia, and Lithuania as the official spokesmen of their nations. Furthermore, last year when the increasing volume of correspondence with the Soviet Government necessitated the setting up in our Department of State of an Office of Soviet Union Affairs, which had previously been a division of the Office of Eastern European Affairs, the desk dealing with the Baltic States was not transferred to the Soviet Union Affairs Office but remained under that of Eastern European Affairs.

Our protests and pledges may not yet have gained their intended result. Nevertheless, they make clear before the whole world and beyond the shadow of any doubt our legal position. At the same time they serve notice to all the young nations of Africa and Asia, struggling for their freedom and their sovereignty, that it is the declared policy of this Government, in contrast to the scheming of the Soviet Government, to insist and never cease to insist that the right, that is, the rule of law and not of force, shall at last prevail.

There are more vestiges left along the Russo-Finnish boundary, as Ingermanland and Petsamo, though the evacuation, a few years ago, of Porkkala indicated that the Soviet Government is able, if willing, to remove vestiges. Other remnants are left along the southwestern border of the Soviet Union, such as Carpatho-Ruthenia, Bukovina, and Bessarabia. Naturally, the Soviets should be reminded of various international pledges which they have given, for example, in the treaties concluded in 1947, to safeguard "human rights" and "the fundamental freedoms" the latter of which were enumerated in the text of the treaties.

I shall not go ticking off further vestiges of World War II but limit my discussion and, at the same time, point to the biggest remnant of that war, the present occupation by Soviet Russia and its Red satellite, Communist Poland, of the eastern part of Germany, that is, the länder of East Prussia, Pomerania, Mecklenburg, Brandenburg, Silesia, Saxony, and Thuringia. There should be no misapprehension. If Khrushchev means what he says and if he honestly wishes to remove the vestiges of World War II, he should by removing his troops and political agents restore Germany as well as Poland and as well as Lithuania, Latvia, and Estonia within the boundaries recognized by international law. As President Eisenhower said in his message to the opening of the American exhibit at Moscow last summer:

> It is never too late to build a peace with honor and justice.

LESSON OF HISTORY: PEACE TREATIES OF WESTPHALIA AND VIENNA PROVIDED FOR RESTITUTION

Let us try to get historical perspective of the worldwide vicious war and destruction that actually began in 1914. There were, at least in Europe, two other widespread upheavals of a comparable kind: The Thirty Years' War and the wars of the Napoleonic period. It is no mere dabbling in historical philosophy when I here point out to you that the peace treaties ending the two aforementioned war cycles merit more than

passing notice. In fact they deserve our serious reflection. Each war cycle was preceded by an era which gave birth to new ideas and rising forces and each then culminated in ghastly bloodletting, tumults, and general disorder.

The Thirty Years' War involved almost every nation in Europe and, when it ended, in 1648, one-third of the population of that continent is said to have been killed as combatants or by famine and pestilence. To be sure, many clauses of the Peace Treaty of Westphalia—a double-feature treaty negotiated and signed at Osnabrück and Münster—were of the usual reactionary type; but the part dealing with the religious issue between the Protestants and Roman Catholics showed considerable perspicacity and laid the foundation for the religious liberty of our day.

On the victors' side of the conference table there was no clamor: "They have lost the war, they should pay for it." It was exactly this absence of any clauses aiming to punish the vanquished which made the Treaty of Westphalia far more lasting than, for example, that of Versailles in 1919. The clauses dealing with the crucial problem of reconciliation were, indeed, the most notable feature of the Treaty of Westphalia and I want to call them to the earnest attention of the peacemakers of 1960 as well as of their several advisers and advance publicists:

The negotiators at Osnabrück and Münster did not even think of accepting the status quo, as they found it at the end of the Thirty Years' War, and in this they surely proved to be right. Suppose they had sanctioned and ordained permanence of a status quo which, not long before, had struck every normal person as scandalously wrong? Suppose they had draped those acts of violence and of annexation of lands and property with the dignity of legalization, forcing all parties to the peace treaty duly to respect as enacted law the result of those evil deeds, would it not have outraged the very sense of justice of those who had been shocked by the wrong? And what about the people upon whom those acts of violence were perpetrated? Could they ever have looked at such new right in any other way than seeing in it the willful and malicious perpetuation of a wrong, nay, of a crime?

Mr. Speaker, the correct answer to this problem will always decide the issue of the permanence of such a peace. No more and no less.

In a conscientious effort to grapple with it, the peacemakers of 1648—the preliminary negotiations began 7 years before—agreed on a year to which the rule of status quo ante should then be applied and they chose New Year's day of 1624, except for the restitution of the territories of various German princes for which a status quo ante 1618 was agreed upon.

Non obstantibus sed annullatis quibuscumque interim in contrarium factis mutationibus—all changes that have taken place in the meantime shall not prevent it, and are declared null and void.

I am quoting this passage from the Osnabrück part of the treaty, article 4, paragraph 26, so as to give a concrete example of the manner in which a problem, similar to that which we are facing today, has been tackled and solved more than three centuries ago.

In much the same way were the treaties signed in 1815 at Vienna and Paris, and marking the end of the Napoleonic wars, conspicuously free of punitive clauses. The treaties put an end to 25 years of wars bred by the ideas emerging from the French Revolution and Napoleon's schemes of a Europe under French domination. Like Hitler and his German armies in our days, Napoleon and his French armies had invaded and subjugated country after country. He had brought untold misery to the suffering people of those nations. Four million men in Europe were lost in the wars caused by Napoleon's ambitions. The passing of a sesqui-century may have put softening pastel shades on the harsh features of the man and his rule. But he was hated as a monstrous and terrible being by those who had overthrown him and had put him away to die on a desolate island in the Atlantic.

Again, as in the Treaty of Westphalia, no attempt was made to punish the defeated. A senior member of the Vienna Congress, France fully participated in preparing the treaties of 1815. In spite of all misery that Napoleon had inflicted upon the nations which his armies overran, French sovereignty over its territory within the pre-Napoleonic boundaries was never even questioned. It was taken for granted and ascertained in the peace treaty accordingly. Not even Alsace which with its German-speaking inhabitants had been torn from the old Reich by Louis XIV was debated, though the argument over German rights in Alsace had continued until 1798 and might well have been reopened. However, since France was left untouched within its historic boundaries, and even beyond them, this treaty also proved to be far more lasting than that of Versailles in 1919.

Mr. Speaker, I want to emphasize this point and call it to the attention of the peacemakers of 1960 as it might help them to get a better perspective of the gigantic task which they are facing.

It is my thesis that we can either have revenge or we can have peace. But we cannot have both. Analogous to the thoughts guiding the earlier peace settlements described a moment ago, I propose, therefore, that the Soviet Union withdraw its troops and political agents to the historic boundaries of August 1, 1939, thus restoring freedom and independence to the captive nations, while Germany be reunified within the borders recognized by international law which boundaries are in general those of the pre-Hitler Weimar Republic.

SILESIAN AND EAST PRUSSIAN BOUNDARIES UNCHANGED SINCE MIDDLE AGES: 1335 AND 1422

I might add here that the eastern boundary of Silesia and the southern and eastern boundaries of East Prussia, separating these provinces from Poland, respectively from Poland and Lithuania, are among the oldest and most respected boundaries in all of Europe. The former dates back to 1335, the latter to the treaty on Lake Melno in 1422, when the defeated German knights negotiated with the victorious Poles and Lithuanians a boundary settlement which could not have given undue advantage to German claims. The fact that these boundaries stood unchanged for more than five centuries clearly refutes any justification of that malicious phrase of a German Drang nach Osten. Few Americans have an intimate knowledge of geography and history of that part of Europe. The myth of Drang nach Osten thrives on exactly this supposition.

JOHN QUINCY ADAMS ON SILESIA; MARSHAL PILSUDSKI ON EAST PRUSSIA

Testifying to the German character of Silesia, I can find no better witness than our sixth President, John Quincy Adams. When American minister at Berlin, he traveled in Silesia and wrote these remarks about the inhabitants:

Among them I found men of agreeable manners and of considerable information, but none of them spoke any other language than German. * * * The manners of the people in the towns have more of a republican than of a monarchical cast; and the general equality among the people give them a social turn, which I have seldom seen in other parts of Germany.

Where does that leave the claim of enforced Germanization of an originally Polish population during the later decades of the 19th century?

Regarding East Prussia, we have the impressive testimony of Marshal Josef Pilsudski, the soldier-statesman and first President of the Republic of Poland after World War I, who led the Polish Army to defeat the Soviet invaders in 1920. It was on his visit to Geneva in December 1927, when Pilsudski discussed with Gustav Stresemann, then Germany's Foreign Minister, a German complaint about Polish aggressive publicity against East Prussia, the southern part of which had almost unanimously reaffirmed its adherence to Germany in an internationally supervised plebiscite after Germany's defeat in World War I. Said Pilsudski to Stresemann:

When a child, I had often crossed the then Russian-German boundary from our Lithuanian home, accompanying my father on shopping trips to East Prussia, particularly before Christmas. The border did not only separate two countries, but two worlds. What a different picture neighboring East Prussia presented. There everything was German, even the Masurians who at that time, more than today, were still speaking their Slavic tongue. East Prussia was undoubtedly a German country. This has been my opinion since childhood, and with me it did not require a plebiscite to confirm it. You may tell this at a public meeting in Königsberg to your East Prussians, to ease their minds, and you have my permission to quote me, if you regard as politically opportune a statement which will surely delight my political opponents at home.

The statement of the Polish leader was never made public by Dr. Stresemann, but put into the records of the German Foreign Office.

AMERICAN RETREAT ON ODER-NEISSE QUESTION WOULD STRIKE FATAL BLOW TO NATO

Mr. Speaker, the suggestion has been made that this Government recognize as a legal German-Polish boundary the present administrative line of demarkation at the Oder-Neisse Rivers. It has

been argued that this would give the Poles external security by alleviating their fears of renewed German expansionism. Please note the footprints of Communist word distortion: the legitimate return to their native land, from which they were cruelly expelled, of the eight or more million Germans is here termed "expansionism" and, please, compare with this malicious phrase the testimony of John Quincy Adams and Josef Pilsudski.

It has also been claimed that such a step, as indicated above, would deprive Soviet Russia of her monopoly as guarantor of Poland's western territory, meaning thereby the historic eastern German provinces. All this, it is suggested, would be a most practical step toward a European settlement and, it is somewhat apologetically added, the British and French also seem to favor such a policy which then could be an item in the list of compromises to be offered to Khrushchev.

Mr. Speaker, I believe that an infamous deal of this kind would entail an avalanche of consequences of dangerous proportions. First of all, by canceling out the interallied agreement of September 12, 1944, concerning the zones of occupation, our retreat would jeopardize the legal basis for our presence in Berlin. Moreover, the deal would surely strike a fatal blow at the security and the very continuation of membership of our German NATO partner. As is generally known, the expellees and refugees from the other side of the Iron Curtain make up a substantial part of the people of West Germany. In addition to 8 million people from eastern German provinces, there are at least 5 million more from Sudetenland, the Soviet-occupied zone and other areas east of the Iron Curtain. Stalin and his cohorts wanted them to be the source of social unrest and candidates for communism. Instead, they have followed their leaders' counsel of patience and moderation and an unshakable belief that "the right shall at last prevail." But how do you think they would act if ever we should go to sell them down the river in order to buy from Khrushchev a brief spell of "peace in our time"? Khrushchev knows how to bide his time and this may be precisely what he is waiting for to deal a fatal blow to NATO.

Furthermore, how much trust, do you think, will our many friends among the captive nations continue to have in our solemn assurances, if we are bamboozled into a seemingly Red Polish, actually Soviet Russian aggrandizement? A retreat—and such it is—of even a legal position in the center bastion of NATO will also make its sure consequences felt on the southern and perhaps still more on the northern flank of NATO. And what about the many uncommitted and new nations that keep a close watch on us for any sign of strength as well as weakness?

No, I do not think that this can ever be the way to a solution. What Poland is entitled to is not the territory of other people; it is the independence, the freedom, and the dignity of her own soul to which she has an inalienable right.

In this connection I want to put on record the warning words of an outstanding member of the West German Bundestag who is also a member of the presiding committee of the association of expellees from East Prussia, now in West Germany, Reinhold Rehs. Addressing in the city hall of Duisburg, West Germany, the assemblymen of his home city of Königsberg, Mr. Rehs said:

> If the free world ever sanctions the fact that law can be brushed aside by force, would there still remain, in these days of Khrushchev-propagated coexistence, the will to resist the corroding spread of Communist ideology? The concept of law is imminent in the concept of freedom. He who abandons the rule of law surrenders freedom and this would cause the very basis of democracy to crumble.

ARGUMENTS FAVORING RED POLISH ANNEXATION OF GERMAN PROVINCES ARE ANSWERED

Mr. Speaker, it may not be necessary for me to elaborate again on all the economic, historical, legal, and political aspects involved in a presentation of the problem of the German provinces east of the Oder-Neisse line. Instead, it will suffice to refer to my statements on May 16, 1957, when I had the privilege of addressing this House on the aforementioned subject. However, sundry political and legal arguments to further Soviet and Communist Polish interests have since been advanced on which I would like to make a few comments.

First, it has been claimed that the "unconditional surrender of Germany" entitled the Big Three at Potsdam to sign away a part of Germany. Therefore, a peace treaty could only "formalize" or "finalize" the delimitation of the Oder-Neisse line. The answer is that the so-called unconditional surrender was not "of Germany," but by its express terms that of the German armed forces. The German military commanders would have violated the rules of international law had they arrogated unto themselves the authority to sign away German territory which, of course, they did not.

Another argument, referring to Cyprus in 1878 and other precedents in support of the claim that all international administrations have led to a transfer of sovereignty, seems to me misleading. I think it can rather be shown that international administrations have led, almost invariably, to a surge of demands for the right to self-determination of the people concerned.

Then, the argument has been made that the resumption or continuation by the Allied governments of diplomatic relations with Communist Poland implies the recognition of boundaries. This certainly is not so. The U.S. Government maintains diplomatic relations with the Soviet Government, yet does not recognize the Soviet annexation, in 1940, of Estonia, Latvia, and Lithuania; and I might add that it has no intention whatever of compromising on this point of law and justice.

The compensation idea, maintained in some arguments, is, of course, untenable in law. If a Pole fell victim to a Russian pickpocket, he cannot then go and help himself by picking the pockets of his German neighbor. Some of the peace settlements of the 17th and 18th centuries, perhaps up to the Congress of Vienna, where balance of power played an important part, have included provisions for swapping territories. But the Versailles Peace Conference rejected such a plan. It may be remembered that Belgium, at that time, wanted the Netherlands to cede the Scheldt River area and proposed that the latter be compensated with German territory on the Ems River. This was rejected because it would have totally disregarded the principle of self-determination. It seems unlikely that a practice, rejected as outmoded in Versailles in 1919, would be adopted now.

The compensation idea is often connected with the penal thesis, that is, that annexation of the eastern part of Germany should be imposed as a punishment. This is but a thinly veiled return to the practice of "the spoils to the victor." However, it is untenable and surely a gross violation of the principle of English law:

> Par in parem imperium non habet—an equal has no dominium over an equal.

An individual nation has the right of self-defense but not of punishment against another nation. Only the total community of nations can arrive at punishment of an offending nation.

The so-called historical claims that have lately been advanced seem to me rather absurd. When the Poles now proceed to claim the area which Slavic—not even Polish—tribes held at a period of their biggest territorial inflation, it would logically lead other people to extraordinary demands. The German—Holy Roman—emperor was feudal overlord of the English king. Great Britain held for centuries large parts of France and, until 1800, His Britannic Majesty maintained also the title, King of France, the reality of the Bourbon dynasty notwithstanding. Historical claims have little meaning if based on legendary dynastic heritages. Modern democracy requires a plebiscite. The people are entitled to the right of self-determination.

Still another argument contends that the expulsion from the German provinces of the inhabitants—of more than 9 million Germans who were expelled every seventh man, woman, and child died in the process of what the Soviets and Polish Communists euphemistically call "transfer"—is evidence of the finality of the present administrative line. A glance at Germany's western boundaries will prove, however, that this is not so. There the Saar territory was placed under French, several smaller areas under Dutch administration. The French expelled many Germans from the Saar region and the Dutch acted likewise. But in both cases the expulsion measures could not prejudge the final decision as to the territories themselves.

Much is made by various apologists contending that delimitation of a boundary means, in general, verification and precludes major alteration. But U.S. policy statements leave no doubt that the question of Poland's western and northern boundaries is wide open. Secretary of State James F. Byrnes expressed the policy of this Government as

early as 1946 when he called attention to the fact that the eastern German provinces had been assigned "to Poland by Russia for administrative purposes" and that the heads of government, at the Potsdam meeting, had agreed that, pending the final determination of Poland's western frontier, the eastern German provinces should be under the administration of the Polish state and for such purposes should not be considered a part of the Soviet zone of occupation. Note the qualification "for such purposes." We should also remember that the protocol of the Potsdam Conference makes it clear the heads of government did not commit themselves to support at a future peace settlement the cession of the eastern German provinces. The policy of this Government has been further enunciated by Secretary of State George C. Marshall in 1947 when he declared that "a just settlement requires careful consideration to the needs of the populations which will be directly affected," and indicated that the United States would "avoid a decision" which would "violate the principles of the Atlantic Charter to which we have all agreed." As in the case of the illegal annexation by Soviet Russia of the three little Baltic countries, this Government has since then, on appropriate occasions, repeated that its policy concerning the eastern German provinces remains unchanged.

GERMANY NOT LEGALLY BOUND BY YALTA AND POTSDAM

Finally, we cannot deny that the agreements of Yalta and Potsdam, while they may have resulted in contractual obligations on the part of the wartime Allies, including Poland, do not, and cannot, bind Germany. Germany is not a partner to these agreements. Germany can only be bound by a peace treaty signed with the consent of the German people and by their authorized representatives. International law accepts as valid the dictum of the famed Roman jurist, Sextus Pomponius, written in the digests section of Justinian's Corpus Juris Civilis:

Id quod nostrum est, sine facto nostro ad alium tranferri non potest—what is ours, cannot be transferred to another person without action on our part.

The British rephrased it thus:

Nullus jus alienum forisfacere potest—no man can forfeit another's right.

This is the wording as it has come down to us from Fleta's Commentarius Juris Anglicani.

Mr. Speaker, I believe it is of crucial importance to the future of the free world that this Government, at the forthcoming summit discussions, withstand all inveiglements of Khrushchev and his associates, and that it remain on the firm ground as indicated by the rule of law.

POINTING WAY TO SOLVE GERMAN-POLISH PROBLEM

But what, then, is the solution? I believe the way to a practical solution of the German-Polish problem is indicated by the mode in which similar problems have been solved along the western borders of Germany. In 1945, at the time of Germany's total defeat, France as well as the Benelux countries initiated steps toward annexation of German territory. But all four, realizing that they would not change the rules of international law, changed, instead, their policy. Mindful of the many advantages which their national economies would derive from long-range economic cooperation with their former enemy, they coupled the return of the areas, for example, the Saar territory, held under their administration with fruitful negotiations for just such an arrangement. The result has been altogether gratifying.

I understand that a similar plan, though on a vastly bigger scale, is being unofficially prepared for a German-Polish settlement. But here, too, questions have been asked and should be answered. Admitted that the return of the eastern German provinces is the logical restitution of a wrong, would it not be an act of injustice to the new Polish and Ukrainian settlers, obliging them to vacate and thus continue the vicious circle of imposing hardship and suffering upon people, and thereby breed more hatred and urge for revenge?

The evidence shows that no member of the Bonn government, not a single deputy of the Bundestag nor any spokesman of an expellee group has ever asked for the transfer of those Poles and Ukrainians who would wish to remain in the eastern German provinces. The spokesmen of the expellees are not paying mere lipservice, but are truly living up to the letter and spirit of the Charter of the Expellees of August 5, 1950, that great human document which solemnly renounced all thought of revenge and retaliation.

Instead, it has been intimated that, if the Polish and Ukrainian inhabitants remain or would wish to go to West Germany, they will be put on an equal footing with German citizens, will enjoy ethnic and cultural autonomy and, if they desire, will be eligible to apply for German citizenship in due course of time. Moreover, I understand that in case of a peaceful return into German administration of the eastern German provinces a comprehensive aid program has been unofficially envisaged for those non-German inhabitants who prefer to return to their old home regions of Poland. The program plans to provide: financial aid; furnishing and setting up prefabricated houses; erecting workshops and factories; and building roads, bridges, and community centers. All of it is to be done in cooperation with the proper authorities in Poland.

I think the plain facts of West German reconstruction and rehabilitation will leave little doubt in anybody's mind that the German economy is fully capable to assure any prospective German citizen of Polish origin of an appreciably higher standard of living than he has previously enjoyed and, moreover, to offer Poland such a comprehensive aid program for its returning citizens.

Far from causing new suffering, it will in all likelihood start a growth of the general prosperity area to reach from the Atlantic to the eastern boundaries of Poland. This promises to be a practical solution because it will work, at the same time, toward a genuine reconciliation of the two peoples whom God has ordained to be neighbors and the lesson of recent history should teach them to be good neighbors.

THE RULE OF LAW IS THE ROAD TO PEACE

Mr. Speaker, I refuse to be pessimistic about our ability of gaining ground toward a solution of the world's problems, if only we follow loyally and courageously the guiding lights which our Founding Fathers so wisely set when they deliberated about and agreed on our Constitution. It is the supremacy of the law which within our Nation has assured freedom to every citizen. If we project this upon the world scene and unflinchingly insist that in the relations between nations the rule of force shall likewise be replaced by the rule of law, it will give a mighty impulse toward peace with freedom and justice for all. I can properly quote here from my late friend, Senator Robert A. Taft, who said:

I do not see how we can hope to secure permanent peace in the world except by establishing law between nations and equal justice under law. It may be a long hard course, but I believe that the public opinion of the world can be led along that course, so that the time will come when that public opinion will support the decision of any reasonable impartial tribunal based on justice.

There may be skeptics and cynics who wonder whether, in a world of tension and power politics, there even is such a thing as a real law governing international affairs. But the world is run by ideas and, as Victor Hugo has aptly said:

An idea whose time has come is more powerful than an army.

While the people of the world speak many different languages and have many diverse forms of government, the rule of law is a universal idea and ideal which all men would like to have in common. I think the idea of the rule of law must strike all those people all over the globe who are desperately longing for peace with freedom and justice, as the Christian cross is said to have struck the Roman Emperor Constantine 16 centuries ago, when he saw the sign in the sky and heard the words:

In hoc signo vinces—in this sign thou shalt be victorious.

President Eisenhower has repeatedly pronounced this idea and has emphasized it on proper occasions. In his last state of the Union message on January 7, 1960, the President urged this Congress "to intensify our efforts to replace force with the rule of law among nations."

Vice President NIXON in a notable statement last year has declared:

I am convinced, and in this I reflect the steadfast purpose of the President, and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the direction of establishment of the rule of law in the world to replace the rule of force.

I would think that it was not mere chance but had an urgent and solemn import, that the late Secretary of State Dulles devoted his very last public ad-

dress, before entering the hospital, to emphasize this idea. Speaking of "the broad strategy of our foreign policy," he stated:

> We seek peace * * * in what seems to us the only dependable way—the substitution of justice and law for force.

Mr. Dulles ended his address with this ringing appeal:

> To accomplish peace through law will take patience and perseverance. * * * There is no nobler mission that our Nation could perform. Upon its success may depend the very survival of the human race. We can, therefore, dedicate ourselves to this mission with supreme confidence that our Nation shall thus fulfill its highest destiny.

If we make this theme the kernel of U.S. foreign policy, we shall unfold a banner around which most nations of the world can unite. It is then that the words from the essay "On Eternal Peace" of the Königsberg philosopher, Immanuel Kant, will be realized:

> Nature irresistibly wills that the right shall at last prevail.

COST INFORMATION IN THE BUDGET PROCESS

Mr. LIPSCOMB. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. LIPSCOMB. Mr. Speaker, in 1956 Public Law 84–863 was enacted by Congress and signed into law by the President. It was my privilege to be a cosponsor of this important measure.

Public Law 84–863 is to provide for accrual accounting and cost-based budgeting in all Federal agencies. Its purpose is not only to provide improved information for the Congress concerning the agencies' budgetary needs, but also to help create better management tools for the agencies themselves in the form of more detailed, accurate, and useful financial information concerning their operations.

I think it would be very worthwhile at this time to review briefly the events leading up to the enactment of this legislation and the reasons it was deemed necessary, the progress that has been made in putting it into effect, and the significance, now and in the future, of this legislation toward improving the fiscal management of Government.

In the Federal Government, the budget process serves as a tool of management, providing the legislative and executive branches with financial control over agency operations. For many years this process operated primarily on the basis of obligation and disbursement information. From the legal standpoint of observing appropriation limitations, this system was adequate; however, it did not always reach its full potential as a management tool because of a failure to develop in the agencies significant operating information of a financial nature.

With the rapid growth of Federal programs the last few decades, the need for better financial information became more and more evident. Agency management, under the leadership of the Bureau of the Budget, the General Accounting Office, and the Treasury Department, began developmental work designed to produce financial data that would provide for improved disclosure and control of program operations. The first Hoover Commission recognized this need; it recommended the use of a performance budget, which would identify programs and the character of the work involved, and bring out the cost of performance of agency operations.

Performance budgeting was adopted in the Federal budget for fiscal year 1951. The first steps toward the ultimate objective of bringing out the cost of agency performance were taken in the budget presentation for the Atomic Energy Commission and the Bureau of the Mint in the Treasury Department. For these appropriation requests, the presentation brought out the cost of agency activities, the resources on hand for future use, and the obligating authority needed to finance the planned programs. While there were some transitional problems in the governmentwide conversion to performance budgeting, the House Appropriations Committee report on the general appropriation bill for 1951—No. 1797—contained these statements concerning the Atomic Energy Commission budget:

> The Commission's budget was presented for the first time on an accrued-cost basis. This method of presentation gave the committee a more realistic picture of estimated costs. Generally, the justifications presented by the Commission gave the committee a more accurate view of the 1951 program than has been provided in previous years.

The same House report identified the improvement work needed in other agencies to make the conversion process fully effective. Under the heading "The Performance Budget," the report stated:

> In its full fruition it is hoped and expected that the better presentation of data will enable the Congress to appropriate more intelligently and provide funds more nearly in line with actual requirements. This can be accomplished only if the budget data are so directly related to the accounting data available in the agencies as to make possible a close check on cost of operations.
>
> The Secretary of the Treasury, the Comptroller General of the United States, and the Director of the Budget have undertaken a joint program to improve accounting processes in the Government. In this effort lies the success or failure of the performance-type budget. It was not expected that the 1951 budget would furnish cost data for the current and past years inasmuch as most agencies of the Government are operating antiquated accounting systems which do not produce the kind of cost information which is required. But if the new method is to succeed, immediate attention must be given to modernization and improvement of accounting systems, and the schedules presented in the budget must be so written as to provide a basis for proper accounting.

These statements indicated acceptance of the general principle that, in addition to obligation data, costs of operations were an important element of budget review and administration. Accordingly, financial management improvement efforts in the Federal Government were directed toward the development of agency accounting systems that would produce information on the costs of agency performance as well as the obligation data needed for compliance with appropriation restrictions. Under this effort, initial emphasis was placed on developmental work in agencies where there was an identified management need.

The second Hoover Commission in 1955 noted the evolutionary improvement work underway and recognized the advances made under the cooperative arrangements of the joint accounting improvement program. However, it urged more rapid progress, and recommended that all Federal agencies adopt accrual accounting and cost budgeting practices as soon as practicable. The President supported these proposals, which were adopted by the Congress in the passage of Public Law 84–863. In enacting this legislation, which gave effect to these as well as other Commission recommendations, the House Government Operations Committee stated in its report—No. 2734:

> The committee is * * * convinced that the enactment of this legislation will eliminate the confusion that has resulted from a difference between accounting and budget classifications and will require a realistic estimate of costs in support of budget requests. It will reaffirm the constitutional right of Congress to control over and knowledge of appropriated funds. No other justification of this legislation is necessary.

These actions and reactions over the earlier years of the past decade gave impetus to the program for modernization of agency budget and accounting systems. An organized Government-wide plan of action was begun in the latter part of 1956 and is still under way. The ultimate objective of this effort is the establishment in each agency of a financial management system that is adapted to the programs of the agency, and provides financial data for strengthened fund and management controls, and for improved disclosure of the cost of agency operations. This improvement program has made good progress—though much still remains to be done. The accomplishments to the end of the last fiscal year are shown in the annual report of the joint financial management improvement program for fiscal year 1959, which tabulated agency reports of the status of their improvement efforts in this field.

As an overall indicator of the results of this government-wide program, 353 accounts, covering appropriation requests of about $34 billion in the 1961 budget, are now presented on a cost basis. In terms of the original performance budget objective, this means that more than half of the appropriations have been converted to a presentation that discloses the costs of programs, the resources on hand, and the obligating authority required. According to the President's budget message, the remaining accounts will similarly be converted as soon as possible.

The appropriation requests now showing cost data in the budget document cover programs that range from complex construction activities to the administrative-type service operations conducted by many small Federal agencies. The significance of such a cost

presentation—in contrast with the traditional obligation presentation—varies according to the types of programs and the kinds of financial transactions involved. Where there are large inventories, or where there is long leadtime between the commitment of funds and the receipt of the goods and services purchased through such commitments, the differences are significant. However, where large inventories or long leadtime are not generally involved—as may be the case in an administrative-type agency—the difference between costs and obligations at a given time may be relatively small. A cost-based presentation for such an appropriation would therefore differ but slightly from an obligation presentation.

In view of the minor differences in such accounts, some questions have been raised concerning the value of changing over to the cost basis of budgeting. In answer to such questions, it should be recognized that much more is involved in this modernization and improvement effort than the difference in presentation that may be reflected in the budget document. In an effective conversion to financial management on an accrual accounting and cost budgeting basis, the agency budget document presentation is only the surface evidence of the significant change sought in the method of operation and control exercised by the agency. Furthermore, these techniques must be appropriately applied in all Federal agencies to permit the development of Government-wide information on program costs and the results of financial operations—another proposal of the Hoover Commission that has been supported in both the legislative and executive branches.

Probably one of the most significant features of Public Law 84–863 is the requirement that:

> For purposes of administration and operation, such cost-based budgets shall be used by all departments and establishments and their subordinate units. Administrative subdivisions of appropriations or funds shall be made on the basis of such cost-based budgets.

In terms of application to Federal agencies, this means the installation of a coordinated programing, budgeting, accounting, and reporting system that gives appropriate attention to costs of operations as well as obligations or fund control. It requires that the financial plans of operating units be constructed on the basis of the full cost of planned programs in relation to the available resources on hand; and that those plans give recognition to the timing of the obligation of appropriated funds, the receipt of goods and services, and the application of available goods and services to the planned programs. After approval of such plans by appropriate review authorities, internal cost-based budgeting involves the use of an accounting and reporting system that provides adequate fund control and measures actual operating results against the approved plan in such terms as unit, activity, and organizational costs. These kinds of data will furnish management at the various levels in the agency with a sound basis for meaningful program and operating decisions. From the standpoint of efficient and effective financial management, this type of system is as appropriate for the small administrative agency as it is for the large scale construction operation.

This goal, the effective management use of significant financial data in all agencies, is the all-important end objective of the modernization program now under way. The most important advantage to be gained is the effective conduct of agency affairs at a minimum cost. To do this, agency management must have available to it the costs of operations within a given time period, to permit comparisons of the performance of similar offices and functions during the same period, or of the performance of the same operating unit in different time periods. This approach, properly applied, contributes to the development of a cost consciousness among the operating managers in an agency. Practices such as these highlight the need for efficiency and place a premium on carrying out programs at less than the planned cost.

To summarize, the Federal agencies today are in the midst of a transition to a more modern, businesslike method of carrying out assigned functions. They are installing accrual accounting to provide more pertinent financial data on agency activities; they are adopting planning procedures that give more attention to costs and the effective use of available resources; they are developing related reporting practices that provide more significant operating and financial data for management use; and they are presenting these additional data in support of appropriation requests to furnish more complete disclosure of actual results and the planning factors used in developing such requests. These improvements can contribute greatly to more effective program, budgeting, and operating decisions.

In addition, such improvements can produce administrative savings to the agencies involved. This is borne out by the report issued in 1958 by the House Committee on Post Office and Civil Service, following its study of manpower utilization in the financial management functions of the Federal Government. In this report—No. 2512—the committee found that:

> During the period 1950–57 * * * departments and agencies, exclusive of the Department of Defense, were able to achieve a reduction of 15.4 percent in personnel performing financial management functions. * * * It is significant that, in a number of instances, reductions were made in financial management personnel through more effective systems and procedures despite level or increased program activities of the departments and agencies. This information clearly indicates that (1) increased program activities and appropriations do not automatically mean an increase in financial management personnel is required and (2) real economies in the use of manpower are possible where effective effort is made to modernize and streamline agency financial management functions.

At the time of this report, comparable data were not available for the Department of Defense. However, the 15.4 percent reduction identified in the civilian agencies represented a decrease in personnel of over 6,000. These findings attest to the effectiveness of the improvement programs under way in the financial management field.

This modernization effort of the operating agencies is worthy of continued and strong congressional support. With such support and stimulation, it can pay important dividends in terms of more effective use of appropriated funds. Considering the size of our annual budget and the outstanding public debt, this is the kind of approach needed in the conduct of our financial affairs. It is therefore incumbent upon all elements of Congress to do all that can be done to promote and encourage these developments.

U–2 INCIDENT AND INTERNATIONAL RELATIONS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. WOLF] may extend his remarks at this point.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. WOLF. Mr. Speaker, the lesson we should have learned from the experience of the U–2 is how quickly, in international relations, great powers can be brought to the brink of war, and, in truth, we should thank God that the world is not in ashes today. It would behoove those men who God and the people of the United States have trusted with their topmost leadership to spend a little time in serious meditation about the awful consequences of such obstructionist tactics in the question of nuclear control.

Yesterday's column by Marquis Childs had a tremendously sobering effect on me and, I believe, should be seriously studied by everyone. Marquis Childs is known for serious and analytic editorial opinion. Thus, the following quote must take on great significance:

> If a treaty fails to be agreed to because of what seem to be obstructionist tactics from the American side or if a treaty is rejected by the Senate, the Western alliance will be split apart and the United States put in the position of standing almost alone in the world.

His further comment is equally significant:

> Furthermore, the British here believe that it would have been possible to get a treaty with adequate guarantees any time during the past 9 months if it had not been for America's delaying tactics.

[From the Washington Post, May 11, 1960]

UNITED STATES ON THE SPOT IN GENEVA TALKS

(By Marquis Childs)

GENEVA.—The incidents of the past few days are readymade for those who want to continue the cold war and who have persistently by every means sought to prevent any meaningful negotiation with the Soviet Union. Here in Geneva, where a negotiation has been going on for 18 months, this is seen in the sharpest and most dramatic fashion.

The announcement from Gettysburg by President Eisenhower that the United States intends to resume nuclear explosions for research purposes fits the pattern. It was

made without any notice to the American delegation. More important, it came as the three powers—Great Britain, the United States, and the Soviet Union—were trying to get agreement on a joint program of research into improved methods for detecting nuclear explosions.

What is little understood is the way in which the Soviets have made one concession after another, coming around time after time to the Western view. They began by saying they would not discuss any control system until after a treaty on general principles had been signed. After 4 months they agreed to talk about how a control system would function in the Soviet Union and the United States.

They came around to agreeing to a discussion by scientists from each country on the problem of underground identification. Having said they would never agree to a threshold and a moratorium outside a nuclear test treaty on explosions below that threshold, they finally accepted this position. They would never accept our criteria for detection which they called absurd, but they accepted them.

With literally dozens of concessions by the Soviets, the outline of a treaty has evolved. Major issues—the number of inspections in each country, the makeup of a control commission, the length of the moratorium—remain to be determined presumably by the heads of government when they meet in Paris.

The American negotiator through all these long, trying months has been James J. Wadsworth, who is deputy head of the American delegation to the United Nations. Wadsworth's Western colleagues say he has shown more skill, patience, and persistence in dealing with the Russians than any other American since the end of World War II.

What has made Wadsworth's position doubly difficult is that, while inching the Russians up little by little to the Western view, he has constantly been fighting a rear-guard action with those in Washington who have been determined to block any treaty. In this context, the Gettysburg announcement is seen as the latest attempt to sabotage the negotiation. While no one will say this officially, it is the view of observers close to the conference for many months.

No one would accuse President Eisenhower of such an intention. But since he has not followed at close range the complex negotiations, he must take his lead from one faction or another. And while the committee of principals dealing with this matter at the top level of Government in Washington is reportedly in favor of a test treaty with proper inspection and control by a majority of four to one, the minority in the Pentagon and the Atomic Energy Commission has shown great resourcefulness in blocking tactics.

There should be no illusions back home about the situation the United States confronts. If a treaty fails to be agreed to because of what seem to be obstructionist tactics from the American side, or if a treaty is rejected by the Senate, the Western alliance will be split apart and the United States put in the position of standing almost alone in the world. Here are the reasons why:

The Conservative Government in London has never wavered in the determination to get a treaty that would mean the beginning of inspection behind the Iron Curtain and perhaps the beginning of a pattern of disarmament. They concede the risk of some cheating under any control system, but they believe this is minimal and is heavily outweighed by the gain of a beginning at inspection and control.

Opinion in Britain is virtually unanimous on this score, as it is in the Scandinavian countries, West Germany, and most of Asia and Africa. Furthermore, the British here believe that it would have been possible to get a treaty with adequate guarantees anytime during the past 9 months if it had not been for America's delaying tactics.

CONSTRUCTION OF HELIPORT ON CAPITOL GROUNDS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Illinois [Mr. MACK] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MACK. Mr. Speaker, I have today introduced a bill to provide for the construction of a heliport on the Capitol Grounds. This bill is identical to the bill introduced 2 years ago but which was not acted upon by the Congress. This bill would amend the Legislative Appropriation Act of 1956 so as to authorize the construction and operation of adequate facilities on the U.S. Capitol Grounds to permit the landing of helicopters and other heavier than air aircraft capable of vertical landing and ascent.

We are spending millions of dollars in this huge project and only a small sum would be required to develop adequate facilities for helicopters. The Pentagon and the White House have helicopter facilities and I see no reason why the U.S. Capitol should not have similar facilities. It is true that the facilities are not urgently needed now but a heliport would facilitate traffic between the Pentagon and the Capitol especially during rush hours. It will also be needed when the new Dulles Airport is completed.

SOCIAL SECURITY AND THE INCREASED COST OF LIVING

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from North Carolina [Mr. ALEXANDER] may extend his remarks at this point in the body of the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. ALEXANDER. Mr. Speaker, for some time I have been greatly concerned over the critical situation that has been brought about in the lives of thousands of our citizens who are drawing social security benefits by reason of our ever increasing cost of living.

During the past several years we have witnessed a steady increase in the cost of food, clothing, housing, and medical services. This increase has been felt by all of us, but certainly no class of our citizens has suffered more than those who are in receipt of social security benefits.

Mr. Speaker, under present law a person receiving social security benefits is allowed to earn as much as $1,200 a year from outside sources. In the face of our steady increase in the cost of living I feel that this limitation on the earning ability of social security annuitants is unrealistic and works a severe hardship on many deserving persons.

With a view to correcting some of this inequity I have, therefore, introduced a bill today which will raise the present $1,200 a year maximum on outside income for social security annuitants to $1,800. This increase, I feel sure, will do much to improve the living standards of the many thousands of our people who are finding it extremely difficult to meet the necessary expenses of daily living.

It is my hope that my colleagues in the House will support my measure and that it will receive favorable consideration at this session of Congress.

A FARM PROGRAM THAT WILL ELIMINATE SURPLUS AND BRING DOMESTIC PRODUCTION INTO BALANCE WITH DOMESTIC CONSUMPTION, THUS PERMITTING THE LAWS OF SUPPLY AND DEMAND TO FUNCTION NORMALLY

The SPEAKER pro tempore (Mr. PRICE). Under previous order of the House, the gentleman from Wisconsin [Mr. FLYNN] is recognized for 60 minutes.

Mr. FLYNN. Mr. Speaker, across the Nation, especially in rural areas, an expression often heard is, "What can be done to solve the farm problem?" It would appear, therefore, that it is almost universally accepted that we have a farm problem. Members of Congress have wrestled with this problem for many years, but commencing in 1952 the control of surplus farm commodities broke down, resulting in annual increases in the stored farm commodities each year since that time. This has tended to neutralize the laws of supply and demand. They have been replaced by artificial rules consisting of orders trying to limit future production in the form of acreage allotment price supports, and the like. Each of these measures has had the same effect that a mechanic experiences when he puts in a new set of spark plugs for a customer whose motor is in need of a complete motor overhauling. It may tend to keep the car running temporarily but the car will continue to sputter and operate in an inefficient and ineffective manner until the owner has the complete overhaul job done which is required. Agriculture, today, must have the complete overhaul job. A new set of spark plugs is not enough; by this I mean that we must have a new and a fresh look at the farm situation and determine basically the cause of the present farm ills, and then agree upon what measures can best solve these ills.

SURPLUS IS CAUSE OF FARM PROBLEM

I believe that all farm economists will agree that the cause of the entire farm problem is that we have in the past produced and are yearly producing more farm produce on American farms today, than the American population can consume annually. It is apparent, therefore, that we must bring domestic production of farm commodities into balance with domestic consumption of farm commodities. American agriculture, because of transportation costs, differences in the value of American and foreign moneys, and because of the complications of world trade and considering the

American standard of life in comparison with the European and Asian standard of living cannot successfully produce foods at a profit for a sale on the foreign market on a broad and general basis.

We, therefore, cannot look to foreign exports of farm produce to solve our problem; instead we must limit the produce of American foodstuffs to the normal annual needs of the American population. If we can keep production in balance with consumption, the economic laws of supply and demand will operate so that the urban dweller will be assured of an adequate supply of food at a reasonable price and the producer will be assured of a fair price. Operating in this type of a free and open market, he will receive an adequate price for the foods that he supplies to the market; a price that would give the producer his cost of production plus a fair return on his investment. Farming is a business, and in order to have successful agriculture, the American way of life must—in the marketplace and not with Government subsidy or dole—guarantee the American farmer the cost of production and a fair return on his investment. This can only be done in a market where the laws of supply and demand are operating and where supply remains consistent with domestic demand.

The automobile manufacturer can, because of the small number engaged in that business, quit making cars when production outruns demand.

Because of the large number of farmers producing for the market and because of the unknown elements of weather, it is difficult and I believe impossible for the farmers themselves to keep supply in balance with demand. This must be accomplished by the Government through studies and through a program that will annually keep in production enough acres to produce the food needed to feed the American public, but also keep out of production those acres of land which produce a surplus and thereby defeat the laws of supply and demand and create a national food problem, such as this country has been plagued with for the past 8 years.

This country can no longer continue to approach the problem in the way it has been approached in the past. The farm produce purchase and storage program is costing billions of dollars annually and the American taxpayer cannot be expected to continue paying on his tax dollar in these huge amounts on a farm program that does not work. Just yesterday we considered the agricultural appropriation bill for 1961. This bill is costing the American taxpayer close to $4 billion. The committee report on that bill is as follows:

> The records of the Department show that the Federal Government is now spending far more in the name of agriculture than ever before in history, and yet income from farming in 1959, including soil bank payments, was at the lowest level since before World War II. This is true, despite the fact that national income has increased consistently each year and per capita income for all segments of the population, other than agricultural producers, is at the highest level in the history of the country.

THE PERIOD 1932–52

The farm price support program was created in 1933 to preserve and maintain our soil resources, to give the farmers suitable purchasing power and to provide the consumers with an adequate supply of food and fiber. By 1952 some weaknesses began to become apparent in the laws which were enacted at that time. The Government had an investment of some $2½ billion in commodities in 1952 and was incurring some one-half billion dollars of cost per year. This came about because of overproduction.

Several factors contributed to this overproduction: (1) The increased knowledge and technical know-how of farmers who were able to materially increase their production by cultivating each acre; (2) lack of effective means of controlling production due to an antiquated system of acreage controls which was becoming ineffective.

Net farm income was $14.4 billion per year in 1952.

THE PERIOD 1953–60

Beginning in 1953, the Department of Agriculture, reflecting the views of some people, insisted that changes should be made in the program then in effect. Since that time, the following "cures" have been offered, tried, and from the record found wanting, so far as solving the problem is concerned:

1. Price support reductions averaging 20 percent were made under the "flexible price support plan."

2. A soil bank program was created to curtail production by paying farmers not to farm.

3. Public Law 480 was enacted to dispose of surpluses by virtually giving them away overseas.

4. Research and extension appropriations have been increased some 120 percent.

5. Department of Agriculture personnel has increased about 28 percent and appropriations have increased around 300 percent.

6. Production controls have been relaxed as price support levels have been lowered. For example, the removal of controls on corn production, beginning with the 1959 crop, has resulted in enormous increases in acreage harvested and volume of production.

THE RESULTS

Most of these so-called cures have been a heavy drain on the Treasury and have provided little to improve the deteriorating farm situation, which will grow worse if the present course is followed.

One serious result has been the impairment of purchasing power of rural America. Farm income has dropped from $14.4 billion in 1952 to $11 billion in 1959, a 24 percent reduction. The effect of reduced prices and increased costs on net farm income during this period has been disastrous.

The loss of this purchasing power has already affected not only those who depend on farming for a livelihood, but also those engaged in banking, merchandising, industrial production and other business activities, particularly in the smaller communities. Since those dependent on agricultural income, either directly or indirectly, represent an important market for goods produced in the urban areas of the Nation, this loss of farm income has not only affected the economic welfare of farm sections of the Nation, but if allowed to continue is bound to have serious effects on the whole Nation.

The importance of American agriculture as a market for the Nation's goods can be appreciated when it is realized that agriculture uses more finished steel in a year than is used for a year's output of passenger cars. It uses more petroleum products than any other industry. It uses more rubber each year than is required to produce tires for 6 million automobiles. It is one of the Nation's largest users of electrical power. Its inventory of machinery alone exceeds the assets of the American steel industry and is five times that of the automobile industry.

It has been reliably estimated that each dollar of farm income produces $7 of income throughout the rest of the economy. Thus, it is reasonable to assume that the loss of $3.4 billion of farm income in 1959, as compared to 1952, resulted in a loss of domestic markets worth some $24 billion to the industrial producers of the Nation in that one year.

Another unfortunate result of these so-called cures has been the production of huge surpluses of many agricultural commodities, which have served to depress markets generally for agricultural products and have been a great economic loss to the United States. Figures furnished by the Department, as set forth on page 68, part 1, 1961 hearings, indicate that total farm output has increased from the 1952 level of 108 percent of the base period 1947–49 to 125 percent in 1959. This increase in production of 17 percent, which has created the surplus problem, has to a considerable degree been due to efforts of farmers to offset reduced prices by increased output. This has placed an additional strain on the fertility of the Nation's soil. It is estimated by officials of the Department that this unneeded production has cost the grain farmers over $1 billion in extra annual production of grain alone.

All of this money has been spent and all of the disastrous effects of agriculture have been incurred without putting into effect any effective plan for limiting the production of agricultural producers.

PLAN THAT WILL WORK

The solution to this problem appears to be relatively simple. It is estimated that there is someplace in the neighborhood of 360 million acres of farmland in production. Farm economists have estimated that if from 50 to 80 million acres of this farmland were removed from production that the remaining acres would be adequate to produce the food that this Nation needed. I propose, therefore, to engage in a program where the Secretary of Agriculture will be authorized to remove from production an adequate number of acres to bring annual production into balance with annual consumption. The method and manner of removing these acres is not important and sound means of doing so have been suggested. All of the plans suggested are good; but in lieu of the fact that we do have in the Department of Agriculture an operating program known as the conservation reserve, which has already taken out of production approximately 28 million acres of land, I propose to increase at the rate of 12 million acres per year the number of acres of farmland to be taken out of production.

I propose to continue doing this until domestic production is brought into balance with domestic consumption, and I also authorize in the bill that the Secretary of Agriculture take out such acres that are needed until he reaches the maximum of 80 million acres.

I propose that this land, while remaining idle, be used for two conservation purposes and that, insofar as possible, we cooperate with conservation groups to permit maximum conservation practices on the land that is removed from production.

I believe, however, that the American farmer is, and should remain, a free

enterprise operator, that he should not be subject to directives that will control his every move and control his operation of the farm that he operates. The American farmer is revolting because of the number of bureaucrats that continually check his operation, issue orders to him and control his movements. The farmer should be able to declare his independence on bureaucratic orders by the agencies of Government.

I propose to keep the farmer free to choose whether he wants to come under the program and if so, I propose to give him election so that he can choose voluntarily which program he wishes to participate in.

I believe that farm operators, for the purpose of this program, should be divided into three classifications: First, the older farmer beyond 65 years of age whose responsibilities are over and whose family is raised; second, the middle-aged farmer of 50 or more who is relieved of some of his responsibilities and who would be willing to cut down his operation, if that were possible; and third, the younger farmer just starting out in life who would like to operate a large farm and who would like to produce the maximum amount possible.

Considering these three age groups and considering that our goal is to remove 80 million acres of land from production we, by my bill, can accomplish our goal and permit the farmer to participate or refuse to participate, as he so desires. I propose to have the Department of Agriculture rent whole farms excluding the living quarters and not to exceed 5 acres on which the buildings are located. I believe that the older farmer will be glad to rent his land to the conservation reserve and use the annual rental as an annuity policy upon which he can retire. He will live on the farm and maintain it.

I will permit the Department of Agriculture to rent partial farms and to permit the middle-aged farmers to cut down their operation by approximately 25 percent and thus have spare time left to engage in other activities such as running for town chairman of their particular township. I would pay this farmer a fair rental for the acres taken out of production and give him a payment in kind to make up his loss. I would then permit the young married man to rent additional farms and farm as much land as he desires. A cross section of these three age groups will show that by removing whole farms from those who want to retire, and partial farms from those who want to cut down the size of their operation, and leaving the young man free to increase his farming operation, that we will have taken out as much land from production that we would have taken out if we provided, by our bill, that all three groups had to continue farming but that each group had to farm 25 percent less land. Such a program makes it mandatory that the elder farmer continue farming 75 percent of his land and denies the young man the opportunity of increasing the size of his operation. Through the process of letting the farmer elect which program he would come under and through the use of the existing conservation reserve programs, the Department of Agriculture can retire at the rate of 12 additional million acres per year; enough acres from production to bring domestic production into balance with domestic consumption.

The cost of this program to the taxpayer would be less than one-half of the cost of the existing program. There would be no need for future storage programs. There would be no need for further increase in bureaucratic control of the farm. The farmer would be free to operate his farm as he desired. We would keep controls in effect for 3 years while we are eliminating the surplus and after this, price supports could be removed, because in the market where supply was in balance with demand, price supports would not be necessary. In the event future years indicated price supports were advisable, engaging in such a program would be far cheaper with the volume of farm produce reduced than it would by continuing to produce huge volumes of produce that are not needed for domestic consumption.

Mr. WOLF. Mr. Speaker, will the gentleman yield?

Mr. FLYNN. I yield to the gentleman from Iowa.

Mr. WOLF. I would like to bring to the attention of the gentleman and the membership, statistics resulting from a poll recently conducted in my district among more than 10,000 farmers. That many reported. Of this number, 87.9 percent of the folks in my district that answered this poll would accept farm legislation with controls. Ninety-five and nine-tenths percent would accept a food-for-peace program. I thought that statement might help the gentleman in making his case that the dirt farmers, the folks who are close to the soil, are in favor of Federal help in the field of agriculture and they will accept controls in order to get it.

I would like to say further that I agree with the gentleman in his remarks and recognize him as a leader in matters dealing with agriculture. I congratulate him for his statement.

Mr. FLYNN. I thank the gentleman for his contribution. Yes, the farmers will accept Federal control with regulation. I might say, however, that the farm people revolt at being socialized, if I may use the term. He resents being followed on his farm by an army of bureaucrats telling him how and what to do and what to plant and being told the manner and method in which he can operate.

Mr. BERRY. Mr. Speaker, will the gentleman yield?

Mr. FLYNN. I yield to the gentleman from South Dakota.

Mr. BERRY. I wonder if the gentleman has given any thought or consideration to the fact that it would not be necessary to take these acres out of production if we limit to a reasonable extent agricultural imports. I do not know whether the gentleman has paid any attention to imports or not, but last year we imported 2¼ million head of cattle. The Department of Agriculture tells me that they do not know the production of how many acres just the beef imports have supplanted. It takes 30 acres per beef per year. Nationwide I think it would require an average of about 20 acres to produce a beef, fatten it, and put it on the market. In other words, the 2¼ million head of beef that we imported last year supplanted the production of about 50 million acres. If we do not import this beef, the 50 million acres that the gentleman is talking about taking out of production would not need to come out of production. The same thing is true with sheep and lamb and mutton and hogs. The same thing is true with wool. The wool that we imported into this country last year is supplanting the production of 75 million acres. I wish that the grange and the Bureau and the Farmers Union would look to the cause of the agricultural difficulty, which is primarily foreign agricultural imports. We do not have to completely limit it. We do not have enough acres in America today to produce the food that we eat and the fiber that goes onto our backs. If the American farmer was only given the opportunity to produce a majority of what we eat and wear, it could be limited.

Mr. FLYNN. I thank the gentleman. I could not agree with anyone more wholeheartedly than I do with him. I point out, however, that the problem he has raised insofar as it applies to the farm economy is duplicated and multiplied in every other segment of our economy. Just today the Secretary of the Army authorized the Panama Canal authorities to sign a contract for something like $4 million for the construction of locomotives for the Panama Canal to be made by the Mitsubishi Co. in Japan. Now, this Buy-European program is so rampant today, we are taxing American industry to maintain the American standard of living and then refusing to buy from American industry and buying abroad with only a 6 percent differential in a country where the standard of living is so far below that which we are trying to maintain. That policy is all wrong.

Mr. LEVERING. Mr. Speaker, will the gentleman yield?

Mr. FLYNN. I yield to the gentleman from Ohio.

Mr. LEVERING. Mr. Speaker, I am very much interested in the statement which the gentleman from Wisconsin is making today. Mr. Speaker, I was shocked to learn this today that the defense contract, involving some $4 million, to which the gentleman from Wisconsin has referred, was awarded to the Mitsubishi Co. of Japan to furnish 39 locomotives to the Panama Canal Zone for towing ships through the locks. This is not only a devastating blow to the welfare of a fine small business enterprise in my district, the Plymouth Locomotive Works, the only qualified domestic bidder on this contract, the kind of small business enterprise we like to see flourish in America; this decision on the part of the administration not only means the loss of jobs to the breadwinners of a great many families in the Plymouth area where we already have substantial unemployment, but in other areas as well where component parts are made.

Mr. Speaker, the award of this contract to a foreign bidder not only results in a loss to our Government of some $500,000 in revenue from taxes, but it raises in my mind a serious question as to whether or not we are risking national security by relying on a foreign firm to maintain service and furnish spare parts for a defense facility in the Canal Zone.

Mr. Speaker, this is another example of the overall policy of this administration to which the gentleman from Wisconsin has just referred, to take care of the many peoples in foreign countries but seemingly without the same regard for the welfare and the interests of our own people at home.

I hope the gentleman from Wisconsin and the distinguished gentleman from South Dakota will join me and many of our colleagues in this House who are very desirous of taking a whole new look at the concept of foreign aid, the principles involved in the Buy American Act, the Small Business Act, and our overall trade policy with a view to stemming this "anything but America" fad, realizing that if we are to meet the challenge laid down by Mr. Khrushchev when he said he would "bury us," we must remain strong economically as well as militarily.

I think this is one of the great issues before the Congress of the United States. I certainly hope that the gentleman will join me in this overall reexamination of these policies to which I have referred.

Mr. BERRY. Mr. Speaker, will the gentleman yield further?

Mr. FLYNN. I yield.

Mr. BERRY. I should like to remind the gentleman that it is Congress that makes these laws. The Constitution provides that Congress shall levy the tariff. Congress has handed, if you please, its authority, or it has attempted to hand its authority, to the administrative branch. I do not believe the Congress had the authority to do it in the first place.

Mr. LEVERING. Mr. Speaker, if the gentleman from Wisconsin will yield further, I would remind the gentleman from South Dakota that under the Buy American Act prior to 1954 a foreign bidder was required to be 25 percent lower than a domestic bidder in order to qualify for a defense contract; but that by the Executive order of 1954 that 25 percent was lowered to 6 percent in most cases and to 10 percent in some cases, depending upon the tariff situation in a given case.

Mr. BERRY. Why do not we, as Congress, do something about it?

Mr. LEVERING. That is exactly what I was suggesting to the gentleman from Wisconsin and the gentleman from South Dakota.

Mr. BERRY. It is we, it is the Congress that is to blame. And I say that we had better get busy pretty fast.

Mr. LEVERING. I certainly agree with the gentleman from South Dakota that the Congress should speak out, but what can the Congress do about the policies of the administration which suggest that we can afford to spend money for flood control projects in foreign lands, but that we cannot afford to do it in America?

Mr. BERRY. Mr. Speaker, if the gentleman will yield further, we have just appropriated $40 billion for defense; that is not only the defense of America, but the defense of the free world. We are appropriating about $5 billion a year for foreign aid. That is about $45 billion, which is $875 per family in America. That $875 has to be added to the cost of everything that is produced in America, whether it is on the farm, in the factory, or wherever it is. That price has to be added. I say to you that if we are going to continue that, then we will have to do this: We are going to have to levy an assessment against these other countries that we are defending, and the only way we can collect it is to collect it when they import material into this country; but I am convinced that the only way we can hope to compete with them is on a competitive basis, and that is by levying a tax against them and collecting it as their product is imported into this country.

I thank the gentleman very much for giving me this opportunity.

Mr. LEVERING. Mr. Speaker, will the gentleman yield further?

Mr. FLYNN. I am glad to yield.

Mr. LEVERING. I do not want to give the Members of this House the impression that I think we should terminate all foreign trade. I think the gentleman would agree that we must have foreign trade.

Mr. BERRY. Surely, but on a reciprocal basis.

Mr. LEVERING. We must have a reciprocal trade program that is reciprocal and be sure that under such measures as the Buy American Act, we come up with a formula which will protect the domestic interests involved.

Mr. FLYNN. I thank the gentleman very much.

I may say in reference to the contract to which the gentleman alluded with reference to locomotives for the Panama Canal that it was the Panama Canal Company, not necessarily the administration, that was at fault. The Panama Canal Company let bids some few months ago. At that time a concern in my district, the Fairbanks, Morse Co., was the low bidder. The Plymouth Locomotive Co. of Ohio, also a very fine company, was second. Mitsubishi of Japan was No. 3.

For some reason that I think is totally unexplained all the contracts were rejected. On the second bid, No. 3, the Mitsubishi Co., was low, the Plymouth Locomotive Co. of Ohio was second, and the Fairbanks-Morse Co. of Beloit, Wis., was third. Both of the American companies are exceedingly fine companies, old companies, qualified to fulfill the contract but unable because of the Buy-American program to get the contract.

I might say that though they say "unable" there was no inability, because in a similar circumstance the Tennessee Valley Authority signed contracts where there was over a 20-percent differential, and the same authority existed for the Panama Canal Company to exceed the 6 percent that existed for the TVA to exceed the 6 percent.

I called this to the attention of the Panama Canal Company and took the matter up with everybody in authority, but finally after they went over the entire matter, with letters of protest going in and the gentleman's concern in Ohio protesting vigorously, and the Senators taking it up, they still signed the contract with the Japanese concern, costing America millions of dollars in loss of tax revenue, hundreds of thousands of man-hours of employment for men living in the industrial Midwest, where there is unemployment today, and costing the Government the taxes that would be paid by these men on the earnings they made. Also, they are getting these locomotives from a place where in time of war it would be extremely difficult to get the necessary spare parts.

That shows how industry is being treated by our Government, yet is being taxed to maintain our standard of living. The workingmen in those plants in order to compete with Japanese labor will have to reduce their standard of living, and their wage per hour will be reduced to a comparative basis with Japanese labor.

The laboring man and the industrialist do not yet realize what the effect might be, but the farmer well knows what it means, because the farmer has already had the price of his commodities reduced to a price which is far out of line with the standard of living maintained by the rest of the American people. Over the last 10 years, as the price of all other commodities rose, the price of farm commodities has decreased, so that any farmer attempting to live on a family farm has had to reduce his standard of living and do a greater share of the work himself or with his family in order merely to hold on. He knows and understands what it means to have this country engage in a Buy-European campaign, to buy millions of pounds of beef, pork, and other food produced outside this country in competition with the produce of his farm.

The farmer, however, is the last vestige of independence in the United States. He does not want to be collectivized, and this Congress cannot attempt to foist upon American farmers a bill that will socialize or collectivize the farmer and make him the victim or pawn of an army of bureaucrats who travel from farm to farm giving orders.

RECOMPUTATION OF MILITARY RETIREMENT PAY

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. WILSON] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WILSON. Mr. Speaker, I strongly favor the legislation presented so ably to the House of Representatives by my colleague and chairman, PAUL KILDAY, of Texas, to equalize the pay of retired members of the uniformed services who were prejudiced at the time the Congress enacted the Military Pay Act of 1958.

The legislation reported by the Armed Services Committee is similar to H.R.

1997, a bill I introduced on January 9, 1959.

Favorable action on this bill will have a profound effect not only on those servicemen who have already retired, but on active duty personnel, as well as the young men who today may be contemplating a career in the military service of the United States. Passage of this legislation will restore the confidence of the serviceman that he also will be subject to traditional pay increases should they be put into effect in future years.

In my district of San Diego, Calif., we have perhaps one of the largest concentrations of retired servicemen who to a man have evidenced their concern to me about the departure from established tradition when the Congress enacted the 1958 act.

Correction of this inequity will mean a great deal not only to my community but to the country as well, for it will restore this confidence that was somewhat shaken in 1958.

Secretary of Defense Thomas S. Gates summed this matter up quite well in his report to our committee. His remarks follow:

The Department of Defense has restudied its earlier position on the recomputation of retired pay and after further consideration now believes it only equitable and fair to reestablish the traditional relationship between active duty pay and retired pay. The Department of Defense, therefore, recommends enactment of legislation to achieve these objectives * * * and believes the net result would be of significant value by increasing the morale, efficiency and effectiveness of our active duty career personnel as well as avoiding discrimination against retired personnel who served their country faithly and well.

Mr. Speaker, I urge my colleagues to support this legislation.

PRESENT FEDERAL OLD AGE MEDICAL PROGRAM

Mr. SMITH of California. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, the propaganda in behalf of a Federal program to assist people over 65 to meet their medical expenses has been based upon a gross innuendo that there is no present Federal program.

There is a substantial Federal program today which is geared into a substantial State, county, municipal, private charity, private enterprise, family, self, health care program. The question is not whether we at the Federal level are to do nothing—because we are doing considerable—the question is can we improve what we are doing.

It is foolhardy to make new proposals without reference to what is being done. We can damage with good intentions our present program which is the finest health program any society has ever had. This program is improving each year at a rapid pace due to the built-in factors permitting healthy growth.

The bold figures of what the Federal Government is presently spending in care for the aged, of which health care of course is a part, are as follows:

For the year 1960

	Billion
OASI (old age social insurance) payments to persons over 65	$9.2
OAA (old age assistance) Federal payments to persons over 65	1.74
Total	10.94

Additional benefits to people over 65 granted in Federal income tax—double Federal income tax exemption for people over 65—$600 times 15 million, equals $9 billion of exemption.

At 20 percent tax is $1.8 billion, adjusted by 40 percent, roughly those who utilize their exemption, $0.72 billion.

Three percent medical deduction allowance in Federal income tax—no figures available.

In addition, the Federal Government has extended FHA guarantee for private nursing homes, has in effect the Hill-Burton hospital construction program, National Health Institute programs and other programs.

RURAL LINES, U.S.A.

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from Illinois [Mr. PRICE] is recognized for 15 minutes.

Mr. PRICE. Mr. Speaker, the Rural Electrification Administration, which celebrates its 25th anniversary today, has published two new booklets telling the history and purpose of its electric and telephone loan programs.

I would like to call these two publications to the attention of my colleagues, for they tell a fascinating story of a revolution in rural America that has not stopped yet.

In keeping with the nonpartisan character of REA, both books are nonpartisan publications. They are complete, accurate, and objective, and they are written so that high school students, as well as adults, can understand them. In addition, both books are profusely illustrated. As a former newspaperman who enjoys a good story, I heartily commend both publications to all of you.

I would like to quote several passages. Rural Lines, U. S. A., the story of REA's electric program, begins as follows:

Within the past quarter century 1,053 rural electric systems have been financed with funds borrowed from the Rural Electrification Administration, an agency of the U.S. Department of Agriculture. By 1960, more than half of all the electrified farms in the United States were receiving electric service from REA-financed utilities, along with a sizable number of other rural establishments.

Each of these electric systems, most of which are operated by farmer-owned cooperatives, is pledged to a principle called area coverage, by which it agrees to make a diligent effort to extend service to anyone within a given area who wants it, no matter how remote the farm or ranch. This principle has proved as practical as it is lofty, for during the 25 years since 1935, when REA was created, the percentage of electrified farms in the United States has climbed from a scant 11 percent to around 97 percent. A large number of the farms and ranches in the thinner areas of our Nation receive their electric service from these REA-financed systems. Furthermore, REA borrowers have proved good credit risks, with principal and interest payments to the Government passing the $1 billion mark by 1960.

Rural Lines, U. S. A. goes on to tell how farmers grew tired of waiting for commercial power companies to build lines to their farms, and how President Franklin D. Roosevelt created REA to help them get electricity on May 11, 1935.

The book describes the efforts of REA's first Administrator, the late Morris L. Cooke, to transform the agency from an unemployment relief program to a full-scale electrification loan program. It tells how the demands of farmers for the right to form their own rural electric cooperatives to borrow funds led to the approval of the Rural Electrification Act of 1936, which was introduced in this Chamber by Speaker of the House SAM RAYBURN.

As the REA program moved into high gear, REA helped develop a new kind of construction.

Rural Lines, U. S. A. recalls:

The cost of building rural lines before REA was between $1,500 and $2,000 per mile of line. In thickly settled areas, there were enough people per mile to pay for this expensive "battleship" construction. In rural areas, however, it was a different story. REA knew that costs would have to be cut if more U.S. farmers were to get electricity and to pay for it.

From the beginning, therefore, REA engineers concentrated on finding new and cheaper ways to build rural lines that were both simple and sturdy. They were enormously successful. By the end of 1936, the agency was able to announce that nine projects had been built in as many States at an average cost of only $941 per mile of line. By 1939, REA borrowers were building lines for an average of less than $825 per mile, including overhead.

The REA publication gives the biggest share of the credit for the success of its program to farm leaders in 45 States who unselfishly gave so much time and energy to organizing the hundreds of electric cooperatives.

The book points out that:

As with most new ventures, the hard work of organizing the rural electric cooperatives generally fell to a handful of local farm leaders. It must not be supposed that the co-op idea sold itself to farmers. As a rule the energetic few had to sell the idea to their neighbors.

The organizers faced many difficulties, even after the co-op was formed. Rural Lines, U. S. A. notes:

It seemed to the co-op organizers that they were always selling something. No sooner was the signup campaign complete than the easement campaign began.

At the outset of the electric program, REA had decided not to approve the use of loan funds to purchase rights-of-way from members, feeling that payment would be inconsistent with the idea of member-owned cooperatives. As a result, cooperatives had to collect thousands of easements across property, each one signed by the property owner. Some idea of the size of the task is indicated by the fact that co-ops had collected more than 1 million separate easements by 1941.

The job would have been difficult enough had all farmers been agreeable, but many were not. As in the signup drive, they had to be sold individually. A number of farmers still had the idea that in signing an easement, they were mortgaging their property to the U.S. Treasury. Others feared that a line of poles would hamper farming operations or attract lightning. Still others didn't like the idea of a pole in the front yard.

In most cases, opposition evaporated when everything was carefully explained. Once a landowner understood that a pole line interfered little if any with farming, that he was protected against damage by insurance carried by the co-op, and that he was not mortgaging his property, he signed. He was made to realize that his neighbors down the road could not have electric service unless he granted his right-of-way.

It goes on to recall the deep emotion with which farm families greeted their first electric lights:

That night—the night the lights came on—was forever after an important date in most farm families, ranking with marriages and births as an anniversary of importance. In countless homes, the lights remained on all night long, with people getting a good look at the rooms—and at each other.

In time, as rural people used more electricity and learned the business of running their cooperatives, it became apparent that the REA program and the co-ops it helped bring into being were going to write one of the biggest success stores of the 20th century.

As Rural Lines, U. S. A. puts it:

To many people, it appeared that the typical electric cooperative had more than three strikes against it from the start. For one thing, the first officers and directors were amateurs in the utility business. It wasn't only their lack of management experience; they had never even experienced electricity before. The first manager was likely to be short of training, too. Chances are he was a former lineman or a board member. Add to this the thinly populated area served by the typical co-op, and you have a textbook case of an outfit in serious trouble.

So much for the textbooks. While the typical cooperative had its bad days, it turned out in the long run to be an enormously successful organization. Behind that success was an intangible that doesn't show on the balance sheet—enthusiasm. The consumers, the directors, and the co-op employers were sold on electricity. They had waited a long time to get it, and they weren't going to give it up.

The book traces the enormous impact of rural electrification on such agricultural pursuits as dairy farming, poultry production, and stock feeding. It observes that in recent years electricity has attracted thousands of nonfarm people and new rural industries to the country.

Rural Lines, U. S. A. concludes:

During REA's first 25 years, the member-owned electric systems have proved themselves efficient and financially responsible organizations. They have proved themselves capable of distributing electric power on an area-wide basis to even the most thinly populated parts of our country. They have proved their right to serve. If all REA-financed systems continue to concentrate on service in the future as well as they have in the past, there appears to be no reason why they should not be a permanent part of the utility industry of the United States.

The other new REA publication is Rural Telephone Service, U. S. A. It tells the story of the agency's newer telephone loan program, which already boasts 686 borrowers and which has approved loans to finance new or improved telephone service for more than 1.2 million rural families.

If any of you have not read both REA histories, I suggest that you secure copies. When you do, I believe that you will take even greater pride in impressive achievements of REA and of the millions of rural people who have participated in its programs.

I commend the Administrator of REA, Mr. David Hamil, for the effective job he has been doing, for his dedication to the REA program and his steadfast adherence to the principles that bind representatives of rural America together in a service of so much benefit to our country. I commend Mr. Hamil and others, namely, Mr. William E. Spivey, Chief, of REA Information Division, and Mr. Robert W. Kelley, information specialist, who are responsible for the compilation of the two books I have discussed this afternoon. Mr. Spivey has directed, in my opinion, the publication of one of the finest, most interesting, and most informative public documents ever issued by a Government agency.

INTERNATIONAL PAYOLA

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from Ohio [Mr. VANIK] is recognized for 15 minutes.

Mr. VANIK. Mr. Speaker, this afternoon, when the House passed the conference report to accompany H.R. 11510, it included a Senate amendment which expressed the sense of the Congress that the Development Loan Fund should give special consideration to loans and guarantees to stimulate the development of free economic institutions and private investment in the field of housing in rapidly developing countries.

In general I am in sympathy with this amendment. The housing problem in many of these countries is deplorable and much worse than most Americans can fully comprehend.

In the current issue of the National Savings & Loan Journal I note that a $2 million loan was recently made by the Development Loan Fund to a privately owned savings and loan association in Lima, Peru. This loan is being made to the Association of Mutuel de Creditos para Vivienda Peru, which was founded by Pedro Beltran before he became Peru's Prime Minister and Minister of Finance.

It was certainly more than mere coincidence or accident that the first Development Loan Fund loaned for housing should be made to an institution founded and owned by the Prime Minister of Peru.

Earlier this afternoon I inquired of the chairman of the Foreign Affairs Committee whether it was the sense of that committee that these loans for housing development should be made to banks or institutions owned by prime ministers or government officials of the Latin American States. I was pleased to learn that this kind of lending was certainly not the intention of the committee. Therefore, it appears to me that those responsible for such lending should bear in mind that this type of international payola is not approved by the Congress.

It will also be interesting to learn the interest rate which will be assessed by this particular institution for residential home construction. Since this $2 million is being borrowed from the United States for a period of 10 years at an interest rate of 5¾ percent, the Association of Mutuel de Creditos para Vivienda Peru should enjoy a very handsome profit on the transaction and pay off the loan within 4 years. It is my understanding that residential loans in Peru are currently commanding an interest rate of 20 percent and higher.

Under these circumstances the borrowing institution in Peru should end up with a whopping big profit on the transaction. It is to be seen whether the victims of this kind of lending will develop any great affection for the Development Loan Fund and the American people who have made this kind of borrowing possible.

I hope that this type of good will interest in the Latin American Republics will not result in greater dislike for America.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. LINDSAY (at the request of Mr. HALLECK), for May 12 and 13, on account of personal reasons.

Mr. BARING (at the request of Mr. MCCORMACK), for an indefinite period, on account of illness.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. PRICE (at the request of Mr. MCCORMACK), to address the House for 15 minutes, today, and to revise and extend his remarks.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. FALLON, to revise and extend his remarks made in Committee and to include extraneous matter and tables on H.R. 10495.

Mr. THOMPSON of New Jersey (at the request of Mr. MCCORMACK), to revise and extend his remarks during debate on the bill H.R. 10495 and to include extraneous matter therein.

(At the request of Mr. MCCORMACK, the following Members were granted

permission to revise and extend their remarks in the CONGRESSIONAL RECORD, and to include extraneous matter:

Mr. WOLF.

Mr. NIX.

Mr. SANTANGELO.

(At the request of Mr. SMITH of California and to include extraneous matter, the following:)

Mr. HOSMER in two instances.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1607. An act for the relief of Mrs. Anne Morgan;

H.R. 10474. An act to authorize construction of modern naval vessels.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 2778. An act to amend the act relating to the Commission of Fine Arts.

ADJOURNMENT

Mr. LEVERING. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 5 o'clock and 56 minutes p.m.) the House, pursuant to its previous order, adjourned until Monday, May 16, 1960, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SMITH of Virginia: Committee on Rules. House Resolution 525. Resolution for consideration of H.R. 4815, a bill to insure effective regulation of D.C. Transit System, Inc., and fair and equal competition between D.C. Transit System, Inc., and its competitors; without amendment (Rept. No. 1602). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 526. Resolution for consideration of H.R. 7480, a bill to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil; without amendment (Rept. No. 1603). Referred to the House Calendar.

Mr. COLMER: Committee on Rules. House Resolution 527. Resolution for consideration of H.R. 10572, a bill to authorize and direct that national forests be managed under principles of multiple use and to produce a sustained yield of products and services, and for other purposes; without amendment (Rept. No. 1604). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 528. Resolution for consideration of H.R. 11761, a bill to simplify, consolidate, and improve the authority of the Secretary of Agriculture with respect to loans to farmers and ranchers, and for other purposes; without amendment (Rept. No. 1605). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII public bills and resolutions were introduced and severally referred as follows:

By Mr. BYRNE of Pennsylvania:

H.R. 12196. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

By Mr. FARBSTEIN:

H.R. 12197. A bill to prohibit the Secretary of Commerce from approving plans, specifications, and estimates for a portion of a route on the Interstate System in New York, known as the Lower Manhattan Expressway, and to prohibit further obligation or expenditure of Federal funds in connection with such route; to the Committee on Public Works.

By Mr. GREEN of Pennsylvania:

H.R. 12198. A bill to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for certain nonprofit clubs organized and operated for the purpose of paying benefits to the members and their dependents; to the Committee on Ways and Means.

By Mr. KOWALSKI:

H.R. 12199. A bill to amend the Internal Revenue Code of 1954 to repeal the manufacturers excise tax on musical instruments; to the Committee on Ways and Means.

By Mr. KILDAY:

H.R. 12200. A bill to amend title 10, United States Code, to authorize reduction in enlisted grade upon approval of certain court-martial sentences, and for other purposes; to the Committee on Armed Services.

By Mr. McGINLEY:

H.R. 12201. A bill to amend the Soil Bank Act to provide that land devoted to conserving uses after the expiration of a conservation reserve contract may continue to be counted in the determination of acreage allotments and marketing quotas; to the Committee on Agriculture.

By Mr. MACK of Illinois:

H.R. 12202. A bill to amend the Legislative Appropriation Act, 1956, to provide that the plan for the extension of the U.S. Capitol shall provide for a heliport on the Capitol Grounds; to the Committee on Public Works.

By Mr. MOORHEAD:

H.R. 12203. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

By Mr. MOSS:

H.R. 12204. A bill to amend the Communications Act of 1934, to aid in protecting individuals, corporations, companies, and other organizations against defamatory or otherwise injurious statements made in interview or discussion programs purporting to be spontaneous and unrehearsed; to the Committee on Interstate and Foreign Commerce.

By Mr. MULTER:

H.R. 12205. A bill to amend section 801 of the act entitled "An act to establish a code of law for District of Columbia," approved March 3, 1901; to the Committee on the District of Columbia.

By Mr. O'HARA of Illinois:

H.R. 12206. A bill to relieve hardship for displaced families and businesses by assisting in their relocation and by providing them with mortgage financing under a new low-rent private housing program, and for other purposes; to the Committee on Banking and Currency.

By Mr. RAINS:

H.R. 12207. A bill to stabilize cotton price support for the 1961 crop; to the Committee on Agriculture.

By Mr. TOLL:

H.R. 12208. A bill to amend section 3568 of title 18, United States Code, to provide for reducing sentences of imprisonment imposed upon persons held in custody for want of bail while awaiting trial by the time so spent in custody; to the Committee on the Judiciary.

By Mr. TUCK:

H.R. 12209. A bill to amend sections 7323 and 7325 of the Internal Revenue Code of 1954 so as to preclude forfeitures of certain property before a final decision in certain criminal proceedings instituted against the owner of such property; to the Committee on Ways and Means.

By Mr. ALEXANDER:

H.R. 12210. A bill to amend title II of the Social Security Act to increase to $1,800 a year the amount of outside earnings permitted without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. GARMATZ:

H.R. 12211. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease and desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

By Mr. HOLLAND:

H.R. 12212. A bill to provide that certain subcontracts may be entered into only in accordance with rules and regulations prescribed by the Small Business Administration; to the Committee on Banking and Currency.

By Mr. McDONOUGH:

H.R. 12213. A bill to amend title VIII of the National Housing Act, as amended, and for other purposes; to the Committee on Banking and Currency.

H.R. 12214. A bill to amend the National Housing Act to remove certain limitations on the aggregate amount of outstanding mortgage insurance; to the Committee on Banking and Currency.

By Mr. McINTIRE:

H.R. 12215. A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. RAINS (by request):

H.R. 12216. A bill to provide additional financial facilities in the Federal National Mortgage Association, to provide for the incorporation of Federal mortgage investment companies, and for other purposes; to the Committee on Banking and Currency.

By Mr. HOGAN:

H.J. Res. 707. Joint resolution providing for the establishment of an Annual Youth Appreciation Week; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. CONTE: Resolutions of the House of Representatives of the Commonwealth of Massachusetts memorializing the Congress of the United States to enact legislation increasing the compensation of postal employees; to the Committee on Post Office and Civil Service.

By Mr. FORAND: Memorial of the Rhode Island General Assembly memorializing the Congress of the United States to preserve the immunity of State and local governments from the payment of Federal income tax on bond interest and to continue in full

force and effect the exemption of such bond interest from Federal taxation; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ABBITT:

H.R. 12217. A bill for the relief of Harry L. Watson; to the Committee on the Judiciary.

By Mr. BOWLES:

H.R. 12218. A bill for the relief of Lorenzo Leone; to the Committee on the Judiciary.

H.R. 12219. A bill for the relief of Sydney Gruson; to the Committee on the Judiciary.

H.R. 12220. A bill for the relief of Hans Erich Arthur Langhammer; to the Committee on the Judiciary.

By Mr. BROCK:

H.R. 12221. A bill for the relief of Joan Discallar Beasely; to the Committee on the Judiciary.

By Mr. DERWINSKI:

H.R. 12222. A bill for the relief of Marya Marek; to the Committee on the Judiciary.

H.R. 12223. A bill for the relief of Helena Maria Michno; to the Committee on the Judiciary.

By Mr. EVINS:

H.R. 12224. A bill for the relief of Alvin C. York; to the Committee on the Judiciary.

By Mr. GUBSER:

H.R. 12225. A bill for the relief of James L. Merrill; to the Committee on the Judiciary.

By Mr. KLUCZYNSKI:

H.R. 12226. A bill for the relief of Adam and Edmund Wojtowicz; to the Committee on the Judiciary.

H.R. 12227. A bill for the relief of Wladyslaw Figura; to the Committee on the Judiciary.

H.R. 12228. A bill for the relief of Eugeniusz Kubicki; to the Committee on the Judiciary.

By Mr. MULTER:

H.R. 12229. A bill to confer jurisdiction on the Court of Claims of the United States to hear and determine the claims of Mollers' Suidah Shipbreakers, Ltd., Alpha Steamship Co., Ltd., and Lancashire Shipping Company, Ltd.; to the Committee on the Judiciary.

By Mr. RIEHLMAN:

H.R. 12230. A bill for the relief of Mrs. Chung-Huang Tang Kao; to the Committee on the Judiciary.

PETITIONS, ETC

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

462. By Mr. McCULLOCH: Petition of members of United Papermakers and Paperworkers Local No. 195 of the State of Ohio, District No. 4, for passage of the Forand bill, H.R. 4700; to the Committee on Ways and Means.

463. By the SPEAKER: Petition of Bertram Edises, Oakland, Calif., relative to *Edises, et al.* v. *Willis, et al.;* to the Committee on Un-American Activities.

EXTENSIONS OF REMARKS

School Safety Patrol

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. WOLF. Mr. Speaker, we have all noticed from time to time on our street corners, in the morning and afternoon hours when children make their way to and from school, a young boy or girl in the uniform, or wearing the shoulder strap, of the School Safety Patrol. Almost everyone, if they were asked what they thought of the Safety Patrol, would say that they think it is a good thing. The hard fact that the Safety Patrol averts many traffic accidents, and even probably saves many little lives, is not brought home to us until we read a newspaper account of some heroic act by a boy or girl in the Safety Patrol.

I was highly honored to have present in the House today Miss Beverly Jean Marsh, a constituent of mine from Cedar Rapids, Iowa, who today received the following citation from the Vice President of the United States:

BEVERLY JEAN MARSH, AGE 12, TAYLOR SCHOOL, CEDAR RAPIDS, IOWA, CERTIFICATE CITATION

Samuel Fountain, age 5, and David Jones, age 10, returning to school after lunch on March 10, 1960, were about to cross Sixth Street at Fifth Avenue where Beverly was on School Safety Patrol duty. A truck driver, moving north on Sixth Street, kept driving at about 25 miles per hour despite a red traffic signal. The two boys, facing a signal in their favor, were not aware of the approaching truck. Alertly noting their danger, Beverly quickly pulled them back, thus preventing serious consequences.

Beverly is the daughter of Mr. and Mrs. Robert Marsh, 820 Ninth Street SW., Cedar Rapids, Iowa.

Mr. Speaker, we believe in the School Safety Patrol for this is the sort of activity which develops good leadership, and we hope that other young people will be encouraged to take seriously their responsibilities.

I have today sent to the Gazette and to radio station WMT, Cedar Rapids, Iowa, the following telegram:

Ceremonies have just been concluded in the office of the Vice President at the Capitol in which the lovely little safety patrol, Beverly Jean Marsh, of Taylor School, Cedar Rapids, was honored by a national citation from the Vice President of the United States for the courage which she showed in rescuing from a traffic accident two little boys on March 10. As the Congressman representing Cedar Rapids in the U.S. House of Representatives I take great pride that one of my constituents has been chosen as one of five people in all the Nation to be so honored this year. I commend Beverly Jean for her alertness, devotion to duty, and her courage. Let us hope that her example can encourage other young people to take seriously their responsibilities.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. HOSMER. Mr. Speaker, the following excerpts from a talk on "Older Worker Placement" by Ewan Clague, Commissioner of Labor Statistics, U.S. Labor Department before the Older Worker Forum in Philadelphia on December 5, 1957, clearly illustrate why we must break the employment age barrier:

Middle-aged and older men and women today constitute a very considerable part of our manpower resources, and by 1965 they will constitute an even more important part. We expect a 10 million increase in labor force between 1955 and 1965, and half of the increase will be persons 45 years and over.

Only if we can make the best possible use of the skills, ability, and capacity for continuous work of all of these people, will we be able to produce the goods, both civilian and military, which are needed. * * *

By 1965 we expect our population in the United States to have reached 193.3 million persons. Our labor force is expected to increase from 68.9 million to 79.2 million in 1965. However, the age distribution will be different. We will have many more of the younger age groups (14–24) and a good many more of the older group (45 and over), but hardly any more in the middle age groups from 25–44, than now. * * *

These projections point up for us * * * the great importance of the worker over 45 in our factories and service industries of the future. If we practice or introduce the right hiring and personnel policies now, then the gradual change in the composition of our labor force will not produce the waste, shortages, or unemployment which might otherwise occur. Since we shall not have a large reservoir of just the preferred age groups, it is all the more important that we learn to make the best possible use of the manpower resources that will be available.

These figures given by Mr. Clague illustrate the fact that our economy needs to learn how to use the productive skills of our older workers. But there are human needs in addition to economic needs. What about the individual who wants to continue working; who needs to work in order to be happy? Studies show that a great many people want to work after they reach 65, even though they are eligible for old-age pensions.

Unless our society can develop methods by which persons can continue to work as long as they are able to work, we shall be faced with an ever-growing number of discontented and unproductive older persons, who will have to be supported by younger persons economically, emotionally, and spiritually.

The problem becomes more acute in periods of depression or recession when there is a labor surplus. Those who do the hiring are more apt to insist on rigid age barriers during such periods because it is easier to find workers with characteristics precisely of the type specified. This makes it even harder to place older workers than is usually the case. Moreover, the increased failure of businesses in depression and recession periods throws more older workers on the labor market. The economy comes out of the recession eventually, but many of the older workers never reach full productivity again.

For those mature people who are able to work, the greatest emotional need they have is to be able to work, to be able to support themselves, to be able to think of themselves as economically useful people.

There are also tremendous social costs in denying employment to older workers under 65. There is the cost of supporting such workers, either through public assistance benefits or private help. There is the loss in taxes which would be paid by such workers if they were employed. And finally there are the numberless social services which are often required when families suffer financial reverses.

It is plain that we cannot continue to lengthen man's lifespan and at the same time lower the age at which he is allowed to continue as a productive member of society. Sooner or later we will reach the point where the burden of supporting large numbers of older workers who are not fully productive will become too much for our economy to bear.

Therefore, there are at least three compelling reasons why all citizens of good will should work to break the age barrier to employment. One is economic—we must do it in order to keep our productivity high and our economy prosperous; a second is social—everyone in our society must help to bear the cost that arises when an individual is denied the opportunity to support himself and his family; a third is human—we must do it to keep our society stable.

Medical Care Now: America's Great Need

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. SANTANGELO. Mr. Speaker, a nation's moral fibre is judged by the regard the government has toward its people, especially its senior citizens. The Forand bill, H.R. 4700, is a measure which demonstrates a concern for the health and care of our elders in the twilight period of their lives. I was happy to be a cosponsor of this humane and practical measure and introduced H.R. 7154.

Our problem is the care of over 15 million of our citizens, and I believe the Forand bill provides the best approach to the solution of this problem. The administration proposal is a cruel hoax upon the American people and the proposal by the American Medical Association is based upon the premise that only a small fraction of our senior citizens need health care and most of them can afford the cost of hospitalization and medical care.

The problem of medical and hospital care for our elderly citizens arises from the fact that medical science has made more progress in the last decades than ever before. Today some diseases such as malaria, smallpox and bubonic plague have been almost completely eradicated in America. Other diseases such as polio and osteomyelitis are on the way out, and we may hope that the recent progress in cancer and heart research may someday result in their eradication as well. Because of these strides, people are living longer than ever before. Man's life expectancy is now 70 years of age. There are now over 15 million Americans who have passed their 65th birthday. In 1975 there will be 20 million.

The increase of life span has not been an unmixed blessing. The aged today face a number of problems some of which they find very difficult to meet. One of the most pressing of these needs is adequate medical care. The Secretary of Health, Education, and Welfare has stated:

> Older persons have larger than average medical care needs. As a group they use about two and a half times as much general hospital care as the average for persons under age 65 and they have special need for long term institutional care.

It should always be kept in mind that the cost of this large amount of medical care must be paid for out of the same resources on which the older person depends for his food, clothing, and shelter. Unfortunately, millions of our senior citizens simply cannot meet all of these expenses out of their present slender means.

In 1958 half of the people over 65 had incomes of $870 or less. That amounts to 8 million people who must live and pay for their medical care out of $73 per month. The cost of medical care has risen far more steeply since 1949 than the cost of items like food. In November 1959 food cost 17 percent more than it did in the base period ending in 1949, while medical costs had increased by 53 percent. The cost of hospital care alone has nearly doubled. It is little wonder that older persons are often forced to forgo medical care they really should have, or that proper care is often delayed until the situation is serious.

As the American Hospital Association stated in hearings before the Senate Subcommittee on the Problems of the Aged and Aging:

> We are convinced by all the evidence we have seen that the problem of health care and its financing is one of the most serious facing the nonindigent aged, and one of the greatest threats to their economic security. * * * Various indications * * * suggest that a good many of the aged postpone or refrain from seeking hospital or other care which would be desirable.

It is also not surprising that a single illness can wipe out the savings of a lifetime and leave a person dependent on the public dole. These problems not only affect the aged persons themselves, but they can also be a tremendous shock to the children and other relatives who assume responsibility for the expenses.

The American Medical Association, which bitterly opposes the Forand bill seems to believe that there is no need for Federal legislation because of the longstanding policy of many doctors to render their services free of charge to those who are in need. You and I know of many excellent physicians who follow this policy. They deserve our respect, our love, and our affection. I know how much they do and how much they can do. I had a brother who was a medical doctor and surgeon who rendered much free services and practically operated a free clinic for the community during the thirties. These doctors are the men who have earned the great respect of society and undying gratitude of their patients. They contribute to the high regard in which the public holds the medical profession. Nevertheless, it seems to me that the evidence is conclusive that many people do not get the care they need despite the generous assistance and charitable work rendered by the followers of Hippocrates.

Even though physicians do take their patients' financial resources into account in fixing their own fees, a great part of the medical expense problem remains beyond their control. In days gone by a doctor could carry all the equipment he needed in a small bag and depended largely on his unaided senses to make his diagnoses. Modern research has ended those days forever. A doctor now requires a host of complicated instruments and highly skilled personnel to operate them. These require huge capital investments and someone must pay for all this modern apparatus.

The Forand bill would help meet the medical care needs of the aged in a way no other proposal yet developed can. It would make health benefits part of the social security system, and thus provide at least a minimum of protection to the nearly 11,300,000 persons over 65 who are now eligible to receive regular old age and survivors benefits. The health benefits would include 60 days' hospitalization per year, plus 60 days' nursing home care per year, and all surgery performed in a hospital. These benefits would be paid as a matter of right out of the social security trust fund created by the joint contributions of the workers and their employers. This, I think, is the most important thing about the Forand bill. The Government, Federal or State, makes no contribution. The taxpayer is not saddled with income taxes to finance the program. Older people would not be subjected to a humiliating "needs test"

or forced to take a pauper's oath. Benefits would not be charity doles, but the proceeds of insurance for which the worker had made payment during his working life. The fact that protection will be completely paid for by the time the worker reaches age 65 does not make medical care free any more than automobile, fire, or life insurance is free.

Most important of all, the worker would pay his share of the cost when he is most able to afford it—when he is working. When a worker retires he would have permanent insurance which would not require additional premium payments out of his meager retirement income.

From one point of view it is difficult to understand the opposition of some doctors to this proposal. As we have already noted many doctors assume a personal responsibility for providing medical care to those who cannot afford it. Even though physicians may be willing, even eager, to carry so much of the load, it is not fair that they should do so. This is after all a national social problem for which the Nation as a whole should bear responsibility.

One question which always arises and which must be answered is "How much will it cost?" The best estimates now available have been prepared by the Department of Health, Education, and Welfare. According to these estimates the cost of the Forand bill could be defrayed by increasing the rate of social security tax by 0.40 percent of payroll each for employers and employees—0.60 percent for the self-employed. The small increase in the contribution rates seems to be more than justified by the great benefits it would provide.

Opponents of the Forand bill have a great many arguments, which I would like to discuss. First, some attack the cost estimates of the Department of Health, Education, and Welfare as too low, even though that Department, as part of the administration, is opposed to the bill. Representatives of the insurance industry and the medical profession have claimed that it will cost almost twice as much as the Department says it will. I am tempted to believe that the zealousness of these opponents has caused them to overestimate the costs. Similar predictions were made when we passed the disability benefit program in 1956. In fact, the Department's estimates proved entirely reliable, even somewhat conservative.

Part of the argument that the cost of the bill would be excessive rests upon assertions that hospitals and nursing homes would be flooded with malingerers who were not really ill. There will, of course, be an increase in the number of people going to hospitals. The bill would not serve its purpose if this did not happen and there would be no reason to pass it. The idea is to get people into hospitals who need treatment but are not getting it because they cannot presently afford it. As for the malingerers, no person would receive health benefits unless treatment were found to be medically necessary by a doctor. I cannot believe that the doctors of this country would deliberately abuse the program. I do believe they are too skillful to be misled by any great number of hypochondriacs.

I think a great deal of opposition to the proposal has come from people who do not want socialized medicine and who have been taken in by statements that the Forand bill would mean the socialization of medicine in this country. Of course, the Forand bill would do nothing of the kind. It provides that medical bills will be paid out of a trust fund to which the patient has contributed. The Secretary of Health, Education, and Welfare would have no more authority to control the practice of medicine by fixing fees and prescribing treatment than does the president of the Mutual Insurance Co., of Omaha, probably less. In fact, any such control by the Secretary is specifically prohibited by the bill. Every patient would have the right to be treated in the hospital of his choice so long as the hospital were willing to receive payment out of the trust fund. No hospital or doctor would be required to admit or treat a patient unless they thought it medically necessary. It seems to me that every conceivable safeguard has been built into the bill.

It has been said that the Forand bill is unnecessary because of the growth of private health insurance, and that passage of the bill would destroy the progress made by private insurers. The opponents cite figures to show that 40 percent of the aged now have some form of health insurance and they predict that the proportion will increase to 70 percent by 1965. The growth of private insurance is a wonderful thing and our Government has helped it grow. However, figures can be misleading because, even if true, they refer to those who are covered while they are employed and not after they retire.

Since World War II because of the wartime restrictions on wage increases, collective bargaining agreements gave impetus to fringe benefits and hospitalization plans. Private hospitalization plans developed on a scale so vast that 95 million American workers and dependents are presently covered by hospitalization programs while they are still working and have not retired. After retirement, only a small portion of the 19 million workers who have pension plans are covered for medical care and hospitalization. Retirement means the end of hospitalization and medical care for our Nation's workers and their dependents. The Forand bill is designed to take care of this need after retirement when because of age, most people need medical and hospitalization care desperately.

With each passing year, our senior citizens develop inexplicable pains and aches. Our senior citizens have arthritic and old bones. I, for one, know of those pains which come from nowhere and end just beyond where the doctor's fingers touch. They frequently defy location. I know of the pains which come with the night and disappear with the dawn. A prescribed pill or an appropriate injection, inexpensive but effective, determines whether our elders shall pass many hours of agony or a period of comparable comfort.

Many of the people who are included in the 40 percent have wholly inadequate coverage for which they must pay more than they can really afford. For instance, one insurance company charges $78 per year for benefits which are less than one quarter of those which would be provided by the Forand bill. If the insured failed to make a single deadline on his premium payments, the policy may lapse and perhaps cannot be reinstated. Many of the aged who have health insurance have this type.

It is not hard to understand why some private insurance companies must charge so much for so little. In some cases almost 60 cents out of every premium dollar is eaten up by overhead expenses, leaving about 40 cents for the actual payment of benefits. Under the Forand bill more than 96 cents out of every dollar collected would be paid out again in the form of benefits. The real problem with most of these private insurance contracts is that they must be paid for after retirement when the ability to pay is lowest and the premiums are highest. As for the predictions of their expansion to coverage of 70 percent of the aged, it seems unlikely to me that the 8 million aged with yearly incomes of $870 or less are going to buy very much insurance at $100 per year, or even $78 per year. The dire prediction that the Forand bill would result in the destruction of private insurance is also fallacious. The same type of argument was used in 1935 when opponents of the social security system claimed it would destroy the great progress which had already been made in private pension plans. Of course, the reverse has been true—private pension plans have burgeoned as they never did before 1935. I believe we could expect the same kind of results after passage of the Forand bill. The Forand bill, like the Social Security Act, is not designed to supplant, but to supplement, private initiative.

Within recent days in response to the great demand that some action be taken, the administration has finally come up with a proposal of its own. The general idea is to put the State governments in the insurance business, with part of their expenditures to be reimbursed by the Federal Government on a matching basis. The States would not, of course, be required to participate in the program. But if they do, they would sell health insurance to people over age 65 for premiums of $24 per year, provided he meets certain fine print qualifications. Benefits would be payable for almost every conceivable type of medical service. However, as in all something for nothing proposals, there is a catch to it. No beneficiary of the State insurance policies would get a penny in benefits until he had spent $250 per year on medical expenses out of his own pocket. Even then his policy would cover only 80 percent of the yearly expenses above $250. Any person who made more than $2,500

per year would not be eligible to buy a policy. However, once a person owned a policy he would not be deprived of coverage no matter how high his income, provided he were willing to pay an increased premium. This is hailed as a voluntary program. This program, I submit, would be neither voluntary, nor calculated to meet the needs of the aged.

Another point. As we have already noted, half of the people over 65 had incomes of $870 or less in 1958. Let us see how much protection such people would have under this program. First, a person in this income group must spend $274—$24 enrollment fee plus the $250 deductible amount—in a year before he will get a penny. That amounts to more than 30 percent of an annual income of $870. Even after he has spent this amount, he will receive benefits only if he is able to put up one more dollar for every $4 of benefits. This means that a person with a $700 medical bill would have to pay almost $360 of it himself. I cannot see how a person who has $870 to live on for a year can afford to spend 40 percent of his income for medical care. If I have only $10 to spend, I cannot buy a $50 suit of clothes even if the merchant offers to cut the price to $25.

The opponents of the Forand bill have called it socialistic. It is surprising that the administration should offer a proposal which is far more susceptible to such charges. The Forand bill would simply extend the well-established social security system to provide for the payment of medical bills. The administration proposal would actually put the State governments in the business of selling insurance to the public at large. Moreover, the State governments would be given control over such aspects of the practice of medicine as the fixing of doctors' fees.

The eligibility requirements of the administration proposal are arbitrary and would operate capriciously. A man who has an income of $2,500.01 would be ineligible to buy a policy. However, if he voluntarily brought his earnings below this level in 1 year he could buy a policy, and then boost his earnings to any level without losing his coverage. This would result in a situation where there are two persons, with exactly equal incomes, one of whom will be covered while the other is not.

It is said that more than 12 million people would be covered by this program. However, this assumes that all 50 States, some of whom are already in financial difficulties, are going to jump into a program which will cost the States $600 million per year. If a State decides to stay out of the program its citizens will not have an opportunity to receive the benefits of the program, even though they must continue to pay the Federal taxes which will be used to finance the program. No one has yet estimated what the administrative expenses of the proposal would be, but I am inclined to think they would be large.

For all of these reasons, I am, therefore, convinced that the administration—in spite of its exhaustive studies—has not come up with an acceptable alternative to the Forand bill. Pain cannot wait until 1970. I, therefore, urge support of the Forand bill now.

The Need for Effective and Meaningful Leadership in the State of Georgia and Elsewhere

EXTENSION OF REMARKS

OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. NIX. Mr. Speaker, by unwavering faith in the inherent greatness of the American character and in the passion for justice possessed by most Americans, has developed in me a reverential regard for those Americans who have come forth from time to time giving direction and leadership to the people of our country in times of tribulation and peril.

Today our Nation has come to its moment of judgment; men of all races and countries know of our might. In every corner of the globe the just, as well as the unjust, are aware of the circumstances of our birth as a Nation and of our heritage of equality, justice, and morality which flows from that event. Many sober-minded men and women of good will in our country know of our imminent peril but have maintained a troubled silence and wishfully hoped that our country would somehow choose to follow the high road to greatness. At the same time a vociferous minority misrepresents the thinking of the majority; distorts the meaning of democracy; creates a U.S. image of intolerance and arrogance; paves the road to our destruction and blithely seeks to lead us.

Mr. Speaker, to those millions of Americans, who in these times of tensions and difficulties have fervently hoped for constructive leadership, I am happy to say that in a prepared speech for delivery before the Seventh District Democratic Executive Committee at Rome, Ga., released Saturday, May 7, 1960, 11 a.m., one of our distinguished colleagues, Representative ERWIN MITCHELL, has drawn the blueprint for leadership and has charted the course for progress. It is particularly significant and encouraging to me and millions of other people in our country that the statement referred to above has come from a gentleman who is a citizen of the State of Georgia. It is a matter of the gravest importance to note that the speaker had the courage, the analytical ability, and the vision to call to task the present leadership of his party in his State and southern leadership in the Nation and to emphasize the fact that this type of leadership is not reflective of the true objectives of a democratic government.

Mr. Speaker, I share the hope of the distinguished gentleman from Georgia that the time is upon us when the citizens of that State must rise up and demand that those who are selected to lead and to express the will of the constituency, do so in terms reflective of the Constitution of the United States, decisions of the courts, as well as in terms which give assurance that the United States of America, in truth, believes in the dignity of mankind.

Mr. Speaker, I recommend that the thoughts expressed in Mr. MITCHELL'S speech are worthy of emulation by his colleagues from the State of Georgia and by men of high principle everywhere. Lastly, I suggest that the directors of the Voice of America program make available to the peoples of the uncommitted countries of the world this address delivered by the distinguished gentleman from Georgia:

REMARKS OF REPRESENTATIVE ERWIN MITCHELL PREPARED FOR DELIVERY BEFORE SEVENTH DISTRICT DEMOCRATIC EXECUTIVE COMMITTEE AT ROME, GA.

We are gathered today to set the rules and regulations for the primary in which the next Democratic candidate for the U.S. Congress will be nominated. This is an exclusive meeting, this is a meeting of Democrats. By our very presence at this occasion, we put the world on notice that we are not Republican nor Dixiecrat in our political philosophy. Each of you by virtue of acceptance of appointment to this committee has thereby made himself an official voting representative of the Democratic Party of Georgia and the United States. This being so, I feel it timely that we talk about the importance of political parties, that we talk about the South's attitude toward the Democratic Party and that we discuss the caliber and attitude of political leadership that we in Georgia and the remainder of the South have today.

In America we have by our own free choice elected to operate under what is known as the two-party system. Every Member of the U.S. Congress is sent to that body under the label of Democrat or Republican. Is party affiliation important? To this I think we all would answer "yes" simply because at the State and national level it is imperative to have party affiliation in order to be elected. But the prime question is this, why is party affiliation important? There are many, many answers to this but most fundamental and most important is the fact that only by men and women of kindred thought joining together in a political organization can there be the unification and strength essential to the presentation and implementation of an effective course of governmental action. This is, of course, the legislative program and the platform which a party adopts and which it believes to be in the best interest of the Nation. Therefore, we who have voluntarily cast our lot with the Democratic Party have thereby manifested our general—not specific—but our general approval of the political philosophy of the Democratic Party of the United States. It is essential that if the course which our party has chartered for our country is to be effective that it have the support not only of you and me as officials of the party but the rank and file membership as well. Only in this way can the visions which emanate from collective thought become realities through legislative and executive action. The things I have said about the system of party are basic and require no further amplification, but it does emphasize that when any candidate seeks

to run as a nominee of his party he thereby signifies that that particular party's ideas and goals most closely approximate his own. This being so, it is a source of amazement that we constantly return to office as Democrats, elected officials who have established the practice of berating our party, its leadership and its principles. It is absolutely astounding that we permit these men and women to bear the Democratic badge when they at every opportunity, through voice and vote, join with the opposition party. I can say this because I believe in the Democratic Party. I can say this because I have not and will never be a part of the sham and hypocrisy that permeates the ranks of the Democratic Party in the South. And when I say this I am talking about political leadership both State and national throughout the South. May the day be forthcoming, and I say to you with the strongest conviction of which I am capable that this day will be forthcoming, when we Democrats will nominate and elect Democrats and will send scrambling those who use our party only as an expedient avenue to public office.

These wonderful 3 years that I have been permitted to represent you in the National Congress have taught me many things, and among the foremost is that the false, self-styled Democrats from the Southland do more harm to our region than any group of northern Democrats and Republicans could ever do. This small group of men and women, and thankfully it is small and will continue to grow smaller, is one of the major obstacles in the path toward unprecedented economic growth, development, and prosperity in our region. These are the people who through their hue and cry have with a great deal of success instilled in the minds of Georgians and other southerners the false belief that the remainder of the Nation literally hates us. These are the ones who constantly cry out that northerners seek to crucify us, to insult us, to make whipping boys of us. I have traveled throughout our great Nation and I have never found this to be so. I have many friends in the Congress from all over the United States and I know that not to be their sentiment but that on the contrary the prevailing sentiment is that the South is a part of the United States just as is the West, North, and East, and that our Nation is no stronger than its weakest section. These political leaders who deem themselves the preservers of our way of life might well be called the destroyers of our future. These people through their negative approach and with the help of a substantial portion of the southern press have sought to convey the impression that we in the South are the last bastion of freedom in our great Republic. This we know to be untrue. These same thought molders have developed the negative and defeatist attitude that the remainder of the Nation stands alined against the future growth and progress of the South. This we know to be untrue. Our fellow Americans regardless of where they come from stand ready to join with us for our mutual benefit if we would only let them. But the attitude of many of our political leaders closes the door to this prospect. They say we are suspicious of you, we don't trust you, and we will not cooperate with you. This pessimistic attitude has caused us suffering in many ways. Each year the influence of the South in Washington is being lessened. Southern opposition to the genuine needs of our metropolitan areas has lost support for the farm programs that are so vital to our economy. This same untenable attitude has led all public education in our State to the very brink of destruction. It warns of Federal domination, it shouts Federal encroachment and control, it says on the one hand "stay away Federal Government and let us operate our schools as we see fit" and then on the other hand it says to you and to me in the local school district that you cannot have the freedom of choice to determine locally what you desire done with your schools. This same leadership screams to the heavens shouting "States rights" when the Congress enacts legislation to insure the right of vote to every qualified American regardless of where he may live and at the same time is responsible for legislation that takes away from you the right to vote for the Democratic nominee for President. How many of you realize this? How many of you recognize the fact that when we go to the polls in November of this year to elect the President of the United States that here in the State of Georgia if you desire to vote for the Democratic nominee you will have no opportunity to do so? Our only opportunity will be to vote for a slate of unpledged electors who can cast the electoral vote of our State for whomever they may choose and without your and my concurrence, advice, or instruction. The same leadership that says there is no need for more legislation to insure the privilege of vote in Georgia is the very same leadership that is responsible for taking away from us the cherished right to cast our ballot for the specific Democrat we would like elevated to the Presidency.

Tradition is fine. No one is more proud of his heritage than I. No one loves Georgia and the Southland any more than I but I am afraid that by and large our leadership has been guilty of too much tradition and not enough vision. This is the age of rockets and nuclear power. What is our past we will continue to revere and will continue to be enriched by it, but we must come of age politically. We must elect men to office who have a full consciousness of America's great reservoir of progress that is awaiting to be tapped. While we should continue to treasure the past and gain experience from it, we should no longer live in it. We must have leaders who are living in the present and are looking to the tomorrow.

These are my words for today. These are some of the impressions I have gained as your Representative and I pass them on to you with the deep conviction that only through affirmative and realistic leadership will the State that you and I love so dearly ever achieve its full capability. It is my hope and prayer that the Democrat you and I send to Congress shall have these qualities.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. HOSMER. Mr. Speaker, columnist Roscoe Drummond one time dispelled many of the myths which are responsible for the unwarranted discrimination by employers against hiring older workers. His excellent article reads as follows:

WASTING OUR WORKERS
(By Roscoe Drummond)

Is there any valid reason why industry should instinctively turn from employing older workers? The answer is to be found in a study by the Labor Department, which provides the first unbiased, comprehensive research into the skills, education, capabilities, performance, stability, adaptability, and health of workers 40 and over. Here are the principal findings:

Myth: The hiring of older workers unduly increases pension costs.

Fact: It is not true that employment of older workers unduly increases the costs of private pension plans. These pension plans are mostly based on a percentage of average earnings multiplied by the number of years of service. Under this system, a man hired when young automatically qualifies for a bigger pension because of longer service.

Myth: That older workers are unskilled.

Fact: The opposite is the truth. Of the workers sampled in seven cities, twice as many older jobseekers had held skilled jobs.

Myth: That older workers are not as flexible, won't accept change.

Fact: This is theory, not experience. Research shows that one in four older job applicants changed jobs in order to get work.

Myth: That they are unstable, or they wouldn't be unemployed that late in life.

Fact: This is misinformation. The fact is that more than one-half of the older jobseekers had held the same job for the previous 3 years, compared with one-third of the younger applicants.

Myth: That older workers are less productive than younger workers.

Fact: In eight clothing and shoe plants studied by the Bureau of Labor Statistics, average output per man-hour of piece-rate workers remained stable through age 54.

Myth: Older workers are absent more often than younger workers.

Fact: There is no visible difference in regularity on the job.

Conclusion: Most of the unfavorable things we've heard so long about older workers simply have no basis in fact and experience. A healthy industry and an expanding economy urgently need their skills.

The Fraternal Order of Eagles has, for some time, conducted an effective national campaign to educate employers and eradicate the scourge of discrimination against older workers. Its campaign has brought much favorable comment from persons prominent in public life. Here are samples:

George M. Leader, Governor of Pennsylvania:

"I am more than happy to have this opportunity to participate in the Eagles jobs after 40 program. Countless men and women who are qualified are rejected for jobs simply because they have reached an arbitrary age limit that steadily becomes lower."

Charles E. Potter, U.S. Senator from Michigan:

"May I commend the Fraternal Order of Eagles for its vision in undertaking its jobs after 40 campaign looking toward ending job discrimination based on age. I consider arbitrary hiring-age barriers now put up by many employers in the United States as unwise and economically unsound."

Abraham Ribicoff, Governor of Connecticut:

"Concerning the jobs after 40 campaign of the Fraternal Order of Eagles, Connecticut will make every effort to increase the employment opportunities for our older people so they can be productive and self-supporting."

Robert E. Smylie, Governor of Idaho:

"I wish to take this opportunity to commend the Fraternal Order of Eagles in their undertaking of the jobs after 40 campaign and to lend my wholehearted support to this worthwhile cause. It is work that gives life meaning. Work gives a sense of personal worth and status among fellow men. The denial of work pulls the pin out of living and the structure of living collapses in a heap."

JOHN SPARKMAN, U.S. Senator from Alabama:

"I am continually amazed that many employers throughout the Nation still tend to refuse to hire people who are over 40 years

old. I want to congratulate the Fraternal Order of Eagles on the order's jobs after 40 campaign. I hope and I pray that the publicity accompanying this program will help turn the tide of employer opinion toward taking advantage of those fruitful years after 40."

Joe Foss, Governor of South Dakota: "I certainly can heartily endorse the 'jobs after 40' campaign, which has been undertaken by the Fraternal Order of Eagles. The over-40 worker who is willing and able to learn should be given an opportunity to do so. Discrimination based on age is not sensible nor practical."

CHARLES RAPER JONAS, Member of Congress, 10th District, North Carolina:

"You are to be commended upon this worthwhile undertaking, the 'jobs after 40' campaign which the Eagles are undertaking as a project. I have a deep interest in this subject and feel very strongly about this work."

Lane Dwinell, Governor of New Hampshire:

"To summarize my attitude toward the Eagles 'jobs after 40' campaign to end job discrimination based on age, I heartily agree that the problem of providing useful employment on a nationwide basis for our older citizens is a most important one, deserving of our best efforts at the Federal, State, and local level."

GORDON H. SCHERER, Member of Congress, First District, Ohio:

"As a member of the Fraternal Order of Eagles, I was pleased to learn of the Eagles 'jobs after 40' campaign. The Eagles are giving the cogent arguments in favor of this fine program."

G. Mennen Williams, Governor of Michigan:

"The Eagles are doing a great and needed work in getting behind the movement to provide jobs for older workers, and use their skills and experience to the utmost. The Nation needs the services of these experienced men and women, and it cannot be economically healthy as long as those over 40 suffer discrimination in finding jobs."

WINFIELD K. DENTON, Member of Congress, Eighth District, State of Indiana:

"It seems to me that we have reached a point where investigation and education about the value of older workers is not enough. For that reason, I introduced a bill to prohibit discrimination against older workers by employers who operate or produce goods in interstate commerce."

Address by Hon. Barry Goldwater, of Arizona

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a speech which I made before the U.S. Chamber of Commerce on May 4, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR BARRY GOLDWATER, U.S. CHAMBER OF COMMERCE, MAY 4, 1960

Disclosures before the McClellan committee which so clearly pointed up the results of the abusive use of power within the labor movement resulted in the passage last year of the Landrum-Griffin bill. While this measure is an infinitely better one than the do-nothing Kennedy bill which passed the Senate, Congress has still to come to grips with the real evil in the labor field. Graft and corruption are symptoms of the illness that besets the labor movement, not the cause of it. This cause is the enormous economic and political power now concentrated in the hands of union leaders.

Such power hurts the Nation's economy by forcing on employers contract terms that encourage inefficiency, lower production and high prices—all of which result in a lower standard of living for the American people.

It corrupts the Nation's political life by exerting undue influence on the selection of public officials.

It gravely compromises the freedom of millions of individual workers who are able to register a dissent against the practice of union leaders only at the risk of losing their jobs.

All of us have heard the charge that to thus criticize the power of big labor is to be antilabor and antiunion. This is an argument that serves the interest of union leaders, but it does not usually fit the facts, and it certainly does not do justice to my views. I believe that unionism, kept within its proper and natural bounds, accomplishes a positive good for the country. Unions can be an instrument for achieving economic justice for the workingman. Moreover, they are an alternative to, and thus discourage State socialism. Most important of all, they are an expression of freedom. Trade unions, properly conceived, are an expression of man's inalienable right to associate with other men for the achievement of legitimate objectives.

The natural function of a trade union and the one for which it was historically conceived is to represent those employees who want collective representation in bargaining with their employers over terms of employment. But note that this function is perverted the moment a union claims the right to represent employees who do not want representation, or conducts activities that have nothing to do with terms of employment (e.g., political activities), or tries to deal with an industry as a whole instead of with individual employers.

As America turned increasingly, in the latter half of the 19th century, from an agricultural nation into an industrial one, and as the size of business enterprises expanded, individual wage earners found themselves at a distinct disadvantage in dealing with their employers over terms of employment. The economic power of the large enterprises, as compared with that of the individual employee, was such that wages and conditions of employment were pretty much what the employer decided they would be. Under these conditions, as a means of increasing their economic power, many employees chose to band together and create a common agent for negotiating with their employers.

As time went on, we found that the workingman's right to bargain through a collective agent needed legal protection; accordingly Congress enacted laws—notably certain provisions of the Clayton Act, the Norris-LaGuardia Act and the Wagner Act—to make sure that employees would be able to bargain collectively.

This is not the place to examine those laws in detail. It is clear, however, that they have overaccomplished their purpose. Thanks to some unwise provisions and to the absence of others that should have been included, the delicate balance of power we sought to achieve between labor and management has shifted, in avalanche proportions, to labor's advantage. Or, more correctly to the advantage of union leaders. This mammoth concentration of power in the hands of a few men is, I repeat, a grave threat to the Nation's economic stability, and to the Nation's political processes. More important, it has taken from the individual wage earner a large portion of his freedom.

The time has come, not to abolish unions or deprive them of deserved gains; but to redress the balance—to restore unions to their proper role in a free society.

We have seen that unions perform their natural function when three conditions are observed: association with the union is voluntary; the union confines its activities to collective bargaining; the bargaining is conducted with the employer of the workers concerned. Let us briefly treat with each of these conditions, noting the extent to which they are violated today, and the remedial action we are called upon to take.

FREEDOM OF ASSOCIATION

Here the argument is so plain that I wonder why elaboration is necessary. What could be more fundamental than the freedom to associate with other men, or not to associate, as each man's conscience and reason dictates? Yet compulsory unionism is the rule rather than the exception today in the ranks of organized labor. Millions of laboring men are required to join the union that is the recognized bargaining agent at the place they work. Union shop agreements deny to these laboring men the right to decide for themselves what union they will join, or indeed, whether they will join at all. The exercise of freedom for many of these citizens, means the loss of their jobs.

Here is the kind of thing that can happen as the result of compulsory unionism. X, a family man in Pennsylvania had been a union member in good standing for over 20 years. When the United Electrical Workers became the recognized bargaining agent at his plant, he refused to join on the grounds the UEW was Communist dominated—a judgment that had been made by the CIO itself when it expelled the UEW in 1950. The result, since his employer had a union shop agreement with the UEW, was that X lost his job.

The remedy here is to give freedom of association legal protection. And that is why I strongly favor enactment of State right-to-work laws which forbid contracts that make union membership a condition of employment. These laws are aimed at removing a great blight on the contemporary American scene, and I am at a loss to understand why so many people who so often profess concern for civil rights and civil liberties are vehemently opposed to them. Freedom of association is one of the natural rights of man. Clearly, therefore, it should also be a civil right. Right-to-work laws derive from the natural law: they are simply an attempt to give freedom of association the added protection of civil law.

I am well aware of the "freeloader" argument, so often advanced by union leaders in defense of compulsory unionism. The contention is that a man ought not to enjoy the benefits of an organization's activities unless he contributes his fair share of their cost. I am unaware, however, of any other organization or institution that seeks to enforce this theory by compulsion. The Red Cross benefits all of us, directly or indirectly, but no one suggests that Red Cross donations be compulsory. It is one thing to say that a man should contribute to an association that is purportedly acting in his interest; it is quite another thing to say that he must do so. I believe that a man ought to join a union if it is a good union that is serving the interests of its members. I believe, moreover, that most men will give support to a union provided it is deserving of that support. There will always be some men, of

course, who will try to sponge off others; but let us not express our contempt for some men by denying freedom of choice to all men.

The union leaders' argument that right-to-work legislation is a "union-busting" device is simply not borne out by the facts. A recent survey disclosed that in all of the 19 States which have enacted right-to-work laws union membership increased after the right-to-work laws were passed. It is also well to remember that the union movement throughout the world has prospered when it has been put on a voluntary basis. Contrary to popular belief compulsory unionism is not typical of the labor movement in the free world. It prevails in the United States and England, but in the other countries of Western Europe and in Australia, union membership is generally on a voluntary basis. Indeed the greatest percentage of unionized workers are found in countries that prohibit compulsion by law. The unions in those countries operate on the principle that a union is stronger and better if its members give their adherence of their own free will.

Here, it seems to me, is the sensible way to combat graft and corruption in the labor movement. As long as union leaders can force workers to join their organization, they have no incentive to act responsibly. But if workers could choose to belong or not to belong depending on how the union performed, the pressure to stamp out malpractice would become irresistible. If unions had to earn the adherence of their members the result would be—not only more freedom for the workingman—but much less dishonesty and high handedness in the management of the union affairs.

POLITICAL FREEDOM

One way we exercise political freedom is to vote for the candidate of our choice. Another way is to use our money to try to persuade other voters to make a similar choice—that is, to contribute to our candidate's campaign. If either of these freedoms is violated, the consequences are very grave not only for the individual voter and contributor, but for the society whose free political processes depend on a wide distribution of political power.

It is in the second of these areas, that of political contributions, that labor unions seriously compromise American freedom. They do this by spending the money of union members without prior consultation for purposes the individual members may or may not approve of, purposes that are decided upon by a relatively small number of union leaders. Probably the greatest spender in the labor movement is the powerful AFL–CIO Committee on Political Education (COPE) which is supported in its "educational" work entirely by union general funds.

It is impossible to say just how much unions spend on political campaigns; certainly one can't tell from the amounts officially reported, which invariably present a grossly distorted picture. In 1956, for example, labor officially acknowledged expenditures of $941,271. According to that official report, $79,939 of the total was spent in the State of Michigan. However, a Senate investigating committee obtained evidence that in that year each of Michigan's 700,000 union members had been assessed $1.20 as a contribution to a "citizenship fund," and that this money was made available for political activities. This suggests that labor spent, from that one source alone, almost a million dollars in Michigan, instead of $79,000. By projecting the difference on a nationwide scale, we get a more realistic idea of the size of labor's political contributions.

Union political activity is not confined, of course, to direct financial contributions. In fact, this is one of its smallest endeavors. Unions provide manpower for election-day chores—for making phone calls, driving cars, manning the polls, and so on. Often the union members who perform these chores are reimbursed for their time off out of union funds. Unions also sponsor radio and television programs and distribute a huge volume of printed material designed to support the candidate of the union's choice. In short, they perform all the functions of a regular party organization.

Now, the evil here is twofold. For one thing, the union's decision whether to support candidate X or candidate Y—whether to help the Republican Party or the Democratic Party—is not reached by a poll of the union membership. It is made by a handful of top union officers. These few men are thus able to wield tremendous political power in virtue of their ability to spend other people's money. No one else in America is so privileged.

The other evil is more serious. Individual union members are denied the right to decide for themselves how to spend their money. Certainly a moral issue is at stake here. Is it morally permissible to take the money of a Republican union member, for example, and spend it on behalf of a Democrat? The travesty is deeper, of course, when the money takes the form of compulsory union dues. Under union-shop conditions, the only way an individual can avoid contributing to the political campaign of a candidate whom he may not approve is to give up his job.

The passage of right-to-work laws will help the situation. But putting unionism on a voluntary basis is only part of the answer. For even though a man can leave or refuse to join a union that spends money for purposes that he does not approve, there may be other factors that would dissuade him from doing so. In many communities strong economic and social pressures are exerted on behalf of joining a union—quite aside from the threat of loss of employment. As a result, a man may decide to join a union notwithstanding his disapproval of its political activities. The question remains, Should that man's union dues be used for political purposes? The answer is clearly "No." Unions exist presumably to confer economic advantages on their members, not to perform political services for them. Unions should, therefore, be forbidden to engage in any kind of political activity. I believe that the Federal Corrupt Practices Act does forbid such activity. That legislation has been circumvented by the "education" approach and other devices; and Congress and the courts, in effect, have looked the other way. The only remedy, it appears, is new legislation (Supreme Court, Looper case).

In order to achieve the widest possible distribution of political power, financial contributions to political campaigns should be made by individuals and individuals alone. I see no reason for labor unions—or corporations—to participate in politics. Both were created for economic purposes and their activities should be restricted accordingly.

ECONOMIC FREEDOM

Americans have been much disturbed in recent years by the apparent power of big labor to impose its will on the Nation's economic life whenever the impulse strikes. The recent steel controversy, and the terms of its settlement, are the latest illustration of labor's ability to get its way notwithstanding the cost to the rest of society. When the strike began, neutral observers—including Government economists normally friendly to the unions—agreed that the Steel Workers' wage demands were exorbitant and would inevitably cause further inflation; and that the steel companies were quite right in insisting that certain work rules promoted inefficiency and retarded production. Nevertheless, the steel companies were forced to accept a settlement that postponed indefinitely revision of work rules and granted a large portion of the union's wage demands.

The reason the union won is quite simple: It posed to the country the choice of tolerating stoppages in steel production that would imperil national security, or of consenting to an abandonment of the collective bargaining process. Since neither the steel companies nor the country at large wanted to resort to compulsory arbitration, the alternative was to give the unions what they asked. In this situation, the only power superior to union power was Government power, and the Government chose to yield.

One way to check the unions' power is for the Government to dictate through compulsory arbitration, the terms of employment throughout an entire industry. I am opposed to this course because it simply transfers economic power from the unions to the Government, and encourages State socialism. The other way is to disperse union power and thus extend freedom in labor-management relations.

Eighty years ago the Nation was faced with a comparable concentration of economic power. Large corporations, by gaining monopoly control over entire industries, had nullified the laws of competition that are conducive to freedom. We responded to that challenge by outlawing monopolies through the Sherman Act and other antitrust legislation. These laws, however, have never been applied to labor unions. And I am at a loss to understand why. If it is wrong for a single corporation to dictate prices throughout an entire industry, it is also wrong for a single union—or, as is the actual case, a small number of union leaders—to dictate wages and terms of employment throughout an entire industry.

The evil to be eliminated is the power of unions to enforce industrywide bargaining. Employees have a right, as we have seen, to select a common agent for bargaining with their employer but they do not have a right to select a national agent to bargain with all employers in the industry. If a union has the power to enforce uniform conditions of employment throughout the Nation its power is comparable to that of a Socialist government.

Employers are forbidden to act collusively for sound reasons. The same reasons apply to unions. Industrywide price fixing causes economic dislocations. So does industrywide wage fixing. A wage that is appropriate in one part of the country may not be in another area where economic conditions are very different. Corporate monopolies impair the operation of the free market, and thus injure the consuming public. So do union monopolies. When the United Automobile Workers demand a wage increase from the auto industry, a single monolith is pitted against a number of separate, competing companies. The contest is an unequal one, for the union is able to play off one company against another. The result is that individual companies are unable to resist excessive wage demands and must, in turn, raise their prices. The consumer ultimately suffers for he pays prices that are fixed not by free market competition—the law of supply and demand—but by the arbitrary decision of national union leaders. Far better if the employees of Ford were required to deal with Ford, and those of Chrysler with Chrysler, and so on. The collective bargaining process will work for the common good in all industries if it is confined to the employers and employees directly concerned.

Let us henceforth make war on all monopolies—whether corporate or union. The enemy of freedom is unrestrained power, and the champions of freedom will fight against the concentration of power wherever they find it.

SENATE

FRIDAY, MAY 13, 1960

The Senate met at 12 o'clock meridian, and was called to order by Senator MIKE MANSFIELD, of Montana.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Eternal God, who committeth to us the swift and solemn trust of life, so teach us to number our days that we may apply our hearts unto wisdom.

Thou hast ordained that, not in cushioned seats of ease, but in danger and stern conflict shall we find our strength and our triumph in these days when all mankind stands in the valley of decision. As deadly perils threaten the birthright of our liberties, help us to close our national ranks in a new unity of the spirit.

In a time calling for greatness, deliver us from all that is petty and provincial. By Thy restraining grace, turning aside from the pull of conflicting opinions and the divisive rivalry of personal loyalties, empower us and sustain us as, with strength unequal to our tasks, we battle in Thy name the powers of darkness. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

U. S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., May 13, 1960.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. MIKE MANSFIELD, a Senator from the State of Montana, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. MANSFIELD thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, May 12, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The ACTING PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8042) to authorize the Secretary of Commerce to resell four C1–SAY–1–type vessels to the Government of the Republic of China for use in Chinese trade in Far East and Near East waters exclusively.

The message also announced that the House had agreed to the amendment of the Senate to the joint resolution (H.J. Res. 352) to authorize preliminary study and review in connection with proposed additional buildings for the Library of Congress.

The message further announced that the House had passed the bill (S. 1358) to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 5098. An act to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado;

H.R. 10495. An act to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; and

H.R. 11318. An act to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1958.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 5098. An act to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado; to the Committee on Interior and Insular Affairs.

H.R. 10495. An act to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; to the Committee on Public Works.

H.R. 11318. An act to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the act of May 20, 1958; to the Committee on Armed Services.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDING OFFICER (Mr. CARLSON in the chair). Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Antitrust Subcommittee of the Committee on the Judiciary was authorized to meet during the session of the Senate today.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Subcommittee on Internal Security of the Committee on the Judiciary was authorized to meet during the session of the Senate today.

THE SUMMIT CONFERENCE

Mr. JOHNSON of Texas. Mr. President, I should like to make a few observations about an event which could determine the destiny of our country for many years to come. It is, of course, the summit conference which will take place next week.

The conference will take place against the most dramatic background in history. The world is changing before our very eyes. We must keep our heads cool and our hearts strong if we are to salvage the values which all Americans hold dear.

Mr. President, these are turbulent times. In Africa, men and women are awakening from the slumber of centuries. In Asia, the surging spirit of nationalism is sweeping away the bonds of the 19th century, in a desperate grasp by the people there for a place in the sun. In the Soviet Union, a political philosophy which openly challenges the concept that men are born free is thrusting communism into new spheres of worldwide influence. In Latin America, a restlessness grips the whole continent. In Europe, political tides are rising and falling, and men and women live on the precipice of danger and destruction.

Our President is going forth to deal with these challenging problems. At best, the situation will be very difficult to handle. But it can be complicated beyond recognition.

It can be complicated if throughout the world there is a feeling that our Nation is divided by its fears. It can be complicated if in other lands it is felt that ours is a Nation which has been split by suspicion.

Mr. President, at times there is an aspect of our political system which can create that impression. Frequently, it is difficult for other nations and other peoples to understand how we in the United States operate under our democratic system. An outsider can look at

our land and can come to the conclusion that the West fears the East, that the South distrusts the North, that the farmers fear the politicians, that labor fears management, and that Republicans and Democrats spend their time lambasting each other hammer and tongs.

Mr. President, if our system were carried to an extreme, that would be so. If we were incapable of admitting the concept that an adversary can be acting in good faith, then we could be destroyed. But, Mr. President, I believe our system has the vitality to survive.

We are approaching an important election which could easily be the dividing line of the 20th century. In that election, all the issues will be debated fully, frankly, at length, and, I am sure, heatedly. This is as it should be, and as it must be. But in this debate, I hope and believe that we shall close our ears to the hate mongers, that we shall debate the real issues with all the maturity and all the objectivity we can muster.

When our President is at the summit conference, I want him to feel the buoyancy of a united country. The President is a member of a political party with whose concepts I do not agree. But he is still our President, and he will continue to be our President until next January. He is the one who must speak for our Nation; and practically all of us are Americans before we are partisans.

I also want to feel that our next President, regardless of his party, will be backed by the same unity of purpose when he speaks for this country. The times are much too important for anything else.

Yes, Mr. President, there is a time for partisanship; that is when we present the issues; that is when we ask the American people to decide between the parties.

But, Mr. President, there is also a time for unity. That is when the decision has been made, and when our Government must act for all the people.

We cannot, and we must not, permit our Nation to be divided either by the clever use made by Nikita Khrushchev of the U–2 plane incident or by internal hatreds of race, of creed, of religions, of color, or sections, or of personalities. When our President goes to the summit conference, he can tell Premier Khrushchev in all confidence that this land, our own America, is united. We debate issues, and we debate them heatedly. But there is one issue that is beyond debate: that is our united determination to preserve our freedoms of discussion, of religion, of the right to disagree, and of the right to live in a land that is governed by law.

Mr. DIRKSEN. Mr. President, the majority leader merits the commendation and the congratulations and the thanks of the country for the observations he has made with respect to the necessity for restraint at a time when the summit conference is soon to take place in Paris, and the Chief Magistrate of this country will go there to represent our country.

When the President leaves this country tomorrow for Paris, he will go not only as President of all the people, but he will go as the Commander in Chief of the Armed Forces of the country. It would certainly be amazing for the highest officer elected within the gift of the people to go abroad for a conference of such momentous importance and feel that the specter of doubt had to dog him as he went into that conference and into the interchanges between him and those who will be sitting around the conference table.

As the majority leader pointed out, this conference is important and momentous, because it involves the continuing peace of the world, and it involves the security and survival of our own country.

It would be amazing if a commander had to move into battle never quite sure whether he had to entertain some doubts as to whether all of them were with him at a time when great decisions had to be made.

This is, indeed, a time for unity and restraint. I saw a brief reference to an address which was made yesterday, which I shall not identify further than that, and I thought it was rather unfortunate because of some terms which were used.

I think the Congress in itself is to be congratulated on the restraint it has shown about this whole U–2 incident. We had a briefing session on Monday. It was attended by Members of both bodies of Congress, from both sides of the aisle. And when it was concluded, it was agreed that the Secretary of State should speak for everybody and make a formal statement; and, with the exception of a laudatory and commendatory statement made in another branch of the Congress, we carried out that agreement in full. I think it indicates the restraint the Congress manifests. Even though it is fair to assume that Members of Congress have access to confidential and secret data, they still showed restraint, whereas sometimes that restraint is not shown by others.

Mr. President, there is a place for this center aisle in our deliberations as we differ on domestic matters and sometimes on matters of foreign relations; but that time and that circumstance must be put aside when the Commander in Chief, when the President of the country, goes to the conference table, there to cross sabers, so to speak, on great issues. He must feel that his hand is being held up, and that we will support him, and that he speaks for a unified country.

I commend the majority leader for the statement he made this morning, because I think it will give the President great heart. I fully share and concur in those sentiments.

Mr. MANSFIELD. Mr. President, I, too, on the eve of the President's departure for Paris tomorrow, to engage in a summit conference which may have momentous consequences, commend the majority leader for the statement he made earlier today, and also the minority leader for his endorsement of that statement. As always, the majority leader has performed a distinct service in behalf of the country as a whole.

What I have to say is not presented in collaboration with what the majority leader has already said, nor, as one can observe, were the remarks by the distinguished minority leader. However, I have been thinking on this subject, and thinking of the problems which will confront the President as he represents all of us in Paris.

Mr. President, the events of the past week should bring home to all—to the Russians, to Americans, and to peoples everywhere—a realization of how slender is the reed by which we cling to a civilized survival. That is the fact and it ought now to be visible to all. Yet this fact, this blazing fact, is in danger of being lost. National passions rise up on all sides to overwhelm it. The struggle of propaganda takes precedence over it. The incident is appraised not in terms of its deep implications for the present state of the world's tensions but in terms of whose equipment is better and the present level of skills on each side for penetration, defense, and counter-penetration, and even photography.

Let me say with all the seriousness that I possess, if this game goes on in its present vein—this game of propaganda-counter-propaganda, this game of probe and counterprobe—there will indeed be a wreckage to study, a monumental wreckage. But it will be for some other generation, not this one, to study it. For the wreckage will be not just a plane. It will be the charred remnants of the civilization which houses living mankind.

That is the grim and fundamental reality which confronts the chiefs of state on the eve of the summit conference. If their attention remains fixed upon it, there will be no room at that meeeting for displays of outraged indignation on anyone's part. There will be no room for propaganda-plays designed to bring to any nation the label of sole custodian of peace or the sole source of provocation to war.

At this critical juncture the four men who will meet are in every sense the principal guardians of humanity's highest hopes—perhaps of the human species itself. This may well be the decisive moment when the deadly game begins to end in the beginnings of a beginning of a durable peace, or drifts into the path of inevitable war. If they maintain that perspective these men will put aside and they will urge their peoples to put aside the dangerous provocations and the glib propaganda. They will see these provocations, this propaganda, for what they are, fragments embedded in the great wound which festers in mankind and threatens the very existence of civilization.

It is with this perspective that I hope Mr. Khrushchev will go to Paris. It is with this perspective that I feel sure Mr. Eisenhower will go to Paris.

Mr. Eisenhower will speak at the summit on behalf of all of us—Democrats and Republicans alike. That is the way under our constitutional system; there is no other. Anger, consternation, or even revulsion at the events of the past week do not alter that fact. As the President carries our common hopes for progress toward a more durable peace so, too, should he command our common support.

There will be a time to explore the grave questions which the events of the past week have raised in this Nation. Enough has already been said to make it clear that these questions must be examined thoroughly, relentlessly. But the need now is to provide the fullest support for the President so that he may proceed with this meeting in a fashion which advances the hopes of the people of this Nation for peace.

May God go with him.

Mr. SALTONSTALL. Mr. President, I came to the Chamber in time to hear the words of the assistant majority leader. I have read the statement of the majority leader. I wish to commend them both for joining in what I know is the feeling of all of us, that when President Eisenhower goes to Paris he will go with the united support of all of us behind him.

Over the years I have known the President I have heard him speak many, many times of his desire to get a more peaceful world. I am confident he is going to Paris to do his utmost to attain that goal and to solve some of the very difficult problems which face us today.

When the majority leader and the assistant majority leader speak for unity in our desire for the success of the President, it is mighty helpful to him, I know, and it coincides with the feeling of all of us who want and pray for a better and more peaceful world.

Mr. PROXMIRE. Mr. President, I, too, should like to join my majority leader and assistant majority leader in their remarks about the coming summit conference and their hopes and prayers in which all of us, as Democratic Senators, concur, that the President may have success at the summit conference.

There have been times when I have differed with the distinguished majority leader. This certainly is not one of them. I am enthusiastically in support of his position. The majority leader has set a fine example for us, perhaps in many ways an unprecedented example. Not often under similar cirmcumstances has the opposition party refrained from criticism.

The Democratic Party is sorely tempted, of course, in an election year, a few months before an election, to make political capital out of the tragic developments involving our plane's capture by Russia, 1,300 miles inside Russia on May 1. Thanks to the leadership of the Senator from Texas, I am sure the Democrats throughout the country will recognize, as he said so well, that this is much too important an occasion for Democrats to politically exploit any partisan differences. Freedom, peace, even survival may hang on these fateful summit deliberations.

Mr. President, I also welcome the assurance of our leader that the Senate and the Congress will quietly, thoroughly and carefully investigate this situation, and take whatever action Congress can take to attempt to secure correction, and to assure that this country will be prepared to prevent the recurrence of the misstatements and lack of responsibility that have been so tragically revealed by this incident.

Mr. YOUNG of Ohio. Mr. President, all of us fervently hope for the success of the summit conference. Our best wishes go with President Eisenhower, as he attends the conference overseas with the head of the Soviet Union. We sincerely hope that the summit conference may lessen some of the tensions, and relieve to some degree our justified fears of further aggressive acts and belligerent action on the part of Mr. Khrushchev, the dictator of the Soviet Union.

Mr. President, nuclear war is unthinkable. The nations of the world must disarm.

Ever since early man discovered that a club could convince his neighbor more easily than a conference, mankind has been embroiled in recurrent wars of ever-increasing ferocity and destruction.

All wars have been horrible, filled with agony and death and the aching of mothers' hearts. But never before has war threatened the total annihilation of mankind.

Today, war has lost all meaning as an instrument of policy. To all who remember the horror of Hiroshima and Nagasaki, it is clear that there must never be another war.

It is a fact, Mr. President, that man has outgrown war. He has made it both impossible and impractical. The wonders of science—in this case, questionable wonders— have made it worse than folly, worse than calamity, worse than tragedy. They have made it insanity.

Mankind now controls the power to eliminate himself and to erase the great achievements of his civilization. If there is sanity left in our species, this will never happen.

Mr. President, recently the United States and the Soviet Union embarked upon disarmament negotiations. Though negotiations now are in recess, there is great hope everywhere that when they resume after the summit conference genuine progress will be made.

These talks must not fail. The art of destruction has grown too refined to permit them to fail.

In the near future, lesser nations will develop atomic and hydrogen bombs and will themselves become threats to the future peace of our world.

Before this happens, sanity must prevail over insanity.

Disarmament is the only answer to this dilemma. The leapfrog game of the arms race—where first one nation is ahead, then another—certainly cannot be the answer indefinitely.

History of the 20th century to this good hour demonstrates that armaments races between nations led to World Wars I and II. We must end the armament race with the Soviet Union and Red China by definite agreements plus safeguards; else the most terrible of all world wars is likely to be precipitated.

Mr. President, my view is that the Soviet Union now recognizes that in any war there can be no victory, for the spoils of victory would be nothingness. My view is that the people of the Soviet Union seek peace and want disarmament and that they, as we, want to devote their energies and resources to improving the lot of their own people.

But to speak disarmament is easier than to achieve it. We must be prepared for long, tedious—often discouraging—negotiations. We must be prepared to compromise.

This has been the case with negotiations to permanently end nuclear weapons testing, and we are now near that essential goal.

Only an ostrich which has kept its head in the ground would say the negotiations, if they succeed, have not been worth it.

So it is with disarmament. Years of negotiations, if they achieve the goal, will repay us with relief, with security, with safety, and with the comforting assurance that mankind will endure and will not commit the final and irrevocable insanity of total self-destruction.

EXCUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON FEDERAL CONTRIBUTIONS PROGRAM

A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting, pursuant to law, a report on the Federal contributions program, for the quarter ended March 31, 1960 (with an accompanying report); to the Committee on Armed Services.

AMENDMENT OF TITLE VIII OF NATIONAL HOUSING ACT

A letter from the Secretary of Defense, transmitting a draft of proposed legislation to amend title VIII of the National Housing Act, as amended, and for other purposes (with an accompanying paper); to the Committee on Banking and Currency.

USE OF SURPLUS GRAIN FOR EMERGENCY USE IN FEEDING WILDLIFE

A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

AMENDMENT OF SECTION 507 OF CLASSIFICATION ACT OF 1949, RELATING TO BASIC COMPENSATION IN DOWNGRADING ACTIONS

A letter from the Attorney General, transmitting a draft of proposed legislation to amend section 507 of the Classification Act of 1949, as amended, with respect to the preservation of basic compensation in downgrading actions (with an accompanying paper); to the Committee on Post Office and Civil Service.

RESOLUTIONS OF GENERAL COURT OF MASSACHUSETTS

The ACTING PRESIDENT pro tempore laid before the Senate resolutions of the General Court of the Commonwealth of Massachusetts, which were referred to the Committee on Post Office and Civil Service, as follows:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION INCREASING THE COMPENSATION OF POSTAL EMPLOYEES

Whereas there is now pending before the Congress of the United States legislation, including H.R. 9883 and H.R. 9977, which would increase the compensation of postal employees; and

Whereas the Post Office Department requires adequate means for attracting and retaining efficient and well-qualified personnel in order to maintain the operations at a high level of service: Now, therefore, be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation that will increase the compensation of all postal employees; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of the Congress, and to each Member thereof from this Commonwealth.

Adopted by the senate, April 25, 1960.

IRVING N. HAYDEN,
Clerk.

Adopted by the house of representatives in concurrence, April 27, 1960.

LAWRENCE R. GROVE,
Clerk.

Attest:

JOSEPH D. WARD,
Secretary of the Commonwealth.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. GREEN, from the Committee on Foreign Relations, without amendment:

S. 3074. A bill to provide for the participation of the United States in the International Development Association (Rept. No. 1349).

By Mr. PASTORE, from the Committee on Interstate and Foreign Commerce, without amendment:

S. 1235. A bill to authorize the Secretary of Commerce to enter into contracts for the conduct of research in the field of meteorology and to authorize installation of Government telephones in certain private residences (Rept. No. 1348).

By Mr. DIRKSEN (for Mr. O'MAHONEY), from the Committee on the Judiciary, without amendment:

H.J. Res. 602. Joint resolution authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week (Rept. No. 1350).

Mr. MANSFIELD subsequently said: Mr. President, I ask unanimous consent that the unfinished business may be temporarily laid aside and that the Senate proceed to the consideration of House Joint Resolution 602.

The PRESIDING OFFICER. The joint resolution will be stated for the information of the Senate.

The LEGISLATIVE CLERK. A joint resolution (H.J. Res. 602) authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the joint resolution.

The PRESIDING OFFICER. The joint resolution is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the joint resolution.

The joint resolution (H.J. Res. 602) was ordered to a third reading, read the third time, and passed.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. HILL, from the Committee on Labor and Public Welfare:

Malcolm M. Willey, of Minnesota, to be a member of the National Science Board, National Science Foundation;

Harry P. Anastopulos, and sundry other candidates, for personnel action in the Regular Corps of the Public Health Service;

David Brand, and sundry other candidates, for personnel action in the Regular Corps of the Public Health Service; and

Henry H. Kyle, and sundry other candidates, for personnel action in the Regular Corps of the Public Health Service.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MORSE:

S. 3543. A bill for the relief of Willia Niukkanen (also known as William Niukkanen, and William Albert Mackie); to the Committee on the Judiciary.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. WILEY:

S. 3544. A bill to amend the Menominee Termination Act; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. WILEY when he introduced the above bill, which appear under a separate heading.)

By Mr. GRUENING (for himself and Mr. BARTLETT):

S. 3545. A bill to amend section 4 of the act of January 21, 1929, 48 U.S.C. 354a (c), and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. GRUENING when he introduced the above bill, which appear under a separate heading.)

By Mr. MANSFIELD (for himself and Mr. MURRAY):

S. 3546. A bill to amend the act of June 18, 1934 (48 Stat. 986); to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MANSFIELD when he introduced the above bill, which appear under a separate heading.)

By Mr. BYRD of Virginia:

S. 3547. A bill relating to the recovery from liable third persons of the cost of medical care and treatment furnished by agencies and departments of the United States to persons authorized by law to receive such care and treatment; to the Committee on Armed Services.

(See the remarks of Mr. BYRD of Virginia when he introduced the above bill, which appear under a separate heading.)

By Mr. DIRKSEN:

S. 3548. A bill to amend the Norris-LaGuardia Act, the National Labor Relations Act, and the Railway Labor Act; to the Committee on the Judiciary.

(See the remarks of Mr. DIRKSEN when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLOTT:

S.J. Res. 192. Joint resolution designating September 22 of each year as Emancipation Proclamation Day, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. ALLOTT when he introduced the above joint resolution, which appear under a separate heading.)

WILLIA NIUKKANEN

Mr. MORSE. Mr. President, I speak with a rather sad heart for a very few moments about a cause célèbre in my State. This situation can be much misunderstood—and no one knows that better than I do—unless people are willing to study the record.

I speak of the famous Willia Niukkanen, or so-called William Albert Mackie, case. It involves the case of a house painter in my State who is the son of Finnish parents who came to the United States, gave birth to several children in the United States, and then returned to Finland for a short visit. While they were there, Willia Niukkanen was born—in Finland. As a babe, he spent 9 months in Finland, while his parents were visiting the country where they originated. Then he was brought back to the United States.

It is alleged that in 1937 to 1939 he attended Communist Party meetings in the State of Oregon. He denies it. He denies, at least—as is set forth in an affidavit to which I shall refer in a moment—that he knew he was attending a Communist meeting.

It is perfectly clear that this man is not well educated. He thought he was attending meetings which sought to find employment and be of economic help, during the depression, to people who were unemployed.

I am perfectly willing to argue the case from the standpoint that he, in fact, did attend Communist meetings; and I am willing to argue the case from the standpoint that from 1937 to 1939 he might have been duped into joining the Communist Party. But I wish to discuss this case from the standpoint of the great moral principle that in this Government we should not be a party to man's inhumanity to man.

In this case, several ex-Communists testified against Willia Niukkanen, and said he was a member of the Communist Party in 1937 and 1939, before World War II, a war in which thousands of American boys died at a time when Russia was supposed to have been an ally of our country, although during the war I said Russia was not an ally; she just happened to be a country with a common enemy.

But here is an uneducated, uninformed man who was tried by immigration officials. He did not have the benefit of a jury trial, because juries are not used in immigration proceedings of this kind. Our immigration officials decided that he had been a member of the Communist Party. They seek now to deport him to Finland. He is 51 years old. He has not been in Finland since he was a babe in arms.

Mr. President, this Capitol dome is not going to fall if this house painter in Portland, Oreg., remains in the United States. My State is highly aroused about it. The Finnish people of my State, and there are thousands of them, cannot understand the case.

The U.S. Supreme Court, by a decision of 5 to 4, handed down a decision against Willia. In a per curiam opinion, the

majority, without going into the facts at all, said they would have to sustain the finding of the immigration officials, although one cannot read the majority decision without realizing that the Court recognized the inhumaneness of its decision.

Mr. Justice Douglas issued a classic and historic dissenting opinion. Concurring in the dissent were the Chief Justice, Justice Black, and Justice Brennan.

This case involves a 51-year-old man, with a father who is 79 and depends on him for support. He owns his home and his automobile; he was a member of the Oregon State National Guard; he was drafted into the U.S. Army, and received an honorable discharge.

I want to say that the Congress ought to reverse the decision of the majority of the U.S. Supreme Court, which carries out a principle of man's inhumanity to man, and we ought to see to it that justice to an individual is done in this case. I am for keeping the man here. He could be kept under the strictest of surveillance, if anybody, after reading the record, really thinks he is of the slightest threat to the security of the country. But somebody ought to be willing, as I am today, to call the attention of the Congress to the inhumaneness of these acts before it is too late, because, as the court has pointed out, Congress is the last resort. It is up to the Congress now.

So, Mr. President, I am offering a bill today, and I ask for urgent and immediate consideration of the bill.

I now introduce the bill, and ask to have it appropriately referred, and printed at this point in the RECORD.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3543) for the relief of Willia Niukkanen (also known as William Niukkanen, and William Albert Mackie), introduced by Mr. MORSE, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the Unites States of America in Congress assembled, That the Attorney General is authorized and directed to discontinue any deportation proceedings and to cancel any outstanding order and warrant of deportation, warrant of arrest, and bond, which may have been issued in the case of Willia Niukkanen (also known as William Niukkanen, and William Albert Mackie). From and after the date of enactment of this Act, the said Willia Niukkanen (also known as William Niukkanen, and William Albert Mackie) shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and order have issued.

Mr. MORSE. I ask unanimous consent that an editorial from the New York Times of April 21 be printed in the RECORD at this point. The editorial makes the point I am making today, for the application of the principle of humanity, rather than inhumanity, to this case. I fail to understand what would be accomplished, in the name of decency, by sending this 51-year-old man to Finland, about which country he knows nothing, where he would be a perfect stranger, when we should keep him in this country; and I am willing to have him kept here under surveillance, if anyone thinks he is a dangerous character. But when one reads the record, he will realize that he is not dangerous, and that he was merely misguided from 1937 to 1939.

Mr. President, I also ask unanimous consent that an affidavit be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, the editorial and affidavit will be printed in the RECORD.

The editorial and affidavit presented by Mr. MORSE are as follows:

DEPORTATION CRUELTY

Willia Niukkanen is a 51-year-old house painter in Portland, Oreg., who was born in Finland but came to this country when less than a year old. Between 1937 and 1939 he was a member of the Communist Party in Portland. There is no evidence that he personally advocated revolution, and he is said to have had no intellectual interest in Marxist doctrine.

A law first enacted in 1940 and reenacted by Congress in 1950 and 1952 requires the deportation of every alien who has ever been a Communist Party member in the United States—no matter how long ago or for how short a time. Because Willia Niukkanen had never become a citizen, deportation proceeding were begun against him. This week the Supreme Court ruled, 5 to 4, that his party membership had been sufficiently proved and that he must go.

It is difficult to disagree with the dissenters' protest against "exile" of "a man who has lived here for every meaningful month of his life." But the onus for this cruel deportation lies more with Congress than with the Supreme Court. The Court years ago, perhaps regrettably, upheld the constitutionality of this statute. Now it is up to Congress to amend a law whose rigid condemnation of every alien who was ever a Communist, however briefly and however much his views have since changed, serves no valid purpose.

AFFIDAVIT

STATE OF OREGON,
County of Multnomah, ss:

I, Willia Niukkanen, also known as William Niukkanen, also known as William Albert Mackie, being first duly sworn on oath, do depose and say:

That I am a resident of the city of Portland, Oreg., with my address at 4326 North Montana Street. That I have lived at this residence for 11 years, and prior to that time I lived at 3820 North Gantenbein Street, Portland, Oreg., for about 8 years. Before then I lived at 3921 North Gantenbein Street, Portland, Oreg. I have been a resident of the city of Portland since I was about aged 10. Before then I lived with my family in Duluth, Minn.; Minneapolis, Minn.; St. Paul, Minn.; Butte, Mont.; and in the State of Washington and State of California.

That I was born in Viipuri, Finland, on November 24, 1908.

I was born in Finland because at the time of my birth my parents were visiting that country. They had originally come to the United States in about 1902 but returned for a 2-year visit to Finland, where I was born.

I have two sisters living at this time. The first is named Eileen Van Beek, who is a native-born citizen and a resident of Portland, Oreg. The other sister is Lillian Mackie, also a native-born citizen, who resides with my father at 3820 North Gantenbein Street, Portland, Oreg. That I had two brothers, both of whom are now deceased. That an older brother, William, was born in the United States and died in Finland on the visit of my parents during which I was born. My other brother, Elmer Mackie, was lost at sea near Wake Island in 1941 or 1942, after the Japanese attack on that island. He was employed as a civil construction worker and was apparently lost at sea.

My father is named William T. Mackie and he is by trade a tailor and lives with my sister, Lillian, at 3820 North Gantenbein Street, Portland, Oreg.

My mother, Ida Mackie, died in 1956, while a resident of Portland, Oreg.

With respect to my education, I completed Jefferson High School in the city of Portland, Oreg., in about 1929.

With respect to my employment, I have been a painting contractor since 1947. Prior to that time I was employed in the Vancouver, Wash., and Swan Island, Portland, shipyards from 1942 to 1945 as a welder and leadman. Prior to that time I had various jobs, including employment with Libby, McNeil & Libby, in Portland, and the U.S. Army Engineers, doing road construction.

In June 1945 I married Irene Hodgdon, who had a son, Stuart, by a prior marriage. He is now approximately 15 years old. I was divorced by my wife about October 1957 without any contest on my part. I did not legally adopt Stuart and I am under no legal obligation for either child support or alimony.

With respect to military service, I enlisted in the National Guard at the age of 16 years and served for approximately 2 years. In 1940 I was drafted into the Army for about 3 months and then I was released because of age. In 1941, I was called back into service but remained on duty only about 3 days before I was rejected, for medical reasons I believe. I was given an honorable discharge.

I have applied for naturalization as a citizen three times. The first time was in 1937 or 1938, the second was in 1941, and the third was in 1944 or 1945. Each time I was rejected but I was not told why I was rejected.

The only criminal record which I have is for two minor offenses. The first one occurred in The Dalles, Oreg., in about 1928, where I was arrested for stealing a chicken and given a 30-day sentence. I was with another man and we were very hungry inasmuch as we hadn't eaten for some time and he actually stole the chicken. He escaped detection but I was caught. The other offense occurred in the State of Idaho during the time when that State had alcohol prohibition in force. I was convicted of possession of some beer and fined $30.

My father is aged 78 or 79 and is employed as a tailor part time in Portland. He is in poor health, having a heart condition. He expects to retire from work completely in the very near future as he is unable to continue his employment and is growing progressively weaker. When he retires, it will be up to the children to take care of him and provide for him. My sister Eileen is not financially able to help and my sister Lillian, while she is a practical nurse, is not financially able to support him. I will therefore have to contribute to his support.

I wish to state that I make this affidavit in support of my request that a private bill be introduced into Congress to permit me to stay in the United States. I believe that my deportation would be a very great hardship on my father and the rest of my family in Portland, and also an extreme hardship upon me, inasmuch as I was in Finland only less than a year, having come to

the United States in 1909. I know a little Finnish, because I have heard it spoken in my home and by friends who were born in Finland, but I do not have any connections, family, or other place to go in Finland should I be deported to that country.

I wish to further state that although I have been accused of being a member of the Communist Party of the United States, I have never been a member of that party and I do not advocate the overthrow of the U.S. Government by force or violence. Neither do I advocate the principles of communism. I have always considered myself to be loyal to the United States and to the Constitution thereof. I have always been and am still willing to engage in military service on behalf of the United States against any foreign power that might become its enemy.

Further deponent sayeth not.

WILLIA NIUKKANEN.
WILLIAM NIUKKANEN.
WILLIAM ALBERT MACKIE.

(Willia Niukkanen, also known as William Niukkanen, also known as William Albert Mackie.)

Subscribed and sworn to before me this 8th day of January 1958.

GERALD H. ROBINSON,
Notary Public for Oregon.

(My commission expires Mar. 3, 1961.)

Mr. MORSE. Mr. President, I ask unanimous consent that a legal analysis of this case by Mr. Nels Peterson be printed in the RECORD at this point.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

APRIL 27, 1960.

Re deportation of Willia Niukkanen known throughout his life as William Albert Mackie.

Senator WAYNE L. MORSE,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: As a factual and legal background to merit introduction of a bill to permanently prevent deportation of the above named, herewith follows a brief outline of his life and the legal aspects of his deportation.

William Albert Mackie was born in Finland on November 24, 1908, at a time when his father and mother were visiting in Finland after having emigrated from Finland to the United States of America. On September 5, 1909, his mother carried him across the border of the United States at Sault Ste. Marie, Mich., for permanent residence in the United States of America. His father was a tailor by trade and the Mackie family lived in California, Montana, Minnesota, and Washington before coming to Portland, Oreg., in 1919. Here, William Albert Mackie attended grade school and high school. He became a painter by trade. During the thirties, he was among the unemployed. He made application for citizenship in 1939 but apparently did not follow through in order to get his final citizenship papers and his application was dismissed, I believe, in 1946. In 1940 he served in the U.S. Army and was given an honorable discharge in 1944 or 1945. He had previously been in the Active Reserve for 4 or 5 years. In 1926 and 1927 he was in the Oregon National Guard. He married an American citizen who had a son.

On June 17, 1952, a warrant of arrest was issued by the U.S. Department of Justice for his deportation under the Internal Security Act of 1950 (64 Stat. 987). He was arrested pursuant to the warrant in September 1952 for deportation to Finland. The warrant of arrest charged that he was "an alien in the United States in violation of the immigration laws and subject to deportation * * * since his last entry on September 5, 1909, * * * and that after such entry into this country he became a member of the Communist Party of the United States."

A hearing was held upon this warrant of arrest in Portland, Oreg., on May 11, 1953, presided over by a special inquiry officer (a nonlawyer) and prosecuted by an examining officer (a nonlawyer). At this hearing, the first witness called was one Walter Robert Patrick Wilmot who then resided in New York City and who testified that he was the editor of the CIO newspaper known as the Labor New Dealer. This witness ascribed the Labor New Dealer as being Communist controlled. The witness testified that he had been expelled from the Communist Party at the Bridges hearing (July or August 1939). The witness testified that he had seen Mackie at Communist Party meetings and at dances, but testified that Mackie never held an office in the party; that he was never employed by the party nor was he ever a functionary in the sense of representing the party; that he attended a regional meeting at Aberdeen, Wash. This witness testified that the only things discussed at any of such meetings were unemployment and bread and butter topics. The period of time of his (Wilmot's) membership in the Communist Party was from sometime in 1937 until the summer of 1939. Mackie swore he had never seen this witness before to his knowledge in his lifetime. This witness (Wilmot) admitted that during the period of time in question he drank a great deal and he always drank to excess.

Another witness was called at this hearing on behalf of the Department of Justice, named Lee Arthur Knipe. This witness testified to Mackie's alleged attendance at Communist Party dances and at meetings, but that Mackie was never a functionary; that Mackie did not participate in any of the discussions in the "educational group"; that Mackie did not distribute literature and that bread and butter topics only were discussed. The witness Knipe denied conviction of any crimes but was recalled to testify that he had been convicted of the felony of forgery in the State of California.

Mackie did not take the stand to testify in his own behalf at this hearing and on the basis of the evidence received, he was ordered deported. An appeal was taken to the Board of Immigration Appeals in Washington where the order of deportation was affirmed.

Mackie had been released on bail following his arrest and arrangements were made to immediately banish him to Finland following affirmance by the Board of Immigration Appeals.

A suit was filed on his behalf by myself as his attorney for injunctive relief and for a writ of habeas corpus in the U.S. District Court for the District of Oregon. We applied to the Immigration Department for the right to apply for suspension of deportation on the ground of personal hardship upon him and his family. A hearing was held upon this application at which time he testified and swore that he had never been a knowing member of the Communist Party. As an illustration, he was asked the question:

"Question. In the Finnish Hall, or anywhere else, did you attend Communist Party meetings?

"Answer. Well, if I say 'yes' and if I said 'no,' maybe I would not be telling the truth because I really could not tell one way or the other. I went to meetings there. Sometimes maybe they were Communist and maybe they wasn't. It could have been and maybe they wasn't."

He further testified that "any place I went to meetings was always more work and more food."

"Question. As far as you know, that was what the Communist Party stood for during that period?

"Answer. I don't know if they stood for that, but I never heard anything against it."

The suspension of deportation was denied, although hardship was found, on the ground that Mackie's answers were evasive and he did not name persons at a meeting of the Oregon Committee for the Protection of Foreign Born. In other words, he refused to be a stoolpigeon and involve other people at a meeting of a committee headed by Rev. Mark Chamberlain in Portland, Oreg., for the protection and preservation of the rights of the foreign born. A hearing was held before Judge Gus Solomon who affirmed the order of deportation and discharged the writ. An appeal was taken to the Ninth Circuit Court of Appeals which affirmed Judge Solomon. A petition for certiorari was applied for in 1957 and denied on December 16, 1957. Following the denial of certiorari by the Supreme Court of the United States in December 1957, a new proceeding for injunctive relief and for writ of habeas corpus was instituted in the U.S. District Court for the District of Oregon, primarily to test the constitutionality of the Internal Security Act with particular reference to its being a "bill of attainder" and also upon the contention that no "meaningful association" was shown by the Government's evidence within the meaning of the case of *Rowoldt* v. *Perfetto* (355 U.S. 115 (decided December 8, 1957)). Again a hearing was held before Judge Solomon who did not pass upon the constitutional questions raised and held that *Rowoldt* v. *Perfetto* did not fit the Mackie case. An appeal was again taken to the Ninth Circuit Court of Appeals where Judge Solomon was affirmed. A petition for writ of certiorari was granted in October 1959 by the Supreme Court of the United States and the latter was argued by myself and Joseph Forer of the law firm of Forer & Rein, Washington, D.C., on March 21, 1960. On April 18, 1960, a per curiam decision of approximately a page and a half affirmed the order of deportation. A strong dissenting opinion was written by Mr. Justice Douglas, concurred in by the Chief Justice, Mr. Justice Black, and Mr. Justice Brennan. In the dissent, Mr. Justice Douglas stated that one who reads the whole of this record cannot put it down without feeling that here is a man, neither conspiratorial, dangerous, cunning, nor knowledgeable. Petitioner, a painter by trade, represents a microscopic element in the ranks of our labor forces who was caught up in a movement whose ideology he did not understand and whose leaders spoke in terms of bread for the hungry, and jobs for the unemployed." Mr. Justice Douglas further said, "The case is on all fours with *Rowoldt* v. *Perfetto* (355 U.S. 115). The 'solidity of proof' (id., at 120) required for the severe consequences of the deportation of a man who came here when he was less than 1 year old, whose only memory of life is in this land, and who has lived here over 50 years has not been met. The 'meaningful association' with the party which the Rowoldt case requires (id., at 120) simply has not been established here. In this case, as in Rowoldt, petitioner's association with the party was 'wholly devoid of any political implications.'" He further said, "A man who has lived here for every meaningful month of his entire life should not be sent to exile for acts which this record reveals were utterly devoid of any sinister implication."

The foregoing is a brief summary of the turbulent years that have faced William Albert Mackie since September 1952 where he has been tormented by the threat of banishment to a "foreign land" to him. He does not speak the Finnish language nor does he write it. He is able to understand a few Finnish words. His father, in his eighties, continues to live in Portland, Oreg., as do his many friends and acquaintances. His mar-

riage has ended in divorce since the deportation proceedings against him. He was seriously injured in an automobile accident in August 1959.

BRIEF SUMMARY OF THE LAW

A summary of the laws relating to immigration and nationality is found in "Laws Applicable to Immigration and Nationality," 1953 edition, compiled under the direction of Carl B. Hyatt, assistant commissioner, Citizenship Services and Instruction Division, Immigration and Naturalization Service, U.S. Department of Justice, by Edwina Austin Avery, Editor. (Available from Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C.) A comprehensive review of most of the cases relating to immigration and the laws passed are included in "The Constitutional Status of the Lawfully Admitted Permanent Resident Alien" published in volume 68, No. 8, July 1959, and volume 69, No. 2, December 1959, Yale Law Journal by Siegfried Hesse.

The Internal Security Act of 1950 was passed over the veto of President Truman. The act provided that "any alien who is a member of any one of the following classes shall be excluded from admission into the United States: * * * (2) aliens who, at any time, shall be or shall have been members of any of the following classes: * * * C. Aliens who are members of or affiliated with * * * (i) the Communist Party of the United States." It is under this provision that Mackie was sought to be deported. This law is a very extensive act and most confusing to any lawyer who reads it for the first time.

In my opinion, the most important case decided by the Supreme Court of the United States on constitutional questions as they apply to aliens was the case of *Fong Yue Ting* v. *United States* (149 U.S. 698 (decided by a divided court on a Chinese ejection case in 1893)). Joseph Choate was the lawyer for Fong Yue Ting. In this opinion there is reviewed the constitutional powers of the Congress to pass laws affecting immigrants to this "land of immigrants."

I personally believe that the framers of the Constitution of the United States (mostly lawyers) in 1787 intended that the Constitution of the United States should apply to citizens and aliens alike. My belief is based upon article I, section 9 of the U.S. Constitution, which provides in part: "No bill of attainder or ex post facto law shall be passed." I believe the only rational theory of the power of Congress to enact laws relating to immigration can only relate to "regulation of foreign commerce" and if this construction of the U.S. Constitution could be adopted, then all constitutional safeguards would apply to citizens and aliens alike.

With respect to the bill of attainder aspect of Mackie's case and all other cases involving current laws, no decision of the U.S. Supreme Court has ever discussed it with the exception of the language of Mr. Justice Black in dissenting in *Galvin* v. *Press* (347 U.S. 522, at p. 533) where he said:

"Perhaps a legislative act penalizing political activities, legal when engaged in, is not a bill of attainder. But see *U.S.* v. *Lovett* (328 U.S. 303, 315, 316).

The leading cases in the United States on bills of attainder are: *Cooper* v. *Telfair* (4 Dall. 14 (1800)), *Ex parte Garland* (4 Wall. 333 (1867)), *Cummings* v. *Missouri* (4 Wall. 277 (1867)), and *U.S.* v. *Lovett, supra* (1943).

Bill of attainder is discussed in *American Communications Association, CIO* v. *Dowds* (339 U.S. 382 (1950)).

Turning to relatively recent cases, the first case of importance dealing with deportation is *Harisiades* v. *Shaughnessy* (342 U.S. 580 (1952)), wherein it was held that the Immigration Act of 1940 was a constitutional act even though having retroactive effect for past membership in an organization which advocated the overthrow of the Government by force and violence.

Galvin v. *Press* (347 U.S. 522 (1954)) declared that it was sufficient for deportation under the Internal Security Act of 1950 that "the alien joined the party, aware that he was joining an organization known as the Communist Party which operates as a distinct and active political organization, and that he did so of his own free will" (p. 528).

Rowoldt v. *Perfetto* (355 U.S. 115), was an opinion by Mr. Justice Frankfurter which held that Rowoldt, an elderly man who had spent most of his life in America, could not be deported under the evidence submitted by the Government consisting solely of his admission, years before his deportation, that he had belonged to the Communist Party and had worked in a Communist Party bookstore. Mr. Justice Frankfurter said that the solidity of proof required had not been met and that no meaningful association with the Communist Party had been shown. Rowoldt at his hearing for deportation refused to testify.

In each of the foregoing cases, the Court was sharply divided.

At the argument before the Supreme Court of the United States on March 21, 1960, the Assistant Solicitor General, Mr. Davis, who argued for the Government, stated that there were 16 cases in the United States pending decision on this subject of deportation and that there were 200 cases on deportation for past political activities in the administrative stage.

I believe it can be reliably estimated that the Internal Security Act of 1950 and its concomitant act of June 27, 1952 (66 Stat. 162), known as the Immigration and Nationality Act, affect 15 million persons, either aliens or naturalized citizens. Those of us having familiarity with the Constitution of the United States and its historical background know that the current laws relating to immigration, insofar as they deal with banishment of persons admitted for lawful residence and who have lived a good part, if not most of their lives in this country, are out of place in the long view of American democracy. I personally am convinced that they are a clear example of a bill of attainder so well known by the framers of the Constitution, as well as constituting an unconstitutional invasion of rights guaranteed under the first amendment as to freedom of speech, association, and assembly, and the due process clause of the fifth amendment which declares that "no person * * * shall * * * be deprived of life, liberty, or property without due process of law."

I respectfully urge that all responsible legislators of good will reconsider the severities imposed by this barbaric act which imposes the cruelest punishment for past political activities, lawful when engaged in, and, where the courts have felt constrained not to grant relief, that the Congress enact special legislation, as they may and have done on many occasions in the past under this act to remedy a wrong.

The tragic story of William Albert Mackie portrays a classic example of man's inhumanity to man.

Congress can show its dedication to American democracy by continuing his presence in the only land which he knows, which he loves, and has demonstrated a willingness to fight and die for. Such legislative action would demonstrate to the world that American democracy still exemplifies justice and mercy. Such action would aid in restoring in the eyes of the world the position, once held, that our system of government affords a superior system over that of any other yet devised by man. Failure to do so will brand our Government as despotic and ruled by tyranny. Enactment of this legislation will give meaning to Emma Lazarus' inscription on the Statue of Liberty:

"Give me your tired, your poor
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed, to me!
I lift my lamp beside the golden door."

Best regards.

Yours sincerely,

NELS PETERSON.

Mr. MORSE. Mr. President, I also ask unanimous consent that a detailed statement I have prepared on this case, which I shall not take the time to read, be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

This is a bill for the relief of Willia Niukkanen, from a deportation order. They say that from 1937 to 1939 Willie was a member of the Communist Party and that he must therefore be sent to Finland. He has exhausted his administrative remedies. His appeals to the courts have failed. Now, Willie, and a whole host of his neighbors in Portland, Oreg., would like Congress to make it possible for him to stay in the United States and go on painting houses.

The Congress can do this. And what I've learned about the case of Willie Niukkanen makes me believe that Congress should and will do it.

Before I say anything about the Niukkanen case, though, let me tell you some things about Willie himself. Mr. and Mrs. Niukkanen, Willie's parents, came from Finland to the United States in 1902. Since that time the Niukkanens have had five children. Only four of them, however, were born in the United States. It was Willie's fate to be born in Finland while his parents were visiting the old country in 1908. In 1909 they returned to the United States bringing 10-month-old Willie with them. Though Willie was born in Finland, he has no memories of any land but the United States.

The Niukkanens moved about for a while. From Minnesota to Montana. From Washington to California. In about 1919, however, they settled in Portland, Oreg., and there they all have stayed. All that is except an older brother who died during the same visit to Finland on which Willie was born and a younger brother who was lost at sea near Wake Island after the Japanese attack in 1942.

Willie grew up in Portland and joined the National Guard when he was 16. He spent about 2 years in the Guard then finished high school in 1929. There is no need to remind you what happened in 1929. Portland was not much different from any place else in the United States. New York had no monopoly on stock brokers selling apples. And for the next 10 years we had our share of breadlines too. This was the decade in which Willie came to manhood. It was about this time, also, that Willie had two brushes with the law. In The Dalles, Oreg., Willie and another hungry lad decided to steal a chicken. Willie's friend got the chicken and also got away. Willie was caught and sentenced to 30 days. Another time he was fined $30 for having some beer in Idaho. Meanwhile Willie worked when he could, where he could. He was with a foodpacker in Portland, and did road construction with the Army Engineers.

Willie was drafted in 1940. He was a little older than most of his peacetime buddies and was honorably discharged "for the

convenience of the Government" because of illness, with an excellent character rating. He was recalled in 1942 but was turned down for medical reasons. Thereafter, he went to work in the Vancouver and Swan Island Shipyards as a welder and leadman. In 1947 he became a painting contractor in Portland. He bought a house for $3,100 which is now worth about $6,000 and he owns a car. His father is 78 years old and a part-time tailor. He is about to retire because of a heart condition and when he does Willie will have to contribute a large measure to his support. Willie's sisters can help care for their father but the financial burden will be largely Willie's. He has been making about $4,000 a year, lately. Does this sound like the life of a man who poses a threat to the national security?

Willie's immigration troubles started in 1952 when the Department of Justice issued a warrant for his arrest for deportation under the Internal Security Act of 1950 (64 Stat. 987). The warrant charged that he was an alien who entered the United States on September 5, 1909, and that after such entry "he became a member of the Communist Party of the United States."

The hearing on the warrant was presided over by a special inquiry officer who was not a lawyer. The officer who presented the case against Willie was not a lawyer, either. There were just two witnesses against Willie. One of them admitted that during this period 1937–39 he "drank a great deal" and "always drank to excess." The other denied conviction of any crimes, but was recalled to testify that he had been convicted of the felony of forgery in the State of California. Both witnesses had been Communists. Their testimony was never heard by a judge. Whether these witnesses were reliable or not is questionable. But let me summarize their testimony against Willie, not in my words, but in the language of the dissenting opinion concurred in by four Justices of the U.S. Supreme Court, including the Chief Justice:

"They testified that petitioner was a member of the Communist Party from 1937 to 1939 in Portland, Oreg. One of them testified that petitioner had assisted in the circulation of a paper, Labor New Dealer, which apparently was an organ of the party. There was evidence he paid dues to the party of 25 cents a month and that he attended both open and closed meetings of the party. But even these two ex-Communists who appeared against petitioner said that there was no discussion of ways and means to overthrow the Government at those meetings; that only problems such as labor conditions, relief, and the like, were discussed. One also swore that petitioner never advocated the overthrow of the Government. Petitioner's interest in the party, according to one of these hostile witnesses, was a result of 'the sufferings of the people in the depression,' and he was 'very sympathetic toward their welfare.' This witness agreed that petitioner was not an intellectual interested in 'theory' or 'political discussion.' His interests were 'in bread-and-butter topics of the day, what to do for unemployment and relief.' Nor had petitioner ever taught the Communist doctrine nor distributed its literature, except for the Labor New Dealer.

"These two ex-Communists testified that petitioner attended dances that the party arranged in Portland. But they said he never held an office in the party, nor was ever employed by the party, nor was ever a 'functionary' in the sense of representing the party. He attended a regional meeting at Aberdeen, Wash., where various speakers, according to one ex-Communist, gave 'glowing accounts' of their work for the party, 'more or less fabricating' their achievements."

So much for the testimony against Willie. Now let's turn to the record and hear what Willie had to say for himself:

"Question. In the Finnish Hall, or anywhere else, did you attend Communist Party meetings?

"Answer. Well, if I said yes, and if I said no, maybe I wouldn't be telling the truth, because I really couldn't tell one way or the other. I went to meetings there. Sometimes maybe they were Communist and maybe they wasn't. It could have been and maybe they wasn't.

* * * * *

"Question. Have you been a member of the Communist Party of the United States or any branch or affiliate or organization by that name or any similar name?

"Answer. Knowingly, I haven't; no.

* * * * *

"Question. Do you believe that membership in the Communist Party now is a lawful political purpose?

"Answer. No. I can't answer questions about that because I don't know. If Congress says it is unlawful, it is unlawful. If it isn't, it isn't. I don't know. If I got the question right, I don't know.

"Question. I am not trying to confuse you. * * * I am trying to find out your feelings toward communism.

"Answer. Naturally I don't—communism or socialism, I don't care what party it is here or any place else, if it has anything to do with overthrowing the Government by force and violence, I don't agree with it, no.

* * * * *

"Question. What was your impression of what the Communist Party was trying to do?

"Answer. Well, the only thing I heard in those days was more relief and more work, and I never heard anything else, no violent overthrow of the Government, or anything of that sort, but anyplace I went to meetings was always more work and more food.

"Question. As far as you know, that was what the Communist Party stood for during that period?

"Answer. I don't know if they stood for that, but I never heard anything against it."

With this evidence and this testimony in mind, is it any wonder that four Justices of the U.S. Supreme Court concurred in saying:

"One who reads the whole of this record cannot put it down without feeling that here is a man neither conspiratorial, dangerous, cunning, nor knowledgeable."

With a minority of the Court, and a majority of his neighbors who concur with us I say: Willie "represents a microscopic element in the ranks of our labor force who was caught up in a movement whose ideology he did not understand and whose leaders spoke in terms of bread for the hungry and jobs for the unemployed. * * * A man who has lived here for every meaningful month of his life should not be sent into exile for acts which this record reveals were utterly devoid of any sinister implications."

The technical legal question resolved by the Supreme Court in the Niukkanen case was whether the evidence against him made Willie subject to deportation under the rule of *Galvan* v. *Press* (347 U.S. 522 (1954)), or saved him from it under the rule of *Rowoldt* v. *Perfetto* (355 U.S. 115 (1957)). Under Galvan an alien can be deported if it is shown that he joined the party aware that he was joining an organization known as the Communist Party which operates as a distinct and active political organization, and that he did so of his own free will. Under Rowoldt it was held that the dominating impulse of that particular alien's affiliation with the party may well have been wholly devoid of any "political" implications and that the record was too insubstantial to establish that petitioner's membership was the kind of meaningful association with the party required by the law to support an order of deportation. In Niukkanen a bare majority of the Court in a very short per curiam opinion resolved this issue against Willie stating in part:

"The determination * * * turns on evaluation of the testimony before the district court. * * * An able judge found that petitioner in denying membership in the Communist Party, unlike Rowoldt who admitted membership but accounted for its innocence, 'perjured himself before, and I believe perjured himself today.' We cannot say that his findings, affirmed by the Court of Appeals, were clearly erroneous and do not support the conclusion of both the lower courts."

However, the four justices who dissented stated:

"The case is on all fours with *Rowoldt* v. *Perfetto* (355 U.S. 115). The 'solidity of proof' (id. at 120) required for the severe consequences of the deportation of a man who came here when he was less than 1 year old, whose only memory of life is in this land, and who has lived here over 50 years has not been met. The 'meaningful association' with the party which the Rewoldt case requires (id. at 120) simply has not been established here. In this case, as in Rowoldt, petitioner's association with the party was 'wholly devoid of any "political" implications' (id. at 120)."

Needless to say I am in complete agreement with the dissenting opinion. But I want to make it very clear to everyone that this bill for the relief of Willie Niukkanen is not going to have any effect whatever on future determinations by the Court nor will it in any way modify the law under which the deportation order was issued. I want to make it clear also that what the courts are doing in cases like this is determining whether or not a particular law written and passed by the Congress requires the deportation of a particular alien. As the judge of the district court said:

"The right to terminate hospitality to aliens and the grounds upon which such determination shall be based are matters solely for the responsibility of Congress and are wholly outside the power of the court to control. *Niukkanen* v. *Boyd* (148 F. Supp. 106, 107 (D.C. Oreg. 1956)) citing *Harisiades* v. *Shaughnessy* (342 U.S. 580, 587, 597 (1953))."

In determining that there is no need for the deportation of Willie Niukkanen I am convinced that the Congress will be acting in the spirit of a statement cited in a memorandum submitted to this body by Senator McCarran in 1951 when the question of the meaning of the words "members of or affiliated with" in the Internal Security Act was being considered by the Senate:

Congress could not have intended to authorize the wholesale deportation of aliens who, accidentally, artificially, or unconsciously in appearance only, are found to be members of or are affiliated with an organization of whose platform and purposes they have no real knowledge. *Colyer* v. *Skeffington* (265 F. 17 (D.C. Mass. 1920), cited at 97 CONGRESSIONAL RECORD 2373).

Mr. MORSE. Lastly, Mr. President, I ask unanimous consent that the Supreme Court decision, which is not very lengthy, be printed in the RECORD at this point.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

SUPREME COURT OF THE UNITED STATES—No. 130—OCTOBER TERM, 1959—WILLIA NIUKKANEN, ETC., PETITIONER *v.* E. D. MCALEXANDER, ETC.—ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

April 18, 1960

Per curiam: The petitioner sought relief from an order directing his deportation on

the ground that as an alien he had become, after entering the United States, a member of the Communist Party within the meaning of the Act of October 16, 1918, as amended by section 22 of the Internal Security Act of 1950, 64 Stat. 987, 1006. The district court, after hearing, denied the petition, 148 F. Supp. 106, and the Court of Appeals affirmed (241 F. 2d 938). Invoking *Rowoldt* v. *Perfetto* (355 U.S. 115) decided after the order for his deportation, petitioner sought an administrative reconsideration of his status. Upon its denial by the Board of Immigration Appeals he began the judicial proceeding immediately before us for review. After a hearing, the district court again denied his petition for relief and the court of appeals affirmed the order of the district court (265 F. 2d 825). The ultimate question is whether petitioner is subject to deportation under *Galvan* v. *Press* (347 U.S. 522) or is saved from it under *Rowoldt* v. *Perfetto, supra.* The determination of this issue turns on evaluation of the testimony before the district court, in light of *Galvan* v. *Press, supra,* and *Rowoldt* v. *Perfetto, supra.* Such assessment largely depends on the credibility of the testimony on which the district judge based his judgment, particularly that of the petitioner himself, whom the judge saw and heard. An able judge found that petitioner in denying membership in the Communist Party, unlike Rowoldt who admitted membership, see 355 U.S., at 116–117, but accounted for its innocence, "perjured himself before, and I believe perjured himself today." We cannot say that his findings, affirmed by the court of appeals, were clearly erroneous and do not support the conclusion of both the lower courts.

Judgment affirmed.

MR. JUSTICE DOUGLAS, WITH WHOM THE CHIEF JUSTICE, MR. JUSTICE BLACK, AND MR. JUSTICE BRENNAN CONCUR, DISSENTING

Petitioner was born in Finland in 1908; and came here when he was less than a year old and has resided here ever since. He is married to a native-born citizen; he served honorably in our Army; and he has no criminal record of any kind except for a petty offense, back in 1930.

The evidence against petitioner was given by two witnesses who had once been Communists, one of whom petitioner swore he never knew. They testified that petitioner was a member of the Communist Party from 1937 to 1939 in Portland, Oreg. One of them testified that petitioner had assisted in the circulation of a paper, Labor New Dealer, which apparently was an organ of the party. There was evidence he paid dues to the party of 25 cents a month and that he attended both open and closed meetings of the party. But even these two ex-Communists who appeared against petitioner said that there was no discussion of ways and means to overthrow the Government at those meetings, that only problems such as labor conditions, relief, and the like were discussed. One also swore that petitioner never advocated the overthrow of the Government. Petitioner's interest in the party, according to one of these hostile witnesses, was as a result of "the sufferings of the people in the depression;" and he was "very sympathetic toward their welfare." This witness agreed that petitioner was not an intellectual interested in "theory" or "political discussion." His interests were "in bread and butter topics of the day, what to do for unemployment and relief." Nor had petitioner ever taught the Communist doctrine nor distributed its literature, except for the Labor New Dealer.

These two ex-Communists testified that petitioner attended dances that the party arranged in Portland. But they said he never held an office in the party; nor was ever employed by the party; nor was ever a "functionary" in the sense of representing the party. He attended a regional meeting at Aberdeen, Wash., where various speakers, according to one ex-Communist, gave "glowing accounts" of their work for the party, "more or less fabricating" their achievements.

We know from petitioner's lips that he was not acquainted with the conventional Communist literature; and nothing came from the lips of his accusers that denied it. One who reads the whole of his record cannot put it down without feeling that here is a man neither conspiratorial, dangerous, cunning, nor knowledgeable. Petitioner—a painter by trade—represents a miscroscopic element in the ranks of our labor force who was caught up in a movement whose ideology he did not understand and whose leaders spoke in terms of bread for the hungry, and jobs for the unemployed. He has recently earned about $4,000 a year; he bought a home for $3,100 (which is now worth from $6,000 to $6,500 subject to a $2,500 mortgage); and he has personal property, including a car, worth $2,000.

This is the background against which the following testimony can be best understood.

"Question. In the Finnish Hall or anywhere else did you attend Communist Party meetings?

"Answer. Well, if I said yes and if I said no maybe I wouldn't be telling the truth, because I really couldn't tell one way or the other. I went to meetings there. Sometimes maybe they were Communist, and maybe they wasn't. It could have been and maybe they wasn't.

* * * * *

"Question. Have you been a member of the Communist Party of the United States or any branch of affiliate or organization by that name or any similar name?

"Answer. Knowingly, I haven't, no.

* * * * *

"Question. Do you believe that membership in the Communist Party now is a lawful political purpose?

"Answer. No. I can't answer questions about that because I don't know. If Congress says it is unlawful, it is unlawful. If it isn't, it isn't. I don't know. If I got the question right, I don't know.

"Question. I am not trying to confuse you, * * * I am trying to find out your feelings toward communism.

"Answer. Naturally I don't—communism or socialism, I don't care what party it is here or anyplace else, if it has anything to do with overthrowing the goverment by force and violence I don't agree with it, no.

* * * * *

"Question. What was your impression of what the Communist Party was trying to do?

"Answer. Well, the only thing I heard in those days was more relief and more work, and I never heard anything else; no violent overthrow of the Government, or anything of that sort, but anyplace I went to meetings was always more work and more food.

"Question. As far as you know, that was what the Communist Party stood for during that period?

"Answer. I don't know if they stood for that, but I never heard anything against it."

The case is on all fours with *Rowoldt* v. *Perfetto* (355 U.S. 115). The "solidity of proof" (id., at 120) required for the severe consequences of the deportation of a man who came here when he was less than 1 year old, whose only memory of life is in this land, and who has lived here over 50 years has not been met. The "meaningful association" with the party which the Rowoldt case requires (id., at 120) simply has not been established here. In this case, as in Rowoldt, petitioner's association with the party was "wholly devoid of any 'political' implications" (id. at 120).

The testimony of the two ex-Communists upon which petitioner is being banished has never been heard by a court. The only testimony taken by the district court was that of the petitioner and his character witnesses. The district judge believed the witnesses against Niukkanen by virtue of having read the same record that is now before this Court. His impression of their credibility can be no more reliable than our own. Certainly then his conclusion that petitioner "perjured himself before, and * * * perjured himself today" does not preclude this Court's review of the evidence against him. Apart from that, the evidence would be far too meager to establish the "meaningful association" which we required in the Rowoldt case.

The unanimity of all the finders of fact in the Rowoldt case (id., at 119) that Rowoldt was a "member" of the party and his refusal to answer when asked in the deportation proceedings whether he had ever been a member of the Communist Party, did not stop us from declaring that "the record before us is all too insubstantial to support the order of deportation" (id., at 121). The unanimity of the finders of fact in the present case should likewise be no barrier to our entry of a just decree. A man who has lived here for every meaningful month of his entire life should not be sent into exile for acts which this record reveals were utterly devoid of any sinister implication.

Mr. MORSE. Mr. President, I close my plea by saying I am satisfied if Members of the Congress will read the record of the case, they will agree with me that, although it is good politics to wave the flag in regard to such a case as this, I believe we ought to rise above our emotions in a matter such as this and see to it that we do justice to our country by not letting the world receive notice that we are going to be guilty of the kind of an inhumanity to man which, in my judgment, is proposed in regard to this particular individual.

FEDERAL EMPLOYEES PAY INCREASE

Mr. MORSE. Mr. President, yesterday I submitted to the Senate Committee on Post Office and Civil Service a statement in support of what I believe to be a completely meritorious pay increase for our Federal employees. I ask unanimous consent that my statement be inserted at this point in my remarks.

There being no objections, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WAYNE MORSE BEFORE SENATE COMMITTEE ON POST OFFICE AND CIVIL SERVICE IN SUPPORT OF FEDERAL PAY INCREASE LEGISLATION, MAY 12, 1960

Mr. Chairman and members of the committee, I come before you today to urge that you give earnest and favorable consideration to a Federal pay increase bill this session which will increase the compensation of postal and Federal employees by at least 9 percent.

There is nothing magic about 9 percent, it could be 10 percent or 12 percent or even more if justified by the facts of the matter. I am suggesting 9 percent to you as an interim figure only, which would be adjusted upon the completion of such necessary and overdue studies as the administration has indicated it is conducting. In my judgment, an objective study would show that the 9 percent figure is a low figure and that an equitable increase would be a higher percentage amount.

Parity of income for Federal employees, by which I mean a fair day's pay for an honest

day's work, corrected when necessary to reflect changes in the cost of living and increases in productivity, is a goal to which we should dedicate ourselves. Those of us who believe that the Government should be a model employer have a responsibility to vote for justified pay increase legislation when it comes before us. It is this parity of income based upon the 1939 standard which we should enact as a minimum.

Let us not forget that we are in a special relationship of trust to the people of the Nation whose best interests we are sworn to uphold, and to the men and women who, by freely entering into our postal and classified services, have dedicated themselves to a lifetime of service to their fellow citizens. By doing so, the scientists who work in the Bureau of Standards, the agricultural and veterinary specialists who guard our health, the indispensable agents who work in Internal Revenue and the postal employees who deliver our mail, to name but a few of the many important service functions performed for our citizens, have all surrendered the accepted rights of labor in private industry to improve economic status by work stoppage. They have done this because their service is vital to our national community and cannot be interrupted. They therefore have a just and continuing claim upon us as legislators for fair and equitable treatment.

I very much regret, from what I have observed in the press, that the administration does not recognize this elementary responsibility to our Federal employees. I have heard that representatives of the administration have even gone so far as to stigmatize the elected representatives of the people by inferring that the Congress is callously manipulating the Federal employee. I am reminded that once before, not too many years ago, a Cabinet rank appointee of the President, went so far in connection with a pay bill for which credit was later claimed by the administration, to say that Federal pay increase proposals of the Congress were a cruel hoax upon the Federal employee. Mr. Chairman, this type of scarecrow argument should be recognized for what it is—the substitution of semantics for needed action.

The administration wants to delay needed upward adjustment of pay schedules under the guise of a study completion. By acceding to this delaying tactic what really is accomplished? The saving of some money which should have been paid at an earlier date. It is the repudiation of a just debt. If the facts you have elicited warrant an increase at this time, then we should face up to the problem and vote the increase now.

Since 1939 there have been increases in productivity of postal and Federal employees which should be kept in mind. Since 1939 there has also been imposed upon the Federal employee the same burden of tax which is borne by all our citizens. Let us not forget that the traditionally lower wages for Federal workers were, in large part, once justified by the tax free nature of their income. But this justification died with the imposition of taxes, State and Federal, upon the Government worker two decades or more ago. Equal pay for equal work is the guide and principle which should determine our action. We should not expect the Federal employee, any more than we should expect the farmer, or the industrial worker to subsidize, by low pay, the balance of our economy. An argument to the contrary, an argument based upon a feared inflationary impact of a Federal pay raise, is an argument, in effect, for forced and uncompensated labor.

A remedy for the supposed inflationary situation which might develop, and I have yet to be convinced that it will develop, lies not in restricting arbitrarily the just reward for conscientiously performed work, it may lie rather in changes in our income tax structure. I note that the administration is not hesitant to inflate the cost of living by postal rate increases and increases in gasoline taxes.

It may be that there are a few grave inequities in our classification system in both postal and civil service. If so, these inequities should be rectified upon the basis of an objective and scientific study. But the study should not be used as a cloak for doing nothing about an immediate and pressing problem.

It is for these reasons that I ask the chairman and his distinguished committee to give careful heed to the just recommendations of the representatives of the employees who have appeared before you in support of an immediate pay raise, and in reporting a bill to do so without prejudice to any further upward adjustments which may later be found to be necessary.

AMENDMENT OF MENOMINEE INDIANS ACT, RELATING TO TERMINATION OF FEDERAL CONTROL OVER TRIBAL AFFAIRS

Mr. WILEY. Mr. President, I introduce, for appropriate reference, a bill to enable the Secretary of Interior to determine whether or not the Menominee Indian Tribe may require additional time—beyond December 31, 1960—for termination of Federal control over tribal affairs.

As we all well appreciate, the termination of Federal control involves complex economic, legal, and social problems. Prior to enactment of Public Law 85–488, providing for termination of Federal control, I pointed out that I was opposed to a December 31, 1960, deadline.

Unfortunately, however, this was the best that could be obtained at the time.

In view of the complex problems involved, however, I am introducing legislation to enable the Secretary of Interior—intimately acquainted with tribal affairs—to determine whether or not additional time would be necessary.

As we know, the Secretary is charged, also, with the responsibility of approving a plan for control of tribal assets after termination of Federal control.

As of now, there is question as to whether or not the tribe will be able to meet the deadline—even though the State of Wisconsin—and the tribe itself—has taken extensive measures to deal with the involved problems. Consequently, I am proposing that the Secretary of Interior be provided with authority to extend the date of termination—if deemed advisable both in the interest of the tribe and the Nation. The purpose would be to enable the tribe to put its affairs in order so as to enable it to integrate properly into the economy of the State.

I believe this is a realistic and justified approach.

In view of the fact that this apparently will be a short session—and termination of control ends December 31, 1960—I would sincerely hope that the Interior Committee would find it possible to act expeditiously on this legislation. I ask unanimous consent to have the bill printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3544) to amend the Menominee Termination Act, introduced by Mr. WILEY, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of June 17, 1954 (68 Stat. 252), as amended (25 U.S.C. 891), is hereby amended by adding a new section 13 as follows:

"SEC. 13. If the Secretary of the Interior determines that more time is needed before the transfer of property to the tribe or a tribal corporation on December 31, 1960, as provided in section 8 of this Act, and before a termination of Federal responsibility for furnishing supervision and services to the tribe on December 31, 1960, as provided in section 7 of this Act, he is authorized to postpone such transfer of property and termination of Federal responsibility to a date he determines is reasonable."

LEASING OF PUBLIC LANDS BY UNIVERSITY OF ALASKA

Mr. GRUENING. Mr. President, on behalf of my colleague, the senior Senator from Alaska, and myself, I introduce, for appropriate reference, a bill to amend the law under which the University of Alaska is authorized to lease public lands granted to it.

As the law is now worded, the university can lease this land only at public auction. Experience has indicated that higher prices for this land can be obtained through sealed competitive bids. This is the method utilized by the State in leasing its own lands. There seems no valid reason for the use of different methods by two instrumentalities of the same State. It is much too confusing for prospective lessees. The bill we are introducing, therefore, would permit the University of Alaska to utilize the same method, namely sealed competitive bidding, employed by the State itself in leasing public lands.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3545) to amend section 4 of the act of January 21, 1929, 48 U.S.C. 354a(c), and for other purposes, introduced by Mr. GRUENING (for himself and Mr. BARTLETT), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

THE NEED TO INCREASE AUTHORIZATIONS FOR THE REVOLVING FUND IN BUREAU OF INDIAN AFFAIRS

Mr. MANSFIELD. Mr. President, on behalf of my distinguished colleague, the senior Senator from Montana [Mr. MURRAY] and myself, I introduce, for appropriate reference, a bill to amend the act of June 18, 1934 (48 Stat. 986).

One of the major issues before Congress which concerns many of us, and is discussed periodically, is what can be done to revitalize our Federal Indian policy. The predominant views can be divided into three categories.

First, there are those who believe that our Indians should be protected and sheltered as wards of the Federal Government for as long as the Indians themselves will accept it.

Second, there are those who would terminate Federal control over the Indian reservations as rapidly as possible, and I might add that the most obvious result of such a policy would be to turn over a welfare problem of the Federal Government to the individual States and counties.

Third, and this is a policy to which I subscribe, is that the Federal Government should see that these folks are properly educated and encouraged to help themselves in addition to seeing that the needy Indian is properly cared for; developing the Indian so that he will break the ties with Federal Government of his own accord.

I do not feel that the Indians want to be under the protective wing of the Federal Government forever, and I am sure that they would like to be treated as the rest of us are. But the majority of our Indian reservations, especially those in Montana, are not blessed with sufficient resources and income to enable them to do anything about improving their own living and economic conditions.

In Montana we have a reservation made up of Northern Cheyenne Indians. I have spoken of these people often. They are very fine people, but they live on a reservation which is blessed with fewer resources than most areas in the country. In fact, many of these people live under the worst kind of circumstances. I have done my utmost to assist them, and they have made a very honest effort to help improve their own situation.

Just recently the Northern Cheyenne Tribal Council submitted a very fine imaginative program for the development of their reservation. It was not a grandiose plan, but was one which they could handle themselves. The tribal council received encouragement from the Bureau of Indian Affairs officials and even submitted the plan to Washington. However, that is as far as the proposal has gone. In order to implement these economic development programs these folks need money. As the Members of the Senate know the tribal revolving credit fund is overcommitted. Without a loan these tribal groups cannot proceed with their land purchase programs which are essential to the development of their reservation. The increased amount of land sales is indeed disheartening and tends to dissipate the land area on their reservation.

I might point out here that I have felt for sometime that when termination does come it does not necessarily need to mean the end of the reservation unit. I see no reason why a reservation cannot continue to function in some corporate form after termination and the release of Federal control. But if many of the reservations are to progress to this state they are going to need financial assistance.

With regard to the land sale matter, I might point out that I recognize the right of an individual Indian to sell the land that is his own, but I also want to see that the tribal council is given the opportunity to exercise its own prerogative of meeting the highest bid. This certainly cannot be done if the tribal council does not have the necessary funds in their treasury.

I have joined my distinguished senior colleague [Mr. MURRAY] in the introduction of proposed legislation today which would increase the authorization of the tribal revolving credit fund in the Bureau of Indian Affairs by an additional $15 million. This would enable many of the tribal organizations to have their loan applications processed and they could then proceed with their own individual programs. The Department of the Interior has given its blessing to such an increase in its report on heirship legislation. I feel that the present situation demands that the loan fund matter be handled separately because of the controversial nature and complexion of the various heirship proposals. The need for the loan fund is immediate.

I am pleased to advise the Senate that the House Committee on Interior and Insular Affairs has reported a bill which includes this $15 million authorization. I might point out that this action was taken under the able leadership of Representative JAMES HALEY, whom we all know as the chairman of the Indian Affairs Subcommittee in the House. The need to replenish the revolving credit fund is very serious and I do hope that the Senate will act favorably at an early date.

Under the leadership of the new chairman of the Indian Affairs Subcommittee, the distinguished Senator from Idaho [Mr. CHURCH], I know we will get the necessary action.

I ask unanimous consent that a statement, prepared by my colleague [Mr. MURRAY], relating to the bill, may be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 3546) to amend the act of June 18, 1934 (48 Stat. 986), introduced by Mr. MANSFIELD (for himself and Mr. MURRAY), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The statement presented by Mr. MANSFIELD is as follows:

STATEMENT BY SENATOR MURRAY

I am pleased to join with my distinguished colleague, Senator MANSFIELD, in sponsoring the bill to increase the Indian Bureau revolving credit fund authorization from $10 million to $25 million.

I will explain briefly the need for such legislation. The revolving credit fund is now overcommitted. This situation has prevailed for some time. Subsequently, deserving tribes which make reasonable proposals for loans are turned down. For example, here is what Assistant Secretary of the Interior Roger Ernst told me in a letter dated March 29, 1960:

"Unfortunately, funds are not available at present to make the Northern Cheyenne Tribe a loan of $550,000 as contemplated by its program. If the Congress authorizes and appropriates the $15 million increase in the revolving fund, recommended as an amendment to S. 51, we shall, of course, proceed to make funds available for land purchases. However, any land purchases made with revolving loan funds would have to be in accordance with a program agreed upon by the Northern Cheyenne Indians and the Bureau of Indian Affairs."

As of February 29, 1960, according to Mr. Ernst, that part of the fund which the loan would be made was overcommitted $1,353,797.

The remedy for this situation is, in my judgment, to increase the authorization promptly and appropriate a reasonable sum in the supplemental appropriations bill.

The revolving credit fund is presently useless to most tribes, some of which have proposed sound land acquisition and tribal enterprise programs which require additional funds.

I have a very high regard for the able, new chairman of the Indian Affairs Subcommittee, the junior Senator from Idaho. I hope that he will consider the proposal which Senator MANSFIELD and I have made. As chairman of the Interior Committee I shall be glad to cooperate in any way toward improvement of the revolving credit fund situation.

RECOVERY OF CERTAIN COSTS OF MEDICAL CARE FURNISHED BY THE GOVERNMENT

Mr. BYRD of Virginia. Mr. President, I introduce, for appropriate reference, a bill relating to the recovery from liable third persons of the cost of medical care and treatment furnished by agencies and departments of the United States to persons authorized by law to receive such care and treatment. I ask unanimous consent that an explanatory statement, prepared by me, in connection with the bill, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the explanatory statement will be printed in the RECORD.

The bill (S. 3547) relating to the recovery from liable third persons of the cost of medical care and treatment furnished by agencies and departments of the United States to persons authorized by law to receive such care and treatment, introduced by Mr. BYRD of Virginia, was received, read twice by its title, and referred to the Committee on Armed Services.

The explanatory statement presented by Mr. BYRD of Virginia is as follows:

The bill relates to lack of authority in certain areas of the Government to recover the costs of hospital and medical services in "negligent third-party cases." It is based on official audit report by the Comptroller General of the United States. The language of the bill was drafted by the Senate Legislative Counsel and approved by the General Accounting Office.

The Comptroller General's report on this subject shows that, while provision is made for recovery of these costs in other areas, the law without apparent reason is silent or insufficient with respect to accident cases involving injury to members of the Armed Forces and their dependents, the Coast Guard, merchant seamen, and others for whom Government medical care is furnished.

The magnitude of these errors of omission is shown by the Comptroller General's examination of Department of Defense records which reveal that in the 30-month period ending June 30, 1959, there were 13,500 accidents involving privately owned automobiles in which military personnel were injured.

The Comptroller General estimated that costs of Federal medical and related services in these cases averaged $10.5 million a year, or some $26 million for the 30-month period; but lacking specific authority, and under a 1947 Supreme Court decision, the Defense Department made no effort to recover any of these costs.

The Comptroller General found so-called "third-party negligence" reasonable to assume in 5,400 of the 13,500 accident cases because the injured military personnel were passengers or pedestrians. The unrecovered costs of medical and hospital services in these cases were estimated at an average of $4.2 million a year.

The military personnel injured in the other 8,100 accident cases were drivers of vehicles involved, and the Comptroller General said that while incidence of "third party liability in these cases is not known, it is reasonable to assume that it was present in a significant number of instances."

In the same review the Comptroller General found that the U.S. Public Health Service does not recover from "negligent third parties" the costs incurred by the Government in the treatment of injured Coast Guard personnel, merchant seamen, and others who are entitled to care in PHS hospitals at Government expense.

He found further that the Veterans' Administration, while successful in proceedings under general provisions of the Veterans Benefits Act, also lacks specific authority to recover medical costs from negligent third parties for accident cases treated through VA facilities.

The review found in some cases injured personnel may recover from negligent parties, but the Government cannot recover from either party in the absence of specific legal authority. In other cases injured parties, having received medical care at Government expense, do not include such costs in their claims.

I concur in the Comptroller General's conclusions that Government medical care in these cases is not intended to relieve anyone of any accident liability, and that the right of recovery should be uniform throughout the Government, with no exceptions.

I am advised by the Senate Legislative Counsel that the bill authorizes the uniform right of recovery in these cases throughout the Government. The bill has been worked out with counsel for the General Accounting Office. And the Comptroller General's recommendation is concurred in by departments and agencies involved including the military departments.

I hope the bill may be enacted during this Congress.

EMANCIPATION PROCLAMATION DAY

Mr. ALLOTT. Mr. President, in 1962 we shall reach the 100th anniversary of one of the most significant documents in the history of the United States. I refer to the Emancipation Proclamation.

That proclamation set the tone of American protection for all citizens and rejection of second-class status for any citizen. In issuing it President Abraham Lincoln strengthened immeasurably the world position of our Nation. Lincoln set forth, for all to see, a policy of national dignity and respect for the God-given rights of the individual. It has stood, alongside such other documents as the Magna Carta, as a hallmark in man's never-ending fight for individual liberty.

In the century since, breathtaking changes have occurred, and yet we still must concern ourselves with the fundamental truths of our freedoms. There is not one of us here who would not champion the freedom of all men, although we may differ on details as to how we can insure that freedom.

As Abraham Lincoln told a group on April 6, 1859:

This is a world of compensations; and he who would be no slave must consent to have no slave. Those who deny freedom to others deserve it not for themselves; and, under a just God, cannot long retain it.

With this abiding faith, with his feeling that "this Government cannot endure permanently half slave and half free," Abraham Lincoln finally, on September 22, 1862, issued his Emancipation Proclamation. Let us once again recall those words:

That on the first day of January, in the year of our Lord 1863, all persons held as slaves within any State, or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them in any efforts they may make for their actual freedom.

That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any in which people thereof, respectively, shall then be in rebellion against the United States, and the fact that any State, or the people thereof, shall on that day be in good faith represented in the Congress of the United States by Members chosen thereto, at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States.

Now, therefore I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander in Chief, of the Army and Navy of the United States in time of actual armed rebellion against authority and Government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do on this first day of January, in the year of our Lord 1863, and in accordance with my purpose so to do, publicly proclaimed for the full period of 100 days, from the day first above mentioned, order and designate as the States and parts of States wherein the people thereof respectively, are this day in rebellion against the United States, the following, to wit:

Arkansas, Texas, Louisiana (except the parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terrebonne, Lafourche, St. Mary, St. Martin, and Orleans, including the city of New Orleans), Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia, (except the 48 counties designated as West Virginia and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Ann, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are for the present left precisely as if this proclamation were not issued.

And by virtue of the power and for the purpose aforesaid I do order and declare that all persons held as slaves within said designated States, and parts of States are and henceforward shall be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defense; and I recommend to them that in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known, that such persons of suitable condition, will be received into the armed service of the United States to garrison forts, positions, stations and other places, and to man vessels of all sorts in said service.

And upon this act sincerely believed to be an act of justice, warranted by the Constitution upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God.

By the President:

ABRAHAM LINCOLN.

Mr. President, I introduce, for appropriate reference, a joint resolution which proclaims September 22 of each year as "Emancipation Proclamation Day." It requests the President of the United States to issue a proclamation each year inviting observance by our people. The joint resolution further sets September 22, 1962, as the first such day of observance on the centennial of the issuance of the historic statement. It directs that this first observance be coordinated with the Civil War centennial already scheduled.

Mr. President, I ask unanimous consent that the joint resolution be printed in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 192) designating September 22 of each year as Emancipation Proclamation Day, and for other purposes, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas on September 22, 1862, the President of the United States, Abraham Lincoln, issued the proclamation historically known as the Emancipation Proclamation; and

Whereas the one-hundredth anniversary of that great historical event will occur in 1962 during the Civil War centennial celebration; and

Whereas the issuance of that proclamation being one of the most significant events in the history of this country, it is fitting that special attention be accorded the anniversary of that event: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the 22d day of September of each year is hereby designated as "Emancipation Proclamation Day." The President of the United States is authorized and requested to issue a proclamation each year inviting the people of the United States to observe such day with appropriate ceremonies and activities.

(b) In the preparation of plans and programs under the Act of September 7, 1957 (Public Law 85-305; 71 Stat. 626), the Civil War Centennial Commission is authorized and directed to include plans for special ceremonies commemorating the Emancipation Proclamation issued on September 22, 1862.

REPORT ON JUSTIFICATION OF WILSON DAM AND RESERVOIR, SALINE RIVER, KANS. (S. DOC. NO. 96)

Mr. YOUNG of Ohio. Mr. President, on behalf of the chairman of the Committee on Public Works, the Senator from New Mexico [Mr. CHAVEZ], I present a letter from the Secretary of the Army, transmitting a report dated March 10, 1960, from the Chief of Engineers, Department of the Army, together with accompanying papers and an illustration, in accordance with Public Law 505, 84th Congress, demonstrating justification of Wilson Dam and Reservoir, Saline River, Kans.

I ask unanimous consent that the report be printed as a Senate document, with illustrations, and referred to the Committee on Public Works.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Ohio? The Chair hears none, and it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. KEATING:

Press release of Governor Rockefeller, of New York, including an exchange of letters between the President and the Governor on the subject of atomic energy regulation.

WHY WE SHOULD HALT ATOMIC TESTS

Mr. PROXMIRE. Mr. President, the lead letter in this morning's New York Times is an expression by Harvard Prof. John Kenneth Galbraith who writes from Switzerland on the prime importance of stopping nuclear tests.

Professor Galbraith was director of the strategic bombing survey in 1945. He conceded that the abandonment of tests does indeed constitute a risk for this country, as the distinguished junior Senator from Connecticut argued so brilliantly yesterday in his eloquent speech. But as Professor Galbraith so ably points out, the American people and our Government must manfully face up to the fact that there is no riskless course left in this world. Are we without risk if we resolutely refuse to consider inspection and control systems designed to end nuclear testing in the kind of technological world the junior Senator from Connecticut described yesterday, an age in which every passing day seems to bring a new and more terrible weapon of nuclear destruction, a world in which France now has broken into the nuclear club, and soon Red China, Germany, and even possibly Castro and Tito may follow?

Mr. President, this is not only a time to speak for peace and to pray for peace, but also a time to work for peace and—yes—to risk for peace.

Mr. President, I ask unanimous consent that the letter from Professor Galbraith be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HALTING ATOMIC TESTS—CHOICE OF LEAST PERILOUS COURSE BELIEVED TO BE NECESSARY

(The writer of the following letter, professor of economics at Harvard University, served as Director of the U.S. Strategic Bombing Survery in 1945:)

To the EDITOR OF THE NEW YORK TIMES:

The recent hearings before the Joint Commission on Atomic Energy, like much earlier discussion, suggest the presence of a strikingly unrealistic attitude toward an agreement on halting atomic tests. I do not suggest that this attitude is universal, but it does seem sufficiently common to merit comment.

We must surely agree that our task is not to eliminate all risk from our lives—that is an impossible goal—but to find the course of policy that minimizes risk. This requires that we balance the dangers of different courses of action. In the present instance there is, on the one hand, the danger of illicit violation of any agreement to ban tests and that the violation will go undetected. On the other hand, there is the danger of continued explosions. We must choose the course which involves the least peril.

Almost everyone must agree—and most do agree—that the dangers inherent in continuing the tests are virtually total. The tempo of competitive development and testing will increase. The countries newly possessed of atomic weapons will claim their right to poison their just share of the atmosphere. Obviously those who are making tests themselves cannot deny them the privilege. All of these dangers are predictable and certain in the absence of agreement.

POSSIBLE BAD FAITH

Against this, as noted, we must reckon with the possibility of Soviet bad faith and that it will escape detection. Some of our estimate of the danger of bad faith, we must agree, will be the residue of the bad feeling of recent years. And bad faith that involves risk of discovery is not without disadvantage as a practical policy.

But it is not my purpose to argue that this course is riskless. Rather what is clear is that whatever its dangers, they must be less than the dangers of the first course, which are certain and total. Yet this is not the nature of much of the present calculation. It holds that the danger of violation must be totally eliminated or we will continue the tests. One is reminded of the man who insists on suicide unless he is fully protected against automobile accidents. Surely we are more logical than that.

Nor is it reassuring that many who advise against accepting the lesser risk believe that any test ban makes poor military sense. We have recently heard that our military security requires a new series of tests this summer or autumn. And a high official of the Defense Department has recently stressed the need to develop atomic weapons which, though they burn, blind, disintegrate, mutilate and otherwise commit to a disenchanting death, are nonetheless clean.

CONCEALED POSITION

The danger of illicit violation has thus become part of the case against the agreement as such. It has no part of this case. If we believe an agreement is unwise, we should say so. This position should not be concealed behind arguments over enforceability. We fool no one with such transparent devices.

But I have difficulty in imagining that responsible military opinion can face with equanimity a world of uncontrolled tests. In the annals of armies there have always been examples of excessive and myopic preoccupation with military goals. Yet thoughtful military leaders certainly agree that the purpose of the armed services is to protect the continuing life and civilization of the community. Armed services are but one means to this end and diplomacy and diplomatic agreements are among the others.

It is to see the whole problem that we have civilian control of the Armed Forces. This will on occasion require the overruling of too parochial a military view. The danger lies not in doing so, but in failing to do so.

JOHN KENNETH GALBRAITH.

GSTAAD, SWITZERLAND, *April 27, 1960.*

ABYSMAL FAILURE OF GOVERNMENT TO WORK FOR PEACE

Mr. PROXMIRE. Mr. President, one of the saddest statistics I know about is that in this vast Government bureaucracy of ours, less than 25 persons are employed full time in working in research on nuclear testing control areas which cries out for understanding if we are to achieve peace. It can in this sense honestly be said that less than 25 people in our Government are working for peace.

The senior Senator from Minnesota [Mr. HUMPHREY] and the junior Senator from Massachusetts [Mr. KENNEDY] have repeatedly pleaded for this research and have in fact introduced legislation to provide for it.

What an irony if this Nation and mankind should perish in a nuclear holocaust because our Congress and administration refused to hire the very few essential experts necessary to do the homework we must do if we are to go into an inspection and controls system knowing what we are doing.

I ask unanimous consent that an excellent article on this subject by Representative CHESTER BOWLES, of Connecticut, be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE ARMAMENT MEETS DISARMAMENT—A VAST NEW RESEARCH PROGRAM IS REQUIRED TO DEVELOP POLICIES FOR BOTH SIMULTANEOUSLY

(By CHESTER BOWLES)

Few public policies have been subjected to more scrutiny and pressure in the last few years than the twin issues of arms and arms control. True, the attention given to arms has far exceeded that given to arms control, but our policies on both issues have been equally confused and the controversies surrounding them have refused to fall into any particular pattern. Yet the expectation is that if the May 16 summit meeting results in agreement on any subject, that subject is likely to have something to do with arms control.

Clearly, our defense debacle and our disarmament debacle are interrelated (although to a degree each has an inner logic of its own). They center around two fundamental truths: (1) Arms races throughout history have usually ended in war. (2) Unpreparedness and unilateral or unsafeguarded disarmament have usually ended in national

catastrophe. Many of our major difficulties stem from attempts to separate these two truths in our thinking.

A fresh approach to our dilemma demands the recognition of both propositions as parallel routes to disaster. Some who recognize this fact recoil from what they see and tell us that our only alternative is to leave the outcome to fate. But such defeatism, however understandable, is potentially catastrophic.

Viewed from the defense perspective on survival, our problem is how to keep up with the arms race. Viewed from the human perspective on survival, our problem is how to curtail it. These two perspectives seem destined to live or die together, an inseparable if unstable combination. Consequently, the central question facing us at the moment is how to pursue simultaneously the policies of rearmament and disarmament of arms and arms control.

There are critics who insist that the task is impossible. They regard the policies as inherently conflicting—economically at odds, politically unmanageable and psychologically frustrating. On specific issues these policies would seem to pull naturally in opposite directions; even their moods seem competitive. But it is high time that we faced these issues for what they are; two sides of the same coin.

The greatest current controversies in the nuclear field are excellent up-to-date examples. They concern nuclear tests and the transfer of nuclear weapons. A brief résumé of each might shed light on the problems we can continue to expect as we pursue rearmament and disarmament together.

Nuclear testing has never been a simple issue. It was not nearly as simple as Vice President RICHARD NIXON thought in October 1956, when he denounced Adlai Stevenson's test suspension proposal as "catastrophic nonsense." Nor was it as simple as NIXON indicated in November 1959, when he took the other side of the question and announced that anyone urging a resumption of nuclear tests was "ignorant of the facts" (a statement, incidentally, which throws a curious shadow over President Eisenhower's subsequent decision that pending any further moratorium or agreement we consider ourselves "free to resume testing").

Surely our patient negotiators, now in the 18th month of the three-power nuclear test talks in Geneva, do not regard the issue as a simple one. Since October 31, 1958, when these talks began, the United States, the United Kingdom, and the Soviet Union have been painfully attempting to find an acceptable formula for inspection and control to allow the discontinuance of tests.

The latest Soviet proposal and the Eisenhower-Macmillan counterproposal have now brought within striking distance the possibility for a summit agreement on a nuclear test ban. Seventeen articles out of a proposed 22-article treaty have been agreed upon. In principle, the USSR has committed itself to accept a complex global monitoring and control system that will include foreign observers and inspectors operating inside Russia.

A treaty based on these propositions would be a tremendous step forward, even if it did not cover the presently undetectable small bomb tests conducted underground. It would set into motion the world's first trial international inspection system. It would initiate the process of international controls for which we have waited so long, and upon which the chances for all further progress directly depend.

Of course there is still a measurable gulf between the Soviet proposal and the British-American counterproposal. Critical differences remain over the number and kind of onsite and offsite inspections to be provided under the treaty. The duration of the moratorium on small bomb testing still has to be decided. The chances are that neither of these issues will be resolved prior to the summit meeting. Moreover, the pitfalls which could prevent final agreement are still very much with us.

Despite our latest official position in favor of a treaty coupled with a moratorium on small bomb tests, forces in the Pentagon and the Atomic Energy Commission remain vitally interested in resuming tests. Viewing matters from a defense perspective, they are eager to make cleaner bombs, test the proposed nuclear charges for the warheads of the Polaris and Minuteman missiles, improve the small warheads for the Nike-Zeus antimissile and develop small, tactical, battlefield weapons. Press reports indicate that preparations are under way for the resumption of certain nuclear tests within a matter of months if the talks in Geneva and Paris fail.

Yet Phillip Farley, the State Department expert on disarmament and atomic energy, recently told the Senate Disarmament Subcommittee that the United States would benefit more than any other nation from a test ban. And one highly important factor which lends an air of unreality to the argument about whether we should or should not resume tests is the feeling that we are not really able to resume them anyway.

Walter Lippmann has suggested that if we did "there would be an uproar around the world. Quite competent and cool observers believe that the uproar would bring about a special meeting of the General Assembly of the United Nations to protest against our action, and that if the question were put to a vote, we should be lucky to get 10 votes out of 80." Lippmann may be exaggerating a little, but there can be no doubt that the damage to our moral position would be enormous if we resumed tests.

Thus we are facing another real dilemma. If current negotiations fail, we will still not be able to resume testing without bearing the full brunt of world opinion. If we allow the test ban negotiations to drag on, the Russians will get what they have wanted all along—an informal, de facto suspension of tests which leaves the rest of the world without any means to determine whether the U.S.S.R. is behaving.

No one who really hopes for the successful conclusion of the test negotiations will readily agree that nuclear tests, however small, should be resumed as long as there remains a chance, however small, that agreement will be reached. At the same time, we know that an indefinite suspension of tests without controls could damage our military capability. This is especially true when we have no way of assuring that the Soviet Union has refrained from secret tests.

This is why a 1-year moratorium on small bomb testing, as a quid pro quo for a treaty with a meaningful inspection system, would, I think, be a good bargain—providing it is carefully meshed with an effective joint research program conducted on a crash basis and designed to close the present gap in our ability to detect underground explosions.

The divergent perspectives of defense and disarmament converge on the inspection question. More reliable scientific preparation, in depth, might already have saved us much time, uncertainty, and embarrassment. To the degree that forces within the governments involved desire to test regardless of whether tests can be detected, a solution for the detection problem would not end this controversy. But it would end a source of tremendous confusion and obstruction which has hitherto vexed all of our arms control efforts, and it is the only way our defense planners can be assured that the technological prohibitions flowing from a complete test ban will apply against the Soviet Union too.

In a field in which progress on all sides is difficult, it would be prudent to concentrate on those areas where more accurate scientific information might tip the scales of policy. One obvious area for effort is to improve the scientific underpinning of the controversy over the detection of underground tests. Since we have not moved ahead with vigor to close this major technical gap in the past, it is essential that we do so now.

The controversy over the sharing of nuclear weapons is the second major current example of how the different perspectives of defense and disarmament converge in the scientific and technical context of controls. Our strategic planners are legitimately worried because the amount of available reaction time in case of attack is coming closer and closer to zero. They are concerned over how to speed the transfer of nuclear weapons for use if and when an attack occurs.

Our nuclear weapons now in Britain, for instance, are physically separated from the missiles which can carry them and which are under British control. The administration reportedly now wants to make atomic weapons available to Britain as warheads for IRBM's manned by British crews and for air-to-air missiles carried by British interceptors. Such a move could be a precedent for similar action in the case of other allies.

Reportedly, too, the administration wants to do this under the President's "inherent powers" as Commander in Chief. Leading members of the Joint Congressional Committee on Atomic Energy have publicly challenged the legal propriety of such a move. At a press conference on February 3 the President himself, to the consternation of his advisers, undermined carefully presented Defense and State Department views by adopting the contrary approach that a change would be needed in the present atomic energy law which prohibits "transfers" of weapons from our "custody" and "control."

From the defense perspective, Gen. Lauris Norstad has been warning that the need for instantaneous defense action in case of attack now requires that nuclear warheads be made available to some of our allies on some new basis inside the North Atlantic Treaty Organization. In case of war, he stresses, there won't be time to negotiate a formal transfer. He has tentatively suggested that one solution might be an atomic-armed international fire brigade to operate under NATO colors, but the proposal is still an embryonic one and administration lawyers are desperately striving to prove that the custody of nuclear warheads would technically remain in American hands.

The constitutional, legal, and policy arguments which these developments have opened up are still gathering clouds on Capitol Hill.

First, there was the astonishing attempt to bottle up a constitutional debate by a classified presentation to the Joint Committee on Atomic Energy.

Second, the President's remarks suggested that signals had once more been seriously crossed between the White House and the departments concerned.

Third, there is a growing feeling that what were intended to be specific congressional restrictions on the custody and control of nuclear weapons have been greatly eased by administrative interpretation.

Fourth, the administration's eagerness to avoid a congressional debate on this subject has been especially disquieting. Only last July, many Senators and Congressmen expressed their misgivings over the substance and manner of the administration's handling of certain new agreements with seven NATO countries permitting the exchange of nuclear information.

Naturally, from the disarmament perspective, there has long been active concern over the spread of nuclear weapons. It has always been highly improbable that the

world's other 90 nations would be content to allow the United States, Britain, and the Soviet Union to preserve their nuclear monopoly in the absence of international controls.

In its helpful new pamphlet, "The *n*th Country Problem and Arms Control," the National Planning Association suggests that 11 more countries have the scientific and industrial capacity to follow France into the nuclear club with actual weapons over the next 5 years: Belgium, Canada, West Germany, India, Italy, Japan, Sweden, Switzerland, Czechoslovakia, East Germany, and Communist China. Just behind them are eight more countries with a similar prospect over a slightly longer period of time. All of this means that the nuclear club is the least exclusive club in the world, and new members can in no sense be vetoed at the whim of the self-conscious elite who now belong.

Once more there would seem to be surface evidence that the defense and disarmament perspective are not complementary. One view stresses the need for a wider sharing of nuclear weapons, arguing that denying our allies a capacity which our probable enemy already has is suicidal in an era of split-second strategy. The other view stresses the equally realistic danger that a further proliferation of weapons increases the likelihood that they will never be brought under control, and that the dangers of the accidental or deliberate triggering of a nuclear war will be correspondingly enhanced.

But these divergent perspectives, under closer examination, may not be unalterably opposed. Once more what chance there may be for reconciliation lies in the field of control systems. It is probably predicated on new procedural answers to this order of questions: What specific steps, if any, are consistent with both defense and disarmament requirements? What new arrangements inside NATO can be made to present simultaneously the steadiest deterrent and the least provocation to outside aggression? What system can maximize the dedication of nuclear technology to common purposes and minimize the sense of deprivation which now serves as an incentive for nonnuclear powers to become nuclear?

The answers are not likely to be found in the indiscriminate granting of nuclear weapons to just any ally, as some of the President's press conference remarks might be read to favor. Similarly, the answer is not likely to be found in the simple satisfaction of hoarding our own nuclear weapons while refusing to consider the very real prospect of the spread of nuclear weapons over our objection and without our help. Now that the French example is before them, the fifth to *n*th powers can confidently be expected to exert increasing pressure on us, the British, and the Russians to placate in one manner or another their desire for nuclear prestige.

Within NATO it may be timely and possible, under the urgency of these new pressures, to negotiate new arrangements for a recognized and equitable division of labor. Such arrangements might be based on accepting the proposition that there is no NATO equality of weapons, manpower, finances, or industrial production. It might be involve general acceptance throughout the alliance of assignments of roles and missions to avoid useless rivalries and duplication.

Internal NATO involvement of nonnuclear members in control, supervision, observation, and planning activities might help to divert the ambitions of some members to emulate France. Development of a credible, overall NATO nuclear deterrent strategy itself could reduce the provocations of separate nuclear deterrents and even reassure the Russians. Joint scientific research inside NATO could be of great potential value in the fields of both arms and arms control.

Outside NATO the threatened spread of nuclear weapons is bound to have equally profound effects. There can be little private gratification in the Kremlin, for instance, over the prospect of an independent nuclear capability in Communist China or in restless East Germany.

Out of mutual danger, too, may come new opportunities for agreements based on mutual interest. In its recent significant study on "The U.S.S.R. and Eastern Europe," prepared for the Senate Foreign Relations Committee, the Columbia-Harvard Research Group may have had this in mind when it said: "In the long run, we may come to regard the Russians as our most conservative and responsible adversary, as we explore the possibilities of common interest in limiting certain aspects of the arms race." This may appear extraordinary, but it is in no sense impossible.

Dangerous deficiencies in our military and strategic positions have accrued from our lingering preoccupation with the reckless single strategy of massive retaliation. The strategy itself was the normal outgrowth of our fixation on big bombs and balanced budgets. The continuing effectiveness of our deterrent strategy now depends on our ability to muster the skill, nerve, and wherewithal to equip ourselves with multiple strategies for defense. By the same token, our chances for a world of greater safety and freedom depend on our ability to develop multiple strategies for peace.

Our inadequacy in the field of arms control research is obviously one of our most glaring shortcomings. I have already discussed instances where advance technical preparation in depth might have spelled progress where we now have frustration and defeat. Additional examples keep occurring:

Why has so little been done to implement the report issued on March 16, 1959, by a panel of seismologists under the direction of Lloyd V. Berkner? It outlined a 3-year program of research and development which it thought would restore to full efficiency the inspection system for bomb tests agreed upon in 1958 at Geneva.

Many distinguished atomic scientists now feel that the addition to the detection network of a series of unmanned seismic stations which could pick up small earth shocks might get the Geneva test conference over its last hurdles. Why is the push not being made?

Time and again Senator HUBERT HUMPHREY, Democrat, of Minnesota, chairman of the Senate Disarmament Subcommittee, which has done such outstanding and effective work in this field, has sought an appropriation of $400,000 which the State Department wants for its own use in procuring special foreign policy studies relating to disarmament, weapons control, and possible technical means for enforcement. Time and again the funds have been refused. Yet the costs and the risks of not moving ahead in these areas are mounting daily; $400,000 is one-thousandth of 1 percent of our annual defense budget.

And where is our system of values? If one asks his 10-year-old son today whether in his lifetime he thinks it might be possible to take a fishing trip to the moon, the boy is likely to answer unhesitatingly, "Yes." If he is asked whether he thinks it will ever be possible to get missiles under international control, he is likely to answer unhesitatingly, "No."

We are, I am afraid, living in a fool's paradise of complacency. What will end it short of catastrophe, I do not pretend to know. But I do know that we have a right to worry, and we have an obligation to propose those things which seem sensible.

One of the latter is Massachusetts Senator JOHN F. KENNEDY'S new proposal for an Arms Control Research Institute embodied in a bill he has introduced in the Senate, and in a companion bill which I have introduced in the House.

We propose to give this new agency the responsibility for a vast new research effort to fill those gaps which science and technology can fill in our preparation for peace and disarmament. The Arms Control Research Institute would conduct studies in the physical, natural, and social sciences relevant to specific disarmament issues. It would be an excellent center for coordinating our participation in the joint research activities which may be agreed upon with the Soviet Union.

The Institute could also be a clearinghouse for arms control proposals—deliberately organized to bring ideas and people together on a practical basis for peace. If the Institute operates as I hope it would operate, we will be able to say with more assurance than we can today that our efforts for arms control are a vital part of American policy.

WISCONSIN CONTINUES LEADERSHIP IN PUBLIC WELFARE FIELD UNDER GOV. GAYLORD NELSON

Mr. PROXMIRE. Mr. President, Gaylord A. Nelson, in serving less than 2 years of his first term as Governor of Wisconsin, has convincingly demonstrated he will carry on and enhance Wisconsin's tradition of leading the Nation's State governments in recognizing and meeting their people's new problems with sound, progressive programs of action.

Probably the most important function of our State governments today is in the public welfare field. Most of us believe that the welfare needs of people should be fulfilled to the greatest extent possible at the State and local level. In Wisconsin we are tremendously proud that our State has led the Nation in developing many programs of aid to the unfortunates among its people, just as we have pioneered many governmental reforms in other fields.

Last week, Governor Nelson reviewed the public welfare advances Wisconsin has already made in the few months of his term of office in an address to the Wisconsin Public Welfare Association. These totaled up to 16 significant reforms which make Wisconsin's government even more responsive to the needs of our people. And he went on to describe the jobs that still face Wisconsin in the welfare field—the jobs he intends to carry through.

In this report, Governor Nelson put his finger on a very significant truth about the vital public welfare function of State governments. He said:

I don't know why, but the press will devote its front pages to story after story on regulation of water skiers or billboards, while burying or completely ignoring many of the programs I have described today.

Perhaps my old friend Wilbur Schmidt—whom we all recognize as one of the great public welfare leaders in the Nation—was right when he said to me the other day that welfare programs represent the failures of society and the society doesn't want to look at its failures.

But Governor Nelson concluded his talk by pointing out that we are overcoming this attitude.

Public welfare programs have come a long way from the days of the dole and mere custodial care. And as we direct our efforts more and more strongly toward the twin

goals of prevention and rehabilitation, I think the people will begin to respond, with sympathy, with understanding, and with hope.

Mr. President, I ask unanimous consent that this highly significant address by Gov. Gaylord Nelson be published at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY GOV. GAYLORD NELSON AT THE WISCONSIN PUBLIC WELFARE ASSOCIATION CONVENTION, MASONIC TEMPLE, OSHKOSH, WIS.

Public welfare, in its broadest sense, determines everything we do in State government. This includes the conservation of our forests, soil, and water; the education of our children; the restrictions we place on the criminal or unscrupulous elements in our society; the location of our transportation routes; the rules we set for general health and safety. In each case, public welfare becomes the first and foremost consideration.

Today, however, I would like to talk about public welfare in your terms—in terms of the help we offer to the less fortunate members of our society, the disabled, the unemployed, the retarded, the delinquent, the sick, the mentally ill, the homeless, the aged, the orphaned. I think it's worth reviewing what we in State government have accomplished in the past 12 months, and I think it's important that we set some goals for the future.

It seems to me that the past year has been a heartening one to all of you who have devoted so much time and effort to helping those in our State who cannot help themselves.

First, we changed the State definition of "total disability" to conform with the Federal interpretation, thereby permitting almost four times as many Wisconsin residents to qualify for total disability payments. Today, over 180 people a month are being transferred from local relief rolls to total disability rolls. The average grant to those transferred has jumped from $64 to $107 a month, or 67 percent. By August, more than 2,000 citizens will be transferred to total disability rolls, or almost one out of every 10 receiving general relief at the time the new act went into effect. And an additional 1,100 people will be approved for total disability payments who were never on relief.

This means a substantial saving in local property taxes that go to pay for general relief. Far more important, however, it means that more than 3,000 disabled people will get anywhere from $30 to $100 more per month. Everyone here knows how often such increases can spell the difference between poor health and good health, between human misery and human dignity.

Second, we rewrote the State's unemployment compensation law, extending periods of coverage to 34 weeks and raising maximum benefits to 52½ percent of the statewide average weekly wage. As a result, 25,700 Wisconsin workers who became jobless through no fault of their own in the last half of 1959 received added protection worth an average of $233 per worker; and more than 4 out of every 10 workers who have applied for unemployment compensation since the start of 1960 have received weekly payments higher than the old $41 maximum, with 3 out of 10 getting the new maximum of $47.

Third, we completely recodified Wisconsin's family code, tightening up our marriage, divorce, and child support laws to promote greater stability in family life.

Fourth, we place top priority on construction of a forestry camp for delinquent teenage boys. This camp will relieve population pressures on the school for boys at Waukesha and the State boys school now under construction at Wales. Equally important, the forestry camp offers special advantages in handling the problems of teenage offenders since the boys will be working in a healthy outdoor atmosphere and will be able to find considerable satisfaction in the work they have done. I feel that this conservation approach to rehabilitation without institutionalization—although starting on a small scale—offers one of the bright new hopes in meeting the problem of juvenile delinquency.

Fifth, we authorized the State's joint committee on standards to develop minimum levels of the care and treatment for patients in Wisconsin's 38 county mental hospitals. This committee, which includes some of our most outstanding county welfare officials, is expected to submit its recommendations sometime this summer.

Sixth, we appointed a citizens' committee on county institutions to coordinate the future role of county institutions with other private, State, and county services available to the mentally ill, the physically infirm and the aged. This committee also includes leading county authorities, and it too is hard at work.

We created a State mental health advisory board to study all mental health activities in the State and recommend improvements. This committee, aided by a full-time executive secretary, is now preparing an inventory of Wisconsin's present and future mental health needs, concentrating first on the needs for trained personnel and the educational programs necessary to obtain them.

We provided funds for construction of an intensive treatment center for emotionally disturbed children. The center will accommodate about 30 children between the ages of 6 and 12. Its great promise is that intensive treatment may enable us to cure emotionally disturbed children at an early age. The research aspects of this project are equally important, considering how little we now know about effective treatment of these extreme cases.

We also provided a total of $396,000 for State aids to the 21 present community mental health clinics. This measure provides for State payment of 40 percent of local clinic costs, and already we have spent more than $33,000 and committed an additional $57,000. The community approach to mental health—providing early, outpatient treatment at the local level—is in line with the best modern psychiatric thinking, and again our hope is to provide cures for many before they become permanent wards of our society.

We passed a new State law prohibiting discrimination in employment because of age.

We provided the first operating funds for the new rehabilitation center at the University of Wisconsin. This center, cooperating with the university medical center and other State agencies, is embarking on a program of total rehabilitation for the victims of industrial and farm accidents and for the increasing numbers of children, adults, and aged who recover from the acute stages of lengthy diseases.

We made major changes in procedures at the University of Wisconsin hospital, promoting greater use by both patients and medical students. This was done by permitting the State to share costs for a broader category of public patients, by abolishing the quota system on county welfare patients, and by letting the State relieve counties and veterans of the excess burden in costly cases.

We launched an all-out effort to provide kitchen facilities to feed the 450 children who will occupy the Central Colony nursery building for retarded children. The nursery building will be completed this summer; and as a result of our efforts, the kitchen will be ready 6 months ahead of the original schedule.

In 1959, we also became the third State in the Nation to share health insurance costs with its State employees. A single State health insurance program was established to replace 239 piecemeal plans previously in effect and the same law provided for State payment of 50 percent of the monthly premiums up to a maximum of $6.

Finally, we placed Blue Cross, Blue Shield, and Surgical Care under regulation of the State insurance commission, and we eliminated the power of private companies to terminate individual health and accident policies at any time on 5 days' notice, limiting their termination rights to annual renewal dates, and then only after 30 days' notice.

I have listed some 16 steps we in State government have taken in the past year as we strive for better public welfare. They are important advances.

The last thing I want to do, however, is leave you with the impression that the State government has done all it can. The steps we have taken are important, but they are only a few yards down the long road that lies ahead of all of us.

For one thing, I think we have to work increasingly—at the State, county, and local levels—toward welfare programs that place the emphasis on cures rather than on costs, and on rehabilitation rather than mere custodial care.

For another, I think it's time we did something about the 1-year residence requirement for general relief. I'm sure no one here today would stand by idly while a family starved simply because it hadn't lived within our State borders long enough. I am not sure of the answer, but perhaps it lies along the lines recently suggested by the Lieutenant Governor of New York, who proposed that anyone residing in New York for less than a year be eligible for general relief only after producing a certificate from the State employment service stating that no work was available within his competence. I am also encouraged by recent proposals that the Federal Government assume some responsibility for relief payments to these so-called stateless people.

I also think we should give serious consideration to the proposal of the blue-ribbon tax revision committee that the State take over the general relief program. Under this proposal, the State would employ the same people now administering local relief programs, but the transfer of general relief to the State would provide $23 million in local property tax relief. In addition, the State could apply all its rehabilitation services to getting these general relief recipients back into productive occupations, including our vocational and adult education system to provide training and the State employment service to find proper jobs.

If we are to continue shifting the emphasis from custodial care to rehabilitation—as we should and as we must—we have no choice but to hire the additional caseworkers we need. Let me give you two examples of what I mean:

First, let's take the State's vocational rehabilitation program. The cost of keeping a handicapped person on public assistance is about $1,000 a year in Wisconsin. It costs us $700 to train this person for employment. But after training, his average earnings amount to more than $2,700 a year.

It only makes sense to train these handicapped people. But what are the facts? Last year, we approved 3,670 cases for vocational rehabilitation, but we trained and discharged only 1,440—or less than half. We simply lacked the personnel and the facilities to handle any more.

Let's take a second case: The average pardon and parole officer in Wisconsin costs the State $8,000 a year, including travel ex-

penses. But this worker handles an average of 40 cases a year. The cost of keeping these 40 people in prison for another year is about $80,000, or 10 times the cost of a caseworker. Yet public safety demands that we keep these people in prison unless we have the trained personnel to supervise their activities.

In the revised budget I submitted to the legislature last fall, I increased funds for vocational rehabilitation by $41,000, and recommended adding nine pardon and parole workers at a cost of $76,000.

Both these increases were killed when the State senate voted to defeat the revised budget. This, I think, is an example of the false economy we must constantly fight against. Because the senate killed the $41,000 increase for vocational rehabilitation, about 150 handicapped people this year will be denied the training that could enable them to earn an average of $2,700 a year; many will remain on public assistance rolls at a substantial relief cost. Because the senate defeated the $76,000 increase for 9 parole and pardon workers, as many as 360 convicts may remain in prison, at a cost of $720,000 a year. This is more than insufficient welfare work; it is terrible economy.

Finally, I want to repeat what I have said on many other occasions—that we must amend the State constitution to permit borrowing for capital construction. As you know, the Wisconsin constitution forbids State debt beyond $100,000. To get around this limitation, past State administrations have adopted the device of the dummy corporation, and I have reluctantly continued the practice while pleading for legal borrowing power. But the dummy corporation has been restricted to borrowing where it can assure repayment of loans out of the fees and rents collected on the buildings it constructs. Such fees and rents are notably lacking in our State welfare institutions. Not a single new State welfare building was authorized by the last State administration. And although we are doing better today, we will never have the modern welfare facilities we need until we can go out and borrow funds for construction, backed by the full faith and credit of the State. You have heard of "pay as we go." I suggest this is nothing more than "pay as we grow."

I have spent a good deal of time today outlining our achievements and our goals in public welfare. But I think such a detailed report is necessary, and perhaps overdue. I don't know why, but the press will devote its front pages to story after story on regulation of waterskiers or billboards, while burying or completely ignoring many of the programs I have described today.

Perhaps my old friend Wilbur Schmidt—whom we all recognize as one of the great public-welfare leaders in the Nation—was right when he said to me the other day that welfare programs represent the failures of society and society doesn't want to look at its failures.

I am convinced, however, that we are overcoming this attitude. Public-welfare programs have come a long way from the days of the dole and mere custodial care. And as we direct our efforts more and more strongly toward the twin goals of prevention and rehabilitation, I think the people will begin to respond—with sympathy, with understanding and with hope.

Thank you.

WHAT IS WRONG WITH OUR MULTI-BILLION-DOLLAR HIGHWAY PROGRAM

Mr. PROXMIRE. Mr. President, the senior Senator from Illinois [Mr. DOUGLAS] and the junior Senator from Minnesota [Mr. MCCARTHY] have often spoken of the fiscal irresponsibility of some phases of our Federal road building program.

In view of our highway program's enormous cost, and what so often seems the formless, planless, dollar-happy, something-in-it-for-everyone-but-the-taxpayer chaos, I was very much impressed by a lucid, thoughtful critique on the subject that appeared recently in the Reporter. Because this constitutes an acute criticism of congressional action from which we can benefit, I ask unanimous consent that this article entitled "New Roads and Urban Chaos," by Daniel Moynihan, be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ROADS AND URBAN CHAOS

(By Daniel P. Moynihan)

The Wall Street Journal does not commonly describe any undertaking of the Eisenhower administration as "A vast program thrown together, imperfectly conceived and grossly mismanaged, and in due course becoming a veritable playground for extravagance, waste, and corruption." It must, to the White House, seem notably unkind for the Journal to speak thus of an enterprise the administration has declared "the biggest public works program ever undertaken anywhere or at any time throughout the world." But even the President has conceded that all is not well with the $45 billion interstate and defense highway program.

The program provides for the construction of 41,000 miles of superhighway, connecting 90 percent of the nearly 300 cities of the continental United States with populations of 50,000 or more. When completed, the system will carry 20 percent of the Nation's traffic Up to 95 percent of the cost will be paid by the Federal Government. Half of it will be spent in the cities the system connects.

Washington abounds with administration task forces, congressional committees, and special interest groups—all investigating this program. Those in Congress who are looking for scandal will likely find no end of it. Those in the President's office looking for ways to cut back the program will have an even easier task, although they may encounter more difficulty getting their findings published during this election year. But very few seem to be asking whether, quite apart from corruption or extravagance, the program is bringing about changes for the worse in the efficiency of our transportation system and the character of our cities.

One of the best publicized resolves of the administration that took office in 1953 was to redress the balance of Federal-State relations by divesting the National Government of such usurpations of State sovereignty as vocational education and aid to the dependent blind. While almost nothing has come of this endeavor, an important change in Federal-State relations has in fact taken place during the Eisenhower years. The Federal Government, through the Federal Aid Highway Act of 1956, has assumed the direction of highway construction—one of the few areas of significant government activity in which the States still had the initiative after the New Deal.

Although the Federal Government has been providing some highway aid to the States since 1916, roadbuilding was almost entirely a State and local affair until 1956. The Federal Bureau of Public Roads was, as late as 1939, a small agency in the Department of Agriculture helping to "get the farmer out of the mud" by supplementing State highway budgets. The States spent the money pretty much as they pleased.

The system was permissive but not disorganized. Standards for highway construction, for example, and national routes (the familiar U.S. sign) were successfully established on a voluntary basis. For the most part, however, these roads followed trails that had originated far back in frontier history. With the coming of the automobile they were just surfaced, and widened and straightened somewhat. Our counterparts of the "rolling English drunkard" who laid out Chesterton's "rolling English road" were the Iroquois war party and the Conestoga wagon: More purposeful but not less circuitous as they sought out the passes and water-level routes north and south, and across the continent. The Roman roads Hilaire Belloc has written of, struck like a lash across the conquered provinces, were not reproduced in America until we too established a dominant central government.

The idea of a Federal system of superhighways arose during the First World War. It was revived by the Roosevelt administration as a public works project for building 14,000 miles of transcontinental routes. A study made by the Bureau of Public Roads, which the President commended to Congress in 1939, revealed that there was surprisingly little cross-country traffic and suggested that the concept be changed to a 26,700-mile intercity system. The idea was popularized by General Motors' Futurama exhibit at the New York World's Fair.

In 1944, after some further study, Congress authorized construction of a National Interstate Highway System on this basis. The size was increased to 40,000 miles. Thus, from the outset there has been more mileage authorized for the system than anyone knew exactly what to do with.

MORE ROADS FOR MORE CARS

Authorization is the first step in a Federal public works program. It more or less commits Congress to appropriate money at a future date and provides time for plans and other necessary arrangements to be made. Plans for the Interstate System went ahead. In 1947 the Federal Government and the States agreed on the location of 37,700 miles of the system, leaving the rest for additional urban connections. The roads were to be limited-access, multilane high-speed routes designed to the highest standards. But no special funds were appropriated to build them; only regular Federal highway-aid funds were made available, on the standard 50–50 matching basis. This required the States to take sizable amounts of money from regular projects to spend on interstate mileage.

The result was that the interstate mileage didn't get built. Highway construction expenditure multiplied by nearly eight times from 1945 to 1952, but the States just would not use their money on interstate highways. It had never, after all, been their idea. Special funds were thereupon appropriated and the Federal share increased to 60 percent, but still with little effect. By 1952, less than 1 percent of the system had been completed. Three years later President Eisenhower declared: "At the current rate of development, the interstate network would not reach even a reasonable level of extent and efficiency in half a century."

For the highway transportation industry this raised a serious question. Automobile registrations had almost doubled in the first decade after the war. By 1955 there was a motor vehicle for every 700 feet of lane in both directions on all the streets and roads of the Nation. It was expected that registrations would rise another 40 percent in the following decade, to a total of 81 million. Yet already the cities were "chockablock" with cars. Unless more room was made for

automobiles, the automobile industry itself might feel the pinch. "Either the roads must be made adequate for the traffic," stated the Engineering News-Record, "or the end of national expansion as we know it must be accepted."

Few pains were spared to popularize this notion. General Motors even went into the essay-sponsoring business, offering $25,000 for the best theme on "How To Build the Roads We Need." (The prize was won, naturally, by Robert Moses.)

But the Eisenhower administration needed little persuading. Highway transport had become, in the words of the Brookings Institution, "the greatest single combination of economic activities in men's history."

In July 1954, the President proposed a "grand plan" for a national highway system. His plan was to build the Interstate System Roosevelt had proposed and Congress had authorized. He next appointed a Committee composed of Gen. Lucius D. Clay and assorted men of substance, including Dave Beck, as was de rigueur in those days, to devise means for doing so. The Committee quickly reported that the system would cost only $27.5 billion, and could be built, with borrowed money, in 10 years. It proposed that the Federal Government pay 90 percent of the cost generally and up to 95 percent in States with extensive untaxed Federal landholdings. The President submitted this proposal to Congress in February 1955.

SOMETHING FOR EVERYBODY

Introducing a highway program in today's Congress is like letting a tariff bill loose in the old days—the figures go up and up and up. The economic interest in highways affects not only General Motors, but also countless numbers of garage owners, automobile dealers, road contractors, real-estate developers, and similar large and small businesses throughout the land. Conservatives think of roads as good for business. Liberals think of them as part of the litany of public investment they so love to chant: "Better schools, better hospitals, better roads * * *." Plain politicians think of roads as the indispensable means by which the owners of 70 million motor vehicles derive the benefits from what is for most of them the largest or second largest investment they ever make.

Highway construction is especially important to the professional politicians, since it provides the largest single supply of money available these days to support their activities. The alliance of the county leader and the contractor is ancient and by no means dishonorable. Public works represents the most beneficent outlet yet devised for the politician's need to make a living and, at the same time, please the public. If it occasionally takes the form of paving stream beds in Kansas City, it may also produce a New York State Thruway.

In most States a symbiotic relationship has been established between the contracting firms and the local political organizations which obviates the usual forms of corruption. The contractors pay an honest tithe to the parties' exchequers out of fair profits, which are large mostly because the sums involved are vast. It is a point of pride with many contractors to make all contributions by check and often, as it were, in public through advertisements in party yearbooks. To the extent that this system works, it provides an excellent, if informal, means of financing our parties out of tax funds—contractors are normally apolitical, asking only that there be just a little more than enough work to go around. The politicians usually do their best.

One special attraction of the interstate program was that these roads, for the most part, would be brandnew. Seventy-two percent of the mileage, both in urban and rural areas, would be on entirely new locations. Along most of these 30,000-odd miles, property values are destined to soar. This is sure to please the owners, whether the property has been in the family for years or, by good fortune, recently acquired. The redoubtable George Washington Plunkett, of Tammany Hall, was not the last American politician who could suggest as his epitaph, "He Seen His Opportunities, and He Took 'Em."

In a Democratic Congress, dominated by southern and western representatives, the program had the further advantage of providing a considerable subsidy to those parts of the country. Far the heaviest concentration of traffic and automobiles in the Nation is located in a parallelogram running from Boston to Milwaukee down to St. Louis over to Washington and back up to Boston. The area's 14 States and the District of Columbia had just under half the Nation's motor vehicles in 1955. However, only a quarter of the interstate mileage is located in these States. Mississippi, with one-third to a half as many automobiles as Massachusetts, is to get almost one and a half times the mileage. Texas, with five-sixths as many automobiles as New York, is to get almost three times as much mileage.

It was fortunate for the President that there were so many sound political reasons to support his program. There weren't many others. With the railroads running at 50 percent of capacity, a sudden, sharp increase in intercity transportation facilities represented, if anything, a threat to the economic stability of the entire transportation industry. Almost certainly the 40,000-mile figure was too large, it had no basis other than the enthusiasm of the wartime Congress for a peacetime program that might be years away. In 1944 Congress had little idea where this mileage was to be located, much less whether it would be needed. Ten years later the Clay Committee, appointed by President Eisenhower, found that only 8,500 miles of the system could expect enough traffic to pay for themselves as toll roads—and of these, all but 3,500 were already built or being built.

There was no question that city streets were jammed, and it was always understood that half the cost of the program would go to urban arterials. But this aspect of the program should have evoked the Malthusian specter raised by New York City's Deputy Administrator Lyle C. Fitch: the number of automobiles increases to fill all the space provided.

A few months after the program was adopted, Geoffrey Crowther, of the London Economist, returned from a trans-American tour, told a New York meeting of the Committee for Economic Development: "I have driven myself with my own hands over 12,000 miles. * * * I could tell you a great deal about the * * * fabulous development of the highways in the United States. I find myself puzzled by the statements—that are taken for granted in this country now—that your highways are obsolete. I think I can claim to know as much about them now as anybody in this room and I say it is not so. Your highway system is magnificent. It is overburdened in the immediate vicinity of the large cities; but get away from the large cities and your highways are empty.

"I wonder," said Crowther, speaking of the new interstate program, "if the matter has been investigated as thoroughly as it should be." It had been. Any number of Congressmen had wondered if it could not be made bigger. It was. The President's proposal was adopted with only one other important change. Ever alert to the call of patriotism, Congress lengthened the title to make it the interstate and defense highway program.

WHO PAYS THE BILL?

The urge to have the highways was not matched by an urge to pay for them. From the outset the financing of the program has been the object of much controversy and muddle.

The Clay Committee had proposed that the program be financed through an independent Federal highway corporation which would sell some $20 billion worth of bonds to raise money to build the highways in a 10-year period. The bonds would be retired over 30 years by the returns on the 2-cent Federal gasoline tax. This would have permitted an increase in Government borrowing and spending of billions of dollars each year, without any increase in the debt limit, the budget, or taxes.

The fiscal conservatives in Congress were upset by this proposal for deficit financing. The partisan Democrats were loath to let the President carry off such a political coup. The two groups combined to insist on what is substantially a pay-as-you-go program, matching increased expenditures with increased taxes. After some difficulty over which taxes would be increased, a bipartisan program passed the House in April 1956, by a vote of 388–19. The Senate approved its measure and the President promptly signed the conference bill.

The Highway Act of 1956 gave the President the $25 billion he had asked to construct the Interstate System (to be matched by $2.5 billion from the States) and provided a third more than he had asked for regular highway aid. The authorized mileage of the Interstate System was increased to 41,000. It was to be built over a 13-year period, at a rate of Federal expenditure rising to $2.2 billion per year.

To provide the money, the fuel tax was increased from 2 cents to 3 cents per gallon and the tax on new tires from 5 cents to 8 cents per pound. These increases, together with some smaller ones on other taxes, brought an increase of almost two-thirds in taxes on highway use. A highway trust fund was set up to receive these and some related taxes. The receipts of the trust fund would be used to pay for the highway program.

The device of the trust fund satisfied the administration's wish to keep the increased level of Government spending from showing up in the budget. The bulk of highway expenditure is now carried as a separate item, similar to social security payments. Thus in the budget for fiscal 1961, highway expenditures are shown as $3 million, although they will actually be something like $3 billion.

The program got under way on July 1, 1956, but it was in trouble even before it began. The financial plan provided for the highway trust fund to incur some deficits during the peak construction years. These would be balanced by surpluses obtained during the early period when the program was still on the drawing boards and during the latter years as it was tapering off. At the last minute, Senator HARRY BYRD, of Virginia, supported by Secretary of the Treasury George M. Humphrey, added an amendment that forbade the trust fund ever to incur a deficit. This meant the scheduled program would have to be cut back as soon as the small initial surplus was used up.

A deficit seemed imminent in March 1958, when the President asked Congress to permit the expenditure of an additional $600 million on the Interstate System as an antirecession measure. Congress eagerly responded with $800 million. The 1958 recession thus caused an increase in expenditures and at the same time a decrease in receipts because of lowered economic activity. In January 1959, the Secretary of Commerce reported to Congress that unless receipts were increased the fund would soon be exhausted. There would be no interstate funds apportioned for fiscal 1961 and only $500 million for 1962.

To prevent this the President asked that fuel taxes be increased from 3 cents to 4½ cents a gallon. This aroused opposition from the oil companies, and for a time it seemed that the program might be seriously interrupted, but at the last moment Congress enacted a 1-cent gas tax increase. The President asked for the other half cent in his recent budget message, but nothing will be done until after the election.

Something will have to be done soon, however, for the financial problems of the Interstate System have become more difficult than simply maintaining the level of expenditures envisioned in 1956. Since then the estimated cost of the system has almost doubled.

In January 1958, the Secretary of Commerce announced that revised estimates indicated that instead of $25 billion, the Federal share of the interstate cost would be nearly $34 billion. This was for only 38,548 miles, however, which, it turned out, was all the routes laid out in 1947 required. To build the remaining 1,452 of the 40,000 miles originally planned (never any question of just dispensing with them as a tribute to efficient management) and the extra thousand miles authorized in 1956 will require another $2.2 billion. Technically the revised estimate did not even cover all of the 38,548 miles, since it did not include the cost of reimbursing the States that had already built parts of the system with their own funds or as toll roads. This would add perhaps $4.3 billion. There is also the matter of some $1.5 billion for relocating railroad tracks, telephone lines, and other utilities disturbed by the new highways, as authorized by Congress. Also, another half billion dollars might be needed to provide the extra 1.5 percent of the cost to States that forbid billboards along the new routes, as authorized by Congress. This could bring the total Federal-State cost to something like $45 billion. The sole prospect of economy is that the States aren't taking up the no-billboard option.

WHO RUNS IT?

This is not the end of it: rising costs are built into the Interstate System. From the outset the program has been undermined by the administration's desire for big government achievements without big government. The Clay Committee envisioned the largest public works program in history being carried on with no increase in public personnel. "The Federal Highway Corporation should consist only of a board of directors with secretarial assistants"—a kind of bureaucratic fantasy in which almost everyone is a member of the board and there is no overhead. The Clay Committee proposed that the interstate program be operated through the Bureau of Public Roads as an ordinary Federal highway-aid program, with all the work of picking sites, drawing plans, letting contracts, and so forth, done by the States. For extra help the States, many of which were altogether incapable of doing such work anyway, would turn to the private engineering organizations capable of providing sound engineering in this field. All of this, in some way, would further the President's stated desire for "a cooperative alliance between Federal Government and the States so that government * * * will be the manager of its own area."

The President has had his desire. The Bureau of Public Roads, with only a handful of extra help, depends on the States, which depend on consulting engineers. The consulting engineers, normally paid by a percentage of cost of the projects they design, depend on the Rotary Club for forecasts of the traffic potential of whatever town they happen to be tearing up.

WHERE IS IT BUILT?

Many instances of almost incredible mismanagement have appeared in scathing reports by the Comptroller General, but there is nothing to be done about it. The interstate program is not a Federal enterprise; it is only a Federal expense. Washington is simply committed to keep supplying money until it is finished. But the States have no real freedom of action either. The basic decision to build the system has been made for them: The enormous bargain of the 90-to-10 money makes it politically impossible to do anything but take the money as fast as possible and try to match it. Since all contracts are closely scrutinized by the U.S. Bureau of Public Roads, the States hardly see it as their responsibility to control the costs of the program, as indeed it is not. But the Bureau, under equally heavy pressure to keep the program rolling and Congress happy, exercises little real control. It functions rather as a company comptroller who fusses over items on an expense account without ever daring to ask if the trip was necessary. In fairness, the Bureau could hardly do otherwise: in 1958 it had two investigators to cover the entire United States.

The Comptroller General's men recently came upon a 3-mile segment in a very sparsely settled area of Nevada on which three interchanges have been built at a cost of $384,000. They will handle a daily traffic load of 89 vehicles, serving, in the words of the General Accounting Office, "some old mines, a powerline, four or five small ranches, and a house of ill repute."

From Arkansas the State auditors reported: "On every hand among both employees and commissioners we encountered a strange and distressing apathy at any extravagant use of highway funds." In Indiana apathy was replaced by enthusiasm: The boys had organized a syndicate, with highway department employees to take all the risks out of speculating on capital gains from right-of-way condemnations. The Pennsylvania Highway Department, 100 percent patronage, was performing less than 10 percent of the preliminary engineering on interstate routes, while passing out contracts to consulting engineers at the rate of a $1 million a month. In West Virginia, "* * * only about 10 percent of the State's project engineers * * * were registered or graduate engineers."

With no strong direction of the program, there has been no way to resist the political pressures to build a little bit of interstate highway in every county along the 41,000-mile route. Limited access highways over new locations are more like bridges than ordinary roads. Until they make the complete crossing from one city to another they are relatively useless, starting, likely as not, at one of the cities and ending in a cornfield. A minimum of businesslike management would have arranged for the system to be built in complete segments, concentrating on the more important ones. Instead it is being built in fragments strewn across the continent. It will be years before these are connected into anything like a national system.

The repeated financial crises of the program have created a mistaken impression that it is slowing down. Apportionments of funds for the next 2 fiscal years will be down as much as $600 million, but this will no more than offset the increases provided in 1958. According to Federal Highway Administrator Bertram D. Tallamy, who built the New York State Thruway and is in charge of the interstate program, expenditures are running some 4 percent ahead of the schedule envisioned by the 1956 legislation. Fifteen thousand miles of the system are either in the contract stage or have actually been completed. Routes have been located and plans are in process for 95 percent of the remaining mileage.

True, unless more funds are made available, the program will stretch out. But there is much support for providing more funds. The President's recent budget message, which calls for cuts in housing, hospital, water pollution, and similar programs and makes clear that a serious education bill will be vetoed, nonetheless proposes more funds to permit the construction program for the Interstate System to proceed at a higher and more desirable level. Congress continues to share the President's unflagging interest in highways. Senator ALBERT GORE, who sponsored the 1956 legislation, was talking awhile back about adding another 7,000 miles.

A few legislators such as Senator PAUL DOUGLAS, of Illinois, have questioned whether this is the very best way to spend our money. Senator EUGENE MCCARTHY, of Minnesota, has asked whether the program wasn't merely hastening the day when "You'll be able to drive 80 miles an hour along superhighways from one polluted stream to another, from one urban slum to another, from one rundown college campus to another."

The only certain consequence of the rising costs of the program is that there is no longer much serious possibility of reimbursing the States that built sections of the system as toll roads. In the postwar years, after the outlines of the Interstate System had been established, a number of States did this. From the outset of the present program it has been recognized that justice entitled these States to be reimbursed so that they might either remove the tolls or build additional roads. Five years ago it seemed unthinkable that this would not be done. An administration spokesman told the House Committee on Public Works that not to reimburse these States would be like saying, "Boys, we are sorry, you took care of yourselves, so you do not get anything."

The 1956 legislation declared the intent of Congress to settle this matter, but as one financial crisis has followed another, the intention has grown weaker. It is now practically settled that those States which did not wait around for Uncle Sam to look after them will in fact get nothing. So much for the fate of the bird dogs in the Eisenhower years.

Not surprisingly, 70 percent of these toll roads are located in the States of the northeastern parallelogram, which as a result will get even less than a quarter of the interstate mileage.

This development only compounds the inequity of paying for the Interstate System with gasoline taxes. Drivers on the Massachusetts Turnpike, the Indiana Toll Road, the New York State Thruway, and similar highways will not only have to pay tolls to use their portion of the Interstate System, but they will be paying extra gasoline taxes to build the other portions.

WHO BENEFITS MOST?

Apart from any regional imbalance, the gasoline tax is still a highly questionable way of distributing the burden of paying for the Interstate System in terms of the benefits that will be derived from it. The fuel levy really amounts to a household tax—more than $15 a year on the average—on the 7 out of 10 American families that own an automobile. Most of these families will use the interstate from time to time, but hardly enough to get their money back.

By contrast the system will provide a great subsidy to industry in the form of cheap road transport. The nature of this subsidy has been obscured by the endless arguments concerning the precise share of highway costs that should be paid by trucks as against private automobiles. (The Federal Government and the States are currently spending $22 million running tractor trailers over a road near Ottawa, Ill., to determine just how much they damage the pavement.) Although it appears that truckers do not pay a fair portion of highway costs, this in itself is not the secret of their economic success. The truckers' main advantage is that railroads must pay all the cost of building and

maintaining their transportation system, while trucks pay only when they actually use the roads. Of each railroad revenue dollar, 20 cents goes to right-of-way costs. For trucks the figure is 4½ cents.

As a result of this advantage, in the words of the industry's trade association, "Within one generation, trucking has become the dominant form of transportation in the United States." This dominance will be confirmed by the completion of the Interstate System, at a presently estimated cost of some $45 billion. The net investment in our entire 220,000-mile railroad system is only $28 billion. Were it not for the trucking subsidy, the railroads would almost certainly be running at better than their current 50 percent of capacity.

Some of this imbalance could be righted if the Interstate Commerce Commission were authorized to take the road subsidy into account in fixing trucking rates. But actually only a third of the road transport is conducted by firms operating as common carriers in direct competition with railroads and under regulation by the ICC. Railroad analyst, A. Joseph Debe of Standard & Poor's estimates that two-thirds of it is conducted by or for private industries hauling their own products. It is these companies, spread across the entire range of American industry, that benefit most from the highway subsidy.

Because two-thirds of truck traffic is subject to no rate regulation, the only practical way to restore any economic balance in intercity transportation would be to impose a toll on the commercial users of the interstate System. A permit system would not send trucks to parallel routes; they gladly pay as much as 10 cents a mile to use a road like the New York State Thruway. (This may give some indication of the size of subsidy on free roads.)

The question of tolls must also be asked in connection with the problem of how the system is to be maintained by the States once it is built. Running a limited-access highway is a complex, exacting job requiring intensive, continuous supervision, much as does running a railroad. The great turnpikes are, in fact, very much like railroads; they are not public facilities nearly so much as they are public enterprises. Their headquarters are elaborate communications centers receiving information and dispatching orders, often of much urgency. The forces required to keep the routes open in winter, repair damage, keep up with maintenance, and generally look after things are far greater than those required on ordinary roads. The costs run as high as $10,000 per mile per year. Few States have this kind of money; fewer have the organization to spend it effectively. Only tolls can really be expected to provide either.

The problem will be vastly enlarged by the absence of any food or fuel facilities on the Interstate System. Limited-access highways are isolated travel corridors; it is essential that they be as self-contained as possible. Restaurants and service stations are automatically included in plans for any large toll road. Anyone who has used a turnpike knows how busy these facilities are. They produce income from concessionaire fees and provide indispensable services to motorists. But the Highway Act of 1956 specifically provided that there should be no service facilities on the system.

A motorist on the Interstate System who has car trouble or needs gas will have to leave the main road at an interchange to find a service station. At four in the afternoon he will almost certainly find one open. At four in the morning he will almost certainly find them all closed. The oil companies are thus free of any obligation to set up stations on interstate routes where their prices might be regulated, where they might have to share their profits with the State governments, and most particularly where they might have to stay open in the unprofitable hours of the early morning. And, of course, nothing will help real-estate values at those interchanges like a gas station and a honky-tonk or two. As far as the public is concerned, it means the interstate routes will almost certainly be poorly maintained and will be dangerous to drive on at night or at any time during the winter.

CHAOS IN CONCRETE

It is not true, as is sometimes alleged, that the sponsors of the interstate program ignored the consequences it would have in the cities. Nor did they simply acquiesce in them. They exulted in them. Thanks to highways, declared the Clay report, "we have been able to disperse our factories, our stores, our people; in short, to create a revolution in living habits. Our cities have spread into suburbs, dependent on the automobile for their existence. The automobile has restored a way of life in which the individual may live in a friendly neighborhood, it has brought city and country closer together, it has made us one country and a united people."

This rhapsody startled many of those who have been concerned with the future of the American city. To undertake a vast program of urban highway construction with no thought for other forms of transportation seemed lunatic.

The 1939 report that Roosevelt sent to Congress—prepared in the Department of Agriculture—took it as axiomatic that the new highways would be part of, and provide the occasion for, a "radical revision of the city plan," which would coordinate other urban programs such as slum clearance and provide for a "reintegration of facilities for the various forms of transportation." The 1944 legislation had much the same intent. But so far as the Highway Act of 1956 goes, there is no form of transportation but the automobile, and the act has no objective save providing more room for it.

It had always been understood that a large portion of the interstate funds would be spent in the metropolitan areas, but the 1956 legislation went further to declare that "local needs * * * shall be given equal consideration with the needs of intensive commerce," thus authorizing construction of arterial highways only by courtesy connected with the Interstate System.

It was clear at the time that locating the metropolitan portions of the Interstate System would constitute an unprecedented venture into national planning. It was estimated that the size of our metropolitan areas would double by 1975. For good or ill, the location of the interstate arterials would, more than any other factor, determine how this growth would take place. Yet no planning provisions of any kind were included.

In the absence of any other provisions, the planning would be done by highway engineers. Theirs, admittedly, is an unjustly maligned profession. Nothing in the training or education of most civil engineers prepares them to do anything more than build sound highways cheaply. In the course of doing this job they frequently produce works of startling beauty—compare the design of public highways with that of public housing. Yet, in the words of John T. Howard, of the Massachusetts Institute of Technology, "It does not belittle them to say that, just as war is too important to leave to the generals, so highways are too important to leave to the highway engineers."

Highways determine land use, which is another way of saying they settle the future of the areas in which they are built. It stands to reason that engineers should be required to conform their highway plans to metropolitan land-use plans designed in the context of more general economic and social objectives.

Yet in 1956 we had no metropolitan area plans, as we had no metropolitan area governments. The only one we have now is in Dade County (Miami), Fla., which is just getting started.

In this predicament, there was considerable sentiment for a moratorium on the urban interstate program until planning requirements could be imposed. Most of those concerned, however, as the distinguished Transportation Economist Wilfred Owen is frank to say, felt if the program went ahead it would precipitate such a crisis that something would have to be done at last about our metropolitan areas.

Across the Nation there seemed to be an increasing awareness among those who actually run the cities and suburbs that to do nothing more than build bigger highways only produced bigger traffic jams. There seemed a growing belief that a complex system of mass transit had to be preserved, or revived, or even indeed created—if only to make automobile transportation feasible.

The sorry results of carrying on a number of Federal urban-development programs completely independent of each other had become increasingly evident. Thus, the American Municipal Association formally requested legislation requiring that the urban renewal and highway program be coordinated.

The crisis has come. It has been impossible for the cities to resist the offer of unprecedented amounts of money, however futile they might know it will be to spend it on highways alone. In one metropolis after another the plans have been thrown together and the bulldozers set to work.

Here and there, as in Milwaukee, a vigorous and established city planning authority has been able to get intolerable plans redrawn. But in general the program is doing about what was to be expected: throwing up a Chinese wall across Wilmington, driving educational institutions out of downtown Louisville, plowing through the center of Reno. When the Interstate runs into a place like Newburgh, N.Y., the wreckage is something to see. Down the Hudson, Robert Moses is getting set to build the Canal Street Expressway, the first hundred-million-dollar mile.

The Bureau of Public Roads recently considered an edict requiring that some area plans be developed before interstate funds are allocated, but the idea was abandoned. Some felt it was too late anyway. As for relating the highway program to urban renewal, a recent policy statement of the American Institute of Planners said simply: "Except for the coordination which may be supplied at the local level * * * each one is apparently operating entirely independently of the other." The legislation asked by the Municipal Association was never introduced. It was with compassion that Paul Ylvisaker of the Ford Foundation recently addressed a meeting of city planners as the "beaten profession."

Just ahead for all of us, perhaps, is Los Angeles, in the words of Harrison Salisbury, "nestled under its blanket of smog girdled by bands of freeways, its core eviscerated by concrete strips and asphalt fields, its circulatory arteries pumping away without focus * * * the prototype of Gasopolis, the rubber-wheeled living region of the future."

MONEY TALKS

Yet we may be learning our lesson after all: Owen may be right. All across the country, area planners and highway engineers are discussing what they recognize as their common problems with a new sense of urgency. It is clear that if the areas in which Federal highways are to be built were required to work out adequate plans for the use of land and transportation before the money was handed over, the planning would almost certainly be done. The demand for 90–10 highway funds is so great that there is almost

nothing, however sensible, that local governments would not do to get their share.

It is true that metropolitan area planning will not be an easy matter to bring off. Dennis O'Harrow, director of the American Society of Planning Officials, says candidly: "There is a shortage of planners, a shortage of information, a shortage of money to support studies, and, more fundamentally, a shortage of information as to what should be done if you could do what you wished." But this is a normal condition of human affairs. Almost any effort to think a bit about what we are doing would help.

Simply by providing some flexibility in the program, we could produce great savings. If the cities were permitted to do what they thought best with, say, 50 percent of the more than $20 billion of interstate funds allotted to them, much of it would almost certainly go to mass transit and commuter facilities. This kind of money could reshape urban transportation in America: our total national investment in public transit is less than $4 billion, and a combined highway-mass transit-commuter program could almost certainly produce the same results at lower cost than a program dependent on highways alone.

It is becoming increasingly apparent that American government, both national, and local, can no longer ignore what is happening as the suburbs eat endlessly into the countryside. Since the spreading pollution of land follows the roads, those who build the roads must also recognize their responsibility for the consequences. There are a number of obvious steps that could be taken. Public authorities could, for example, buy up the development rights of open land in the suburbs—not the property itself, but only an easement to prevent it from being turned into a factory site or a housing development. This could be done, as it is in England, in accordance with an area land-use plan that fixes the perimeter of the metropolitan area, or alternates built-up sections with open spaces. What this really amounts to is effective zoning regulations.

How could the money be found to pay for the development rights? A practical solution would be the technique of "excess-taking" as proposed by President Roosevelt in his 1939 message to Congress. As he put it: "The Government, which puts up the cost of the highway, buys a strip on each side of the highway itself, uses it for the rental of concessions and sells it off over a period of years to homebuilders and others who wish to live near a main artery of travel. Thus the Government gets the unearned increment and reimburses itself in large part for the building of the road."

This unearned increment can be staggering; a 5,000-percent increase in land values is not uncommon. At a time when State and local governments are reaching a limit of the money they can get out of taxpayers, here is an opportunity to get money that doesn't belong to anyone; it doesn't exist, as it were, until the Government builds the highway. It represents a legitimate source of Government revenue of great potential. Used to shape the development that the highways make possible, it could transform the suburbs of the next half century.

All these possibilities are enlivened by the investigation of the interstate program now getting under way in Congress. So much thieving, mischief, and blunder will be uncovered (if not, it will be necessary to investigate the investigators) that the public should be prepared for a serious reappraisal of the program by the next administration, Democratic or Republican.

We may yet impart some sanity and public purpose to this vast enterprise. We may yet establish some equity in paying for the highways and restore some balance between them and other elements of our transportation system. We may even refute Belloc's dictum, "The general rule in history is that a city having reached its highest point of wealth becomes congested, refuses to accept its only remedy, and passes on from congestion to decay." But we shall not escape his rule that "the road moves and controls all history."

Roads can make or break a nation.

MONTANA SCHOOL OF MINES

Mr. MANSFIELD. Mr. President, each city in my State, and I am sure each city in the country, is very proud of the schools it maintains, especially the colleges and universities. Many times these institutions of higher learning are taken for granted and people forget what they contribute to a community.

Colleges and universities are a stabilizing influence. They are in a sense an industry whose product is our Nation's greatest asset, an educated youth.

Montana has an exceedingly fine school of higher learning which is probably better known in parts of the United States and the world than it is in Montana. I speak of the Montana School of Mines, at Butte, one of the best of its kind in the world, if not the best. The school of mines is a unit of the university system in the State and is noted for its educational accomplishments, its outstanding graduates, and its contributions to the fields of mining and engineering. The school is playing an ever-increasingly important part in this age of advanced technical and scientific research.

Mr. President, I ask unanimous consent to have a feature story from the April 27 issue of the Montana Standard, which discusses this fine school, printed at the conclusion of my remarks in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINES SCHOOL: INSTITUTION DEFINITELY GREAT ASSET TO BUTTE

"To keep a town alive you must take care of what you already have before you attract something new."

This is an excerpt from a speech made by E. G. Booth, regional manager of the U.S. Department of Commerce, before a group of Butte civic leaders.

We were particularly attracted to this statement because Booth, as the saying goes, knows what he is talking about. It is said that his opinions on proposals for new industries are highly valued in Butte as well as in other communities throughout this area.

Now one might ask what we in Butte should take care of before we go out to get something new. Any number of industries come to mind.

One of them, we would say, is the Montana School of Mines whose campus looks down on the mining city from its western heights.

Some people might not think of the School of Mines as an industry. But it definitely is an asset to Butte. We would do well to take care of it. By taking care of it, we mean that the people of Butte should take more interest in the Montana School of Mines.

We should find out all about it and then tell other people.

Sometimes we think that the Montana School of Mines is better known outside Butte than it is in Butte.

It definitely has an international reputation, because its graduates over a period of more than half a century have penetrated to the four corners of the world. They have become known for their technical competence, their high character, their dependability and their devotion to duty.

Jobs always await Mines graduates. Even during the worst years of the depression of the 1930's Mines graduates stepped off the campus into jobs.

Many have contributed greatly to the advancement of the science of mining, mineralogy, geology, and engineering.

It is something of a novelty in these days and times for a school to become noted internationally for its exceptional educational accomplishments. The Montana School of Mines has achieved this status.

We think many more Butte young men and women could profitably spend a year or two as students at the Montana School of Mines before beginning to specialize in other schools.

The first year or two in college does not vary greatly in any institution of higher learning.

The cultural value of such an institution as the School of Mines to a community cannot be overestimated. The School of Mines faculty represents men and women of the highest ranking in their respective fields.

Dr. Edwin G. Koch, president of the institution, is a native of Butte. Before being chosen to head the school 2 years ago, Dr. Koch was head of the School of Mines chemistry department. Dr. Koch was awarded a doctorate in philosophy at the University of Illinois in 1932.

The School of Mines has an average of more than 300 students, many of them coming from out of the State and even from out of the United States. Many of them find jobs in Butte to assist them in getting through school.

We think the Montana School of Mines deserves a salute from the people of Butte for being a good citizen, an asset to the community and State and Nation and as a producer of a product which is of the highest quality and, consequently, is of universal demand.

THE SECRETARY OF DEFENSE AND GREATER EFFICIENCY IN THE PENTAGON AND THROUGHOUT THE ARMED FORCES

Mr. MANSFIELD. Mr. President, at a time when our national security requires maximum military strength consistent with dollar economy, it is particularly encouraging to note the steady progress the new Secretary of Defense, Mr. Thomas S. Gates, Jr., is making toward greater efficiency in the Pentagon and throughout the Armed Forces. The Congress has already noted, and I believe with satisfaction, the decisive fashion in which Mr. Gates has tackled the job of making decisions in defense matters, and the commendable manner in which the Secretary has entered into discussions of the problems which face them as custodians of the Nation's security forces. His policy of personally meeting with the Joint Chiefs of Staff and quickly resolving matters in disagreement has revitalized the constitutional principle of civilian control, and reaffirmed the ageless adage that organizational and procedural problems in Government—in this case in the Pentagon—are readily resolved by officials such as Secretary Gates who know their responsibilities, willingly assume them, and make the decisions it is their duty to make.

As the able military writer of the New York Times, Hanson Baldwin, recently pointed out:

Secretary Thomas S. Gates has galvanized the decisionmaking process by the simple expedient of making decisions.

Today I would like to call your attention to another most important decision coming from the Secretary's office, which is the creation of a Defense Communications Agency and a Defense Communications System, both under his direction, authority, and control. The magnitude of the services' communications problem can be partially measured by the fact that the combined annual message traffic of the services is in excess of 63 million per year, and the systems which carry this traffic involve over 6 million channel miles of leased wires and nearly half a million high quality long-range voice channels. Under Mr. Gates' two directives, military long-line communications systems will be centralized under an officer of general or flag rank, with command responsibility direct to the Secretary of Defense through the Joint Chiefs of Staff.

When one stops to reflect that our continent is now only 30 minutes or less away from any place in the world, missile time, one begins to get some appreciation of the requirement for the fastest and most reliable communications that can be provided, organizationally as well as technically. We have been making tremendous strides in the technical area. The organizational aspects and control of this global complex have been under official scrutiny for some time, seeking further improvements and economics.

The Secretary's directives are the result of long and thoughtful studies, and promise not only improved command and control for the employment of our military forces, but also increased flexibility, a maximum return in communications capability for the dollars invested in the various systems, and increased responsiveness to the need of the Defense Establishment.

CONFERENCE ON AFRICAN RESOURCES

Mr. CLARK. Mr. President, on May 2, 1960, I placed in the RECORD at pages 9009 to 9010 a brief statement about the Conference on African Resources which is scheduled to be held at New York University in September. That statement included a quote from the New York Times of April 29 that there had been speculation that the Union of South Africa had brought pressure to bear on certain corporate investors in this country to get them to shun the conference.

Ambassador du Plessis of the Union of South Africa has written to me that this newspaper speculation "has absolutely no basis in fact" and that his Government "has yet to arrive at a decision whether or not to participate in the conference."

On May 6 the New York Times carried a similar statement by the consul general of the Union in New York City and I ask unanimous consent that the article appear at this place in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH AFRICA DENIES HOSTILITY TO FAIR

A South African spokesman denied yesterday that his Government was seeking to destroy a proposed African trade conference here.

T. J. Endemann, consul general of the Union of South Africa, said he was "completely unaware" of any supposed hostility of his Government toward the Conference on African Resources, planned for September at New York University. He said the Union was in fact "still giving consideration" to an invitation to take part.

The consul branded as a fabrication rumors circulating in New York business circles that the Union Government had brought pressure to bear on companies to withdraw from sponsorship of the Conference. The aim of the meeting is to promote trade between the United States and the rising nations of Africa south of the Sahara.

The conference is a joint project of New York University and African Fair, Inc., a nonprofit organization set up in 1959 to promote a traveling African trade fair. A third of the original 24 sponsors have withdrawn for unexplained reasons.

Mr. CLARK. Mr. President, upon further investigation I am satisfied that there is no factual basis for the speculation referred to by the Times in its April 29 issue, and I would like to make this brief statement to express regret for having given currency to a newspaper report which contained unfounded implications adverse to the Union Government.

THE PRESIDENT'S APPOINTMENTS

Mr. CLARK. Mr. President, I ask unanimous consent that a list showing the President's appointments for Wednesday, May 11, 1960, as carried in the Washington Post, may appear at this point in my remarks. I call the attention of my colleagues to the noon appointment.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S APPOINTMENTS

President Eisenhower's schedule today:

7:45 a.m. (breakfast): A group of 17 Republican Senators headed by Senate Leader EVERETT M. DIRKSEN.

9 a.m.: Clarence Francis, consultant to the President on surplus foods, and Dr. C. G. King, executive director of the Nutrition Foundation, Inc., New York.

10:30 a.m.: News conference.

11:30 a.m.: Officers of the National League of Insured Savings Associations.

Noon: The President receives an award from Travel magazine.

PROVIDING A SENATE CLIMATE FOR THE SUMMIT CONFERENCE, THE NUCLEAR TEST BAN NEGOTIATIONS, AND THE DISARMAMENT NEGOTIATIONS

Mr. CLARK. Mr. President, all of us in the Senate must be increasingly concerned by the recent events which have cast grave doubt on the success of the summit conference, the success of the nuclear test ban negotiations, and the success of the general disarmament negotiations in Geneva.

It has been my view that we in this body would be wise not to engage in partisan criticism of the activities of the President of the United States, the Secretary of State, or others in the administration. I adhere to that view.

However, I believe it important that a climate should be created in the Senate which will give encouragement to the administration to work for a relaxation of tensions, to work for an agreement at the disarmament conference, based on total and permanent disarmament under adequate supervision and control and enforced by the strength of the United Nations, protected by an international police force.

It has always been my hope that there would be created a climate in this body which would encourage meaningful agreements at the summit, and it is to help create that climate that I speak briefly today.

This morning, in the New York Times, there appears a penetrating article, written by Mr. James Reston, entitled "The Political Consequences Following the U–2."

I ask unanimous consent that the column may appear at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL CONSEQUENCES FOLLOWING THE U–2

(By James Reston)

WASHINGTON, May 12.—There is one charge that cannot fairly be made against the administration in the U–2 spy case. It is not playing Presidential politics with the foreign policy of the United States. As a matter of fact, it may in the last week have lost the "peace issue," which was the best issue it had.

The best politics for the GOP this summer lay in creating an atmosphere of peace, an air of progress toward an accommodation with the Russians on Berlin, Germany, nuclear testing and disarmament.

Prime Minister Harold Macmillan of Britain demonstrated the possibilities of such an atmosphere in the British election of last year. This is not to say that his peace efforts were an insincere campaign maneuver—they obviously were not—but the fact remains that his patient and persistent negotiations in Moscow, Paris, and Washington helped his party win the election.

The same opportunity was open to President Eisenhower. He had agreed to go to the summit with Nikita Khrushchev. He had worked out the possibility of associating Vice President NIXON with the Paris talks. He had a date with Khrushchev in Moscow on June 10, followed by a dramatic flight into the Far East just before the nominating conventions.

All these events, combined with the nuclear testing talks and the disarmament negotiations in Geneva, gave the administration the chance to start a long process of negotiations; and this, in turn, put Mr. NIXON in a position to argue that he should be elected to keep the process going in the years ahead.

THE SUDDEN SWITCH

The U–2 case has not destroyed these political opportunities but it has certainly minimized them. Instead of a calm atmosphere the politcal weather is now stormy. Instead of the "spirit of Camp David" we

now have the "spirit of Sverdlovsk." Instead of President Eisenhower and Premier Khrushchev writing mash notes to each other about "peaceful coexistence," Khrushchev is now making like the unrequited lover whose trust was betrayed.

There is still just a chance to save things at Paris but not if the President continues on his present theme. He is insisting that he must continue crossing the Soviet frontiers. He is saying that the security of the United States demands it. He is saying all these things openly, and therefore Khrushchev cannot let them pass.

By demanding the right to intrude into the Soviet Union, the President has defied Khrushchev to stop him, put Khrushchev on the spot with the Stalinists who have always been against a détente, embarrassed the allies by making their bases a target of Khrushchev's anger, and even repudiated one of Washington's own favorite principles—namely, that each nation has the right to choose its own form of government.

Maybe the President has made the right choice in demanding the right to challenge the authority of the Soviet Government over its own territory; maybe this was essential to protect the United States against another Pearl Harbor. But the President cannot have it both ways: he cannot defy Khrushchev and have his cooperation too.

BAD POLITICS

Accordingly, much depends on whether Mr. Eisenhower goes to Paris in his present mood, blaming Soviet secrecy for U.S. aerial espionage. Asking the Russians to give up secrecy, as anybody who knows Russian history will tell you, is asking the Russians to stop being Russian. And if the President rests his case on this point, the summit will be highly volcanic. Instead of a "peace issue" the GOP may very well, in that case, face a "war issue."

In domestic political terms—to say nothing of international politics—this situation, created largely by accident, bad luck and bungling, will do the Republicans no good. And this is especially so since Vice President NIXON has known all about the aerial espionage and boasted about the wonderful photographs the U–2 brought back.

The fate of one political party in one country in one election is not, of course, the main consideration. The fate of much more is at stake in the present trend of events. But it is a factor. The GOP has, unwittingly, by bad administration, bad judgment and bad luck, stumbled into a course which is also bad politics.

Mr. CLARK. Mr. Reston makes the point, with which I am in agreement, that there is still just a chance to save things at Paris, but not if the President continues on his present theme.

I do not intend to be unduly critical of the President, but I hope that he and his White House advisers will ponder long the comments made by Mr. Reston in that regard.

We are all aware of the fact that there is growing up in this country a strikingly unrealistic attitude toward an agreement on halting atomic tests. We are told about the dangers of Russia cheating on these tests. This danger is, of course, a real one. But we are told nothing about the danger to all of us if these tests are continued without any treaty.

I ask unanimous consent that there may be printed at this point in my remarks a very able letter written by Prof. John Kenneth Galbraith, of Harvard University, writing from Switzerland, entitled "Halting Atomic Tests. Choice of Least Perilous Course Believed To Be Necessary."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HALTING ATOMIC TESTS—CHOICE OF LEAST PERILOUS COURSE BELIEVED TO BE NECESSARY

(The writer of the following letter, professor of economics at Harvard University, served as Director of the U.S. Strategic Bombing Survey in 1945.)

To the EDITOR OF THE NEW YORK TIMES:

The recent hearings before the Joint Commission on Atomic Energy, like much earlier discussion, suggest the presence of a strikingly unrealistic attitude toward an agreement on halting atomic tests. I do not suggest that this attitude is universal, but it does seem sufficiently common to merit comment.

We must surely agree that our task is not to eliminate all risk from our lives, that is an impossible goal, but to find the course of policy that minimizes risk. This requires that we balance the dangers of different courses of action. In the present instance there is, on the one hand, the danger of illicit violation of any agreement to ban tests and that the violation will go undetected. On the other hand, there is the danger of continued explosions. We must choose the course which involves the least peril.

Almost everyone must agree—and most do agree—that the dangers inherent in continuing the tests are virtually total. The tempo of competitive development and testing will increase. The countries newly possessed of atomic weapons will claim their right to poison their just share of the atmosphere. Obviously those who are making tests themselves cannot deny them the privilege. All of these dangers are predictible and certain in the absence of agreement.

POSSIBLE BAD FAITH

Against this, as noted, we must reckon with the possibility of Soviet bad faith and that it will escape detection. Some of our estimate of the danger of bad faith, we must agree, will be the residue of the bad feeling of recent years. And bad faith that involves risk of discovery is not without disadvantage as a practical policy.

But it is not my purpose to argue that this course is riskless. Rather what is clear is that whatever its dangers, they must be less than the dangers of the first course, which are certain and total. Yet this is not the nature of much of the present calculation. It holds that the danger of violation must be totally eliminated or we will continue the tests. One is reminded of the man who insists on suicide unless he is fully protected against automobile accidents. Surely we are more logical than that.

Nor is it reassuring that many who advise against accepting the lesser risk believe that any test ban makes poor military sense. We have recently heard that our military security requires a new series of tests this summer or autumn. And a high official of the Defense Department has recently stressed the need to develop atomic weapons which, though they burn, blind, disintegrate, mutilate and otherwise commit to a disenchanting death, are nonetheless clean.

CONCEALED POSITION

The danger of illicit violation has thus become part of the case against the agreement as such. It has no part of this case. If we believe an agreement is unwise, we should say so. This position should not be concealed behind arguments over enforceability. We fool no one with such transparent devices.

But I have difficulty in imagining that responsible military opinion can face with equanimity a world of uncontrolled tests. In the annals of armies there have always been examples of excessive and myopic preoccupation with military goals. Yet thoughtful military leaders certainly agree that the purpose of the armed services is to protect the continuing life and civilization of the community. Armed services are but one means to this end and diplomacy and diplomatic agreements are among the others.

It is to see the problem whole that we have civilian control of the Armed Forces. This will on occasion require the overruling of too parochial a military view. The danger lies not in doing so, but in failing to do so.

JOHN KENNETH GALBRAITH.

Mr. CLARK. Mr. President, Professor Galbraith points out that what is clear is that whatever the dangers of a test ban are, they must be less than the dangers of no test ban.

In this morning's Washington Post there appears another able column, written by the distinguished commentator Marquis Childs, entitled "Lack of Support Perils Arms Talk." I ask unanimous consent that Mr. Childs' column may appear at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LACK OF SUPPORT PERILS ARMS TALK
(By Marquis Childs)

GENEVA.—It was not alone the pilots of espionage airplanes who brave great dangers in the service of their country on oversea missions. Diplomats and negotiators confronting the Russians across the conference table, all too often find themselves perched precariously at the end of a forgotten limb.

A case in point is Ambassador James J. Wadsworth, who was sent here 18 months ago by Washington to negotiate a nuclear test agreement treaty with the British and the Russians. Close to success after long and painstaking effort, he finds that a massive propaganda attack is being launched against the treaty and, incidentally, against him. From the principal figures in the administration, who are supposedly behind his efforts, there comes scarcely a peep of support, not to mention encouragement.

The propaganda concentrates on the technical difficulties of perfecting a system of inspections that will be cheat proof, and these difficulties are considerable. But this stress entirely ignores the political advantages of a test treaty and by implication it greatly exaggerates the gains that might come from further testing.

A familiar experience of the American negotiator is to have an American Senator or Congressman pop in and out for a few days and then to presume on the basis of this brief experience of an enormously complicated subject that he knows more than the men around the conference table. Wadsworth has experienced this kind of harassment which has included inspired attacks on him in the familiar cliches of "soft" and "appeaser."

He comes of a family distinguished for public service in a tradition more familiar in Britain than in America. His father, the late James W. Wadsworth, served first in the Senate from his native New York and then in the House. Ambassador Wadsworth's grandfather was John Hay, who started his public career as secretary to Lincoln and then, as the climax to a series of diplomatic posts, became Secretary of State.

A big, shambling man with an easy, friendly manner, he has shown a monumental patience and persistence in bringing the Soviets around to the Western view on the major issues of control, inspection, and joint research. If he and—far more important—his work are to be shot down in flames, the disastrous effect on America's standing in the world can hardly be exaggerated.

America's position is rapidly deteriorating because the visible signs of leadership, the friendly grin to one side, are fewer and fewer. The tragedy of the U–2 illuminated this as with a lightning flash. The universal regret and sorrow in the European press, even in West Germany where there is a confused desire to cling to the concept of American infallibility, are expressed in terms of restraint that cloak dismay and indignation.

At the 10-nation disarmament conference, which met here for 7 weeks of polite futility, the chief of the American delegation was Frederick M. Eaton. A New York lawyer of standing and integrity, Eaton started from scratch with no knowledge of disarmament, of the Russians, or of negotiation. He proved himself a quick and resourceful learner who often puzzled the Soviets by the novel frankness of his approach.

But he was thrown in against a tough, hardened, experienced, professional Valerian Zorin, a deputy foreign minister and head of the Soviet delegation. Zorin held repeated press conferences at which the world press represented in Geneva was free to ask any and all questions. After repeated prodding, Eaton announced a press conference. He appeared with a written statement which he said he would read but no questions would be permitted. That was the last as well as the first Eaton press conference.

What is most damaging to America's prestige and standing is the wibble and wobble of American policy from one side of the road to the other. Nothing could illustrate this more forcefully than the backing and filling over the proposed nuclear test treaty; the impression so strongly reinforced in the U–2 case that the left hand and the right hand are operated by quite different sets of intellectual and emotional controls. The record on nuclear testing can be set straight only by strong affirmative words from the President and his Secretary of State.

Mr. CLARK. Mr. President, for a good many weeks now Mr. Childs has been among the leaders in the formulation of public opinion which has pointed out that the record on nuclear testing can be set straight only by strong affirmative words from the President and the Secretary of State.

I hope we will get those words soon, and also that those words will be followed up by deeds at the summit conference. Again I express the hope that we can create a climate in the Senate which will be favorably disposed to any meaningful agreement which may be brought back from Paris for ratification by the Senate.

Mr. President, this morning the Washington Post has published a full-page advertisement entitled "Time for Common Sense," signed by Norman Cousins, editor of the Saturday Review. I ask unanimous consent that the advertisement may be printed at this point in the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

TIME FOR COMMON SENSE

An uneasiness is settling over America. It goes deep down. There is a feeling that we are undergoing a moral shrinkage in the eyes of the world community.

The bigness of our history seems to have been interrupted. The large image of America created by our past seems less clear than it was only a short while ago. And we are sensing a mood of disconnection—disconnection between what we stand for and what we do; disconnection between ourselves as individuals and those who speak and act for us as a Nation.

It is natural for Americans to think of their country as a prime source of stability and responsibility in the world. We have traditionally interposed ourselves against hotheads and bullies in the international arena. We have denounced aggressors, instituted action to stamp out brush fires, and called for a code of responsible behavior for nations.

Only 3 years ago, in fact, the President dissociated the United States from the action of Great Britain and France in the attack on Suez. He properly declared that the United States could not observe a double standard in its foreign policy. We could not approve in our friends that which we denounced in our foes. World law meant obligations binding on all. This was the position we took when we went before the United Nations and supported the resolution against our friends.

Another question of right and wrong has now come up—but this time we ourselves are wrong.

We dispatched jet planes on military reconnaissance over Russian territory. In doing so we took appalling risks.

The main danger of nuclear war today comes not from a definite policy by any nation to launch such a war, but from an act of carelessness or a hideous miscalculation.

An alien military reconnaissance plane taking photographs over any country—whether the Soviet Union or the United States or Great Britain or Pakistan or India or whatever—is a specific and volatile act of provocation that could ignite the war fuses. Our Armed Forces are constantly monitoring their radar screens and are prepared immediately to send jet planes in the direction of the Soviet Union if we should see any possible hostile object. Thus, precisely the same violation we committed, if carried on against us, would trigger our swiftest retaliatory measures.

In any case, the plane incident is at the opposite end from the code of responsible international behavior and world law advocated by the President and the Secretary of State. It creates a strange atmosphere for a meeting of heads of government called for the purpose of reducing world tensions. It gives world communism its biggest propaganda boost in many years. It puts us in a harsh and damaging light before the world's peoples, whose good will and respect are more vital to our security than any reconnaissance photographs or even stockpiles of nuclear bombs.

Only a week ago the President sought to dramatize for the Nation the importance of maintaining a human fund of good will and respect, in connection with his proposals for economic aid. But we can't place a high value on world opinion about our economic policies and then disregard that same world opinion about our military policies.

Just as disturbing as the incident itself was the manner of our response. When it was announced that an American plane had been shot down, we made a false explanation that the plane had wandered off its course, and that the pilot had perhaps been in a daze. (If this statement had been true, consider its implications alongside the recent proposal by American military officials to keep hundreds of bombers in the air on a round-the-clock basis, fully loaded with nuclear explosives and within ready striking distance of the Soviet Union.)

Meanwhile, by way of compounding the damage, several Washington sources were quoted as saying that our only mistake was that we were caught. This is a curious definition of morality to come from a capital that only recently was making headlines with its investigation of rigged TV quiz shows.

An equally astounding comment was that, if only the pilot had chosen to go down with his ship, instead of bailing out, the United States might have been spared the embarrassment represented by the Soviet ability actually to produce the captain of the American plane. In other words, we are now calling on our soldiers to give their lives, not to serve our honor or our freedom, but to spare us the indignity of being caught in a lie.

In any event, the sense of fright and shock felt by the world over the incident was not allayed when it was demonstrated that the initial American explanation was untrue. In this connection, one thing is clear: the American people have not given leave to their government or any branch thereof to speak falsely in our name or make us look like fools.

Most serious of all is the later statement that the reconnaissance 1,000 miles inside the Soviet Union was carried out without knowledge of the White House or the State Department. What it means is that not all the major decisions having to do with war and peace are being made by those who are constitutionally entrusted with the responsibility. It means that the military has arrogated to itself powers intended for the President and the Congress.

No one doubts that the American military was attempting to serve the national security as it sees it. The location of our missile bases is a matter of common knowledge. We live in an open society. But very little is known about the Soviet bases. And there is the fear of surprise attack. It was for the purpose of reducing this danger, it is now officially stated, that the reconnaissance flights were authorized.

The danger, however, of a surprise attack against us may proceed more out of jitters caused by high-flying planes where they shouldn't be than by inadequate intelligence. Moreover, the best pictures in the world will not tell us whether the Soviet is about to spring a surprise attack—any more than Soviet pictures of American military sites can tell them when our bombers will go into operation. Only a knowledge of intentions can provide adequate information about lightning attack. The principal value of mapping is that it provides knowledge about what targets to hit. The Soviet knows this; we know this; other countries know this.

Meanwhile, the gravity of the situation has not produced in either Government an appropriately sober recognition of the perils involved. Mr. Khrushchev puts a nuclear chip on his shoulder and says the Soviet may bomb bases from which our planes took off. Not to be outdone, the United States says it may continue its provocative flights and come to the defense of countries in which we maintain bases. The distance between nuclear threats and nuclear horror grows shorter by the minute.

Ultimatums and counterultimatums will not have the peace, but common sense may. If we are really serious about wanting to reduce or eliminate the danger of a Soviet surprise attack, we should vigorously pursue the new Soviet offer to disarm. Instead of locating Soviet rocket sites, we ought to be locating the true nature of the Soviet intentions. At long last the Soviet claims it is now willing to accept inspection and controls as part of a comprehensive disarmament plan.

If we can get the Soviet to give up its capacity to wage surprise attacks, this will contribute much more to our security than a

gallery of photographs showing every military installation in the Soviet Union. And if the Soviet offer to submit to controls is just a propaganda maneuver, it will be easy enough for us to unmask it as such. We can make counterproposals to give the United Nations the specific machinery for carrying out a program of effective disarmament under enforcible safeguards.

Let's test the policies of the Russians and not their tempers.

Here we get to the heart of the matter. The Atomic Energy Commission and certain military officials have made it clear that they are opposed to any program of disarmament—even if we could get the Russians to agree to everything we asked. One thing is certain, however. We are not going to get others to submit to controls and turn in their hardware unless we are prepared to to do the same.

The result is an American policy of uncertainty and drift. The President speaks on a plane of important principle; but major parts of the Government go off in entirely different directions and act in violation of those principles.

Hence, the present feeling of uneasiness in the Nation, the feeling that things are going against the American grain. For when we lost ground in world opinion, we lose vital security. What does a nation do when it is wrong? The answer need not be obscure. We can admit it and face up to it. We can act promptly and resolutely to guard against a recurrence. And we can do the things that can restore both our pride and our station in the world.

We can identify ourselves mightily with the big ideas that are directed to the control of force in the world, and not with the exercise of force. Ideas calling for a United Nations with the responsible powers of world law. Ideas concerned with the development of the world's resources for a more productive and healthier human commonwealth. Ideas that serve freedom by dramatizing the moral imagination of freemen.

NORMAN COUSINS.

Mr. CLARK. Mr. President, I particularly call the attention of Senators to the last paragraph of the advertisement which actually is an editorial that will appear in this week's Saturday Review, a splendid publication, which I know many of my colleagues read regularly. Mr. Cousins points out that it is our responsibility to identify ourselves with the big ideas which are directed to the control of force in the world, and not with the ideas which are connected with the exercise of force; that we must stand for a strong United Nations with the responsible powers of world law; and with ideas concerned with the development of the world's resources for a more productive and healthier human commonwealth. Those are the ideas we need in America today.

I hope the spirit and the philosophy of what I have said today and of the items which I have asked to have printed with my speech will be the prevailing spirit in the Senate as we face the days ahead.

POLICY FOR AGRICULTURE

Mr. DIRKSEN. Mr. President, on May 11, 1960, the distinguished Secretary of Agriculture, Ezra Taft Benson, delivered an address before the National Restaurant Association, in Chicago. The address is at once timely and fundamental. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE NATIONAL RESTAURANT ASSOCIATION, CHICAGO, ILL., MAY 11, 1960

Seven years ago this month—shortly after I became Secretary of Agriculture—I had the privilege of addressing your convention. Many changes have taken place since that time, but at least one thing remains the same—the warmth of your hospitality.

It is a great honor to be singled out, as we five have been, as contributors in the field of food research. I'm sure I speak for the other recipients also when I say that I do not regard this as a personal tribute. In our day so many people play a part in whatever is achieved that the recognition given to one is rightfully shared by the many. All of us who have received these beautiful medallions, speaking for ourselves and for those who over the years have joined their fruitful labors to ours, thank you for these inspiring awards.

Actually, if it were possible to do so, there is one medal, above all, that should be given today. It is a medal to the American farmers.

Through their enterprise, initiative, and self-reliance, our American farmers have done much to lift the standard of living in this country higher than has ever been known before, in any land, at any time.

They have done marvels in producing abundance. Their productivity is growing more than twice as fast as the productivity of workers in industry.

Since 1950, output per man-hour in nonagricultural industry has risen 2 percent per year. In agriculture the increase has averaged 5 percent per year. A man-hour of farm labor now produces nearly three times what it did 20 years ago.

The ability of our farmers to produce abundance is one of the basic strengths of our Nation. We, who are concerned with food, should help see to it that every citizen realizes this fundamental truth.

The fact that you are presenting a scroll to the Department of Agriculture indicates your awareness of the role the USDA has played in the development of our great farming system, which in turn has been so fundamental to the development of this Nation. One hundred years ago one farmworker provided food and fiber for 4½ persons. By 1950, the figure had risen from 4½ to 14½. Now in 1960, we find one farmworker on the average providing food and fiber for some 25 persons. In short, we've made as much progress in this respect in the past 10 years as was made in the preceding 90 years. The work of the USDA, as well as that of the land-grant colleges and State experiment stations, has been an important factor in this technological revolution.

Over the years, agriculture and the entire food trade have made it possible for our people to buy their food for a smaller proportion of their incomes than is true in any other major nation. That is another fact which needs to be told.

Much of our eating today is done outside the home. The market value of all food served in restaurants and other away-from-home eating places last year is estimated at $15 billion—23 percent of the value of all food sold in the country. More and more of our people of every age are depending on restaurants for balanced, nutritious meals.

As one who has seen the way food is marketed in many parts of the world, I have no hesitation in saying that I believe our food supplies in the United States are the safest, cleanest, and most wholesome food anywhere on the face of the earth.

We have come to accept these achievements of agriculture and the entire food industry as something commonplace. But they are not commonplace. These conditions are unique in the world.

How other nations envy us our agriculture. One must go abroad to appreciate it.

Last fall I visited the Soviet Union and several other countries in Europe. In Russia some 50 million persons—more than 40 percent of the labor force—work in agriculture and forestry. This compares with from 7 to 7½ million persons in the United States, or about 10 percent of our labor force engaged in agriculture.

Compared with us, the Russians have relatively few farm machines. They use a great deal of hand labor, most of it provided by women. Three out of five, or possibly even three out of four persons engaged in agricultural production in Russia, are women.

They are putting up a bold front as regards their ability to catch up to us. I saw hundreds of posters in the U.S.S.R. urging farmers to surpass the United States in per capita production. I also saw many posters forecasting the ultimate victory of the Communist system.

But I feel sure that the Soviets will not equal, much less surpass, our productivity in our lifetime, if ever, under their system of agriculture. Why? Because they can never duplicate the levels of efficiency and productive ingenuity which are called forth in a free society.

Communism is an evil system. It is far more than an economic system. It is a total philosophy of life—atheistic and completely opposed to all that we hold dear.

We must constantly keep our guard up.

But if we dedicate our efforts to making our own free system of agriculture and industry even more efficient, we need have no fears of being overtaken in the foreseeable future.

I don't know how many of you have eaten in restaurants in the Soviet Union. As one who has, I can testify that you need not fear competition from that direction.

Our scientists and technologists are continually discovering new truths which give hope to the entire world in mankind's long struggle to conquer hunger.

And this progress, of course, is not confined to production. Years ago agricultural research may have been devoted almost entirely to helping farmers get higher yields—to make two potatoes grow where one grew before. But today it's far more than that. Today, we use research to grow a better potato at half the cost. We use research to learn more about the nutritive value of potatoes and other foods. We use research all the way through processing, marketing, and household or restaurant utilization.

We expect research to go on building better qualities into foods. Research developed the family-size turkey, the modern broiler, and the meat-type hog. Now we are seeking to develop beef cattle to produce more lean tender beef—and dairy cows to provide milk with more solids and less fat—and hens to lay eggs with longer lasting fresh qualities.

Progress is being made in breeding better fruits and vegetables. We are going to have potatoes with higher total solids and more vitamin C—and giant size, high-flavored blueberries—and fine textured strawberries that are easily capped—and tender snap beans that hold their moisture and crispness—and sweet corn with more sugar that will not turn to starch so quickly as present varieties.

Research continues to tell us more about food composition and about the nutritional needs of people at different ages and doing

different kinds of work. You use this information in planning and preparing your balanced menus. Consumers use it, too, in selecting their food.

So the problem of feeding America is not simply one of producing meat, milk, eggs, fruits, and vegetables. The problem is to help farmers produce the right foods of the right quality and in the right quantity—and to enable industry to process and market them in ways that will meet consumer demands for high quality and convenience.

How fortunate the food trade is to be able to get an abundance of high quality food at reasonable prices.

Because restaurants and other public eating places have become such a large and important outlet for food, we are striving to help you improve the efficiency of this part of the marketing system. It is vital that the cost spread between the farmer and consumer be kept within reasonable bounds. We appeal to you to make every effort to increase the marketing efficiency of the food industry so as to reduce this spread.

Aided by marketing research on improved warehouse layout and methods, wholesale grocers have been able to reduce their gross margins by 50 percent in the past 10 years. Labor productivity in their offices has increased by 25 to 50 percent.

We are planning a similar research program for institutional wholesalers. It should produce comparable reductions in their margins. Preliminary work with a few institutional wholesalers has shown that better plant layout, improved equipment and work methods, and more efficient office and delivery procedures can cut labor costs in half.

We plan to survey food service operators to find out just what services they need from wholesalers. This will help your wholesalers to give you better services at lower costs for food.

We have projects underway that apply even more directly to your operations. Following plans developed by marketing research, a large restaurant chain is installing and testing a revolving table for making salads. This one improvement could reduce costs in this food service department by 14 percent.

Your association asked us to develop more information on the quality of potatoes. Our biologists, working with our home economists, provided information that has resulted in better tasting potatoes with longer storage life.

We have provided similar research to protect the quality of lettuce, tomatoes, sweet corn, and other perishables.

Your association has also cooperated with us in developing recipes for preparing foods in large quantities. We have a mutual interest in putting on the tables of America food that not only tastes good but is good for our bodies.

Recently we have developed machines that quickly identify products of high quality. Such a machine is now helping make possible a constant, reliable supply of high quality eggs. It reduces the gamble for you when a customer orders "two sunnyside up." We are working with meat products to find out just how much marbling is necessary for maximum tenderness.

Such research benefits all our people—those in the food trade, our farmers and ranchers, and, of course, consumers in general. We are pleased with our progress in agricultural research.

But research alone is not sufficient to develop and maintain the kind of progress we seek in agriculture and the food industry. We need to pursue realistic programs all along the line:

Programs that build farm markets.

Programs that permit dynamic adjustments to the rapidly changing science of agriculture.

Programs that will strengthen our family farms as sound economic units.

Programs which will always dignify the individual farmer and his family in the free atmosphere of a vigorous and prosperous America.

In the past 7 years we have emphasized greater freedom for farmers to plant, to market, to compete, and to make their own decisions. In farmer polls and in the corn referendum of 1958, our farm people again and again have made it clear that they want more freedom and less Government interference.

We have stood for more emphasis on making farm products competitive in price and in quality.

We have emphasized aggressive promotion and marketing.

During our term of office we have seen farm exports rise to the highest level in U.S. history in 1957 and remain high ever since.

We have moved out of surplus and into use the astounding total of $17.5 billion worth of farm commodities.

Only last week we signed an agreement with India for the movement of the equivalent of over 1,500 shiploads of wheat and rice during the next 4 years.

We have seen the standard of living on farms rise higher than ever before, measured in terms of electrical appliances, automobiles, and other conveniences owned by farm families.

Yet our critics persist in trying to peddle the myth that our programs have been tried and found wanting. The truth is that some of the important programs we urged years ago are still wanting to be tried. The programs that have failed are the programs we inherited, the programs which Congress refused to bring sufficiently up-to-date. We are still trying to get action on wheat—after all these years and the repeated urgings of President Eisenhower. Yet Congress refuses to act.

Neither farmers nor this administration are to blame for the high costs of existing obsolete farm programs. Our farmers are living, producing, and marketing in the 1960's—but some of the farm programs under which they operate are geared to the 1940's and 1930's. We have protested—we have recommended—we have appealed—all to little avail.

In the light of all the circumstances, three conclusions seem to me to be forced upon any logical mind:

1. The only justification for paying farmers not to produce in 1960 is the fact that Congress has been unwilling to correct outmoded legislation. This has prevented needed adjustments by forestalling the play of economic forces in the market to direct production and consumption.

2. Only if Congress enacts the needed legislation, especially for wheat, should be recommended extending the conservation reserve.

3. Farmers overwhelmingly want to stand on their own feet in a market economy. We must use price support to facilitate orderly marketing, not to destroy outlets by pricing commodities out of the market. It is long past time we released farmers from the acreage control price-support straitjacket.

I speak to you in these terms because this is not only the farmers' battle for realistic farm programs. This is your battle—the battle of everyone who has any connection with any phase of agriculture—the battle, indeed, of every businessman, professional person, every taxpayer, every housewife, every consumer, every person interested in the future of this country.

The abundant blessings we have in this country came to us through an economic system which rests largely on three pillars:

1. Free enterprise—the right to venture—to choose.

2. Private property—the right to own.

3. A market economy—the right to exchange.

Let us never forget that the progress of the future must be built upon these same three pillars or it is not worth having—because in that case it will not be true progress at all but retrogression.

The basic issue is Government control versus freedom. We must keep our economy strong and free. This is your challenge and mine—a challenge to every American no matter who or what he may be. As Daniel Webster put it in an earlier day, "God grants liberty only to those who love it and are always ready to guard and defend it."

Mr. DIRKSEN. Mr. President, on the 10th of May, the Democratic Advisory Council, under the leadership of, I suppose, Gov. Herschel C. Loveless, issued a statement with respect to agricultural policy. Subsequent to the issuance of the statement, the Secretary of Agriculture made some comment. I ask unanimous consent that the statement by the Democratic Advisory Council and the statement by the Secretary of Agriculture, dated May 11, 1960, be printed at this point in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY GOV. HERSCHEL C. LOVELESS, CHAIRMAN OF THE ADVISORY COMMITTEE ON FARM POLICY OF THE DEMOCRATIC ADVISORY COUNCIL, MAY 10, 1960

The Advisory Committee on Farm Policy has been in session for the last 2 days for its first meeting.

The committee has reviewed practically all phases of agriculture. I have referred many subjects to subcommittees for further study and investigation, and to report at the next meeting of the committee.

The committee has unanimously agreed upon certain specific recommendations which it will make to the Democratic Advisory Council. Those recommendations are set forth in the following report of the Advisory Committee on Farm Policy:

RECOMMENDATIONS TO THE DEMOCRATIC ADVISORY COUNCIL BY THE ADVISORY COMMITTEE ON FARM POLICY

The Advisory Committee on Farm Policy recommends to the Democratic Advisory Council for consideration in connection with their recommendations to the platform committee of the Democratic National Convention of 1960, as its first interim report, as follows:

1. When President Roosevelt assumed office in 1933 he found American agriculture prostrate—bankrupt. Under his matchless and fearless leadership this desperate situation was corrected. He established programs for building and maintaining the fertility of the soil—our most precious possession; for rural electrification, to provide our farm people with light, power, and modern conveniences; for support prices and production quotas for agricultural commodities; and numerous other programs which resulted in the restoration of agriculture to a sound and profitable basis.

For the next 20 years, in times of war and peace, under Presidents Roosevelt and Truman, our farm people continued to produce in abundance at a fair return. Agriculture remained strong, vigorous, and prosperous until the present Republican administration assumed office. Since that hour the fate and welfare of agriculture has gone down and down, with every indication that another 4 years of Republican control will return our farm people to the bankrupt condition they faced at the end of 1932.

Yet agriculture is our basic industry. It provides a high percentage of the raw products for industry. It must continue to provide a plentiful supply of food and fiber for our people rapidly increasing in number and now estimated to reach 300 million by the turn of the century. Farmers offer a $40 billion market for American labor and industry. Their return to the conditions of 1932 would have a dangerous impact on the national economy. A vigorous and prosperous agriculture is just as important to the safety and security of the American people as is our Armed Forces. We cannot afford to leave agriculture in the hands of another Republican administration—the chance is too great, the consequences too terrible.

2. The economic welfare of the Nation demands positive Government action to raise farm prices to enable farmers to earn full parity of income with other groups in the economy. This means the immediate attainment of higher prices for the farm commodities produced by those farmers who will adopt effective production adjustments to bring supply into line with requirements for all national purposes.

Restoration of the full 100 percent of parity prices enjoyed by American farmers under Democratic administrations can be achieved through the fair and just application of production and marketing quotas, commodity loans at not less than 90 percent of parity, purchases, payments, marketing orders and agreements, orderly retirement of land and other effective methods. Such programs will provide production adequate for all national needs, at what price, including expanded domestic food programs and greatly increased use of food for peace, for exports, and for reserves, and can be brought about without substantially increasing the farm price of food to consumers and with annual savings to the U.S. Treasury of several billions of dollars. Such programs should lead as expeditiously as possible to a parity of income to the farmers; that is, that gross income from agriculture which will provide the farm operator and his family with a standard of living equivalent to those afforded to persons depending upon other gainful occupations.

3. The Secretary of Agriculture, and his administrative officials, must be persons who are thoroughly familiar with the financial situation now facing the farm people of the Nation, who are dedicated to the early restoration of farm prosperity, who will make constant use of farmers in the preparation and administration of all farm programs, and who will at all times be guided by the best interests of the farmers, consumers, and the national welfare and security.

4. Farmers have demonstrated, through their own marketing and purchasing cooperatives, that only through combined strength can they hope to match the bargaining power of those who process and market the products of the farm. We support the right of farmers to provide themselves with marketing services and farm production supplies through their own cooperative organizations so as to reduce costs, raise the value of their products and enhance their individual income. To this end, we will continue our long-established support of bona fide farmer cooperatives by protecting them from taxation of a punitive nature, or from any other action which will restrict their ability to effectively perform the services for which they were established.

5. We, of the Democratic Party, are pleased to join with the rural electric cooperatives and the rural people of this Nation in the observance in this year of 1960 of 25 years in the service of bringing electricity to rural America.

Our party has successfully blocked all attempts of the Eisenhower-Nixon administration to force its hard money policy upon this great free enterprise program of our farm people.

We believe that Congress should continue to depend upon the farm leadership of our rural electric cooperatives to bring adequate and abundant low-cost electric service to all rural communities on a complete area coverage basis, and that loans by the Government to effectuate this purpose should be available at the interest rate and for the term now provided by law.

6. The Democratic Party supports the use of our food abundance to feed our needy at home and expand the food consumption of our aged and unemployed. The legislation passed by the 86th Democratic Congress, authorizing a food stamp plan, should be immediately and fully implemented.

7. The Democratic Party originated and supports the food for peace idea, and seeks to put it on a permanent and expanded basis. The food bounty of the United States can be used to combat famine abroad, and finance and support economic development in countries greatly in need of such development. At the same time, food for peace programs can expand importantly the market for our farm products.

MEMBERS OF ADVISORY COMMITTEE ON FARM POLICY OF THE DEMOCRATIC ADVISORY COUNCIL IN ATTENDANCE AND APPROVING THE PRECEDING STATEMENT

Hon. Herschel Loveless (chairman), Governor, State of Iowa, Des Moines, Iowa.

Hon. Robert G. Lewis (secretary), agricultural coordinator, executive office, Madison, Wis.

George Bader, McClure, Ill.

Palmer E. Beebe, chairman, Michigan Agricultural Commission, Route 2, Dowagiac, Mich.

Ralph S. Bradley, 200 East Jefferson Street, Springfield, Ill.

Hon. Charles F. Brannan, 1575 Sherman Street, Denver, Colo.

Hon. J. FLOYD BREEDING, U.S. House of Representatives, Washington, D.C.

L. C. Carpenter, director, public affairs, Missouri Farmers Association, Inc., Columbia, Mo.

Prof. Willard W. Cochrane, Department of Agricultural Economics, University of Minnesota, St. Paul, Minn.

Hon. D. S. Coltrane, department of administration, Raleigh, N.C.

Lloyd Godley, Osceola, Ark.

Charles J. Hearst, Maplehurst Farm, Cedar Falls, Iowa.

Emery E. Jocabs, 1510 Republic Building, Oklahoma City, Okla.

Hans O. Jensen, Aurora, Nebr.

Ken Kendrick, vice president, National Association of Wheat Growers, Stratford, Tex.

Arthur Jones, Britton, S. Dak.

William H. Morgan, cooperative consultant, Cortland, N.Y.

Howard Haines Murphy, Sr., 900 North Street, Walpole, Mass.

Ole L. Olson, Buxton, N. Dak.

Hon. Stephen Pace, Macon Road, Americus, Ga.

J. S. Watson, president, California State Board of Agriculture, 498 Pepper Road, Petaluma, Calif.

Hon. Claude R. Wickard, Fairacre Farms, Inc., Camden, Ind.

Dwight Wise, Route 1, Freeman, Ohio.

STATEMENT BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON, MAY 11, 1960

I have just seen press reports of the plan for agriculture drafted by the Democratic farm policy advisory committee.

It is a shocking commentary on the present confused thinking among some so-called experts that the best the Democrats can offer American farmers is a sellout to servitude and a return to what caused their problem in the first place.

It is tantamount to a doctor prescribing for his patient more of what caused the illness.

I had not thought much about what might have emerged from that meeting (of the advisory committee) but I never expected this, especially since other confused Democrats on Capitol Hill have been busily brewing a different but equally poisonous concoction for farmers commonly referred to as the Poage bill.

These fumblings are proof to me that some Democrats are groping desperately for a political panacea. It also shows they do not know the farmers' mind. Every responsible poll of farm operators that I know about is overwhelmingly opposed to Government meddling in agriculture.

Farmers want more freedom to manage their own affairs. If this is what farmers want, what are we waiting for? Why don't we give it to them?

The answer is we must have constructive legislation but Congress refuses to act. There are those in Congress who still seem to favor a Government-regimented and socialized agriculture. We have never had tightly effective control on agriculture production. I fear we really would have a farm revolt should such controls be legislated and enforced.

I believe, as I always have, that Congress would never enact, farmers would not accept and the Government could not enforce the controls necessary to throttle our dynamic agriculture.

I cannot conceive that farmers would sell their freedom for a Government-guaranteed price. If such should happen it would be a sad day for America.

Mr. DIRKSEN. Mr. President, I think it is a little incredible that the Democratic advisory committee should recommend and indicate a desire to go back to rigid price fixing and attempted controls, because to do so would be a repetition of the very thing which has brought on all the ills and difficulties with which the country is confronted today in the agricultural domain. I regard the statement of policy as something incredible, and I let it speak for itself.

LABOR RELATIONS ON THE RAILROADS

Mr. DIRKSEN. Mr. President, recently the Supreme Court of the United States rendered a decision in a case involving the Chicago & North Western Railroad and the Telegraphers Union. The railroad company, believing that in the interest of efficient carrier operation it should close quite a number of its way stations because, first, they did not pay their way, and, second, because those who manned those operations were putting in so little time in the course of the day, they felt it imperative, in the interest of efficient transportation, in the interest of the stockholders, and in the interest of management, that the stations be closed.

Subsequently there was a strike, and the company asked for an injunction. That matter was rejected by the Supreme Court of the United States by a 5-to-4 decision. The Court indicated that the remedy lay in Congress. The act to which the Supreme Court referred is the Norris-La Guardia Act.

The case was one in which the railroad, in attempting to solve its present financial problems, as we in the Senate have urged to the Senate to do, obtained permission from the proper authority to eliminate certain of the stations on its route, but offered to negotiate with the union about new jobs or severance pay for the workers. Some of the employees were drawing a full day's pay for as little as 15 to 30 minutes' work.

I point out particularly that in South Dakota the Public Utility Commission found that the employees affected in that State averaged 59 minutes of work a day, and that the maintenance of the railroad's full-time service to keep such stations open because of the lack of public need would constitute mismanagement.

However, the union threatened to strike unless the railroad gave it the contractual right to veto the abolition or discontinuance of any job then in existence. The Supreme Court held that Congress intended to give the union that power, saying:

> If the scope of the * * * act is to be cut down in order to prevent waste * * * Congress should be the body to do so.

This decision has broad implications, affecting all industrial improvement. If the Court had held that way 50 years ago, we would still have men making horse blinders. Unless we make it clear to the Supreme Court that we do not condone waste, the wonderful world which scientists and engineers predict for our future may never come into being, because we will have allowed the Supreme Court to freeze the state of our present industrial development by permitting the freezing of existing jobs.

I am therefore at this time introducing for appropriate reference a bill to make it abundantly clear the intent of Congress is that progress is our way of life. I want to emphasize, however, that this progress requires due regard for the welfare of those whose lives are dislocated by such progress and that the bill is not intended to change the law on bargaining as to rates of pay, rules, working conditions, severance pay, and other matters. All the bill does is to provide that the phrase "terms and conditions of employment" and related language in various acts do not include the creation or discontinuance of jobs.

I wish to note, too, that the decision of the Supreme Court was by a narrow 5 to 4 vote and has been condemned by editorials regardless of the political inclination of the newspaper.

Mr. President, in this connection, I ask unanimous consent to have printed at this point in my remarks an editorial entitled "Another Blow at the Railroads," published in the Chicago Daily Tribune, and an editorial entitled "Supreme Court Creates New, Bigger Featherbed," published in the Chicago Daily News of April 20, 1960.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). The bill will be received and appropriately referred; and, without objection, the editorials will be printed in the RECORD.

The bill (S. 3548) to amend the Norris-La Guardia Act, the National Labor Relations Act, and the Railway Labor Act, introduced by Mr. DIRKSEN, was received, read twice by its title, and referred to the Committee on the Judiciary.

The editorials presented by Mr. DIRKSEN are as follows:

[From the Chicago Daily Tribune, Apr. 20, 1960]

ANOTHER BLOW AT THE RAILROADS

No matter what the railroads do, some agency of the Government tells them it's wrong.

Two years ago a Senate committee bawled out the railroads for not doing enough to help themselves. Among the things specifically recommended by the committee was abandonment or consolidation of nonpaying branch and secondary lines. About the same time the Chicago & North Western Railway, which was in poor financial shape, sought to better itself by eliminating full time agents at several hundred little used stations. Permission to do so was obtained from the Public Utility Commissions of South Dakota, Iowa, Minnesota, and Wisconsin.

The railroad did not propose to throw out all the superfluous agents without notice and without compensation. It suggested to the telegraphers union several means of cushioning the effects. The agents no longer needed might be transferred to other jobs or granted severance pay, or have their jobs abolished only through death, retirement, or resignation. The union countered by threatening to strike unless the North Western promised that no job existing on December 3, 1957, would be abolished except by agreement between the railroad and union.

The North Western sued for an injunction to restrain the strike. The Federal district court in Chicago refused to issue an injunction, but the court of appeals reversed the lower court, holding that "this is an attempt by the union to arrogate to itself the prerogatives that have been traditionally and rightfully management's, while at the same time, assuming none of the corresponding burdens and responsibilities."

Now the U.S. Supreme Court, in a 5-to-4 decision, has reversed the court of appeals. The majority opinion, written by Mr. Justice Black, noted the railroad's contention that station abandonments were necessary but held that, under the circumstances, the courts were barred by the Norris-La Guardia Act from enjoining a strike.

"If the scope of the act is to be cut down in order to prevent 'waste' by the railroads, Congress is the body to do so, the Court held.

Mr. Justice Whittaker, who wrote the principal dissenting opinion, concluded that a lawful labor dispute was not involved and that, therefore, the Norris-La Guardia law was not applicable. Mr. Justice Clark, in a separate dissenting opinion, said he did not believe Congress intended to put the railroads in such a situation.

In view of the Court's decision, it is obviously the duty of Congress to clarify this matter without delay. On the one hand, Congress cannot berate the railroads for being inefficient while at the same time requiring them by law to be inefficient.

The question here goes far beyond the telegraphers on the North Western Railway. All the railroads and their employees are involved. The question is whether a railroad must get the consent of a union whenever it wishes to abolish a job made unnecessary by changing conditions or technological improvements. As Mr. Justice Clark said, "Everyone knows what the answer of the union will be."

If the unions are to have veto power over the abolishment of jobs, there is no chance for the railroads to help themselves.

[From the Chicago Daily News, Apr. 20, 1960]

SUPREME COURT CREATES NEW, BIGGER FEATHERBED

When the Chicago & North Western Railway decided in 1957 to close 123 little-used freight stations, the jobs of some telegraphers were threatened. Some of them had been drawing full pay for less than an hour's work a day.

The Telegraphers Union threatened a strike unless the railroad agreed to negotiate on a demand that none be dismissed unless the union consented. The U.S. Circuit Court of Appeals issued an injunction forbidding the strike.

In a decision of far-reaching importance, the U.S. Supreme Court has now held, 5 to 4, that the injunction was improper, being in conflict with the Norris-La Guardia Act forbidding court interference in labor disputes.

The significance of the decision is that a union demand for this form of job security is held to be a proper subject for negotiation. Other unions can be expected to press for a contract clause reading: "No position shall be abolished or discontinued except by agreement between the union and the employer."

Justice Clark, in his dissent, noted that a strike would be the death knell of the railroad. Therefore, he added, the Court was in effect telling the C. & N.W. that it must obtain union approval before severing the hundreds of employees no longer needed, and everyone knows what the answer of the union will be.

The majority opinion, written by Justice Black, struck down the railroad's contention that the union's demand represented an attempt to usurp legitimate managerial prerogative in the exercise of business judgment. He added that Congress passed the Norris-La Guardia Anti-Injunction Act knowing that it might sometimes increase the expense of railroad operations because of increased wages and better working conditions.

"If the scope of the Norris-La Guardia Act is to be cut down in order to prevent waste, Congress should be the body to do so," asserted Black.

Justice Whittaker, in a separate dissent, said he was fearful that the innovation and reach of the Court's conclusion will be destructive of congressional policy and to the public interest. He noted the unsatisfactory earnings of the North Western, and pointed out that the planned efficiencies were undertaken in an attempt to safeguard both service to the public and the jobs of 18,000 other employees.

This is really the nub of the matter: whether a business is to be operated for the benefit and convenience of those who manage once to get on its payroll, or whether it may revise its operations to insure its solvency—or to increase its profits.

Up to this point in our industrial progress, the Nation has cast the decision generally on the side of efficiency, in the conviction that if everyone produces the maximum possible, the result will be advantageous to all.

Now we are approaching a situation in which an employee can be sewed into a job requiring 12 minutes of his time a day. If featherbedding really does get accepted to this extent, our industrial supremacy will be a gone glory.

THE MALLORY CASE

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have inserted in the body of the RECORD as a part of my remarks a very illuminating letter written to me by Senator HALL S. LUSK of Oregon, and my reply concerning the Mallory case and S. 3411.

Senator LUSK has had a most distinguished career in the legal and judicial field and is one of our ablest authorities on the law.

It is with his approval that I ask consent to have his letter and my reply inserted in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., May 4, 1960.

Hon. HARRY FLOOD BYRD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BYRD: I listened with interest to your statement on the floor on April 25th regarding the Mallory case and S. 3411. I am in entire sympathy with the view that the rule of the Mallory case should be abrogated. I think, however, that one statement which you made, as reported in the CONGRESSIONAL RECORD, is not supported by the facts. You said, "The so-called Mallory case has been applied to convictions in State courts all over the country."

As you no doubt are aware the Mallory decision stems from *McNabb* v. *United States* (318 U.S. 332), in which the Supreme Court first departed from the rule which had theretofore been uniformly applied in both the Federal and the State courts, that the only test of whether a confession of the accused in a criminal case is admissible in evidence is whether the confession was freely and voluntarily made and was not induced by coercion, threats, or promises. The McNabb case was decided in 1942 and has since then been discussed in many opinions of the State courts, but has never, to my knowledge, been followed.

I take the following statement from the 1959 Cumulative Supplement to volume 20 of "American Jurisprudence," page 79:

"A number of recent cases decided in the Supreme Court or lower Federal courts have held that an illegal delay in arraignment is sufficient to render inadmissible a confession procured during the period of delay. This rule has been qualified or limited in its application by some courts. Thus, where the delay in arraignment was not illegal, or was found to have been necessary and reasonable under the circumstances, the doctrine has found no application.

"Where no unlawful detention is found prior to the time when a confession is made, an illegal detention subsequent to the making of the confession does not operate retroactively so as to invalidate it.

"Confessions have been ruled inadmissible in a number of cases where a delay in arraignment has been only one of several factors which combined to create a coercive atmosphere which most of the courts have found to be violative of the "due process" clause of the Federal Constitution.

"Generally speaking, the State courts have continued to consider only the question of the voluntariness of a confession in determining its admissibility."

The recent cases that have been collected in 19 A.L.R. 2d, beginning at page 1331, bear out the following statement at page 1336:

"With few exceptions, the State courts have refused to apply the strict rule established by the McNabb case, although the decision has been discussed in the majority of subsequent cases involving the question of the admissibility of confessions obtained during a period of delay in arraignment."

Among the State decisions which have refused to accept the rule of the McNabb case are two by the Oregon Supreme Court, *State* v. *Folkes* (174 Oregon, 568) and *State* v. *Leland* (227 p. (2d) 785).

As a result of this adherence of the State courts to long established precedent, the impact of the Mallory rule upon the administration of criminal justice in this country has not been as serious as otherwise would have been the case. At the same time, this position of the State courts is strong reason for questioning the validity of the Mallory rule, for these judges deal with criminal cases not occasionally as does the Supreme Court of the United States but from day to day. They are fully aware not only of the need to protect the accused in his right to a fair trial, but also the right of the public to be protected against violators of the law. The Supreme Court has never held that to admit in evidence a voluntary confession obtained under the circumstances disclosed in the Mallory case is a violation of a prisoner's constitutional rights. The State courts have therefore felt free to apply their own rule. In doing so, they have harmed no one and have served the public good.

Sincerely yours,

HALL S. LUSK,
U.S. Senator.

MAY 12, 1960.

Hon. HALL S. LUSK,
U.S. Senate.

MY DEAR SENATOR: I certainly appreciate your letter in regard to my talk on the Mallory bill.

Enclosed is a copy of my release, which referred to the lower courts, and in some way, the RECORD stated, State courts.

I received a very fine letter from Senator ERVIN regarding your letter, and I am much pleased that you have no objection to having it inserted in the CONGRESSIONAL RECORD, which I am doing.

With appreciation and warm regards, I am,

Faithfully yours,

HARRY F. BYRD.

VERNON TALBERTT

Mr. YOUNG of Ohio. Mr. President, I should like to associate myself with other Senators in extending my congratulations and also my highest personal regard to Vernon L. Talbertt, Chief Messenger of the Office of Secretary of the Senate, upon the almost unprecedented occasion of his 50th anniversary as an employee of the U.S. Senate.

During the period of my acquaintance with him I have come to consider him a gentleman of the highest caliber. I have found him personable, intelligent, and most understanding and accommodating.

In addition to his services over these many years, under various Secretaries of the U.S. Senate, Vernon Talbertt served in the Armed Forces of his country as an enlisted man.

So I am glad to yield my deference and devotion to Vernon Talbertt, and to express the happiness I have experienced in knowing him personally. I consider him a fine, loyal American, and a conscientious and intelligent employee of the U.S. Senate. I join other Senators in wishing him many more happy anniversaries.

NATIONWIDE SUPPORT FOR NATIONAL VOTERS DAY

Mr. WILEY. Mr. President, across the Nation we face a challenge of increasing voter participation in elections—local, State, and National.

The voting record by U.S. citizens is deplorably low—ranging from 24 percent in 1904 to 63 percent in 1952 in a national election.

By contrast, voting in other countries has reached such ranges as follows: Italy, 93 percent; Germany, 86 percent; Turkey, 87 percent; Denmark, 80 percent.

For 1960, the Nation should shoot for a minimum of 75 percent and, if possible, a 90–100 percent voting record in the election.

My colleagues will recall that recently I introduced a resolution, Senate Joint Resolution 186, in which I was joined by Senators KENNETH KEATING, of New York, and JENNINGS RANDOLPH, of West Virginia, as cosponsors—designed to designate a national voters day. The purpose would be to give direction to a much-needed national effort to increase voting.

The aim of the resolution—to designate the first Tuesday after the first Monday in November of each year as National Voters Day—would also be to encourage not only national efforts, but Governors, mayors, industry, business, labor, fraternal, service, women's and other civicly oriented groups to support voter education campaigns.

The objective, of course, would not—as some have erroneously concluded—merely attempt to herd people to the polls, regardless of qualifications. To the contrary, the fundamental aim would be to carry on programs—beginning now—to educate people on the issues in a campaign; the candidates and their qualifications; mechanism of voting, such as marking ballots and using voting machines; informing eligible voters of—and encouraging them to meet—registration requirements; educating potential voters on the processes of government, and the value of citizen support, participation in—and, if deemed advisable, constructive opposition; finally, launching a counter-attack on the trend toward apathy—now among the major causes, keeping almost 50 percent of the eligible voters away from the polls.

Would the designation of a National Voters Day stimulate interest among voters? On a statewide basis the idea of a special Voters Day has already been tried and proved successful. In Connecticut, Governor Ribicoff, for example, reports that the designation of such a special day increased the percentage of voters casting ballots considerably higher than the national average—amounting to 93.4 percent in 1952, 81.3 percent in 1954, 90.8 percent in 1956, and 80.2 percent in 1958. By contrast, the national voting record in these respective years was, in 1952, 63 percent; 1954, 42.5 percent; 1956, 60 percent; and 1958, 44 percent.

GOVERNORS SUPPORT NATIONAL VOTERS DAY

Following the introduction of the resolution, a great many Governors across the country have enthusiastically endorsed the idea in a splendid, bipartisan way.

In addition a substantial number of veterans, fraternal, women's, and other organizations have wholeheartedly endorsed the idea of establishing a National Voters Day.

In view of this widespread support, I sincerely hope that our colleagues on the Federal Charters, Holidays, and Celebrations Subcommittee—before which this resolution is now pending—will give it early and favorable consideration.

Overall, I believe it would—if enthusiastically supported by creative efforts at local and State levels—educate voters and encourage them to turn out at the polls—and so serve to strengthen the foundation of our free country.

I ask unanimous consent to have printed at this point in the RECORD letters from Governors across the country endorsing the concept of establishing a National Voters Day.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

STATE OF VERMONT,
EXECUTIVE DEPARTMENT,
Montpelier, April 29, 1960.

The Honorable ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR MR. SENATOR: I have read with keen interest your proposal for a National Voters Day and give this excellent idea my wholehearted support. Any step taken to encourage greater voter participation is good, and your proposal is certainly in the right direction.

I shall be most happy to cooperate here in Vermont by designating such a day.

Very truly yours,
ROBERT T. STAFFORD,
Governor.

STATE OF FLORIDA,
OFFICE OF THE GOVERNOR,
Tallahassee, May 3, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator From Wisconsin,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter of April 20, informing me of your proposal for the establishment of a National Voters Day.

I am very much concerned by the low percentages of eligible voters participating in our local, State, and national elections. I think your proposal has great merit and you can count on me to render any assistance I can.

With kindest regards, I am,
Sincerely,
LEROY COLLINS,
Governor.

STATE OF CALIFORNIA,
GOVERNOR'S OFFICE,
Sacramento, May 2, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: I appreciate your recent letter and its suggestion to designate the first Tuesday after the first Monday of November, in each year, as National Voters Day.

I would like to join with you in the hope that such a movement will stimulate a greater voter participation, and that the observances held shall be regardless of race, color, religion, economic status, or partisanship. Such a movement for a better based participation in our national elections, and particularly in local and State elections, will have widespread acceptance and appeal.

I hope that you will go forward with this project and I wish you the greatest success in so doing.

Sincerely,
EDMUND G. BROWN, *Governor.*

STATE OF DELAWARE,
EXECUTIVE DEPARTMENT,
Dover, April 22, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate,
Senate Office Building, Washington, D.C.

MY DEAR SENATOR WILEY: Thank you for your good letter of April 20 with enclosure concerning your proposal for National Voters Day.

I would certainly welcome the opportunity to cooperate in every way possible to encourage greater registration by the citizenry and greater voter participation in local, State, and National elections. I believe that extensive attention directed to registration dates and election dates would indeed have the desired results. To that end a National Voters Day would, I am confident, stimulate greater participation in elections.

Thank you again for writing and with best wishes, I am,

Sincerely,
J. CALEB BOGGS, *Governor.*

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, April 28, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR ALEX: Thank you for your letter of April 20 in connection with your resolution for a National Voters Day.

I fully concur in the importance of this program and appreciate your drawing it to my attention.

With best wishes,
Sincerely,
NELSON A. ROCKEFELLER,
Governor.

STATE OF OHIO,
OFFICE OF THE GOVERNOR,
Columbus, April 25, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate, Committee on the Judiciary,
Washington, D.C.

DEAR SENATOR WILEY: Thank you very much for your recent letter concerning the resolution for National Voters Day. I believe the idea is commendable and has great merit.

Certainly in a proposal such as yours, which would increase voter participation, is worthy of great consideration. One of the problems in my State is getting the voters to make themselves eligible for participation by registering prior to the actual election.

While your resolution does not strike at this particular problem, I am certain it would make the voters more aware of their responsibilities in an election.

Sincerely yours,
MICHAEL V. DISALLE,
Governor.

STATE OF RHODE ISLAND AND
PROVIDENCE PLANTATIONS,
EXECUTIVE CHAMBER,
Providence, April 27, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: The problem of greater voter participation in our elections is one which deserves the serious attention of all responsible groups and individuals if it is to be met successfully.

Fortunately, many civic groups in recent years have recognized this challenge to our democratic form of government and have attempted to stimulate more widespread interest in our elections. In many areas, these programs have met with significant success.

Your resolution seeks to focus further attention on this matter and I would be happy to cooperate in any way to insure the success of such a program.

I look forward to receiving any additional proposals you plan to make on this vital subject.

With best wishes.
Sincerely,
CHRISTOPHER DEL SESTO,
Governor.

THE STATE OF NEVADA,
EXECUTIVE CHAMBER,
Carson City, Nev., May 4, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I have received and thank you for your letter of April 20 regarding the problem of stimulating greater voter participation in our local, State, and National elections. I certainly do agree with you that we should use every available opportunity to recommend and promote greater voter participation.

I realize, as you do, that merely designating a National Voters Day could not be expected to solve the problem; however, it may help to stimulate in the minds of many people the idea of exercising their citizenship franchise. I support this idea, and I feel that any progress made along this line would be extremely beneficial to all citizens of our Nation.

Cordially,
GRANT SAWYER,
Governor.

STATE OF IOWA,
OFFICE OF THE GOVERNOR,
Des Moines, May 3, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate,
Committee on the Judiciary,
Washington, D.C.

DEAR SENATOR WILEY: I received your letter under date of April 20 in which you advise me of your deep interest in stimulating greater voter participation in local, State, and National elections. I note that you have introduced a resolution in Congress to designate a National Voters Day.

I am preparing a proclamation entitled "National Voters Day" as a result of your letter.

With kind personal regards, I am,
Cordially yours,
HERSCHEL C. LOVELESS,
Governor of Iowa.

STATE OF NEW JERSEY,
OFFICE OF THE GOVERNOR,
Trenton, April 26, 1960.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter of April 20. I agree with you that the low percentage of eligible voters participating in our general elections is deplorable.

In many talks I have made over the past years, I have stressed the necessity for greater citizen participation at the polls, in primaries as well as in general elections.

I think that your plan to designate a National Voters Day might help to stimulate a greater exercise of suffrage rights and you are assured of my help and cooperation.

Sincerely yours,
ROBERT B. MEYNER,
Governor.

STATE OF ARKANSAS,
OFFICE OF THE GOVERNOR,
Little Rock, April 25, 1960.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: This will acknowledge your letter of the 20th in reference to

National Voters Day, to be observed in November.

In accordance with your request, I will be happy to proclaim National Voters Day at the appropriate time. Certainly, it behooves all of us, as civic-minded citizens, to do our utmost to encourage greater interest in voting.

Please let me know whenever I can work with you in mutual service to our constituents.

Most sincerely,

ORVAL E. FAUBUS,
Governor.

STATE OF ALABAMA,
GOVERNOR'S OFFICE,
Montgomery, April 27, 1960.

HON. ALEXANDER WILEY,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I wish to thank you for your letter of April 20, with enclosure, suggesting that a National Voters Day be observed nationwide each year. I appreciate your sending me a reprint of your remarks in the CONGRESSIONAL RECORD in explanation of your suggestion.

It appears to have much merit since voter participation in our national elections has never been very high. I am interested to know of your National Voters Day campaign, and I hope you will keep me posted on developments.

Sincerely yours,

JOHN PATTERSON,
Governor.

EXECUTIVE DEPARTMENT,
Annapolis, Md., April 28, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: I am grateful to you for your letter of April 20, and for the enclosure outlining your program to stimulate greater voter participation in local, State, and National elections.

I concur wholeheartedly in your statement that it is the duty of all of us to work toward the achievement of a broader participation by the people in our elections.

As you suggested in your statement, it is perhaps premature at this time to consider the establishment of a legal holiday for the Tuesday after the first Monday in November. In Maryland, for example, I would feel compelled to go to the general assembly for such action.

I shall be happy, however, to proclaim that day as National Voters Day and to support you in any other practicable way.

With best wishes and kindest regards, I am,

Sincerely,

J. MILLARD TAWES,
Governor.

STATE OF WASHINGTON,
EXECUTIVE DEPARTMENT,
Olympia, April 29, 1960.

HON. ALEXANDER WILEY,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: May I thank you for your suggestion that a National Voters Day be designated in the State of Washington.

At the present time we cooperate with both political parties in designating a Voters' Registration Month to stimulate greater participation in elections. Your idea may possibly be used to supplement this traditional effort.

Sincerely,

ALBERT D. ROSELLINI,
Governor.

STATE OF IDAHO,
OFFICE OF THE GOVERNOR,
Boise, April 29, 1960.

HON. ALEXANDER WILEY,
U.S. Senator,
Committee on the Judiciary,
Washington, D.C.

DEAR SENATOR WILEY: I share with you, as do all chief executives in the 50 States, your concern in getting out eligible voters to exercise their rights in the elections coming up this fall.

We, in Idaho, have, through the efforts of many organizations and civic leaders, gained the enviable position of having led the Nation in the last general election. Seventy-some percent of the voters voted in that election. I sincerely hope we can improve this record.

I am quite certain that your resolution to designate a National Voters Day will receive widespread support.

Sincerely,

ROBERT E. SMYLIE,
Governor.

WYOMING EXECUTIVE DEPARTMENT,
Cheyenne, April 26, 1960.

HON. ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: The problem which you have moved into with your resolution in Congress to designate a National Voters' Day is one which, of course, plagues us every election.

When the appropriate time comes, just prior to our next election, I shall be most happy to bring National Voters Day to the attention of the Wyoming people either by proclamation or statement to the press. I would appreciate it if you can advise me when the resolution is passed.

Sincerely yours,

J. J. "JOE" HICKEY,
Governor.

DEFENSE COMMUNICATIONS AGENCY

Mr. BRIDGES. Mr. President, yesterday the Defense Department made the announcement that Secretary of Defense Thomas S. Gates, Jr., has established a single defense communications system. By this action Secretary Gates has pulled together into one consolidated system the vast and expensive worldwide communications networks of the various services.

I take this opportunity to commend Secretary of Defense Thomas S. Gates, Jr., on his recent decision. The proposed defense communications system will furnish facilities for command and control functions, intelligence, weather, logistics, and administration. It represents a most important organizational step and, to quote the Secretary of Defense, it is "one which will result in better utilization of the communications equipment so essential to our modern military forces and weapons systems."

This action of the Secretary of Defense is one more example of his tireless efforts to give the American people a more efficient Defense Establishment. It reflects his determination to avoid rigidities in the organization of his Department, and to move in a forthright manner to integrate functions in the interests of efficiency.

Under this new agency the facilities of the services will be integrated for the first time into a single system responsive to the needs of the Department of Defense as a whole. The reorganization not only provides maximum communications for dollar outlay, but it also provides maximum flexibility, dispersion and alternate routing capability, and standardization of installations, operations, and maintenance. Unnecessary duplication in research and development in this important area will be prevented.

I believe that we can take additional encouragement from this action as evidence of what the present Secretary of Defense is doing to improve our Nation's military capability. This, together with his recent decision to meet personally with the Joint Chiefs of Staff, constitutes reassuring examples of how personal leadership, such as that possessed by Tom Gates, can result in both economy and strength.

In view of the great importance of this action, I ask unanimous consent that the press release and directives of the Secretary of Defense under date of May 12, 1960, announcing this new single communication system, be made a part of these remarks, and printed in the RECORD at this point.

There being no objection, the release and directives were ordered to be printed in the RECORD, as follows:

SINGLE COMMUNICATIONS SYSTEM SET UP IN DEFENSE DEPARTMENT

(News release from the Department of Defense)

A single communications system, pulling into one Agency all the long-haul requirements of the Department of Defense will be established under two directives, the Department of Defense announced today.

The documents, signed by Secretary Thomas S. Gates, Jr., authorize a new type of Agency headed by an officer of general or flag rank with command responsibility direct from the Secretary of Defense through the Joint Chiefs of Staff. It resolves a problem that has been known to concern the Congress and the Pentagon for a long period.

The two directives, designed to increase the effective use of long-line communications by centralizing their control provide for a Defense Communications Agency and a Defense Communications System, both under the direction, authority, and control of the Secretary of Defense. General responsibility for the operational control and supervision of the system will be assigned to the Agency.

The Defense Communications System will furnish facilities for command and control functions, intelligence, weather, logistics, and administration. Communications requirements which have been met by the three military services in support of the National Aeronautics and Space Administration will be furnished in the future by the Agency.

In commenting on this action, Secretary Gates said: "This method of handling long-line communications is the outcome of a most comprehensive study in which the Joint Chiefs of Staff, the military services, and the Office of the Secretary of Defense participated. We regard it as an important organizational step, and one which will result in better utilization of the communications equipment so essential to our modern military forces and weapons system."

Implementation of the plan, with the assumption of operational control and full supervision of the system by the new Agency will be accomplished on a phased basis without disrupting essential communications during the transition period. This is expected to

take about 9 months from the date when the Chief of the Agency is appointed.

The Defense Department believes the single communications system is essential for the following reasons:

(a) To provide maximum communications for the dollar investment;

(b) To provide support for the more advanced weapons systems of the future through a centralized control;

(c) To provide maximum flexibility;

(d) To assure adequate dispersion with alternate routing capability;

(e) To eliminate duplication in the research and development field; and

(f) To provide for standardization of installation, operation, and maintenance to assure overall system efficiency.

The system does not include: tactical communications which are self-contained within tactical organizations; self-contained information gathering, transmitting and/or processing facilities which are normally local in operation and use; weapons systems requirements which cannot be met through the facilities of the DCS; and land, ship, or airborne terminal facilities of broadcast, ship-to-ship, ship-to-shore, and ground-air-ground systems.

The communications net does encompass 79 major relay stations scattered throughout the world representing a plant investment of $2 billion.

The combined annual message traffic handled by the three military systems which are to be integrated into a single communications system, currently is in excess of 63 million messages per year. The systems of today involve 6.352 million channel miles of leased wires and 489,000 high quality long-range voice channels. To provide some idea of the magnitude of the traffic, the Air Force high frequency radio alone is 14 times greater than the RCA system, has three times as many people, and handles 20 times as much traffic.

The military departments' communications systems employ approximately 24,700 personnel. Personnel will be assigned to the Agency from existing resources of the military departments or other Department of Defense agencies to man the Communications Agency headquarters and traffic control centers.

The Chief of the Agency will be a military officer of general or flag rank who will be responsible for establishing a headquarters staff and such subordinate units, facilities, and activities (including communications control centers) as are required by the Agency.

The location of the Agency headquarters shall be determined when the organizational structure and staffing plans of the Joint Chiefs of Staff and the Chief of the Defense Communications Agency are submitted to the Secretary of Defense for approval.

DEPARTMENT OF DEFENSE DIRECTIVE NO. 5105.19, MAY 12, 1960—DEFENSE COMMUNICATIONS AGENCY

References: (a) Memorandum from Deputy Secretary of Defense to Chairman, Joint Chiefs of Staff, subject as above, July 25, 1959; (b) DOD Directive 4600.2, "Defense Communications System"; (c) DOD Directive 4600.1, "Telecommunications Policy Objectives."

I. GENERAL

Pursuant to the authority vested in the Secretary of Defense and the provisions of the National Security Act of 1947, as amended, including the Department of Defense Reorganization Act of 1958, a Defense Communications Agency (DCA) is hereby established as an Agency of the Department of Defense under the direction, authority, and control of the Secretary of Defense.

II. ORGANIZATION AND COMMAND

A. The Defense Communications Agency shall consist of a military commander of suitable general or flag rank, a headquarters staff, and such subordinate units, facilities and activities (including communications control centers) as are specifically assigned to the Agency by the Secretary of Defense or by the Joint Chiefs of Staff by the authority and direction of the Secretary of Defense.

B. The chain of command shall run from the Secretary of Defense, through the Joint Chiefs of Staff, to the Chief, DCA. Orders, program approval and guidance to the Chief, DCA, shall be issued by the Secretary of Defense or by the Joint Chiefs of Staff by the authority and direction of the Secretary of Defense.

C. The DCA shall establish and operate communications control centers as necessary to implement responsibility assigned the DCA for operation control and supervision of the Defense Communications System (DCS). Operational responsibility for DCS communications control functions currently being performed by the military departments will be assumed by the communication control centers establishment by the DCA as soon as practicable after activation; no other control centers will be authorized to perform these functions after that time.

III. RESPONSIBILITIES

The DCA, under the direction and control of the Chief of the Agency, shall be responsible for the operational control and supervision of the DCS which includes all worldwide, long-haul, Government-owned and leased, point-to-point circuits, terminals, control facilities and tributaries required to provide communications:

A. From the President to and between the Secretary of Defense, the Joint Chiefs of Staff, and other governmental agencies.

B. From the Secretary of Defense and the Joint Chiefs of Staff to and between the military departments and the unified and specified commands.

C. From the military departments to and between their major commanders and subordinate fixed headquarters.

D. From the unified and specified commands to and between their component and subordinate commands.

IV. FUNCTIONS

Under the direction and control of the Chief, DCA, the Agency shall perform the following functions within its assigned field of responsibility:

A. Operations:

1. Based on approved requirements, allocate circuits and channels to the military departments, the unified and specified commands and other Department of Defense or governmental agencies.

2. Allocate standby communications facilities (installed and mobile) to meet approved requirements or emergency situations.

3. Supervise the restoration and allocation or reallocation of circuits and channels under emergency conditions.

4. Operate communications control centers; supervise "departmental facilities/technical control" elements; and maintain current information on status of circuits, channels, and resources of the DCS.

5. Prescribe maintenance standards and installation practices.

6. Conduct continuing traffic analysis and maintain necessary records to insure effective and efficient utilization of the DCS.

7. Supervise the operation of special purpose communications facilities, such as those required to support the Alternate Joint Communications Center, Joint War Rooms, and other similar activities as designated by the Secretary of Defense or the Joint Chiefs of Staff.

8. Conduct periodic operational exercises, inspections, and tests in order to evaluate the effectiveness of the DCS.

9. Maintain necessary radio frequency records and request the assignment or reassignment of radio freqencies required for the DCS.

10. Recommend to the Secretary of Defense, through the Joint Chiefs of Staff, the assignment to the military departments or other Department of Defense agencies the responsibility for:

(a) Providing and maintaining component facilities of the DCS.

(b) The leasing of authorized commercial circuits and facilities required to support the DCS.

(c) Providing and maintaining personnel, facilities, equipment, and other support required by the DCA to maintain and operate the communications control centers.

B. Plans and engineering:

1. Consolidate and analyze communications requirements proposed for the DCS, giving due consideration to planned and available system facilities, and submit report of analysis and evaluation to JCS together with recommendations for approval, modification, or disapproval.

2. Develop plans for meeting approved requirements that are beyond the capability of the DCS and submit such plans through the Joint Chiefs of Staff to the Secretary of Defense for approval.

3. Translate approved requirements into system plans for detailed engineering by the military departments.

4. Review detailed engineering plans prepared by the military departments for conformance with approved policies and programs and consistency with the concept and objectives of the DCS.

5. Initiate appropriate action to implement approved plans.

C. Programs:

1. Translate system engineering plans into program guidance, including the assignment of appropriate program priorities.

2. Recommend to the Secretary of Defense, through the Joint Chiefs of Staff, assignment of program implementation responsibility to the military departments.

3. Review status of programs and related facilities which support the DCS and recommend to the Secretary of Defense, through the Joint Chiefs of Staff, any corrective action or change necessary.

D. Research and development:

1. Coordinate communications research and development programs of the military departments which are applicable to the DCS to insure effective integration, standardization, and compatibility and to eliminate unnecessary duplication in research and development effort and expense.

2. Review current status of research and development efforts in support of the DCS.

3. Recommend to the Director of Defense, Research and Engineering, through the Joint Chiefs of Staff, research and development programs or projects required to insure progressive improvement of the system.

E. Perform such other functions as the Secretary of Defense or the Joint Chiefs of Staff assign.

V. RELATIONSHIPS

A. In the performance of its functions, the Agency shall:

1. Coordinate actions, as appropriate, with the military departments and other Department of Defense or governmental agencies having collateral or related functions in the field of its assigned responsibility.

2. Maintain active liaison for the exchange of information and advice with the military departments and other Department of Defense or governmental agences.

3. Make full use of established facilities in the Office of the Secretary of Defense, the

military departments and other Department of Defense agencies rather than unnecessarily duplicating such facilities.

B. Officials of the military departments and other Department of Defense agencies shall provide support within their respective fields of responsibility to the Chief of DCA as may be necessary to carry out the assigned responsibilities of the Agency in accordance with approved requirements.

VI. AUTHORITIES

A. To carry out assigned responsibilities and functions of the Agency, the Chief of DCA is specifically delegated authority to:

1. Exercise operational control and supervision of communications activities and facilities comprising the DCS.

2. Issue instructions pertaining to the operation and maintenance of the DCS to the heads of the operating agencies of the military departments and other Department of Defense or governmental agencies, provided that task assignments and pertinent instructions may be issued directly to any operating element of the DCS that are within the capacity of such elements to accomplish.

3. Have direct access to and direct communication with any department or agency performing DCS functions over which the DCA exercises operational control and supervision.

4. Direct the consolidation or elimination of DCS facilities and operations in order to achieve maximum efficiency, economy and effectiveness.

5. Prescribe procedures, principles, standards and practices for activities under his operational control and supervision.

6. Prescribe or approve, as appropriate, security rules, regulations and instructions for DCS activities.

7. Obtain such reports and information from the military departments and other Department of Defense or governmental agencies as may be necessary to the performance of the Agency's assigned functions.

B. In providing direct DCS support to the military departments, other Department of Defense agencies and other governmental agencies, the Chief of DCA is authorized to redelegate operational control of specified DCS facilities and resources.

C. Other authorities specifically delegated by the Secretary of Defense to the Chief, DCA, in other directives or issuances will be referenced in an inclosure to this directive.

VII. ADMINISTRATION

A. The Chief, DCA, shall be designated by the Secretary of Defense, upon recommendation of the Joint Chiefs of Staff.

B. Applicable Department of Defense policies, regulations and procedures shall govern the Agency's operations.

C. The Agency will be authorized such personnel, facilities, funds, and other administrative support as the Secretary of Defense deems necessary for the performance of its functions. The military departments will assign military personnel to the Agency in accordance with approved authorizations and applicable Department of Defense directives and instructions.

D. Personnel, facilities, equipment and other support required to maintain and operate specific segments of the DCS for which a military department or other Department of Defense agency has been assigned responsibility shall be provided from resources available to that department or agency.

E. Personnel, facilities, equipment and other support required to maintain and perform the operation of the DCS Communications Control Centers will be provided to the DCA by the military departments or other Department of Defense agency to which such responsibility is assigned.

VIII. DEFENSE COMMUNICATIONS POLICY ADVISORY COMMITTEE

A Defense Communications Policy Advisory Committee is hereby established to advise the Joint Chiefs of Staff and the Secretary of Defense on matters relating to the DCS. The membership of the committee shall consist of the Assistant Secretary of Defense (S. & L.), as chairman; the Director of Defense Research and Engineering, as vice chairman; a representative of each military department and the organization of the Joint Chiefs of Staff; the Chief of the DCA; and the Director of the National Security Agency.

IX. EFFECTIVE DATE

This directive is effective upon publication.

THOMAS S. GATES,
Secretary of Defense.

DEPARTMENT OF DEFENSE DIRECTIVE NO. 4600.2, MAY 12, 1960—DEFENSE COMMUNICATIONS SYSTEM (DCS)

References: (a) Memorandum from Deputy Secretary of Defense to Chairman, Joint Chiefs of Staff, subject as above, July 25, 1959; (b) DOD Directive 5105.19, "Defense Communications Agency"; (c) DOD Directive 4600.1, "Telecommunications Policy Objective."

I. PURPOSE

The purpose of this directive is to establish a single Communications System within the Department of Defense under the direction, authority, and control of the Secretary of Defense, and assign general responsibility for its operation.

II. DEFINITIONS

A. The Defense Communications System (DCS) includes all worldwide, long-haul, Government-owned and leased, point-to-point circuits, terminals, control facilities and tributaries, required to provide communications from the President to and between the Secretary of Defense, the Joint Chiefs of Staff and other Government agencies; from the Secretary of Defense and the Joint Chiefs of Staff to and between the military departments and the unified and specified commands; from the military departments to and between their major commanders and subordinate fixed headquarters; and from the unified and specified commands to and between their component and subordinate commands.

B. The DCS does not include: tactical communications which are self-contained within tactical organizations; self-contained information gathering, transmitting and/or processing facilities which are normally local in operation and use; weapons systems requirements which cannot be met through the facilities of the DCS; and land, ship or airborne terminal facilities of broadcasts, ship-to-shore, ship-to-ship, and ground-air-ground systems.

III. POLICY

A. There will be a single Defense Communications System (DCS) to provide facilities to meet all long-haul telecommunications (as defined in II.A. above) requirements of the Department of Defense. No other facilities will be authorized for this purpose.

B. Special purpose communications facilities, such as those required to support the Alternate Joint Communications Center (AJCC), Joint War Rooms and similar activities, as designated by the Secretary of Defense, will be included in the DCS.

C. The operational control and supervision of the system will be under the Defense Communications Agency (DCA) as prescribed in reference (b) above.

D. The system will be operated and maintained in accordance with Department of Defense policies, regulations and procedures and strategic and logistic guidance by the Joint Chiefs of Staff (JCS).

E. Unilateral tactical and special purpose communications (as defined in II.B. above) will be operated and maintained by the military departments and other Department of Defense agencies, as assigned.

F. Personnel, facilities, equipment and other support required to maintain and operate specific segments of the DCS for which a military department or other Department of Defense agency has been assigned responsibility shall be provided from resources available to that department or agency.

G. Personnel, facilities, equipment and other support required to maintain and perform the operation of the DCS Communications Control Centers will be provided to the DCA by the military departments or other Department of Defense agency to which such responsibility is assigned.

IV. OPERATION AND CONTROL

A. The requirements of the Department of Defense for efficient and economical long-haul communications will be met by an evolutionary conversion of the common communications facilities of the military departments into the DCS. The DCS will provide facilities for command and control, intelligence, weather, logistics, and administrative purposes. The component facilities of the DCS as assigned will be operated by the military departments and unified and specified commands under the operational control and supervision of the DCA. The communications control centers will be directly operated by the DCA.

B. The DCS will be designed to provide the flexibility and reliability necessary to maintain the quality and quantity of communications capabilities required for military operations. In addition, common-user services and allocated channels will be provided to other Government agencies, as required. The utilization of channels allocated to commanders will be under their control and will be considered an integral part of their command and control systems.

V. RESPONSIBILITIES

In addition to the normal staff functions assigned to the principal staff assistants to the Secretary of Defense, the following organizations of the Department of Defense are specifically responsible, as indicated below, for DCS functions:

A. The Director of Defense Research and Engineering in accordance with responsibilities and functions contained in DOD Directive 5129.1 and other pertinent issuances.

B. The Assistant Secretary of Defense (Supply and Logistics) in accordance with responsibilities and functions contained in DOD Directive 5126.1 and other pertinent issuances.

C. The Assistant Secretary of Defense (Comptroller) in accordance with responsibilities and functions contained in DOD Directive 5118.3 and other pertinent issuances.

D. The Defense Communications Policy Advisory Committee will provide advice to the Joint Chiefs of Staff and the Secretary of Defense on matters relating to the DCS.

E. The Joint Chiefs of Staff in accordance with responsibilities and functions contained in DOD Directive 5100.1 and other pertinent issuances, as well as the following specific functions:

1. Review communications requirements submitted by the unified and specified commands, the military departments and other users of communications facilities to assure consistency with strategic and logistic plans and to determine validity of requirements.

2. Evaluate communications requirements peculiar to a special mission or weapons system to determine if the requirements can be

satisfied by the facilities of the DCS, and make recommendations to the Secretary of Defense.

3. Obtain advice and recommendations from the DCA during the review and evaluation of communications requirements.

4. Issue orders, program approval and guidance to the Chief, DCA, by authority and direction of the Secretary of Defense.

F. The unified and specified commands in accordance with responsibilities and functions contained in pertinent issuances, as well as the following specific functions:

1. Develop communications requirements and submit to the JCS for review and approval.

2. Operate and maintain assigned facilities of the DCS.

G. The military departments in accordance with responsibilities and functions contained in DOD Directive 5100.1 and other pertinent issuances, as well as the following specific functions:

1. Operate and maintain assigned facilities of the DCS.

2. Budget, fund and account for the support of the DCS (including those components assigned to the military departments) in accordance with instructions of the Assistant Secretary of Defense (Comptroller).

3. Develop departmental communications requirements and submit for review.

4. Perform detailed engineering to meet approved requirements of assigned DCS responsibilities.

5. Implement approved plans for assigned DCS operation.

H. The Defense Communications Agency will perform the functions prescribed in reference (b) above.

VI. IMPLEMENTATION

1. Instructions implementing the provisions of this Directive will be issued in accordance with the attached schedule. Such instructions will be coordinated with the Assistant Secretary of Defense (Supply and Logistics) prior to publication. The Assistant Secretary of Defense (Supply and Logistics) will coordinate the instructions with appropriate officials of the Office of the Secretary of Defense and the Joint Chiefs of Staff.

2. During the implementation period, provisions of existing directives and procedures pertaining to long-haul, point-to-point communications programs will remain in effect until superseded by the new implementing instructions.

VII. EFFECTIVE DATE

This Directive is effective upon publication, for planning and for systematic implementation, in accordance with the attached schedule.

THOMAS S. GATES,
Secretary of Defense.

IMPLEMENTATION SCHEDULE

Action	Action agency	Action date
1. Recommend Chief, DCA	JCS	Within 15 days from date of issuance of this directive.
2. Appoint Chief, DCA	Secretary of Defense	No later than June 15, 1960.
3. Develop organizational and staffing plans and submit to Secretary of Defense for approval.	JCS and Chief, DCA	Within 30 days after date of appointment of Chief, DCA.
4. Establish the DCA headquarters	do	Items 4 through 8 will be completed within 9 months after date of appointment of Chief, DCA, in accordance with a schedule to be developed by the Chief, DCA in coordination with the JCS, D.D.R. & E., ASD (S. & L.) and the military departments.
5. Prepare plans for exercising his authority in accordance with functions and responsibilities set forth in DOD Directive 5105.19.	Chief, DCA	
6. Develop and submit to the Secretary of Defense for approval a plan which identifies each component of the DCS, assigns responsibility therefor, and fixes specific dates that each military department or other DOD agency will assume its assigned responsibilities.	Chief, DCA, in coordination with the JCS, ASD (S. & L.) and other appropriate DOD officials.	
7. Assume operation of communications control centers.	Chief, DCA	
8. Assume operational control and supervision of the DCS in accordance with plan.	Chief, DCA and staff	
9. Other actions necessary to accomplish effective implementation of the DCS as identified.	As appropriate	Continuing.

MOTHER'S DAY

Mr. BYRD of West Virginia. Mr. President, Anna Jarvis, of Grafton, W. Va., was the founder of Mother's Day. The day set aside each year for the honoring of our mothers is past, but to all mankind every day is mother's day. To those of us who have no memory of a loving mother, a man's greatest blessing, for which he should be most thankful, is a living mother on Mother's Day.

Tender and beautiful words have been written and spoken about the hand that rocks the cradle and rules the world. What could surpass the beauty and tenderness of the sentence which Thomas Gray wrote for the resting place of his *mother*? In the old churchyard at Stoke Poges, hard by the elm and yew beneath which Gray wrote the matchless "Elegy," we can read today these words:

In the same pious confidence, beside her friend and sister, here sleep the remains of Dorothy Gray, widow, the careful and tender mother of many children, one of whom alone had the misfortune to survive her.

When Alexander the Great entertained the kings and nobles at the court of Persia, he appeared wearing only those garments which had been woven for him by his mother, Olympias, who was the daughter of a chieftain, the wife of a king, and the mother of a conqueror. Long ago we discarded the garments that were made for us by a loving mother's hand; and yet, in a certain sense, as to life and character, we are all still wearing the garments that were woven for us by a mother.

Napoleon, whose mother, Madam Mere, was one of the strongest of women, said:

My opinion is that the future good or bad conduct of a child depends entirely on its mother.

When General Grant's mother died at Jersey City in 1883, he said to the minister who was to officiate at the funeral:

Make no reference to me. She owed nothing to me, to any post I have occupied or any honors that have been paid me. Speak of her just as she was, a pure-minded, simple-hearted, earnest Methodist Christian.

Said Henry Ward Beecher concerning the influence on him of the sorrows and sufferings of his mother:

Now you may put all the skeptical men that ever lived on the face of the earth on one side, and they may plead in my ears. And all the scientists may stand with them, and marshal all the facts of the universe to disprove the truth of Immanuel, God with us; and yet, let me see my mother, walking in a great sorrow, but from the surface of which sorrow reflecting the light of cheer and heavenly hope, patient, sweet, gentle, full of comfort for others—yea, and showing by her life as well as her lips that with the consolation wherewith she has been comforted, she is comforting others—and that single instance of suffering is more to me, as an evidence of the truth of Christianity, than all the arguments that the wisest men can possibly bring against it.

No one ever read Victor Hugo's "Notre Dame" without being moved and purified and cleansed in heart at the marvelous scene where the demented mother, who has been searching over all Europe for her child, long years before stolen by the gypsies, matches the shoe she carries with the shoe the maid has carried all the years about her neck, and discovers her long-lost child. The heavenliness of her joy, and the terribleness of her anger and grief when her daughter is again dragged from her, exhibit perhaps as well as anything that was ever written the strange and awful powers of human love.

Mr. President, the blessed thoughts of mother are probably best spoken by the poet, Elizabeth Akers Allen, in the beautiful lines of her poem "Rock Me to Sleep." These lines bring back the sweet memories of yesteryear, and bring sunshine where now is but night:

Backward, turn backward, O time, in your flight,
Make me a child again just for tonight!
Mother, come back from the echoless shore,
Take me again to your heart as of yore;
Kiss from my forehead the furrows of care,
Smooth the few silver threads out of my hair;
Over my slumbers your loving watch keep;
Rock me to sleep, mother, rock me to sleep!

Backward, flow backward, oh, tide of the years!
I am so weary of toil and of tears—
Toil without recompense, tears all in vain—
Take them, and give me my childhood again!

I have grown weary of dust and decay;
Weary of flinging my soul-wealth away;
Weary of sowing for others to reap;
Rock me to sleep, mother, rock me to sleep!

Tired of the hollow, the base, the untrue,
Mother, O mother, my heart calls for you!
Many a summer the grass has grown green,
Blossomed and faded, our faces between:
Yet, with strong yearning and passionate pain,
Long I tonight for your presence again.
Come from the silence so long and so deep;
Rock me to sleep, mother, rock me to sleep!

Over my heart, in the days that are flown,
No love like mother love ever has shone;
No other worship abides and endures—
Faithful, unselfish, and patient like yours;
None like a mother can charm away pain
From the sick soul and the world-weary brain.
Slumber's soft calms o'er my heavy lids creep;
Rock me to sleep, mother, rock me to sleep!

Come, let your brown hair, just lighted with gold,
Fall on your shoulders again as of old;
Let it drop over my forehead tonight,
Shading my faint eyes away from the light;
For with its sunny-edged shadows once more
Haply will throng the sweet visions of yore;
Lovingly, softly, its bright billows sweep;
Rock me to sleep, mother, rock me to sleep!

Mother, dear mother, the years have been long
Since I last listened your lullaby song;
Sing, then, and unto my soul it shall seem
Womanhood's years have been only a dream.
Clasped to your heart in a loving embrace,
With your light lashes just sweeping my face,
Never hereafter to wake or to weep;
Rock me to sleep, mother, rock me to sleep!

CONSTRUCTION AT MILITARY INSTALLATIONS

The PRESIDING OFFICER. Is there further business in the morning hour? If not, morning business is closed.

Mr. MANSFIELD. Mr. President, I ask that the Chair lay before the Senate the unfinished business.

The PRESIDING OFFICER. Without objection, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes, which had been reported from the Committee on Armed Services with an amendment to strike out all after the enacting clause and insert:

TITLE I

SEC. 101. The Secretary of the Army may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment, for the following projects:

Inside the United States

Technical Services Facilities

(Ordnance Corps)

Aberdeen Proving Ground, Maryland: Training facilities, medical facilities, and utilities, $6,221,000.

Benicia Arsenal, California: Utilities, $337,000.

Blue Grass Ordnance Depot, Kentucky: Utilities and ground improvements, $353,000.

Picatinny Arsenal, New Jersey: Research, development, and test facilities, $850,000.

Pueblo Ordnance Depot, Colorado: Operational facilities, $369,000.

Redstone Arsenal, Alabama: Community facilities and utilities, $1,000,000.

Umatilla Ordnance Depot, Oregon: Utilities and ground improvements, $319,000.

Watertown Arsenal, Massachusetts: Research, development, and test facilities, $1,849,000.

White Sands Missile Range, New Mexico: Operational facilities and utilities, $1,233,000.

(Quartermaster Corps)

Fort Lee, Virginia: Utilities, $363,000.

Atlanta General Depot, Georgia: Maintenance facilities, $365,000.

New Cumberland General Depot, Pennsylvania: Operational facilities, $89,000.

Quartermaster Research and Engineering Center, Massachusetts: Research, development, and test facilities, and troop housing, $3,628,000.

Richmond Quartermaster Depot, Virginia: Administrative facilities, $478,000.

(Chemical Corps)

Army Chemical Center, Maryland: Operational facilities and community facilities, $843,000.

Fort Detrick, Maryland: Research, development, and test facilities, $334,000.

(Signal Corps)

Fort Huachuca, Arizona: Research, development, and test facility, and utilities, $415,000.

Fort Monmouth, New Jersey: Research, development, and test facilities, troop housing, and community facilities, $8,803,000.

(Corps of Engineers)

Fort Belvoir, Virginia: Operational facilities, utilities, and real estate, $1,838,000.

(Transportation Corps)

Brooklyn Army Terminal, New York: Utilities, $607,000.

Fort Eustis, Virginia: Administrative facilities, and troop housing, $833,000.

(Medical Corps)

Madigan General Hospital, Washington: Medical facilities, $73,000.

Walter Reed General Hospital, District of Columbia: Supply facilities, $788,000.

Field Forces Facilities

(First Army area)

Fort Devens, Massachusetts: Troop housing and utilities, $2,157,000.

(Second Army area)

Fort Knox, Kentucky: Research, development and test facilities, and troop housing, $6,649,000.

Fort Meade, Maryland: Operational facilities, $314,000.

(Third Army area)

Fort Benning, Georgia: Medical facilities, administrative facilities, and community facilities, $1,956,000.

Fort Bragg, North Carolina: Training facilities, supply facilities, and community facilities, $1,092,000.

Fort Campbell, Kentucky: Maintenance facilities, and community facilities, $609,000.

Fort McClellan, Alabama: Training facilities and supply facilities, $463,000.

Fort Rucker, Alabama: Operational and training facilities, maintenance facilities, community facilities, utilities and ground improvements, and real estate, $3,329,000.

(Fourth Army area)

Fort Bliss, Texas: Maintenance facilities and troop housing, $1,880,000.

Fort Sill, Oklahoma: Maintenance facilities, supply facilities, troop housing, and utilities, $4,955,000.

(Fifth Army area)

Fort Leavenworth, Kansas: Operational facilities, troop housing, and utilities, $1,370,000.

Fort Riley, Kansas: Utilities, $1,332,000.

United States Army Support Center, Missouri: Administrative facilities, $2,188,000.

Fort Leonard Wood, Missouri: Troop housing, community facilities, utilities, and medical facilities, $9,087,000.

(Sixth Army area)

Fort Lewis, Washington: Operational facilities, maintenance facilities, and utilities, $539,000.

Fort MacArthur, California: Operational facilities, $151,000.

Fort Ord, California: Operational facilities, and community facilities, $997,000.

Presidio of Monterey, California: Troop housing, $1,633,000.

Presidio of San Francisco, California: Utilities and ground improvements, $202,000.

West Coast Relay Transmitter Station, California: Operational facilities, and utilities, $1,231,000.

Yuma Test Station, Arizona: Research, development, and test facilities and community facilities, $137,000.

(Military District of Washington, District of Columbia)

Fort McNair, District of Columbia: Utilities, $263,000.

(United States Military Academy)

United States Military Academy, West Point, New York: Utilities, $350,000.

(Defense atomic support agency)

National Naval Medical Center, Maryland: Research, development, and test facilities, $1,891,000.

Sandia Base, New Mexico: Hospital facilities and troop housing, $140,000.

(Alaska command area)

Fort Greely, Alaska: Family housing and community facilities, $2,649,000.

Outside the United States

(Pacific command area)

Fort Buckner, Okinawa: Operational facilities, supply facilities, medical facilities, and utilities, $2,946,000.

Korea: Operational facilities, maintenance facilities, supply facilities, troop housing, community facilities and utilities, $4,892,000.

(Caribbean command area)

Salinas Training Area, Puerto Rico: Training facilities, $208,000.

Fort Allen, Puerto Rico: Supply facilities, administrative facilities, utilities, and ground improvements, $295,000.

(European command area)

Italy: Utilities, $221,000.

(Army security agency)

Various locations: Operational facilities, maintenance facilities, administrative facilities, troop housing, and utilities, $2,964,000.

(Signal overseas stations)

Various locations: Operational facilities, maintenance facilities, administrative facilities, and utilities, $806,000.

SEC. 102. The Secretary of the Army may establish or develop classified military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $45,598,000.

SEC. 103. The Secretary of the Army may establish or develop Army installations and facilities by proceeding with construction made necessary by changes in Army missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Army, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1961, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 104. In accordance with the provisions of title IV of the Housing Amendments

of 1955 (69 Stat. 646) as amended, the Secretary of the Army is authorized to construct family housing for occupancy as public quarters at the following locations:

Inside the United States

Fort Huachuca, Arizona, 100 units.
Fort Meade, Maryland, 400 units.
Fort Ritchie, Maryland, 60 units.
Fort Campbell, Kentucky, 500 units.
Fort Rucker, Alabama, 498 units.
Fort Sill, Oklahoma, 350 units.
Fort Lewis, Washington, 500 units.
Fort Ord, California, 500 units.

Outside the United States

Fort Buchanan, Puerto Rico, 100 units.

SEC. 105. (a) Public Law 534, Eighty-third Congress, as amended, is amended under the heading "CONTINENTAL UNITED STATES", in section 101, as follows:

(1) Under the subheading "FIELD FORCES FACILITIES (Fifth Army Area)", with respect to Camp Carson, Colorado, strike out "$3,582,000" and insert in place thereof "$3,839,000".

(b) Public Law 534, Eighty-third Congress, as amended, is amended by striking out in clause (1) of section 502 the amounts "$131,906,000" and "$238,870,000" and inserting in place thereof "$132,163,000" and "$239,127,000", respectively.

SEC. 106. (a) Public Law 968, Eighty-fourth Congress, as amended, is amended by striking out in section 102 "$203,331,000" and inserting in place thereof "$207,385,000".

(b) Public Law 968, Eighty-fourth Congress, as amended, is amended by striking out in clause (1) of section 402 the amounts "$203,331,000" and "$339,601,000" and inserting in place thereof "$207,385,000" and "$343,655,000".

SEC. 107. (a) Public Law 85–241 as amended, is amended under the heading "INSIDE THE UNITED STATES", in section 101, as follows:

(1) Under the subheading "TECHNICAL SERVICES FACILITIES (Transportation Corps)", with respect to Fort Eustis, Virginia, strike out "$562,000" and insert in place thereof "$747,000".

(2) Under the subheading "FIELD FORCES FACILITIES (First Army Area)", with respect to Fort Devens, Massachusetts, strike out "$6,719,000" and insert in place thereof "$7,354,000".

(3) Under the subheading "FIELD FORCES FACILITIES (Fourth Army Area)", with respect to Fort Bliss, Texas, strike out "$7,704,000" and insert in place thereof "$8,113,000".

(b) Public Law 85–241, as amended, is amended by striking out in clause (1) of section 502 the amounts "$118,101,000" and "$295,580,000" and inserting in place thereof "$119,330,000" and "$296,809,000", respectively.

SEC. 108. (a) Public Law 85–685, as amended, is amended under the heading "INSIDE THE UNITED STATES" in section 101 as follows:

(1) Under the subheading "FIELD FORCES FACILITIES (Second Army Area)", with respect to Fort Meade, Maryland, strike out "$498,000" and insert in place thereof "$917,000".

(2) Under the subheading "FIELD FORCES FACILITIES (Third Army Area)", with respect to Fort Bragg, North Carolina, strike out "$762,000" and insert in place thereof "$1,059,000"; and with respect to Fort Campbell, Kentucky, strike out "$847,000" and insert in place thereof "$1,200,000".

(b) Public Law 85–685, as amended, is amended by striking out in clause (1) of section 502 the amounts "$109,556,000" and "$309,466,000" and inserting in place thereof "$110,625,000" and "$310,535,000", respectively.

SEC. 109(a) Public Law 86–149 is amended under the heading "INSIDE THE UNITED STATES" in section 101 as follows:

(1) Under the subheading "FIELD FORCES FACILITIES (Second Army Area)", with respect to Fort Meade, Maryland, strike out "$2,530,000" and insert in place thereof "$3,819,000".

(b) Public Law 86–149 is amended by striking out in clause (1) of section 402 the amounts "$72,363,100" and "$188,403,100" and inserting in place thereof "$73,652,100" and "$189,692,100", respectively.

TITLE II

SEC. 201. The Secretary of the Navy may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities and equipment for the following projects:

Inside the United States

Shipyard Facilities

David Taylor Model Basin, Carderock, Maryland: Utilities, $206,000.

Naval Shipyard, Charleston, South Carolina: Maintenance facilities, $12,355,000.

Naval Facility, Fort Miles, Lewes, Delaware: Operational facilities, maintenance facilities, supply facilities, medical facilities, administrative facilities, troop housing, community facilities, and utilities and ground improvements, $1,293,000.

Naval Submarine Base, New London, Connecticut: Operational facilities, and dental facilities, $738,000.

Navy Underwater Sound Laboratory, New London, Connecticut: Research, development and test facilities, $4,432,000.

Naval Shipyard, Norfolk, Virginia: Utilities, $2,790,000.

Naval Submarine Base, Pearl Harbor, Oahu, Hawaii: Training facilities, $509,000.

Naval Shipyard, Portsmouth, New Hampshire: Operational facilities, maintenance facilities, and utilities, $6,829,000

Naval Shipyard, San Francisco, California: Utilities, $285,000.

Fleet Base Facilities

Naval Station, Charleston, South Carolina: Utilities, $56,000.

Naval Observatory, District of Columbia: Research, development and test facilities $250,000.

Naval Observatory, Flagstaff, Arizona: Research, development and test facilities, $1,900,000.

Naval Station, Mayport, Florida: Utilities, $1,895,000.

Naval Station, San Diego, California: Operational facilities, $1,700,000.

Naval Weapons Facilities

(Training stations)

Naval Auxiliary Air Station, Meridian, Mississippi: Operational facilities, maintenance facilities, ammunition supply facilities, community facilities, and utilities and ground improvements, $2,695,000.

(Fleet support stations)

Naval Air Station, Alameda, California: Operational facilities, $384,000.

Naval Air Station, Barber's Point, Oahu, Hawaii: Operational facilities, $108,000.

Naval Air Station, Cecil Field, Florida: Operational facilities, and maintenance facilities, $271,000.

Naval Degaussing Station, Charleston, South Carolina: Operational facilities, and real estate, $235,000.

Naval Air Station, Jacksonville, Florida: Operational facilities, $178,000.

Naval Air Station, Lenmoore, California: Operational and training facilities, maintenance facilities, supply facilities, administrative facilities, community facilities, utilities and ground improvements, and real estate, $10,568,000.

Naval Air Station, Miramar, California: Maintenance facilities, $786,000.

Naval Air Station, North Island, San Diego, California: Maintenance facilities, $244,000.

Naval Air Station, Oceana, Virginia: Operational facilities, and maintenance facilities, $965,000.

Naval Air Station, Quonset Point, Rhode Island: Operational facilities, $919,000.

(Marine Corps air stations)

Marine Corps Auxiliary Air Station, Beaufort, South Carolina: Operational facilities, $272,000.

Marine Corps Air Station, Cherry Point, North Carolina: Operational facilities, and utilities, $1,611,000.

Marine Corps Air Station, El Toro, California: Utilities and ground improvements, $558,000.

Marine Corps Air Station, Kaneohe Bay, Oahu, Hawaii: Operational facilities, $397,000.

(Special purpose stations)

Naval Air Development Center, Johnsville, Pennsylvania: Research, development and test facilities, $1,334,000.

Naval Air Station, Patuxent River, Maryland: Utilities. $2,116,000.

Naval Missile Center, Point Mugu, California: Operational facilities, and on San Nicolas Island, utilities, $338,000.

Supply Facilities

Bureau of Supplies and Accounts, District of Columbia: Administrative facilities, $85,000.

Naval Supply Center, Norfolk, Virginia: Supply facilities, $151,000.

Naval Supply Center, Oakland, California: Utilities, $358,000.

Marine Corps Facilities

Marine Corps Supply Center, Albany, Georgia: Maintenance facilities, $65,000.

Marine Corps Supply Center, Barstow, California: Supply facilities, $82,000.

Marine Corps Base, Camp Lejeune, North Carolina: Troop housing, $433,000.

Marine Corps Recruit Depot, Parris Island, South Carolina: Troop housing, and community facilities, $1,455,000.

Marine Corps Base, Camp Pendleton, California: Training facilities, administrative facilities, troop housing, and utilities, $1,973,000.

Marine Corps Schools, Quantico, Virginia: Operational and training facilities, $715,000.

Marine Corps Recruit Depot, San Diego, California: Training facilities, $73,000.

Marine Corps Base, Twenty-nine Palms, California: Utilities, $215,000.

Service School Facilities

Naval Academy, Annapolis, Maryland: Troop housing, $6,000,000.

Navy Supply Corps School, Athens, Georgia: Medical facilities, and real estate, $193,000.

Fleet Air Defense Training Center, Dam Neck, Virginia: Troop housing, $669,000.

Naval Training Center, Great Lakes, Illinois: Utilities and ground improvements, $125,000.

Fleet Sonar School, Key West, Florida: Training facilities, $1,002,000.

Communication Facilities

Naval Radio Station, Adak, Alaska: Operational facilities, $670,000.

Naval Radio Station, Annapolis, Maryland: Operational facilities, and utilities, $795,000.

Naval Radio Station, Cheltenham, Maryland: Operational facilities, $396,000.

Naval Radio Station, Dixon, California: Operational facilities, $2,474,000.

Naval Radio Station, Skaggs Island, California: Operational facilities, $1,579,000.

Naval Radio Station, Wahiawa, Oahu, Hawaii: Operational facilities, $357,000.

Naval Security Group Activity, Winter Harbor, Maine: Operational facilities, $2,279,000.

Outside the United States

Shipyard Facilities

Naval Facility, Bermuda: Operational facilities, and utilities and ground improvements, $908,000.

Naval Facility, Ramey Air Force Base, Puerto Rico: Operational facilities, $200,000.

Fleet Base Facilities

Joint United States Military Mission, Golcuk, Turkey: Family housing, $675,000.

Naval Weapons Facilities

Naval Air Station, Agana, Guam, Mariana Islands: Operational facilities, $822,000.

Naval Station, Argentia, Newfoundland, Canada: Operational facilities, $462,000.

Naval Air Station, Atsugi, Japan: Operational facilities, and utilities, $416,000.

Marine Corps Air Facilities, Iwakuni, Japan: Operational facilities, $910,000.

Naval Air Facilities, Naha, Okinawa, Ryukyu Islands: Family housing, and troop housing, $5,943,000.

Naval Station, Roosevelt Roads, Puerto Rico: Operational facilities, $460,000.

Naval Station, Rota, Spain: Operational facilities, and family housing, $2,414,000.

Naval Air Facility, Sigonella, Sicily, Italy: Operational facilities, administrative facilities, and troop housing, $347,000.

Communication Facilities

Naval Radio Station, Barrigada, Guam, Mariana Islands: Operational facilities, $68,000.

Naval Radio Station, Finegayen, Guam, Mariana Islands: Operational facilities, $469,000.

Naval Security Group Activity, Galeta Island, Canal Zone: Operational facilities, $1,750,000.

Naval Security Group Activity, Karamursel, Turkey: Operational facilities, $84,000.

Naval Radio Station, Martin Pena, Puerto Rico: Operational facilities, $72,000.

Naval Radio Facility, San Miguel, Luzon, Republic of the Philippines: Operational facilities and utilities, $383,000.

SEC. 202. The Secretary of the Navy may establish or develop classified naval installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $18,208,000.

SEC. 203. The Secretary of the Navy may establish or develop Navy installations and facilities by proceeding with construction made necessary by changes in Navy missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Navy, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1961, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 204. In accordance with the provisions of title IV of the Housing Amendments of 1955 (69 Stat. 646), as amended, the Secretary of the Navy is authorized to construct family housing for occupancy as public quarters at the following locations:

Naval Air Station, Alameda, California, nine hundred units.

Marine Corp Base, Camp Pendleton, California, four hundred units.

Naval Station, Charleston, South Carolina, five hundred units.

Naval Training Center, Great Lakes, Illinois, two hundred and fifty units.

Naval Station, Mayport, Florida, five hundred units.

Naval Air Station, Memphis, Tennessee, five hundred units.

Naval Post Graduate School, Monterey, California, two hundred and fifty units.

Naval Air Station, Oceana, Virginia, forty units.

Pacific Missile Range, Point Mugu, California, three hundred units.

Marine Corps Base, Twentynine Palms, California, one hundred and fifty units.

SEC. 205. (a) Public Law 161, Eighty-fourth Congress, as amended, is amended under the heading "INSIDE THE UNITED STATES" in section 201, as follows:

(1) Under the subheading "AVIATION FACILITIES (Fleet Support Air Stations)", with respect to the Naval Air Station, Jacksonville, Florida, strike out "$2,224,000" and insert in place thereof "$2,724,000".

(b) Public Law 161, Eighty-fourth Congress, as amended, is amended by striking out in clause (2) of section 502 the amounts "$308,624,000" and "$578,801,300" and inserting in place thereof "$309,134,600", and "$579,301,300", respectively.

SEC. 206. (a) Public Law 85–685, as amended, is amended under the heading "INSIDE THE UNITED STATES" in section 201, as follows:

(1) Under the subheading "SERVICE SCHOOL FACILITIES", with respect to the Naval Receiving Station, District of Columbia, strike out the amount "$650,000" and insert in place thereof "$850,000".

(2) Under the subheading "COMMUNICATION FACILITIES", with respect to the Naval Radio Station, Washington County, Maine, strike out the amount "$38,654,000" and insert in place thereof "$45,954,000".

(b) Public Law 85–685, as amended, is amended by striking out in section 202 the amount "$75,301,000" and inserting in place thereof "$93,101,000".

(c) Public Law 85–685, as amended, is amended by striking out in clause (2) of section 502 the amounts "$216,809,000", "$75,-301,000", and "$325,994,000" and inserting in place thereof "$224,309,000", "$93,101,000", and "$351,294,000", respectively.

SEC. 207. (a) Notwithstanding any other provisions of law, the Secretary of the Navy is authorized, upon such terms and conditions as he may determine to be in the public interest, to convey to the State of Oregon the lands, including acquired and public domain lands, comprising the Boardman Bombing Range in the State of Oregon, as delineated on a map designated as War Department-Office of the Division Engineer-North Pacific Division-Real Estate-Boardman Precision Bombing Range, approved February 17, 1947, drawing numbered O–31–52. The conveyance of such lands to the State of Oregon shall be made in exchange for a conveyance, without restriction as to use, to the United States of such lands of the State of Oregon as the Secretary of the Navy shall find suitable for use as a bombing range, and upon payment by the State of Oregon to the United States of such amount as the Secretary of the Navy determines to represent the total of (1) the difference, if any, between the fair market value of the property so conveyed by the Secretary of the Navy and the fair market value of the land accepted in exchange therefor, and (2) the cost to the Department of the Navy of providing a complete substitute facility on the State lands so acquired.

(b) The State of Oregon shall agree to be primarily liable and hold the United States harmless from any claims for personal injury or property damage resulting from the condition of the lands conveyed by the United States.

(3) Of the lands conveyed to the United States by the State of Oregon, 37,320.31 acres thereof, as agreed upon by the Secretary of the Interior and the Secretary of the Navy, shall become public domain lands of the United States subject to all the laws and regulations applicable thereto, but shall remain withdrawn from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and shall be reserved for use as a bombing range under the administration of the Department of the Navy until such withdrawal and reservation is revoked by order of the Secretary of the Interior with the concurrence of the Secretary of the Navy. The remaining acreage of the lands conveyed to the United States shall become a part of the lands comprising the substitute bombing range and shall be administered by the Department of the Navy.

(d) The money received by the Secretary of the Navy in connection with the exchange authorized by this Act shall be disbursed as follows: (1) the difference in the fair market value between the public domain lands conveyed by the United States and the lands designated as public domain lands under subsection (c) shall be distributed as a receipt from the sale of public domain lands; (2) the difference in the fair market value between the remaining lands exchanged shall be covered into the Treasury as a miscellaneous receipt; and (3) the amount received to defray the cost of providing a complete substitute facility shall be available to the Department of the Navy for the construction and acquisition of such complete substitute facility.

(e) The Department of the Navy shall not be required to relinquish use of the Boardman Bombing Range until the complete substitute facility is available for use.

TITLE III

SEC. 301. The Secretary of the Air Force may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment, for the following projects:

Inside the United States

Air Defense Command

Duluth Municipal Airport, Duluth, Minnesota: Maintenance facilities and community facilities, $197,000.

Geiger Field, Spokane, Washington: Operational facilities, maintenance facilities, and supply facilities, $456,000.

Grand Forks Air Force Base, Grand Forks, North Dakota: Operational and training facilities, maintenance facilities, community facilities, and utilities, $2,571,000.

Hamilton Air Force Base, San Rafael, California: Maintenance facilities and troop housing, $419,000.

K. I. Sawyer Municipal Airport, Marquette, Michigan: Operational and training facilities, maintenance facilities, supply facilities, administrative facilities, community facilities, and utilities, $2,874,000.

Kingsley Field, Klamath Falls, Oregon: Operational facilities, maintenance facilities, medical facilities, and community facilities, $299,000.

Kincheloe Air Force Base, Sault Sainte Marie, Michigan: Operational and training facilities, maintenance facilities, supply facilities, administrative facilities, troop housing, and community facilities, $3,382,000.

McChord Air Force Base, Tacoma, Washington: Operational facilities and maintenance facilities, $854,000.

Minot Air Force Base, Minot, North Dakota: Operational facilities, maintenance facilities, supply facilities, troop housing, and community facilities, $2,882,000.

Otis Air Force Base, Falmouth, Massachusetts: Operational facilities, maintenance facilities, and supply facilities, $451,000.

Oxnard Air Force Base, Camarillo, California: Maintenance facilities, community facilities, and real estate, $732,000.

Paine Air Force Base, Everett, Washington: Operational facilities, maintenance facilities, and community facilities, $1,985,000.

Richards-Gebaur Air Force Base, Kansas City, Missouri: Operational facilities and maintenance facilities, $131,000.

Selfridge Air Force Base, Mount Clemens, Michigan: Operational facilities, maintenance facilities, and community facilities, $1,383,000.

Suffolk County Air Force Base, Westhampton Beach, New York: Maintenance facilities and community facilities, $411,000.

Tyndall Air Force Base, Panama City, Florida: Operational facilities, maintenance facilities, and utilities, $1,272,000.

Air Material Command

Brookley Air Force Base, Mobile, Alabama: Operational facilities, supply facilities, and utilities, $400,000.

Gentile Air Force Station, Dayton, Ohio: Operational facilities, $422,000.

Griffiss Air Force Base, Rome, New York: Operational and training facilities, maintenance facilities, and administrative facilities, $1,725,000.

Heath Maintenance Annex, Newark, Ohio: Maintenance facilities, $3,907,000.

Hill Air Force Base, Ogden, Utah: Operational facilities and maintenance facilities, $4,095,000.

Kelly Air Force Base, San Antonio, Texas: Operational facilities and maintenance facilities, $638,000.

McClellan Air Force Base, Sacramento, California: Operational facilities and maintenance facilities, $1,169,000.

Norton Air Force Base, San Bernardino, California: Ground improvements, $169,000.

Robins Air Force Base, Macon, Georgia: Training facilities, maintenance facilities, supply facilities, and administrative facilities, $1,478,000.

Stockbridge Test Annex, Rome, New York: Research development, and test facilities, $2,653,000.

Tinker Air Force Base, Oklahoma City, Oklahoma: Operational facilities, $1,032,000.

Wright-Patterson Air Force Base, Dayton, Ohio: Training facilities, maintenance facilities, research, development, and test facilities, and utilities, $1,810,000.

Air Research and Development Command

Arnold Engineering Development Center, Tullahoma, Tennessee: Research, development, and test facilities, $10,500,000.

Edwards Air Force Base, Muroc, California: Research, development, and test facilities, and community facilities, $171,000.

Eglin Air Force Base, Valparaiso, Florida: Operational facilities, maintenance facilities, research, development, and test facilities, supply facilities, and community facilities, $2,312,000.

Holloman Air Force Base, Alamogordo, New Mexico: Utilities, $424,000.

Kirtland Air Force Base, Albuquerque, New Mexico: Operational and training facilities, research, development, and test facilities, utilities, and real estate, $3,596,000.

Laurence G. Hanscom Field, Bedford, Massachusetts: Research, development, and test facilities, supply facilities, administrative facilities, and real estate, $2,011,000.

Patrick Air Force Base, Cocoa, Florida: Operational facilities, maintenance facilities, research, development, and test facilities, supply facilities, and utilities, $5,065,000.

Sacramento Peak Upper Air Research Site, Alamogordo, New Mexico: Research, development, and test facilities, $166,000.

Air Training Command

Amarillo Air Force Base, Amarillo, Texas: Operational and training facilities and maintenance facilities, $1,098,000.

Brooks Air Force Base, San Antonio, Texas: Troop housing, $734,000.

James Connally Air Force Base, Waco, Texas: Operational facilities and maintenance facilities, $670,000.

Keesler Air Force Base, Biloxi, Mississippi: Operational and training facilities, $2,499,000.

Lackland Air Force Base, San Antonio, Texas: Training facilities, administrative facilities, and troop housing, $5,427,000.

Lowry Air Force Base, Denver, Colorado: Maintenance facilities and utilities, $1,256,000.

Mather Air Force Base, Sacramento, California: Operational and training facilities and maintenance facilities, $2,709,000.

Moody Air Force Base, Valdosta, Georgia; Training facilities and maintenance facilities, $1,389,000.

Perrin Air Force Base, Sherman, Texas: Operational and training facilities, maintenance facilities, utilities, and real estate, $3,752,000.

Randolph Air Force Base, San Antonio, Texas: Utilities, $182,000.

Reese Air Force Base, Lubbock, Texas: Training facilities, $268,000.

Sheppard Air Force Base, Wichita Falls, Texas: Operational and training facilities, maintenance facilities and medical facilities, $928,000.

Stead Air Force Base, Reno, Nevada: Operational facilities and medical facilities, $457,000.

Vance Air Force Base, Enid, Oklahoma: Training facilities, $292,000.

Webb Air Force Base, Big Spring, Texas: Operational and training facilities and maintenance facilities, $938,000.

Air University

Gunter Air Force Base, Montgomery, Alabama: Training facilities and troop housing, $548,000.

Maxwell Air Force Base, Montgomery, Alabama: Operational facilities, hospital facilities, and troop housing, $4,757,000.

Alaskan Air Command

Eielson Air Force Base, Alaska: Operational and training facilities, maintenance facilities, and supply facilities, $5,178,000.

Galena Airport, Alaska: Operational facilities, $1,965,000.

King Salmon Airport, Alaska: Operational facilities, $973,000.

Various locations, Alaska: Operational facilities, supply facilities, troop housing, and utilities, $5,524,000.

Headquarters Command

Andrews Air Force Base, Camp Springs, Maryland: Operational and training facilities, maintenance facilities, supply facilities, community facilities, and utilities, $3,109,000.

Military Air Transport Service

Aeronautical Chart and Information Center, Saint Louis, Missouri: Administrative facilities, $3,200,000.

Dover Air Force Base, Dover, Delaware: Operational facilities, $147,000.

McGuire Air Force Base, Wrightstown, New Jersey: Operational facilities, $156,000.

Scott Air Force Base, Belleville, Illinois: Operational facilities and community facilities, $999,000.

Travis Air Force Base, Fairfield, California: Medical facilities, $41,000.

Pacific Air Forces

Hickam Air Force Base, Honolulu, Hawaii: Operational facilities, $265,000.

Strategic Air Command

Altus Air Force Base, Altus, Oklahoma: Maintenance facilities, $109,000.

Barksdale Air Force Base, Shreveport, Louisiana: Operational facilities, $7,265,000.

Beale Air Force Base, Marysville, California: Operational facilities, maintenance facilities, and supply facilities, $1,558,000.

Bergstrom Air Force Base, Austin, Texas: Operational facilities and maintenance facilities, $974,000.

Blytheville Air Force Base, Blytheville, Arkansas: Operational and training facilities, maintenance facilities, supply facilities, and troop housing, $1,487,000.

Bunker Hill Air Force Base, Peru, Indiana: Operational and training facilities, maintenance facilities, supply facilities, medical facilities, and utilities, $1,647,000.

Carswell Air Force Base, Fort Worth, Texas: Operational facilities, $170,000.

Castle Air Force Base, Merced, California: Maintenance facilities, supply facilities, hospital facilities, and community facilities, $2,760,000.

Clinton-Sherman Air Force Base, Clinton, Oklahoma: Operational facilities, maintenance facilities, and supply facilities, $1,221,000.

Columbus Air Force Base, Columbus, Mississippi: Operational and training facilities, maintenance facilities, supply facilities, troop housing and community facilities, $2,921,000.

Davis-Monthan Air Force Base, Tucson, Arizona: Operational facilities, $222,000.

Dow Air Force Base, Bangor, Maine: Operational and training facilities, maintenance facilities, supply facilities, hospital facilities and real estate, $2,575,000.

Ellsworth Air Force Base, Rapid City, South Dakota: Operational facilities, $776,000.

Fairchild Air Force Base, Spokane, Washington: Operational facilities and community facilities, $5,951,000.

Forbes Air Force Base, Topeka, Kansas: Operational facilities and supply facilities, $635,000.

Francis E. Warren Air Force Base, Cheyenne, Wyoming: Operational facilities, $445,000.

Glasgow Air Force Base, Glasgow, Montana: Operational and training facilities, maintenance facilities, supply facilities, administrative facilities, troop housing, and community facilities, $3,541,000.

Homestead Air Force Base, Homestead, Florida: Operational facilities, $463,000.

Hunter Air Force Base, Savannah, Georgia: Maintenance facilities, $734,000.

Larsen Air Force Base, Moses Lake, Washington: Operational facilities, maintenance facilities, troop housing, and utilities, $1,282,000.

Loring Air Force Base, Limestone, Maine: Operational facilities, $500,000.

March Air Force Base, Riverside, California: Operational facilities and maintenance facilities, $7,428,000.

McCoy Air Force Base, Orlando, Florida: Operational facilities, $786,000.

Mountain Home Air Force Base, Mountain Home, Idaho: Operational facilities and administrative facilities, $695,000.

Offutt Air Force Base, Omaha, Nebraska: Administrative facilities, troop housing, community facilities, and utilities, $3,458,000.

Plattsburgh Air Force Base, Plattsburgh, New York: Operational facilities, $80,000.

Turner Air Force Base, Albany, Georgia: Operational and training facilities, maintenance facilities, supply facilities, and troop housing, $1,895,000.

Vandenberg Air Force Base, Lompoc, California: Maintenance facilities and utilities, $1,284,000.

Walker Air Force Base, Roswell, New Mexico: Operational facilities, $156,000.

Westover Air Force Base, Chicopee Falls, Massachusetts: Operational facilities, $177,000.

Whiteman Air Force Base, Knobnoster, Missouri: Operational facilities, $561,000.

Wurtsmith Air Force Base, Oscoda, Michigan: Operational and training facilities, maintenance facilities, and supply facilities, $2,400,000.

Tactical Air Command

Cannon Air Force Base, Clovis, New Mexico: Operational facilities, $1,021,000.

England Air Force Base, Alexandria, Louisiana: Operational facilities, maintenance facilities, and supply facilities, $1,176,000.

George Air Force Base, Victorville, California: Maintenance facilities, $50,000.

Luke Air Force Base, Phoenix, Arizona: Operational facilities and maintenance facilities, $1,645,000.

Myrtle Beach Air Force Base, Myrtle Beach, South Carolina: Operational facilities, $222,000.

Nellis Air Force Base, Las Vegas, Nevada: Maintenance facilities, troop housing, and community facilities, $2,223,000.

Pope Air Force Base, Fort Bragg, North Carolina: Maintenance facilities, $200,000.

Seymour-Johnson Air Force Base, Goldsboro, North Carolina: Training facilities, maintenance facilities, supply facilities, and administrative facilities, $1,672,000.

Aircraft Control and Warning System

Various locations: Operational facilities, maintenance facilities, supply facilities, medical facilities, family housing, troop housing, community facilities, utilities, and real estate, $22,938,000.

Miscellaneous Facilities

Various locations: Family housing, $750,000.

Special Facilities

Various locations: Operational facilities and administrative facilities, $684,000.

Outside the United States

Military Air Transport Service

Various locations: Utilities, $140,000.

Pacific Air Forces

Various locations: Operational facilities, maintenance facilities, supply facilities, medical facilities, administrative facilities, family housing, troop housing, community facilities, and utilities, $27,777,000.

Strategic Air Command

Andersen Air Force Base, Guam: Utilities, $850,000.

Ramey Air Force Base, Puerto Rico: Operational facilities, $70,000.

Various locations: Operational facilities, maintenance facilities, troop housing, community facilities, and utilities, $3,797,000.

United States Air Forces in Europe

Various locations: Operational facilities, maintenance facilities, supply facilities, hospital facilities, administrative facilities, family housing, troop housing, community facilities, and utilities, $33,362,000.

United States Air Force Security Service

Various locations: Operational facilities, maintenance facilities, supply facilities, medical facilities, administrative facilities, family housing, troop housing, community facilities, and utilities, $8,758,000.

Special Facilities

Various locations: Operational facilities, $4,308,000.

Aircraft Control and Warning System

Various locations: Operational facilities, maintenance facilities, supply facilities, troop housing, and utilities, $25,637,000.

SEC. 302. The Secretary of the Air Force may establish or develop classified military installations and facilities for ballistic missiles by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $408,600,000.

SEC. 303. The Secretary of the Air Force may establish or develop Air Force installations and facilities by proceeding with construction made necessary by changes in Air Force missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permament or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Air Force, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1961, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 304. In accordance with the provisions of Title IV of the Housing Amendments of 1955 (69 Stat. 646), as amended, the Secretary of the Air Force is authorized to construct family housing for occupancy as public quarters at the following locations:

Beale Air Force Base, California, two hundred and thirty units.

Brooks Air Force Base, Texas, one hundred and seventy units.

Griffiss Air Force Base, New York, one hundred and thirty-five units.

Lowry Air Force Base, Colorado, one hundred units.

Offutt Air Force Base, Nebraska, five hundred units.

Turner Air Force Base, Georgia, four hundred and thirty units.

Westover Air Force Base, Massachusetts, one hundred and eighty units.

SEC. 305. (a) Public Law 85–685, as amended, is amended under the heading "INSIDE THE UNITED STATES" in section 301, as follows:

(1) Under the subheading "AIR DEFENSE COMMAND", with respect to Kingsley Field, Klamath Falls, Oregon, strike out "$229,000" and insert in place thereof "$290,000".

(b) Public Law 85–685, as amended, is amended, by striking out in clause (3) of section 502 the amounts "$544,239,000" and "$954,493,000" and inserting in place thereof "$544,300,000" and "$954,554,000", respectively.

"SEC. 306. (a) Public Law 86–149, is amended under the heading "INSIDE THE UNITED STATES" in section 301, as follows:

(1) Under the subheading "ALASKAN AIR COMMAND", with respect to Elmendorf Air Force Base, Alaska, strike out "$1,150,000" and insert in place thereof "$1,409,000".

(2) Under the subheading "STRATEGIC AIR COMMAND", with respect to March Air Force Base, Riverside, California, strike out "$6,052,000" and insert in place thereof "and real estate, $8,271,000."

(3) Under the subheading "TACTICAL AIR COMMAND", with respect to England Air Force Base, Alexandria, Louisiana, strike out "$2,468,000" and insert in place thereof "$2,669,000".

(b) Public Law 86–149 is amended by striking out in section 302 the amount "$417,541,000" and inserting in place thereof "$467,541,000".

(c) Public Law 86–149 is amended by striking out in clause (3) of section 402 the amounts of "$296,897,800", "$417,541,000", and "$797,496,800" and inserting in place thereof "$299,576,800", "$467,541,000" and "$850,175,800", respectively.

TITLE IV

SEC. 401. The Secretary of Defense may establish or develop installations and facilities required for advanced research projects and in connection therewith may acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities and equipment, in the total amount of $20,000,000.

SEC. 402. (a) Section 401 of the Act of August 20, 1958 (72 Stat. 636, 659), is amended by striking out "$50,000,000" and inserting in place thereof "$73,545,000".

(b) Section 502 of the Act of August 20, 1958 (72 Stat. 636, 660), is amended by striking out in clause (4) "$50,000,000" and inserting in place thereof "$73,545,000".

SEC. 403. Section 7 of Public Law 85–325, dated February 12, 1958 (72 Stat. 13), as amended, is hereby repealed.

TITLE V

General provisions

SEC. 501. The Secretary of each military department may proceed to establish or develop installations and facilities under this Act without regard to sections 3648 and 3734 of the Revised Statutes, as amended (31 U.S.C. 529, 40 U.S.C. 259, 267), and sections 477(d) and 9774(d) of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning, and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended (40 U.S.C. 255), and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use) by gift, purchase, exchange of Government-owned land, or otherwise.

SEC. 502. There are authorized to be appropriated such sums as may be necessary for the purposes of this Act, but appropriations for public works projects authorized by titles I, II, III, and IV shall not exceed—

(1) for title I: Inside the United States, $79,552,000; outside the United States, $12,332,000; section 102, $45,598,000; section 103, $10,000,000; or a total of $147,482,000.

(2) for title II: Inside the United States, $81,361,000; outside the United States, $16,383,000; section 202, $18,208,000; section 203, $10,000,000; or a total of $125,952,000.

(3) for title III: Inside the United States, $202,240,000; outside the United States, $104,699,000; section 302, $408,600,000; section 303, $10,000,000; or a total of $725,539,000.

(4) for title IV: $20,000,000.

SEC. 503. Any of the amounts named in titles I, II, III, and IV of this Act, may, in the discretion of the Secretary concerned, be increased by 5 per centum for projects inside the United States (other than Alaska) and by 10 per centum for projects outside the United States or in Alaska, if he determines in the case of any particular project that such increase (1) is required for the sole purpose of meeting unusual variations in cost arising in connection with that project, and (2) could not have been reasonably anticipated at the time such project was submitted to the Congress. However, the total costs of all projects in each such title may

not be more than the total amount authorized to be appropriated for projects in that title.

SEC. 504. Whenever—

(1) the President determines that compliance with section 2313(b) of title 10, United States Code, for contracts made under this Act for the establishment or development of military installations and facilities in foreign countries would interfere with the carrying out of this Act; and

(2) the Secretary of Defense and the Comptroller General have agreed upon alternative methods of adequately auditing those contracts;

the President may exempt those contracts from the requirements of that section.

SEC. 505. Contracts for construction made by the United States for performance within the United States and its possessions, under this Act shall be executed under the jurisdiction and supervision of the Corps of Engineers, Department of the Army, or the Bureau of Yards and Docks, Department of the Navy, unless the Secretary of Defense determines that because such jurisdiction and supervision is wholly impracticable such contracts should be executed under the jurisdiction and supervision of another department or Government agency, and shall be awarded, insofar as practicable, on a competitive basis to the lowest responsible bidder, if the national security will not be impaired and the award is consistent with chapter 137 of title 10, United States Code. The Secretaries of the military departments shall report semiannually to the President of the Senate and the Speaker of the House of Representatives with respect to all contracts awarded on other than a competitive basis to the lowest responsible bidder.

SEC. 506. As of July 1, 1961, all authorizations for military public works to be accomplished by the Secretary of a military department in connection with the establishment or development of military installations and facilities, and all authorizations for appropriations therefor, that are contained in Acts approved before August 21, 1958, and not superseded or otherwise modified by a later authorization are repealed, except—

(1) authorizations for public works and for appropriations therefor that are set forth in those Acts in the titles that contain the general provisions;

(2) the authorization for public works projects as to which appropriated funds have been obligated for construction contracts or land acquisitions in whole or in part before July 1, 1961, and authorizations for appropriations therefor;

(3) the authorization for the rental guarantee for family housing in the amount of $100,000,000 that is contained in section 302 of the Act of July 14, 1952 (66 Stat. 606, 622);

(4) notwithstanding the provisions of section 406 of the Act of August 10, 1959 (73 Stat. 302, 319), the authorization for—

(a) operational and training facilities in the amount of $1,246,000, maintenance facilities in the amount of $1,335,000, utilities and ground improvements in the amount of $275,000, all at Fort Campbell, Kentucky, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "Third Army Area" of the Act of August 30, 1957 (71 Stat. 531, 533);

(b) administrative facilities in the amount of $350,000 at Fort Bliss, Texas, that is contained in title I, section 101 under the heading "INSIDE THE UNITED STATES" and subheading "Field Forces Facilities (Fourth Army Area)" of the Act of August 3, 1956 (70 Stat. 991, 992), as amended by title I, section 107(a) of the Act of August 30, 1957 (71 Stat. 531, 536);

(c) maintenance facilities in the amount of $809,000 at Fort Ord, California, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "Field Forces Facilities (Sixth Army Area)" of the Act of August 30, 1957 (71 Stat. 531, 533);

(d) classified facilities in the amount of $3,664,000 that is contained in title I, section 102, of the Act of August 30, 1957 (71 Stat. 531, 534);

(e) clearance easements and land acquisition in the amount of $63,300 at Atlanta General Depot, Georgia, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "Technical Services Facilities (Quartermaster Corps)" of the Act of August 30, 1957 (71 Stat. 531);

(f) tactical air navigation facility in the amount of $39,000 at the Naval Auxiliary Air Station, Saufley Field, Florida, that is contained in title II, section 201, under the heading "INSIDE THE UNITED STATES" and the subheading "AVIATION FACILITIES (Naval Air Training Stations)" of the Act of August 30, 1957 (71 Stat. 531, 537);

(g) operational facilities in the amount of $8,479,000 at the Naval Air Station, Whidbey Island, Washington, under the heading "INSIDE THE UNITED STATES" and the subheading "AVIATION FACILITIES (Fleet Support Air Stations)" that is contained in title II, section 201, of the Act of August 30, 1957 (71 Stat. 531, 538);

(h) operational facilities in the amount of $1,500,000 at the Marine Corps Base, Camp Lejeune, North Carolina, under the heading "INSIDE THE UNITED STATES" and the subheading "MARINE CORPS FACILITIES" that is contained in title II, section 201 of the Act of August 30, 1957 (71 Stat. 531, 538);

(i) utilities in the amount of $120,000 at the Public Works Center, Norfolk, Virginia, under the heading "INSIDE THE UNITED STATES" and the subheading "YARDS AND DOCKS FACILITIES" that is contained in title II, section 201 of the Act of August 30, 1957 (71 Stat. 531, 539);

(j) community facilities in the amount of $759,000 at the Naval Station, Adak, Alaska, under the heading "OUTSDE THE UNITED STATES" and the subheading "FLEET BASE FACILITIES" that is contained in title II, section 201, of the Act of August 30, 1957 (71 Stat. 531, 539);

(k) operational facilities (guided missile support facilities) in the amount of $428,000 at the Naval Air Station, Agana, Guam, Mariana Islands under the heading "OUTSIDE THE UNITED STATES" and the subheading "AVIATION FACILITIES" that is contained in title II, section 201 of the Act of August 30, 1957 (71 Stat. 531, 540);

(l) operational facilities in the amount of $5,619,000 at the Naval Air Station, Guantanamo Bay, Cuba, under the heading "OUTSIDE THE UNITED STATES" and the subheading "AVIATION FACILITIES" that is contained in title II, section 201 of the Act of August 30, 1957 (71 Stat. 531, 540), and

(m) medical facilities in the amount of $4,136,000 for Selfridge Air Force Base, Mount Clemens, Michigan, that is contained in title III, section 301 of the Act of July 15, 1955 (69 Stat. 324, 344) as amended.

(n) solar facilities in the amount of $4,401,000 for Holloman Air Force Base, Alamogordo, New Mexico, under the heading "INSIDE THE UNITED STATES" and the subheading "AIR RESEARCH AND DEVELOPMENT COMMAND" that is contained in title III, section 301 of the Act of August 30, 1957 (71 Stat. 531, 545), as amended.

SEC. 507. (a) Section 803(a) of the National Housing Act, as amended, is amended by striking out in the last proviso the word "twenty" and inserting in place thereof the word "twenty-five".

(b) Section 406(a) of Public Law 85-241, as amended, is amended by inserting a comma after the word "activities" and adding the following "and no certificates with respect to any family housing units shall be issued by the Secretary of Defense or his designee under section 810 of the National Housing Act, as amended,".

(c) Paragraph (B) of section 803(b)(3) of such Act is amended by inserting before the semicolon at the end thereof a colon and the following: *"And provided further,* That subject to the limitations of this paragraph no family unit included in any mortgaged property shall be contracted for after the date of enactment of the Military Construction Act of 1960 if the cost of such unit exceeds $19,800."

SEC. 508. The Secretary of Defense, or his designee, is authorized to issue certificates under section 810 of the National Housing Act, as amended, for family housing units at the following locations:

Crystal Springs Air Force Station, Mississippi, twenty-seven units;

Eglin Air Force Base, Florida, two hundred units;

Ellsworth Air Force Base, South Dakota, one hundred units;

Mountain Home Air Force Base, Idaho, one hundred units;

Naval Activities, New York, New York, five hundred units;

Naval Air Station, New Iberia, Louisiana, one hundred and seventy-eight units;

Naval Base, Philadelphia, Pennsylvania, four hundred units;

Robins Air Force Base, Georgia, two hundred units;

Syracuse Air Force Station, New York, two hundred and fifty units;

Francis E. Warren Air Force Base, Wyoming, two hundred units.

SEC. 509. Section 407 of the Act of August 30, 1957 (71 Stat. 531, 557), as amended, is further amended by adding the following subsection:

"(g) The Secretaries of Defense and Health, Education, and Welfare, in order to insure as far as possible that family housing under their jurisdiction is adequate as public quarters and fully utilized, shall maintain such continual surveillance and conduct such periodic surveys of such quarters as they shall deem necessary for this purpose. Where either Secretary or his designee determines, on the basis of such surveys, that it is not in the best interest of the United States to improve, demolish, or otherwise dispose of any quarters which have been determined inadequate under this section, he may exempt such quarters from the requirements of subsection (e) of this section: *Provided,* That any quarters so exempted must be improved, demolished, or otherwise disposed of not later than July 1, 1963."

SEC. 510. The Secretary of Defense, or his designee, may, with respect to any housing owned by the United States which is under the jurisdiction of the Department of Defense, and which has been constructed, as rental housing and is occupied by personnel of the Department of Defense on a rental basis, utilize the proceeds from the rental of such housing for maintenance, repairs, and rehabilitation thereof.

SEC. 511. Notwithstanding the provisions of any other law, at least 75 per centum of the total cost of any family housing project or community facility hereafter constructed or acquired in any foreign country by the Department of Defense or any military department shall be paid for from foreign currencies acquired by the Commodity Credit Corporation pursuant to the provisions of the Agricultural Trade Development and Assistance Act of 1954; except that the following projects authorized pursuant to this Act shall not be subject to this requirement:

Air Force activities, Japan, one hundred fifty units;

Cigli Air Base, Turkey, community facilities;

Clark Air Force Base, Philippine Islands, one hundred units;

Iraklion Air Station, Crete, community facilities;

Kirknewton RAF, United Kingdom, fifty units;

Naval Air Station, Naha, Okinawa, two hundred; and

Site I–5, Italy, one hundred units and community facilities.

SEC. 512. None of the authority contained in titles I, II, and III of this Act shall be deemed to authorize any building construction project within the continental United States (other than Alaska) at a unit cost in excess of—

(1) $32 per square foot for cold-storage warehousing;

(2) $6 per square foot for regular warehousing;

(3) $1,850 per man for permanent barracks;

(4) $8,500 per man for bachelor officer quarters;

unless the Secretary of Defense determines that, because of special circumstances, application to such project of the limitations on unit costs contained in this section is impracticable.

SEC. 513. Title 10, United States Code, is amended as follows:

(1) Section 2662 is amended to read:

"§ 2662. Real property transactions: Reports to the Armed Services Committees

"(a) The Secretary of a military department, or his designee, may not enter into any of the following listed transactions by or for the use of that department until after the expiration of 30 days from the date upon which a report of the facts concerning the proposed transaction is submitted to the Committees on Armed Services of the Senate and House of Representatives:

"(1) An acquisition of fee title to any real property, if the estimated price is more than $50,000.

"(2) A lease of any real property to the United States, if the estimated annual rental is more than $50,000.

"(3) A lease of real property owned by the United States, if the estimated annual rental is more than $50,000.

"(4) A transfer of real property owned by the United States to another Federal agency or another military department or to a State, if the estimated value is more than $50,000.

"(5) A report of excess real property owned by the United States to a disposal agency, if the estimated value is more than $50,000.

If a transaction covered by clause (1) or (2) is part of a project, the report must include a summarization of the general plan for that project, including an estimate of the total cost of the lands to be acquired or leases to be made.

"(b) The Secretary of each military department shall report quarterly to the Committees on Armed Services of the Senate and the House of Representatives on transactions described in subsection (a) that involve an estimated value of more than $5,000 but not more than $50,000.

"(c) This section applies only to real property in the United States and Puerto Rico. It does not apply to real property for river and harbor projects or flood-control projects, or to leases of Government-owned real property for agricultural or grazing purposes.

"(d) A statement in an instrument of conveyance, including a lease, that the requirements of this section have been met, or that the conveyance is not subject to this section, is conclusive."

(2) Chapter 159 is amended by deleting the following item in the analysis:

"2662. Real property transactions: Agreement With Armed Services Committees; reports."

and inserting the following item in lieu thereof:

"2662. Real property transactions: Reports to the Armed Services Committees."

SEC. 514. Section 43 of the Act of August 10, 1956 (70A Stat. 636, 50 U.S.C. App. 2285), is amended to read:

"§ 43. Real property transactions

"(a) The Director of the Office of Civil and Defense Mobilization, or his designee, may not enter into any of the following listed transactions by or for the use of that agency until after the expiration of thirty days from the date upon which a report of the facts concerning the proposed transaction is submitted to the Committees on Armed Services of the Senate and House of Representatives:

"(1) An acquisition of fee title to any real property, if the estimated price is more than $50,000.

"(2) A lease of any real property to the United States, if the estimated annual rental is more than $50,000.

"(3) A lease of real property owned by the United States if, the estimated annual rental is more than $50,000.

"(4) A transfer of real property owned by the United States to another Federal agency or another military department, or to a State, if the estimated value is more than $50,000.

"(5) A report of excess real property owned by the United States to a disposal agency if the estimated value is more than $50,000.

If a transaction covered by clause (1) or (2) is part of a project, the report must include a summarization of the general plan for that project, including an estimate of the total cost of the lands to be acquired or leases to be made.

"(b) The Director of the Office of Civil and Defense Mobilization shall report quarterly to the Committee on Armed Services of the Senate and the House of Representatives on transactions described in subsection (a) that involve an estimated value of more than $5,000 but not more than $50,000.

"(c) This section applies only to real property in the United States and Puerto Rico. It does not apply to real property for river and harbor projects or flood-control projects, or to leases of Government-owned real property for agricultural or grazing purposes.

"(d) A statement in an instrument of conveyance, including a lease, that the requirements of this section have been met, or that the conveyance is not subject to this section, is conclusive."

SEC. 515. Titles I, II, III, IV, and V of this Act may be cited as the "Military Construction Act of 1960".

TITLE VI

Reserve Forces facilities

SEC. 601. Subject to chapter 133 of title 10, United States Code, the Secretary of Defense may establish or develop the following facilities for reserve forces:

(1) For Department of the Army:

Army National Guard of the United States

(Armory)

Abbeville, Alabama: Training facilities, $71,000.

Aibonito, Puerto Rico: Training facilities, $63,000.

Alexandria, Louisiana: Training facilities, $311,000.

Anaconda, Montana: Training facilities, $66,000.

Angleton, Texas: Training facilities, $85,000.

Barbourville, Kentucky: Training facilities, $138,000.

Bastrop, Louisiana: Training facilities, $131,000.

Beatrice, Nebraska: Training facilities, $165,000.

Bismarck, North Dakota: Training facilities, $265,000.

Bogalusa, Louisiana: Training facilities, $180,000.

Boston (Jamaica Plain), Massachusetts: Training facilities, $360,000.

Brockton, Massachusetts: Training facilities, $255,000.

Brooklyn (Eighth), New York: Training facilities, $75,000.

Brooklyn (Sumner), New York: Training facilities, $75,000.

Brownsville, Texas: Training facilities, $85,000.

Burlington, Wisconsin: Training facilities, $140,000.

Carmichael, California: Training facilities, $115,000.

Carson City, Nevada: Training facilities, $101,000.

Carthage, Mississippi: Training facilities, $63,000.

Carthage, Texas: Training facilities, $85,000.

Casa Grande, Arizona: Training facilities, $108,000.

Charleston, West Virginia: Training facilities, $250,000.

Claremont, New Hampshire: Training facilities, $139,000.

Clayton, New Mexico: Training facilities, $70,000.

Clear Lake, South Dakota: Training facilities, $63,000.

Columbus, Texas: Training facilities, $87,000.

Cortez, Colorado: Training facilities, $114,000.

Cranston, Rhode Island: Training facilities, $184,000.

Crete, Nebraska: Training facilities, $120,000.

Danville, Arkansas: Training facilities, $45,000.

De Kalb, Mississippi: Training facilities, $63,000.

Dover, New Hampshire: Training facilities, $139,000.

Dover, New Jersey: Training facilities, $190,000.

Driggs, Idaho: Training facilities, $80,000.

Dumas, Arkansas: Training facilities, $45,000.

Elkins, West Virginia: Training facilities, $157,000.

Elko, Nevada: Training facilities, $97,000.

Escondido, California: Training facilities, $105,000.

Eupora, Mississippi: Training facilities, $63,000.

Forest, Mississippi: Training facilities, $64,000.

Georgianna, Alabama: Training facilities, $71,000.

Gurabo, Puerto Rico: Training facilities, $130,000.

Harrisburg, Pennsylvania: Training facilities, $104,000.

Hartwell, Georgia: Training facilities, $90,000.

Hawthorne, Nevada: Training facilities, $97,000.

Heber Springs, Arkansas: Training facilities, $45,000.

Hettinger, North Dakota: Training facilities, $100,000.

Hinton, West Virginia: Training facilities, $157,000.

Honolulu, Hawaii: Training facilities, $102,000.

Hot Springs, South Dakota: Training facilities, $132,000.

Howell, Michigan: Training facilities, $250,000.

Islip, New York: Training facilities, $300,000.

Jackson, Mississippi: Training facilities, $232,000.

Jacksonville, Florida: Training facilities, $243,000.

Jasper, Indiana: Training facilities, $218,000.

Kings Mountain, North Carolina: Training facilities, $104,000.
Laredo, Texas: Training facilities, $87,000.
Las Vegas, New Mexico: Training facilities, $70,000.
Lavonia, Georgia: Training facilities, $90,000.
Lawrence, Kansas: Training facilities, $102,000.
Lawrenceville, Georgia: Training facilities, $90,000.
Lehighton, Pennsylvania: Training facilities, $240,000.
Levelland, Texas: Training facilities, $85,000.
Lewiston, Montana: Training facilities, $66,000.
Lexington, Massachusetts: Training facilities, $255,000.
Logan, Ohio: Training facilities, $150,000.
Louisville, Kentucky: Training facilities, $285,000.
Marshall, Arkansas: Training facilities, $47,000.
Mendenhall, Mississippi: Training facilities, $63,000.
Montgomery, West Virginia: Training facilities, $189,000.
Mountain Home, Arkansas: Training facilities, $47,000.
Natchitoches, Louisiana: Training facilities, $161,000.
Newberry, South Carolina: Training facilities, $136,000.
Newport, Oregon: Training facilities, $120,000.
Northfield, Minnesota: Training facilities, $49,000.
Orofino, Idaho: Training facilities, $75,000.
Oshkosh, Wisconsin: Training facilities, $235,000.
Perryville, Arkansas: Training facilities, $45,000.
Philip, South Dakota: Training facilities, $145,000.
Pittsfield, Massachusetts: Training facilities, $195,000.
Plymouth, Pennsylvania: Training facilities, $185,000.
Portland, Oregon: Training facilities, $393,000.
Redding, California: Training facilities, $105,000.
Richlands, Virginia: Training facilities, $161,000.
Richmond, Indiana: Training facilities, $188,000.
Richmond, Missouri: Training facilities, $135,000.
Riverdal New Jersey: Training facilities, $171,000.
Rolla, Missouri: Training facilities, $150,000.
Sabana Grande, Puerto Rico: Training facilities, $63,000.
Sacramento, California: Training facilities, $72,000.
Safford, Arizona: Training facilities, $113,000.
Schenectady, New York: Training facilities, $108,000.
Scottsburg, Indiana: Training facilities, $188,000.
Sheldon, Iowa: Training facilities, $113,000.
Sheridan, Arkansas: Training facilities, $45,000.
Siloam Springs, Arkansas: Training facilities, $47,000.
Spartanburg, South Carolina: Training facilities, $134,000.
Spencer, West Virginia: Training facilities, $157,000.
Springfield, Illinois: Training facilities, $50,000.
Springfield, Missouri: Training facilities, $240,000.
Statesboro, Georgia: Training facilities, $120,000.
Stoughton, Massachusetts: Training facilities, $210,000.
Stratford (Bridgeport), Connecticut: Training facilities, $415,000.
Union City, Tennessee: Training facilities, $87,000.
Vergennes, Vermont: Training facilities, $135,000.
Weymouth, Massachusetts: Training facilities, $180,000.
Worland, Wyoming: Training facilities, $141,000.
Various locations: Training facilities minor conversions, $423,000.

Army National Guard of the United States

(Nonarmory)

Camp Murray, Washington: Supply facilities, $159,000.
Camp Ripley, Minnesota: Troop housing and utilities, $910,000.
Camp Shelby, Mississippi: Troop housing, $846,000.
Fort William H. Harrison, Montana: Troop housing, administrative facilities and supply facilities, $123,000.
Fort Stewart, Georgia: Troop housing, $846,000.
Salt Lake City, Utah: Administrative facilities and supply facilities, $266,000.

Army Reserve

Albany, New York: Training facilities addition, $61,000.
Alexandria, Virginia: Training facilities, $553,000.
Artesia, New Mexico: Training facilities, $173,000.
Ashtabula-Geneva, Ohio: Training facilities, $182,000.
Bluefield, West Virginia: Training facilities, $173,000.
Bogalusa, Louisiana: Training facilities, $183,000.
Boulder, Colorado: Training facilities, $350,000.
Clarksburg, West Virginia: Training facilities, $350,000.
Cleveland, Ohio: Training facilities, $746,000.
Columbus, Nebraska: Training facilities, $173,000.
Creston, Iowa: Training facilities, $173,000.
Dallas (Number 3), Texas: Training facilities, $525,000.
Elmira (Horseheads), New York: Training facilities addition, $61,000.
Eureka, California: Training facilities, $182,000.
Fort Thomas, Kentucky: Training facilities, $476,000.
High Point, North Carolina: Training facilities, $156,000.
Houma, Louisiana: Training facilities, $164,000.
Kalispell, Montana: Training facilities, $190,000.
Kingsport, Tennessee: Training facilities, $333,000.
Lafayette, Indiana: Training facilities addition, $58,000.
Lancaster-Logan, Ohio: Training facilities, $182,000.
Le Sueur, Minnesota: Training facilities, $190,000.
Lewiston-Auburn, Maine: Training facilities, $523,000.
Lincoln, Nebraska: Training facilities addition, $55,000.
Los Angeles (Number 2), California: Training facilities addition, $73,000.
Louisville, Kentucky: Training facilities addition, $55,000.
Lubbock, Texas: Training facilities expansion, $111,000.
Madisonville, Kentucky: Training facilities, $173,000.
Marion, Illinois: Training facilities, $182,000.
Miami (North), Florida: Training facilities, $498,000.
Mount Pleasant, Iowa: Training facilities, $173,000.
New Castle, Pennsylvania: Training facilities, $182,000.
Norfolk, Nebraska: Training facilities, $173,000.
Oak Ridge, Tennessee: Training facilities, $164,000.
Palatka, Florida: Training facilities, $156,000.
Pasadena, California: Training facilities addition, $58,000.
Pasadena, Texas: Training facilities, $333,000.
Penn Yan, New York: Training facilities, $190,000.
Petersburg (Fort Lee), Virginia: Training facilities, $452,000.
Pittsburg, California: Training facilities, $366,000.
Rushville, Indiana: Training facilities, $182,000.
Shawnee, Oklahoma: Training facilities, $173,000.
State College, Pennsylvania: Training facilities, $303,000.
Tampa (Drew Field), Florida: Training facilities, $428,000.
Tobyhanna, Pennsylvania: Training facilities, $182,000.
Toledo, Ohio: Training facilities expansion, $77,000.
Troy, Ohio: Training facilities, $182,000.
Tupelo, Mississippi: Training facilities, $167,000.
Ventura, California: Training facilities, $366,000.
Wailuku-Maui, Hawaii: Training facilities, $225,000.
Willmar, Minnesota: Training facilities, $190,000.
Winston-Salem, North Carolina: Training facilities addition, $49,000.
Yoakum, Texas: Training facilities, $164,000.
Various locations: Training facilities minor additions, $179,000.
Land acquisition: Training facilities, $671,000.

(2) For Department of the Navy:

Naval Reserve

(Aviation)

Naval Air Station, Dallas, Texas: Operational facilities, $130,000.
Naval Air Station, Glenview, Illinois: Operational facilities, $1,298,000.
Naval Air Station, Grosse Ile, Michigan: Operational facilities, $150,000.
Naval Air Station, Los Alamitos, California: Supply facilities and utilities, $306,000.
Naval Air Station, Minneapolis, Minnesota: Operational facilities, $178,000.
Naval Air Station, New York, New York: Operational facilities, $471,000.
Naval Air Station, Olathe, Kansas: Operational facilities, $121,000.
Naval Air Station, Seattle, Washington: Operational facilities, $181,000.
Naval Air Station, South Weymouth, Massachusetts: Operational facilities, $300,000.
Naval Air Station, Willow Grove, Pennsylvania: Training facilities, $575,000.

Naval Reserve

(Surface)

Naval Reserve Electronics Facility, Appleton, Wisconsin: Training facilities, $47,000.
Naval Reserve Electronics Facility, Auburn, California: Training facilities, $75,000.
Naval Reserve Training Center, Fort McHenry, Baltimore, Maryland: Training facilities, $300,000.
Naval Reserve Electronics Facility, Boulder, Colorado: Training facilities, $56,000.
Naval Reserve Training Center, Brooklyn, New York: Training facilities, $75,000.
Naval Reserve Electronics Facility, Corvallis, Oregon: Training facilities, $56,000.
Naval Reserve Electronics Facility, Eau Claire, Wisconsin: Training facilities, $55,000.

Naval Reserve Electronics Facility, Fayetteville, Arkansas: Training facilities, $87,000.

Naval and Marine Corps Reserve Training Center, Freeport, New York: Training facilities, $35,000.

Naval Reserve Electronics Facility, Helena, Montana: Training facilities, $56,000.

Naval Reserve Electronics Facility, Medford, Oregon: Training facilities, $56,000.

Naval Reserve Electronics Facility, Paris, Texas: Training facilities and land acquisition, $90,000.

Naval and Marine Corps Reserve Training Center, Phoenix, Arizona: Training facilities, $600,000.

Naval Reserve Electronics Facility, Provo, Utah: Training facilities, $56,000.

Naval Reserve Electronics Facility, Red Bluff, California: Training facilities, $80,000.

Naval Reserve Electronics Facility, Redding, California: Training facilities $80,000.

Naval and Marine Corps Reserve Training Center, Topeka, Kansas: Training facilities, $383,000.

Naval Reserve Electronics Facility, Wenatchee, Washington: Training facilities, $65,000.

Naval Reserve Electronics Facility, Yuba City, California: Training facilities, $75,000.

Marine Corps Reserve

(Ground)

Marine Corps Reserve Training Center, Johnstown, Pennsylvania: Acquisition of land and training facilities, $65,000.

Naval and Marine Corps Reserve Training Center, Phoenix, Arizona: Training facilities, $225,000.

Naval and Marine Corps Reserve Training Center, Topeka, Kansas: Training facilities, $123,000.

(3) For Department of the Air Force:

Air National Guard of the United States

Barnes Municipal Airport, Westfield, Massachusetts: Operational facilities, $675,000.

Congaree Air Base, Columbia, South Carolina: Operational facilities, $432,000.

Fort Smith Municipal Airport, Fort Smith, Arkansas: Operational facilities, $164,000.

Foss Field, Sioux Falls, South Dakota: Operational facilities, $675,000.

Hickam Air Force Base, Honolulu, Hawaii: Operational facilities, $604,000.

Hutchinson Naval Air Station, Hutchinson, Kansas: Operational facilities, $1,389,000.

Jackson Municipal Airport, Jackson, Mississippi: Operational facilities, maintenance facilities, and supply facilities, $2,689,000.

Portland International Airport, Portland, Oregon: Operational facilities, $314,000.

Springfield Municipal Airport, Springfield, Ohio: Operational facilities, $164,000.

Westchester County Municipal Airport, Westchester, New York: Operational facilities, $120,000.

Various locations: Operational facilities, maintenance facilities, and supply facilities, $5,771,000.

Air Force Reserve

Bakalar Air Force Base, Columbus, Indiana: Operational facilities, $237,000.

Bradley Field, Windsor Locks, Connecticut: Maintenance facilities and troop housing, $150,000.

Dallas Naval Air Station, Dallas, Texas: Maintenance facilities and supply facilities, $1,992,000.

Dobbins Air Force Base, Marietta, Georgia: Maintenance facilities, $1,268,000.

Ellington Air Force Base, Genoa, Texas: Operational facilities, $534,000.

General Mitchell Field, Milwaukee, Wisconsin: Maintenance facilities and supply facilities, $155,000.

Selfridge Air Force Base, Mount Clemens, Michigan: Operational facilities, $161,000.

(4) For all reserve components: Facilities made necessary by changes in the assignment of weapons or equipment to reserve forces units, if the Secretary of Defense or his designee determines that deferral of such facilities for inclusion in the next law authorizing appropriations for specific facilities for reserve forces would be inconsistent with the interests of national security and if the Secretary of Defense or his designee notifies the Senate and the House of Representatives immediately upon reaching a final decision to implement, of the nature and estimated cost of any facility to be undertaken under this subsection.

SEC. 602. (a) Public Law 85–685 is amended under the heading "ARMY RESERVE" in clause (3) of section 603 with respect to Galesburg, Illinois, by striking out "$157,000" and inserting in place thereof "$182,000".

(b) Public Law 85–685 is amended under the heading "ARMY NATIONAL GUARD OF THE UNITED STATES (ARMORY)" in clause (3) of Section 603 as follows:

(1) With respect to Dallas number 5, Texas, strike out "$154,000" and insert in place thereof "$351,000".

(2) With respect to Jerome, Idaho, strike out "$52,000" and insert in place thereof "$72,000".

(3) Strike out the following:

"Boston, Massachusetts: Training facilities, $270,000."

"Juncos, Puerto Rico: Training facilities, $38,000."

"Mayaguez, Puerto Rico: Training facilities, $160,000."

"Oak Ridge, Tennessee: Training facilities, $142,000."

"Saugus, Massachusetts: Training facilities, $210,000."

"South Boston, Massachusetts: Training facilities, $360,000."

(c) Public Law 85–685, as amended, is amended by striking out in clause (3) of section 606 "$27,079,000" and inserting in place thereof "$26,141,000".

(d) Public Law 86–149 is amended under the heading "ARMY RESERVE" in clause (1) of section 501 as follows:

(1) With respect to Aurora, Illinois, strike out "$302,000" and insert in place thereof "$366,000".

(2) With respect to Bloomington, Indiana, strike out "$302,000" and insert in place thereof "$366,000".

(3) With respect to Champaign, Illinois, strike out "$302,000" and insert in place thereof "$366,000".

(4) With respect to Duluth, Minnesota, strike out "$317,000" and insert in place thereof "$384,000".

(5) With respect to Jefferson City, Missouri, strike out "$288,000" and insert in place thereof "$349,000".

(6) With respect to Joliet, Illinois, strike out "$302,000" and insert in place thereof "$366,000".

(7) With respect to Mount Vernon, Ohio, strike out "$168,000" and insert in place thereof "$182,000".

(8) With respect to Odessa, Texas, strike out "$152,000" and insert in place thereof "$175,000".

(9) With respect to Savannah, Georgia, strike out "$259,000" and insert in place thereof "$315,000".

(10) With respect to Vallejo, California, strike out "$302,000" and insert in place thereof "$366,000".

(e) Public Law 86–149 is amended by striking out in clause (1)(a) of section 504 "$20,916,000" and inserting in place thereof "$21,457,000".

SEC. 603. The Secretary of Defense may establish or develop installations and facilities under this title without regard to sections 3648 and 3734 of the Revised Statutes, as amended, and sections 4774(d) and 9774(d) of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended, and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange of Government-owned land, or otherwise.

SEC. 604. Appropriations for facilities projects authorized by section 601 for the respective reserve components of the Armed Forces may not exceed—

(1) for Department of the Army:

(a) Army National Guard of the United States, $18,093,000;

(b) Army Reserve, $13,089,000;

(2) for Department of the Navy: Naval and Marine Corps Reserves, $6,450,000;

(3) for Department of the Air Force:

(a) Air National Guard of the United States, $12,997,000.

(b) Air Force Reserve, $4,497,000.

SEC. 605. Any of the amounts named in section 601 of this Act may, in the discretion of the Secretary of Defense, be increased by 15 per centum, but the total cost for all projects authorized for the Army National Guard of the United States, the Army Reserve, the Naval and Marine Corps Reserves, the Air National Guard of the United States, and the Air Force Reserve, may not exceed the amounts named in clauses (1)(a), (1)(b), (2), (3)(a), and (3)(b) of section 604, respectively.

SEC. 606. As of July 1, 1961, all authorizations for specific facilities for reserve forces to be accomplished by the Secretary of Defense, and all authorizations for appropriations therefor, that are contained in the Reserve Forces Facilities Act of 1958, and not superseded or otherwise modified by a later authorization, are repealed except the authorizations for facilities for the reserve forces as to which appropriated funds have been obligated in whole or in part before July 1, 1961, and authorizations for appropriations therefor.

SEC. 607. This title may be cited as the "Reserve Forces Facilities Act of 1960."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. MANSFIELD. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that further proceedings under the call be suspended.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DIRKSEN. Has the unfinished business been laid before the Senate?

The PRESIDING OFFICER. It has. The question before the Senate is on agreeing to the committee amendment, which is a complete substitute for the bill.

Mr. STENNIS. Mr. President, the bill before the Senate provides construction and other related authority for the military departments within and outside the United States, including authority for the construction of facilities for the Reserve components. The total sum of the new authorizations contained in the bill is $1,074,099,000. The Army would be authorized $147 million; the Navy, $126 million; the Air Force, $726 million; the

Department of Defense, $20 million; and a total of $55 million for the various units of the Reserve forces.

In addition thereto, approval is granted for an increase of $110,766,000 in prior years authority for a total authorization of $1,184,865,000. I should like to call attention to the fact that the bill, as originally submitted to the Congress, and upon which the House acted, called for authorizations in the amount of $1,142,122,000. Subsequently, however, the Department of Defense requested numerous revisions, including major changes in the air defense program, resulting in a revised request of $1,219,555,000, which is $77,433,000 above the amount contained in the original bill. Thus, the Senate committee was called upon to pass upon many major items not considered by the House. The authorization granted is $34,690,000 below the amounts requested.

By way of review: In new authority, the Army is authorized $147.4 million; the Navy, $125.9 million; the Air Force, $725.5 million; the Department of Defense, $20 million; and $55 million for the Reserve components.

In addition, the bill also contains authority for the construction of 9,541 units for family housing, consisting of 653 units to be constructed from appropriated funds, 8,543 units under the Capehart Act, and 345 units overseas programed under the surplus commodity program. The Secretary of Defense is also given the authority to issue certificates, under section 810 of the National Housing Act, for 2,155 units of housing. Some of the latter units have previously been authorized under other programs; and the inclusion of this provision does not necessarily mean that these houses will be constructed, but simply permits the Secretary of Defense to explore the feasibility of the section 810 program. Later, I shall discuss further these housing provisions.

The basic policy of Defense Department planning continues to have, as principal elements, the following: first, possession of a powerful retaliatory capability, which is considered mandatory as a war deterrent; second, the responsibility to maintain a capability to apply military force promptly in various local conflict areas of the free world; and, third, continuation of a strong continental air defense and maintenance of open sea lanes. The items included in the bill support these policies.

The committee, during its examination of the project, took particular care to verify that all items included in this bill were needed to support the long-term future military plans, eliminating all items for which a compelling military necessity did not exist.

This bill contains, first, construction which is necessary in support of new weapons systems and new defense concepts; second, construction needed in the augmentation of existing bases to support changes in weapons and operating concepts which are due to advancing technological development; and, third, construction needed to modernize support facilities which, because of deferred maintenance, must be improved to assure adequate capability at a time of demand.

Now I should like to deal more specifically with certain areas of concern to the committee in considering the bill.

As mentioned earlier, the bill considered by the committee was a revised version of the one originally submitted to the Congress in early February of this year. The principal revision requested by the Defense Department related to a change in the air defense and ballistic missile programs. Several major items were deleted from the bill and others were added, the net effect being an increase in this area of over $73 million.

I wish to emphasize these few comments now, because I am speaking not only for myself, but, I think, for the entire subcommittee.

The committee's concern over the air defense picture has been made abundantly clear over the past several years. Emphasis has repeatedly been placed upon the need for prompt clear-cut decisions on the part of the Department of Defense to avoid costly duplications and waste in the air defense program and to assure a balance between our offensive and defensive forces. We have consistently taken such steps as were available to us to bring forth the desired decisions from the Defense Establishment.

During consideration of the military construction authorization bill last year, in response to the committee's suggestions, the Secretary of Defense submitted a revised plan for air defense. This plan particularly called for revisions in the ground-to-air missile program and in the electronic ground environment so necessary to the control of the weapons and the air battle. The committee received this revised plan with some reservations as to the premises and philosophy employed, and requested the Secretary of Defense and the Joint Chiefs of Staff to again carefully review the proposed new program before proceeding with the construction of new ground-to-air missile sites.

By letter dated September 10, 1959, the Secretary of Defense then advised the committee that the Joint Chiefs of Staff had reviewed the plan in accordance with the directive of the committee and that all currently authorized surface-to-air missile sites were required by military necessity. He concurred in these recommendations. Again, as late as February 1960, certain questions were submitted to the Department of Defense with reference to the air defense problem designed to determine if there had been any significant changes in the planning since the Secretary of Defense appeared before the committee to present the revised air defense plan in June 1959.

Under date of February 9, 1960, a reply was received from the Deputy Secretary of Defense, which, in part, stated:

> With respect to the objectives of the June 1959 Department of Defense air defense plan, there has been no significant departure from the concepts enunciated therein, although some differences in detail have developed. * * * The force levels established for Bomarc, Nike-Hercules, and manned interceptors have not changed since the plan was originally presented.

The military construction authorization bill for fiscal year 1961, as originally submitted to the Congress around the first of February, was apparently based on these contentions.

Prior to the time the committee could complete consideration of the bill, however, the Department of the Air Force again drastically revised its air defense planning, although no testimony had been presented to indicate any major change in the air defense threat since the submission of the revised plan in June 1959. The details of the most recent revised plan are, of course, classified; but, generally, the new plan consists of placing greater emphasis on the intercontinental ballistic missile program, a new concept for the electronic ground environment, and a 50-percent reduction in the number of Bomarc ground-to-air missile sites which the committee had earlier been led to believe were so necessary to our continental air defense.

The committee has not been able to reconcile the cancellation of these long-range, ground-to-air defense missile sites, located on the perimeter of our country, while continuing those of shorter range primarily designed for last-minute protection of our cities and military installations.

Mr. President, if I may emphasize that situation, no member of the subcommittee or of the full committee would set himself up as an expert in this field, but we wish to make clear to the Congress that, in the constant shifting of these plans, the committee has certainly tried to be diligent, within our limitations, in keeping up with this matter. Most of us felt all the time that too much money was being put into ground-to-air missiles, at the expense of the affirmative or purely offensive weapons.

We asked the Senate to authorize these sites and to approve the appropriation of the huge sums of money, which run into billions of dollars, on the direct representation that such steps were essential.

Last year we were much impressed by the need for revised thinking, so we left many of these items out of the bill. That forced the Department of Defense to revise its estimates. The Department came in with a changed plan, which they called the master plan. We recommended its adoption. The money was provided.

This year, after the budget was submitted and late in the legislative year, we were again approached, this time by the Air Force, to make a change which was really not concurred in by the North American Air Defense Command, or NORAD, as it is called. We come to the Senate now to reverse ourselves in a great measure, and to ask the Senate to shift the authorizations around, and, in effect, to abandon over $26 million worth of installations for Bomarc and almost $30 million worth of construction alone for the super Sage system which goes with it, for a total of over $58 million on

those two items alone. We ask for the shift of that money over to the two Titan squadrons, and Minuteman and other facilities, for a net increase in the amount of $73 million.

At least four of the perimeter defense missile sites discontinued have reached an advanced stage of completion. Granted that developments in the missile field have lessened the value of fixed defenses against bomber attacks, the bomber threat will continue for the next decade. The committee feels that further consideration should be given to the completion and utilization of at least two of these locations on the northern perimeter of the United States. As may be seen from the chart appearing on page 10 of the report before the Senate, the cost of completing these sites is nominal in comparison to the money already spent in developing these sites, and to be spent in settlement charges resulting from the cancellation of contracts.

Accordingly, the committee has requested that the revised air defense plan be again reviewed in detail by the Joint Chiefs of Staff and the Secretary of Defense with due consideration of the recommendations of the commander in chief of the North American Air Defense Command, and his staff, who have the final responsibility for the air defense of this continent.

On the credit side of the ledger, additional emphasis has been placed on our offensive forces, and the revised program provides an additional $110 million for this purpose, making almost $409 million available for operational, testing, and training facilities for the Atlas, Titan, and Minuteman intercontinental ballistic missiles, as well as for the Samos and Midas satellites.

The Atlas missile facilities program is moving ahead at an accelerated rate, and the bill before us provides for facilities for three additional Atlas squadrons. Under present program objectives, this provides for the last phase of Atlas construction. Six additional Titan squadrons are provided for as well as the construction required for the first three operational squadrons of Minuteman. The bill also provides substantial contributions to our other retaliatory forces, including the powerful manned bomber units, the Polaris submarine with its capacity for concealment and mobility, and our intermediate range ballistic missiles being deployed at forward locations in Allied countries.

Mr. President, speaking only for myself on this point, because others can make their positions clearer than anyone else could, I am inclined to think this is a timely move and a sound move, to put the money more on the offensive weapons. At the same time, we are left with an amazing situation in regard to ground-to-air defense. There must be some, but we are canceling out the longer range weapons, like the Bomarc, and providing for the shorter range missiles, like the Hercules. In other words, the longer range part of the ground-to-air weapons is being stopped, whereas the shorter range part is to be left in operation. I do not think there is any logic or consistency behind this. It represents, to my way of thinking, more of a matter of letting each service use the money as it sees fit, not even complementing or supplementing another service in its operations, which still leaves us highly uncertain as to what we shall accept and believe in and suggest to the Senate be done.

I know there cannot be absolutely accurate planning and forecasting with reference to such a vast program. It is something to which the committee has given special attention. We have called before us the man in charge of the North American Air Defense Command, a very exceptional general, General Kuter. We find this was not done on his recommendation.

The committee is still very uncertain as to exactly what the present situation is; and certainly dissatisfied with the situation in its present state. However, we approve the idea of putting the money into these intercontinental ballistic missile programs, and that is the substance of our recommendation with reference to the funds left over from Bomarc and the additional money which is required.

We are requesting, though, that the revised Air Defense plan be again reviewed in detail by the Joint Chiefs of Staff and the Secretary of Defense, with due consideration to the recommendations of the Commander in Chief of the North American Air Defense Command and his staff, who have final responsibility for the air defense of this continent.

Another area of the program the committee reviewed with a critical eye was the numerous requests for replacement items and additions to existing facilities, many of which were almost new. The impression was gained that perhaps such requirements were not as firm or as critical on items contained in the bill in past years. As a result, there were deleted shop facilities of various kinds in excess of $7.5 million and community facilities consisting of officers' clubs, commissaries, and post exchanges totaling $5.4 million. As indicated, in nearly every instance, these deletions were made in areas where there are now existing facilities which may be used. When no community facilities of the type described existed at all, the committee approved the requests of the services but at a reduced figure. On the other hand, approval was granted for five new hospitals, and I am happy to advise that we found the cost estimates consistent with action taken by the committee last year. Mr. President, Senators may recall that in the bill last year authority was requested for several hospitals at costs far in excess of known costs for Hill-Burton civilian hospitals. The committee found it necessary to delete all hospitals in an effort to secure from the military services more realistic estimates. When such estimates were not forthcoming, the committee made substantial reductions, approximating 20 percent or more, and reinserted these facilities in the bill. We now find that the services have been able to get along with the amounts granted and the office of the Secretary of Defense is to be commended for the very satisfactory efforts made this year in holding down the cost of the hospitals contained in the bill before us.

Mr. President, that is another amazing story. The committee, after proper testimony and surveys out in the field, was fully convinced the hospital costs were far too high. We called upon the services for revised estimates, and we were told the figures were as low as they could get them if the work was to be done. The services had no further suggestions to make with reference to those figures.

After some weeks of consideration, we wound up by reducing the figures approximately 20 percent, and the amount as to the other hospitals was sustained by the Appropriations Committee. We now find that the work is going on at the reduced figures, and that this year the request for further appropriations for hospitals is based upon the plan we adopted last year.

This simply shows, in respect to many avenues of military construction, that if some segment of the Congress simply takes out after the point and runs it down, finally maintains it and writes it into the law, cutting the figures accordingly, a savings is made. That is about the only way to do it.

The Department of the Navy presented rather elaborate plans for additional facilities at the Anacostia Naval Air Station in the District of Columbia to house and to supply their personnel in the Washington area and to accommodate various activities such as the music and photographic schools. This committee has long urged both the Navy and the Air Force to vacate the Bolling and Anacostia Air Fields and to return this valuable property to the tax rolls.

This is the area, the Senate will remember, that embraces the services moving out of Anacostia Naval Air Station and Bolling Air Force Base due to the congested air pattern over the city of Washington, D.C., particularly in close proximity to the National Airport.

The Senator from Mississippi happened to be a member of the subcommittee which considered for the Appropriations Committee the need for a second National Airport. We finally recommended, as the Senate will recall, the building of a new airport. We were going to move the service installations out. I have decided it would have been better to move the National Airport and to let the service installations remain where they were, because this process has already cost us some $58 million, which has already been spent to take the services over to Andrews Air Force Base, and more money will be required. The Navy has come in with a program to redo Anacostia Naval Air Station at a cost, according to its figures, of about $40 million, although that has been reduced somewhat by the Navy.

We understood the Air Force had an even more ambitious program for the old Bolling Air Force Base next year. It is located in an area in the Capital of

the Nation which cannot expand geographically. It is hemmed in by the boundary lines of the District of Columbia. It is an area which should be restored to civilian use and put back on the tax rolls. People who make their homes in the area should be permitted to develop it. I do not know that all of the area is suited for such purposes, but in view of the fact that it is located in the Capital of the Nation, and is hemmed in and cannot expand, the proposal should be given the utmost consideration.

Therefore, the item of $13.3 million, the first increment of the proposed renewal of construction at the Anacostia Naval Base, has been taken out of the bill.

The committee's position is set forth in greater detail on page 10 of the report before the Senate. The view is expressed that before proceeding further with this matter an impartial committee should make a study of all Army, Navy, and Air Force space in the Washington area.

The bill as it passed the House contained $15 million for a Polaris submarine drydock at the Charleston, S.C., shipyard. While the Navy does not propose to fund this item during the coming fiscal year, they did testify that the inclusion of some authorization in the bill would be most helpful for planning and design purposes, and they will ask for funding in fiscal year 1962. The committee is sympathetic to this important proposal but feels that $10 million in new authority is sufficient for the purpose. If any adjustments are necessary the Navy can let this be known when they are ready to proceed with construction.

Another area where a substantial reduction of $22.5 million was made is in the authority granted for emergency construction requirements arising during the year as a result of new developments or unforeseen circumstances. The Department of Defense requested an authorization for each military service of $17.5 million. Past experience demonstrates that this amount of authority is not necessary and we have provided for $10 million, the amount granted last year.

Now I should like to speak briefly concerning the Reserve portion of the bill. I want to emphasize the important role played by our Reserve forces in the overall defense picture and their outstanding performance in past conflicts in which the country has become engaged.

I do not believe I can overemphasize the importance of the role which the Reserves, including the National Guard, play in our national defense program. Particularly is it valuable, as the Senator from Mississippi sees it, in keeping trained and utilizing the talent of the men whom we have already trained. It also carries forward the concept of the civilian soldier, and it keeps the military program in close touch with the communities back home. I believe that that, more than anything else, makes our present military program understood. The Reserve programs have had appropriated for them comparatively little money over the past few years, and so we have incorporated additional projects in the National Guard program and also in the Reserve construction program, and a special one for the Air National Guard. About $90 million in Federal money would be required to match the local money which has already been made available by counties, States, and cities for the building of National Guard armories, and which is on hand for them to pay their part of the cost of armories, land, and all that goes with it. That in itself indicates how strong these programs are at the so-called back-home level. We adopted the amount suggested by the House, added a certain amount in the Senate committee, and then we inserted an overall total of $5.5 million additional for National Guard armories exclusive of the Air National Guard increase that I am coming to.

On the National Guard armories and other military installations the senior Senator from West Virginia [Mr. RANDOLPH] strongly urged the inclusion of projects in his State both from the standpoint of need and also the standpoint of employment.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. STENNIS. I am very glad to yield to the Senator from Kansas.

Mr. CARLSON. May I express my appreciation as a Member of the Senate for the excellent report and excellent recommendation which the Subcommittee on Appropriations for Military Authorization for Military Construction has made to the Senate. I think we are fortunate to have a subcommittee headed by the distinguished Senator from Mississippi [Mr. STENNIS] and the ranking minority member, the Senator from South Dakota [Mr. CASE].

I would like to emphasize the importance of the Air National Guard and the Air National Guard Reserve. I am pleased to note the authorization program calls for an expenditure for the Air National Guard unit at Hutchinson, Kans., of some $1,389,000. This National Guard unit is located on a deactivated former naval base, and I think it is fine that the base is being used. It is in the interest of the Federal Government as well as the State government that this is being done, and if the distinguished Senator will permit again for just a moment, I wish to express my appreciation to the chairman and all members of the subcommittee and the full committee for including the authorization for a new bridge at Fort Riley, Kans. I know the evidence will prove that this bridge is badly needed, and its authorization will mean much to the future development of a post which is rapidly becoming, and is already, a part of a great defense program. I express my sincere thanks to the chairman.

Mr. STENNIS. We were very much impressed with the Senator's testimony with reference to the bridge. We think he rendered a service by presenting the facts and figures in this connection. We are glad we could include the project in the bill.

I likewise appreciate his remarks with reference to the Air National Guard, which has become an even more important part of our program with new duties assigned. The needs of the Reserve components must not be neglected.

Testimony before the committee indicated that there is a definite need for more flexibility in the Army National Guard program to permit the National Guard Bureau and the States to construct to the limit of annual obligation authority. The subcommittee was urged to incorporate additional project authorization in the bill to provide total authority more in consonance with the amount of the matching funds already on hand and held by the States for this program. This will permit substitutions of authorized line items on a basis of unforeseen contingencies. The subcommittee believes this argument has considerable merit and has increased the authorization granted by the House for the Army National Guard by approximately $5.4 million, to provide for a total of 99 armories, 26 expansions, and to accelerate the completion of 2 important Reserve training centers. An additional $5.7 million was given the Air National Guard to provide for essential maintenance and missile-storage facilities at various locations made necessary as the result of the accelerated conversion to century series aircraft.

Although there were many other adjustments necessary, the above-enumerated items account for the major money changes in the bill.

Finally, I should like to speak briefly on certain language changes in the general provisions which are of some importance.

Section 503 of the bill before you was rewritten to more specifically spell out the intent of the Congress in providing a 5-percent differential to take care of unforeseen cost increases. This should prevent such abuses of this provision as have occurred in the past.

Mr. President, in the new or revised defense program which I mentioned a while ago, which has really been formulated in the past few weeks, there is a transfer of duties and responsibilities in the interceptor and fighter field to the Air National Guard units. As a minimum requirement, $5.7 million would be needed to carry out those missions, which consist of relatively minor additions in many fields throughout the United States. As the committee understands, if the authorization is granted, the Air Force, having been relieved of certain responsibilities of its own, will recommend the transfer of a like amount of money from its budget for 1961. It will recommend that the Appropriations Committee transfer the appropriation to this program. We have, therefore, included all the items that have been agreed upon and spelled out for this additional construction program, which covers the entire United States.

Section 507(a) places a limitation on the number of Capehart housing units that may be contracted for by the Department of Defense after July 1, 1959. It will be recalled that a 20,000-unit limitation was placed in the bill last year to assure that of the 23,600 odd units authorized only those found to be absolutely essential would be built. This

year the Department of Defense has requested approval of in excess of 8,500 additional units and an increase to 30,000 the number of units to be contracted for. The committee has again applied the same criteria as last year and believes an increase in the limitation to 25,000 units is sufficient.

That means, Mr. President, that we did not authorize, in effect, the total number of new Capehart housing units requested, and puts a ceiling on the gross amount of the entire program over the years that can be built. The Senator from Pennsylvania [Mr. CLARK] has an inquiry, I understand, and I am glad to yield.

Mr. CLARK. I thank the Senator for his courtesy. I should like to call his attention to page 42 of the committee report, which deals with the request by the Navy for 400 units of Capehart housing at the Naval Base in Philadelphia. I am not sure whether all members of the committee know the history of this request.

It is a problem with which the city of Philadelphia has been laboring ever since the days when I was mayor, in 1955. During the war some public housing was built in South Philadelphia near the navy yard. It is now occupied entirely by naval personnel. Under the housing law, that project is supposed to be operated by the Philadelphia Public Housing Authority as a public housing project. However, in point of fact it is occupied entirely by naval personnel, and therefore the city has been deprived of the use of that project for 400 public housing occupants.

I know that the Senator will agree with my comment that the applicants for that housing are stacked as high as the planes on a foggy day over Washington National Airport. We have been negotiating for years with the Navy Department to move these people, so that the city can get control of the project and move people in there who cannot find anything lse.

We have been trying to persuade the Navy to go in for Capehart housing, to be built on a site quite close to the naval hospital, adjacent to the navy yard. They have been resistant to that suggestion.

Finally, on the 10th of May, our prayers and protestations took effect. I have here a copy of a memorandum sent to Representative BARRETT by the Department of the Navy.

With the approval of the Senator from Mississippi I ask unanimous consent that the letter may be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE NAVY,
Washington, D.C., May 10, 1960.

Hon. WILLIAM A. BARRETT,
House of Representatives,
Washington, D.C.

DEAR MR. BARRETT: This is in further reply to your letters of January 15, 1960, addressed to the Honorable Thomas S. Gates, Jr., and the Honorable William B. Franke. My letter of January 29, 1960, promised that you would be advised of the plans to cope with the housing problem for naval personnel in the Philadelphia area when such plans had been formulated.

Please be advised that a plan for the construction of a 400-unit Capehart housing project for enlisted personnel in Philadelphia has been approved by the Department of Defense and the Bureau of the Budget. It is proposed that the project will be built near the naval hospital on land to be acquired from private owners. This matter is now under consideration by the Congress.

If I can be of any further assistance to you in this matter, please let me know.

Sincerely,

F. A. BANTZ,
Under Secretary of the Navy.

Mr. CLARK. Mr. President, the Navy has now persuaded both the Department of Defense and the Bureau of the Budget—and I interpolate to say that must have been quite a job—to agree to the authorization of 400 units of Capehart housing on this land, which is just sitting there, ready to be used, next to the naval hospital.

As the Senator knows, I have been perhaps a little bit too aggressive in urging the committee to follow up this matter. I was therefore quite disappointed to find that even though the Bureau of the Budget and the Department of Defense had finally been persuaded of the justness of the claim of the city of Philadelphia, of which the Navy Department was satisfied some time ago, these units were not authorized, and we were relegated to section 810 of the National Housing Act, as appears from the report on page 42. The reference to section 810 is on page 63.

I may say to the Senator from Mississippi, honestly, that we are not going to get the job done under section 810 in the foreseeable future, because the rents are not good enough to persuade private capital to go in there and build this housing. The naval people are actually squatters on the property which the city of Philadelphia ought to have.

I appreciate that this is a kind of last-minute request, and I actually hesitate to make it. However, I know how strongly my constituents in Philadelphia feel about it. If the Senator from Mississippi ever had the distinguished Mayor Dilworth of Philadelphia on his back, trying to get him to do something, he would know how strongly I feel about it. I wonder, therefore, if I could possibly persuade the Senator to accept an amendment on page 90, after line 25, to insert the 400 units for the naval base in Philadelphia. Before he answers, I should like to say to him that we really have made survey after survey to establish the fact that rental housing is not available, anywhere near where these naval personnel have to go to work, at rents which their naval pay will permit them to take care of.

I make this plea to the Senator and throw myself on his mercy.

Mr. STENNIS. I certainly appreciate the attitude of the Senator from Pennsylvania. He has a problem there, and undoubtedly the Navy has, too. This matter came in very late, and we were met, on the very threshold of our examination with the fact that we would have to spend, as we understood, $540,000 at the very outset for land upon which to build these Capehart houses. That is $18,000 per acre. It seemed to us that the Navy had the authority to buy the land, but had not requested it, that the Senator from Mississippi can recall, at least, within the last few years to take care of this situation.

We treated the situation in Brooklyn, N.Y., in the same way with reference to their requests for 500 units, and thought that perhaps under section 810 it might be taken care of. We thought it might be a better plan to try it out under section 810 and see whether it would work. These sums are running into enormous figures on the Capehart housing.

We hear talk about its being $16,500 a unit. That is just for the walls and the roof and the interior walls and floors, more or less. That does not include the land around the house. It does not include anything beyond the 5-foot line. Loose statements to the effect that the rental allowance made to these military men will pay for the housing are not true. They have no regard for the $60 or $70 a month for repair and maintenance and the upkeep cost which must be provided, and various items of that kind.

We are convinced that somebody will have to stop, look, and listen and make a new start with reference to the housing.

These requests came in late, and we put them in the program under section 810. We believe it will work out, although we are not sure it will. However, it ought to be tried, and very thoroughly gone into. It would certainly have a very high rating next year if something could not be done and we were satisfied that they tried.

Mr. CLARK. In the first place, I understand the very heavy responsibilities which the Senator from Mississippi must bear in this regard. Quite often he cannot do for his friends what he would like to do. Therefore, I understand fully what he has just said he has to do in accordance with his public duty.

On the other hand, I point out that there was before the committee a joint statement by my colleague from Pennsylvania [Mr. SCOTT] and me, which begins on page 623 of the printed hearings and continues over to the middle of the next page.

Mr. President, I ask unanimous consent that the statement may be printed at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Department of Defense has transmitted a letter to the Armed Services Committee requesting that the military construction bill be amended to provide 400 units of Capehart housing for the 4th Naval District, with headquarters in Philadelphia.

We wish to point out to the committee the urgent necessity of approval of this authorization at this time.

At the present time there are 663 families of Navy enlisted personnel living in a project in Philadelphia known as Passyunk Homes, which was constructed in 1941, and has been occupied by Navy personnel since that time.

Under the terms of the National Housing Act, Passyunk Homes automatically reverted to the Philadelphia Housing Authority for low-income public housing on January 1,

1960. In the 1959 session of Congress, because no Capehart housing had then been approved by Congress to provide for these Navy families the deadline for the reversion of Passyunk Homes was extended to February 1, 1962.

At that time the Senate and House Banking and Currency Committees made it clear to the Navy Department and Defense Department that the extension could not be renewed beyond 1962, and that the Defense Department would have to make other provisions for these families prior to February 1, 1962.

The Navy Department and Department of Defense have meanwhile explored other alternatives for providing housing for these families and has found none to be feasible. A thorough study of the possibility of using section 810 of the Housing Act of 1959 demonstrates that such housing would cost $30 per room per month, which is far beyond the income capacity of the Navy personnel presently occupying Passyunk Homes.

Other alternatives investigated but found to be unfeasible were the extension of the present authority to inlease housing for military personnel assigned to tactical installations, to nontactical installations, and the modification of existing authorities to permit institution of special station allowances in high-rent areas.

Surveys completed by the 4th Naval District, the Philadelphia Housing Authority, and the office of development coordinator of the city of Philadelphia, and later verified by special study teams of the Navy and Defense Departments, demonstrate that there is no rental housing in Philadelphia to meet Navy requirements.

At the present time the city of Philadelphia has a shortage of 5,000 public housing units for low-income families. The stepped-up pace of Federal highway construction and urban renewal will increase this gap considerably by 1962. The city of Philadelphia, therefore, cannot agree to any extension of the deadline for Passyunk Homes beyond the present date.

Because of the income limitation for public housing 625 of the 663 Navy families occupying Passyunk Homes will be required to vacate on February 1, 1962.

Unless the additional units of Capehart housing are authorized now these 625 Navy families face sure eviction by February 1, 1962, with no other form of housing within their income limits open to them.

During the fiscal year 1959 the Navy recruiting station in Philadelphia enlisted a total of 4,390 individuals for naval service. The effect on recruitment in Philadelphia and the serious damage to efficiency and morale to Navy personnel stationed in Philadelphia if adequate housing within their means is not provided is self-evident.

There is presently a site available within easy commuting distance of the Philadelphia Navy Yard in the development of which the city of Philadelphia is willing to cooperate by bringing it under its redevelopment program, thus providing it with adequate community services and sound city planning. This site cannot be withheld from subdivision for very much longer, however.

Mr. CLARK. Mr. President, I think we make a pretty conclusive case that section 810 will not work. I may say to the distinguished Senator from Mississippi, in all good humor, that, with some regret, in my judgment, this is what will happen: We will not get section 810 housing. The land which is now being sought avidly by speculative builders next to the naval hospital will be taken off the market, and housing far too expensive for the naval personnel to occupy will be built there. The city of Philadelphia will reluctantly have to kick the naval personnel out of there by February 1962, and the loser will not be the city of Philadelphia; it will be the U.S. Navy. This I deeply deplore. However, I believe the city of Philadelphia has exercised extraordinary patience in putting up with this situation so long as it has.

While I thoroughly understand the point of view of the Senator from Mississippi, I believe it is only appropriate, for the purpose of the RECORD, to advise him of what, in my opinion, will be the result of the unwillingness of the committee to accept this amendment.

Assistant Secretary of the Navy Bantz, writing to the secretary of the Committee on Armed Services on May 10, requested 400 units of Capehart housing. That letter was not printed in the hearings, but I have just placed it in the RECORD.

Mr. STENNIS. I think that is a valuable contribution. I assure the Senator from Pennsylvania that action of the committee was not hastily taken, as I am certain he knows. We have great concern for the problem in the city of Philadelphia, or the problem in any other city, for that matter. At the same time, the Federal Government is certainly confronted with a big problem as to whether it shall build expensive houses on expensive pieces of real estate in the large cities of the Nation. Many of those houses certainly will not be built until a real survey has been made as to the number required, a determination made as to whether they cannot be built in areas where real estate is not so expensive, and it can be ascertained whether provision cannot be made for even more than 400 units, if they are essential.

So the commmittee will take these matters into consideration when the question comes up again, as I am certain it will.

Mr. CLARK. I simply wish to say, in conclusion, that surveys of the situation have been made until they are running out of the wood. I believe the facts have been fully established. However, I know full well that if the Senator from Mississippi is unwilling to accept the amendment, there is no point in my offering it. I simply wish the RECORD to show that I had it here, ready to present it, if I had been able to persuade the Senator of the justice of our cause.

Mr. STENNIS. No cause is in better hands than when it is in the hands of the vigorous Senator from Pennsylvania, who always knows his facts, and is really helpful in getting at the very heart of a problem. We certainly will continue to give his problem—and it is a real one—our utmost attention, and will try to do something affirmative which will meet the situation. I especially thank the Senator for his attitude in the matter.

Mr. CLARK. I thank the Senator from Mississippi.

Mr. STENNIS. Mr. President, I have a very few more remarks, which I think will cover the high points of the bill. I understand the Senator from Massachusetts is concerned about a matter in the bill and has compelling reasons for being off the floor later in the afternoon. If it is agreeable with other Senators, I hope we may consider his item next.

Section 507(a) places a limitation of $19,800 on the amount that may be spent for a single Capehart housing unit. The General Accounting Office reported that instances have been discovered by law for appropriated fund housing in building Capehart units for general officers. Since Capehart housing must be constructed for an average of $16,000 per unit—within the 5-foot line—it can be seen that these more expensive units can be built only by a sacrifice in the size of units for lower grade personnel. Therefore, the limit was put upon the top amount which could be spent for a single housing unit. If units which cost more than that amount are absolutely essential, the overflow beyond the $19,800 can be obtained by appropriated funds.

Section 510 will permit the Secretary of Defense to use rental proceeds from rental quarters under the jurisdiction of the military for the maintenance and repair of such housing. This particularly applies to certain Lanham Act housing which the military is inclined to destroy as maintenance costs are higher than would be on more modern type structures. It has come to the attention of the subcommittee, however, that some of this type housing is still useful and better than some that may be obtained on the economy. It is felt that this provision will act as an incentive to the military commanders to retain such housing rather than have it torn down and request new housing units.

I have attempted to analyze briefly the highlights of the military construction authorization bill for fiscal year 1961, and I shall be pleased to answer any questions any of the Members of the Senate may wish to ask.

Mr. CASE of South Dakota. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield. First, I wish to thank and commend the Senator from South Dakota for the excellent service he has rendered in the preparation of this and all other bills. He renders, the year round, valuable service to the committee in this respect, as well as in other respects in the Senate. The Senator from South Dakota formerly served as chairman of this subcommittee, and his work was outstanding.

Mr. CASE of South Dakota. Mr. President, the words of the Senator from Mississippi are deeply appreciated.

I reciprocate by saying that it has been a pleasure to work under his leadership on this and other bills while he has been chairman of the subcommittee. I shall say more on this later. I rose at this time because I wanted particularly to give emphasis to the point which the Senator was making in respect to the limitation in the bill upon the Capehart housing units which would be designed for officers.

CAPEHART OFFICERS QUARTERS

I think it came as a surprise to members of the committee to realize that in the operation of the so-called Capehart

housing program, the armed services were using as an average figure per unit one which could mean considerably less than the average for lower grade officer and servicemen's units, and considerably more than the average for the higher grade officers. It is not that the higher grade officers are not entitled to housing which is larger and designed for entertaining, and in keeping with responsibilities, but the Capehart and Wherry housing programs were primarily intended to provide the maximum housing accommodations for the maximum number of people and yet stay within an average cost figure that would permit rentals the servicemen could pay.

It came as a surprise to me when I visited one base and saw the housing there called Capehart housing. It included some of the most exquisitely appointed officers' quarters I had ever visited. Yet it was Capehart housing. That was a surprise to me, because the Capehart housing I had visited before had a uniform quality, with the average cost limit used to benefit all the officers and personnel whose families it served.

The committee was told, as I recall, that some of the units now are costing as much as $35,000, $36,000, or $37,000 per unit, plus the utilities and the land which were provided in the project. This was not only above the average permitted but exceeded the limitation which would have been applicable had the housing been built directly as military housing. It seemed to the committee to be inconsistent with prior presentations on the purpose of these projects that certain units could be selected which would cost about twice as much as the average cost of units, and more than could have been expended if the houses had been provided by direct appropriation for standard military housing.

That is the reason why the committee placed a limitation of $19,800 upon any individual unit within Capehart projects. Of course, $19,800 is above the average permitted for Capehart units, but that amount will permit some leeway. If it is felt on any particular station that even better appointed quarters should be provided for general officers or post commanders the committee thinks that they should be justified and presented for building with appropriated funds.

The Senator from Mississippi was the one who really brought out the facts concerning this particular proposition. He is entitled to the credit for it. I have ventured to interrupt him at this point because I thought his efforts and the action taken deserve some emphasis.

Mr. STENNIS. I thank the Senator from South Dakota very much, indeed.

We really found the practices outlined by the Senator from South Dakota to be evasive of the intent of the law; and such practices take a rather heavy toll of the confidence we can give to this program and to other programs. I hope there will be no repetition of such practices.

Mr. JACKSON. Mr. President, will the Senator from Mississippi yield to me?

Mr. STENNIS. I am happy to yield to the Senator from Washington, who is a very able member of our subcommittee, and makes excellent contributions to its work.

Mr. JACKSON. Mr. President, I wish to associate myself with the remarks made by the able Senator from South Dakota [Mr. CASE].

Those of us who serve on the subcommittee are very grateful to the distinguished chairman [Mr. STENNIS] for his very able leadership.

It is a fact that our decisions in each and every instance in connection with the pending bill—as has been true in the past—have, almost without exception, been unanimous ones; and great credit must go to the chairman for the way in which he has handled the bill.

I also wish to state that the ranking minority member, the former chairman of the subcommittee, the Senator from South Dakota [Mr. CASE], has distinguished himself this year, as he has in the past, by his wide knowledge of the subject matter and by the fine way in which he has participated in the handling of the bill.

The same is true of the other members of the subcommittee.

Mr. President, it is not possible for a subcommittee or a committee to do a good job without able support by the staff technicians and staff members, who must be responsible for all the details. They have the further responsibility of pointing out the areas of special concern. Mr. President, without the invaluable counsel, advice, and assistance of the able staff members, we could not do a proper job.

Therefore, I wish to pay special tribute to Gordon Nease, the staff director for the subcommittee, who has been ably assisted by his assistant, Mrs. Edith Johnson. They have done a wonderful job, and we are grateful for the contributions they have made.

Mr. President, the report speaks in great detail about all the provisions of the bill. There is little that I can add, by way of any statement here on the floor, in further explanation of the provisions of the bill.

As has been true in the past, I believe the bill represents the muscle we need in order to maintain a firm military posture.

We have attempted to cut out the "fat," wherever we could find any.

The bill is a good one. It meets the overall objectives of the security position of our Government, as presented to us.

I can make only one concluding statement, Mr. President, and it relates to the subject of air defense. Air defense has been a subject of continuing concern to our subcommittee, over the past several years. I believe we have established a good record in this regard. Our main problem has been to obtain from the Defense Department some statements of long-range objectives in the area of air defense. In that regard, we have had great difficulty, because of constant changes which have been made.

This year we had the problem all over again; as we were about to approve an air-defense program, it was revised "in the middle of the stream," so to speak.

In this bill, and in the report, in particular, to which I invite the attention of the Members of the Senate, we have tried to point out the problem, the situation we must face, and the things which must be done if we are to provide an adequate air defense.

I wish to pay my highest respects to the chairman of the subcommittee, the Senator from Mississippi [Mr. STENNIS], for the fine way in which he has handled this difficult matter. As he has done in other matters, he has approached this task with his unique judicial ability. He has been fair, objective, and understanding.

I believe we have before us a good bill chiefly because he has done an outstandingly fine job.

Mr. STENNIS. Mr. President, I especially thank the Senator from Washington for his remarks on the substance of the bill. He has had a great deal to do with it, and I am particularly apreciative of his kind remarks.

Mr. CASE of South Dakota, Mr. ELLENDER, Mr. BYRD of Virginia, and other Senators addressed the Chair.

Mr. STENNIS. Mr. President, I am more than happy to yield to other Senators, for statements on the bill.

In regard to the amendments, I understand that the Senator from Virginia has an amendment which can be presented in a brief time.

Mr. CASE of South Dakota. Mr. President——

Mr. STENNIS. But, Mr. President, first, I should like to yield to the Senator from South Dakota, who is a member of the subcommittee.

Mr. CASE of South Dakota. Mr. President, perhaps I should speak in my own time; I desire to discuss the bill at some length.

Mr. STENNIS. Yes, Mr. President, I expect the Senator from South Dakota to speak in his own time.

I understand that the Senator from Louisiana wishes to ask a question at this time.

Mr. ELLENDER. Yes; I should like to ask a question.

Mr. STENNIS. Very well; I yield.

Mr. ELLENDER. I notice that the total amount authorized by the bill is $1,184,865,000. Is that correct?

Mr. STENNIS. That is correct.

Mr. ELLENDER. Will any counterpart funds be used for the construction of any facilities which now are being authorized?

Mr. STENNIS. This year there is a new policy in reference to the local currencies or the so-called counterpart funds. I imagine the Senator from Louisiana uses the term in an inclusive way.

Mr. ELLENDER. That is correct.

Mr. STENNIS. The new policy is that we authorize the funds to be used to buy that currency or to pay the Commodity Credit Corporation, or whatever agency may be involved, the dollars. But we nail it down, so that any dollars authorized cannot be spent if counterpart funds or other local funds are available.

Mr. ELLENDER. So this part of the funds will be purchased from the Treasury or from whoever owns them; is that correct?

Mr. STENNIS. That is correct.

Mr. ELLENDER. Then, Mr. President, I should like to ask about——

Mr. CASE of South Dakota. Is the Senator from Louisiana about to refer to another item?

Mr. ELLENDER. I wish to ask about an item which was stricken from the bill.

Mr. CASE of South Dakota. I should like to refer to the item which has been under discussion.

Mr. STENNIS. On this point, I yield to the Senator from South Dakota.

Mr. CASE of South Dakota. Mr. President, I expected to mention the counterpart funds, insofar as housing overseas is concerned.

In view of the comment which already has been made, I wish to call attention to section 511 of the bill, on pages 122 and 123, reading as follows:

SEC. 511. Notwithstanding the provisions of any other law, at least 75 per centum of the total cost of any family housing project or community facility hereafter constructed or acquired in any foreign country by the Department of Defense or any military department shall be paid for from foreign currencies acquired by the Commodity Credit Corporation pursuant to the provisions of the Agricultural Trade Development and Assistance Act of 1954; except that the following projects authorized pursuant to this Act shall not be subject to this requirement.

Then there follow, in the next five or six lines, the few excepted housing projects. They are given an exception, because we were advised that adequate amounts of foreign currencies were not available in those particular countries.

But with the exception of the ones specifically excepted, at least 75 percent of the cost of any other housing project or community facility to be constructed will have to be paid through use of foreign currencies, the so-called counterpart funds.

Mr. ELLENDER. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

Mr. ELLENDER. What I had in mind during our earlier discussion was to find out if these counterpart funds would be in addition to the amount authorized in the bill. Am I clear in understanding that, in the event counterpart funds are used in foreign countries for military construction, some of the amount authorized by this bill would be used to purchase these foreign currencies?

Mr. CASE of South Dakota. I believe the Senator is correct in his understanding. There is a requirement that on housing at least 75 percent must be met by counterpart funds except on a few indicated projects. It would mean at least that much of the authorization would be saved.

Mr. ELLENDER. It is my hope that other agencies will follow this very good example. For example, only a few days ago we authorized foreign aid spending to the tune of $4,175 million. But, in addition to that, we have Public Law 480 funds that can be used for foreign aid functions that will aggregate some $540 million. Other funds can also be drawn under title II of the act. So, it is possible that instead of our Government spending $4,175 million for foreign aid—the amount authorized by the Congress—we could spend a great deal more. I wanted to make certain that in the case of military construction there would not be any extra funds for this purpose in addition to the actual money authorized.

Mr. CASE of South Dakota. Let me make one additional comment. The Senator from Mississippi recalls, of course, that it was back in 1954 when this particular subcommittee first wrote into legislation the possibility of using counterpart funds for the construction of military housing or military facilities overseas. We have sought to make that practice as effective as possible in the years that have followed.

With respect to the point which the Senator from Louisiana has brought up—and it is a very worthwhile point—I wish to say this committee is so eager to have the dollar signs reduced by the utilization of foreign currency funds that, during the hearings, we repeatedly brought to the attention of the representatives of the military services the possibility of using counterpart funds from a second or third country when counterpart funds were not available in the country where the installation was to be built. We pointed out that it might be possible to use counterpart funds of a third country in order to provide facilities in country A or country B. We tried, by the emphasis expressed in the hearings, by the language in the report, and by the references to which the Senator from Louisiana has already alluded, to maximize the utilization of counterpart funds in place of dollars, and at the same time not to increase the total dollar authorizations.

Mr. ELLENDER. That objective could be accomplished in the agreements that are made between us and the receiving countries of surplus commodities, for which purpose we are able to use some of the funds.

Mr. President, I should like to ask one more question of the Senator from Mississippi.

Mr. STENNIS. I am glad to yield to the Senator from Louisiana.

Mr. ELLENDER. Mr. President, I notice on page 67 of the House bill, on lines 11 to 12, there was a very small item of $58,000 for the New Orleans Naval Air Station at New Orleans, La., for operation facilities and supply facilities. That item was provided in the House bill. I notice the Senate committee, in its wisdom, deleted that item. I wonder if the Senator can tell me why the item was deleted.

Mr. STENNIS. The Senator from Louisiana could be mistaken about the deletion.

Mr. ELLENDER. I hope I am.

Mr. STENNIS. A memorandum is not available on that item at the moment. We shall check into it, if I may answer the Senator's question later.

Mr. ELLENDER. Very well.

Mr. STENNIS. Mr. President, if the Senator from South Dakota seeks the floor now, I hope he may make such remarks as he wishes to. I will yield the floor at this time, with the hope of obtaining it later.

Mr. CASE of South Dakota. Mr. President, first I wish to make a few comments on some specific features of the bill, and then to discuss the general aspects of the situations it applies to military construction.

BOMARCS IN AIR DEFENSE

First, with reference to some of the items already mentioned by the Senator from Mississippi and the Senator from Washington, I wish to invite the attention of Senators to the language in the report which starts on page 8, runs over to page 9, and onto the middle of page 10, relating to air defense.

I particularly invite the Senator's attention to the table at page 10, which gives the comparative figures for construction, obligation, percent completion, cancellation costs, and recoupments on four BOMARC sites. As the previous speakers have said, the air defense picture is changing. The Air Force revised its requests following the original submission, and there is some doubt as to whether or not the revisions are firm even as of today. This, however, seems necessarily to be expected under the changing concepts of weaponry.

When we were dealing with planes as the major offensive threat against which a defense should be conceived and planned, it seemed adequate to have a Distant Early Warning line, a mid-Canada line, a Pine Tree line, and then a SAGE system, which could take the intelligence gained by the early warning lines and use that information, in turn, to trigger off a rocket defense as the incoming planes might get within the area of the weapons.

Interceptor planes, of course, were the weapon of first response with the longest range an air-to-air system.

Behind them in the zones closer to targets we had two types of rockets—ground-to-air systems.

One, the Nike, with the Ajax and Hercules series, and then the Bomarc. The Nike defense was a point defense system. The Bomarc was an area defense system, with potential protection for a larger range.

In the revision of plans which has accompanied the recognition of a changing threat from bombers planes to intercontinental ballistic missiles, the Defense Department recommended the suspension of all of the Bomarc construction with the exception of that in the northeastern part of the United States.

I think I do not reveal classified information when I say that at the time, when Bomarc was expected to occupy a major role in the defense plan for the continental United States, some 32 Bomarc sites were once scheduled. By some preprograming, that initial number was reduced to 29, and, by later steps, to a lesser number. The final number of Bomarcs in the plan recommended by the Defense Department this year, was limited to those in the northeastern part of the United States, and largely for installations the construction of which was substantially completed.

The committee noted, in the cancellations proposed under this revised plan, that there were four sites, listed on page 10 of the report—Paine, Wash.; Adair, Oreg.; Travis, Calif.; and Vandenberg, Calif.—where a considerable obligation had already been made, and

where the percent of completion as of March 31 ranged from 25 percent complete to as much as 67 percent complete.

After we asked for figures as to the costs for cancellation of the contracts and the indemnity which the Government would be obligated to pay, and noted the possible recoupments, it occurred to members of the committee that it might be worthwhile to take another look at these Bomarc facilities. It was difficult for us to reconcile the proposed continuation of the point defense system afforded by Nike-Ajax and Nike-Hercules stations, with their more limited range, and the decision against completion of these Bomarc sites, where there could only be a relatively small recoupment if the construction were canceled at this stage.

That is the reason for the language which appears on page 8 and following, to which I have referred. It explains the reason why the table appears on page 10 of the report.

The committee has directed a letter to the Secretary of Defense, raising a question on the validity of the cancellation cost figures.

It will be noted, in the case of Adair, Oreg., that the cancellation cost figure is placed at $2,780,000, which is in excess of the obligation figure as of March 31, which is $2,673,000. The committee felt that if there were value in keeping some Nike sites operational it might be worthwhile, since these would be the only Bomarc sites in the Northwest part of the United States, to take another look at them and to ask for the recommendation of the commander in chief of the North American Air Defense Command, before abandonment of the projects.

That is, if it is sound to keep Nike stations operational, might it not be worthwhile to complete the Bomarc stations nearest completion where the costs of a cancellation come close to completion costs? At least, the matter warrants a second look the committee believes.

DEFERRAL OF SHOPS AND COMMISSARY ITEMS

Mr. President, I wish now to say a few words with respect to the policy which the committee followed in the elimination of some shop items, commissaries, and post exchanges.

The committee, to the best of its judgment, did deny requests for some shop items where it seemed clear that the denial would not interfere with operational capability of the facilities. The matter was given special study by a subcommittee headed by a new member of the committee, who, incidentally, is proving to be a very valuable member of the committee, the Senator from Nevada [Mr. CANNON]. It was the finding of the subcommittee that in each case where the deletion is recommended the operational requirements of the facility would not be interfered with by deferment of the requested item at this time.

Similarly, with respect to commissaries and post exchanges, the committee felt that in those instances where there was an operating commissary or post exchange, or where the dependents' housing was located near to an established marketing center, these items could be deferred without injury to the services. At a time when items of very great priority and importance to the national defense picture—and I mean the changing national defense picture—are being denied or limited, the committee felt we ought not to authorize the spending of money for projects which lack essential or critical priority. This should make some resources available for reprograming on items needed in the new military space picture. That explains why some of the commissary and shop items were deferred.

There is an additional aspect of the housing program which I wish to mention briefly. Under the Federal Housing Act there is a section known as section 810. In the statutory law today that section would authorize the building of some 5,000 units of housing where the Secretary of Defense gives a certification to the Federal Housing Administration which would permit insuring the building of houses which do not quite meet the criteria of economic soundness which are required for normal FHA housing.

The committee felt that some strings should be put on that authorization. We have previously established standards for housing built with appropriated funds. We have previously adopted the practice of line items in order to get control over the Capehart housing program. Accordingly, we felt it was in order to establish the line item principle for houses to be built under section 810. That is why the paragraphs appear in the bill as they do on page 120 of the bill, suspending in one instance the authority granted in the original section 810 and in the other instance providing specific line items of authorization for about 900 housing units under section 810.

CHANGING PICTURE OVERSEAS

Mr. President, I now propose to discuss some of the implications of the U–2 plane incident upon the military construction program. In venturing to say something about that subject, I do so because some parts of this bill before us is outdated by the events of the past 10 days.

First, however, let me repeat in essence what I have said in the Senate in previous brief statements on the U–2 plane incident.

The day after the plane was reported downed in mid-Russia, I placed in the RECORD an article written by Constantine Brown some weeks ago, in which he warned of the danger of war by accident or miscalculation. I thought the incident pointed up his warning.

The day after our State Department came forward with the admission that the plane was on a mission of espionage, I likened the situation to a baseball game, where the coaches on both sides seek to steal the signals of their opponents, by pointing out that this does not deter the managers of both teams from shaking hands and sitting down to work out ground rules to prevent the incidents from turning into knockdown and drag-out brawls.

I not only said that of course President Eisenhower should go to the summit conference, but also that he should proceed with a greater awareness on the part of everybody of the importance of arriving at understandings to lessen world tensions. I recalled De Gaulle's wise words that in the better climate of a détente, "objective solutions little by little would come into view."

Mr. President, I fervently believe that. In international matters as well as other relationships of life, we move step by step. We make progress by beginning with simple things. Cooperation begets cooperation.

Last summer, when Vice President NIXON went to Russia, I applauded his trip as one of the remarkable developments of our time, that a man of his ability in expression could speak by radio and television to the previously closed ears behind the Iron Curtain.

Similarly, I defended the invitation to Premier Khrushchev to visit this country and to see whatever he wanted to see. I wanted him to realize what America is really like.

I have supported in every way the proposed return visit by President Eisenhower to the Soviet Union. I still think President Eisenhower should visit Russia, and should do what he can to dispel the schooled propaganda notion of the Russians that the United States wants to fight Russia, and that Americans are dominated by a bloodthirsty, warmongering group.

The President can say effectively that we are not seeking conquest. Despite the propaganda made of the plane rubble and the presence of pilot Powers in Russia, he can say, in ways the Russian people can hear, that we do have open skies in this country, that here newspapers publish pictures of military installations and maps of their locations, and that although we have been visited by spies like Fuchs and Abel, our concern is to guard against surprise attacks, and our aim is to achieve security and freedom for all people everywhere.

Only the President can now tell our story to the Russians in ways that will reach them effectively.

Mr. BRIDGES. Mr. President, will the distinguished Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. BRIDGES. Who is the Senator quoting?

Mr. CASE of South Dakota. I started by quoting from a previous statement I made; otherwise what I have been saying has been my present statement.

Mr. BRIDGES. The distinguished Senator from South Dakota speaks, as he always performs his work, ably and well.

Mr. CASE of South Dakota. I thank the distinguished Senator from New Hampshire.

I turn to the implications of the present situation for the military construction bill which is found in the bill before us, and I do so, Mr. President, because I think a new picture has arisen.

There is carried in the bill something like $160 million of authorization for construction overseas. The necessity, the importance, and the relative priority of some of that construction will be affected by what has happened in the past week. It has made the bill to some extent out of date. Already revised in its

request since originally submitted, as we have previously said, it is now out of date by reason of recent events which are beyond the ability of anyone to assess and revise accurately at this time. If the committee today were asked to revise the bill to meet the changing picture, we would not have the information at this time to do it. This is so because our military posture has been built around certain deployments abroad, and because the present situation inevitably will affect the availability of some of the bases and fields that have been developed.

The impact of the disclosures in connection with the U–2 plan is considerable in our own country. We realize that there would be fairly vigorous remarks if a high-altitude reconnaissance Russian plane had taken off from a field in Cuba and had come down over Chicago.

Understandably the impact is considerable in Russia. The piling of the plane's pieces for exhibition in Gorki Park is not calculated to lessen the effect of the incident. On the contrary, it is intended to strengthen the hand, I suppose, of Mr. Khrushchev at the summit conference and possibly in positions at home.

And, certainly the incident is not without some effect in the countries around the world where we have spent military dollars and constructed airstrips, built control towers, stationed ships, and supplied troop housing.

News dispatches of the past few days have told of Labourite questions in the British Parliament, queries in Pakistan, disavowals in Norway, and reassurances by Foreign Minister Fujiyama of Japan. I note that early editions of the Washington Star today carry the statement that Norway has lodged a formal protest with our Ambassador against the claimed plan to have the U–2 plane land in Norway. I believe we should note that that claim has never been admitted to be an accurate one but, in any event, the allegations are such that the Government of Norway has felt it necessary to lodge a formal protest against any such use of its airfields.

And the Canadian authorities have felt obliged to state that the two U–2 planes based in Canada engage only in weather reconnaissance and are not authorized to engage in activities such as are alleged in the case of the U–2 plane found in Russia.

These references suggest the concern that is being felt in various countries of the world and indicate the nature of the problem that now confronts us.

The threat by Russia that any additional flights into or over Russia would be smashed to smithereens and that the bases from which they took off would be destroyed naturally brought a prompt rejoinder from the United States that our forces would go to the prompt defense of any of our friends.

But, Mr. President, it must be obvious to anyone who gives that suggestion a second thought that this declaration of readiness on the part of the United States to go to the defense of any of our friends or allies does not remove the fears that have been generated or quench political fires which can be fanned by elements in some of those countries adverse to the government in power.

The plain and simple fact is that no country wishes to become the first battleground in a nuclear war. In my humble opinion the possible availability or nonavailability of some of the fields overseas will not be enhanced by the mere declaration that this Government stands ready to come at once to the rescue of some country whose fields are being "smashed to smithereens" because no country wants to become the first battleground of a nuclear war.

So, some of the authorizations in the bill for military construction abroad cannot be considered as very firm today. It authorizes limited military housing for Japan. But if Japan begins to define what can be done with, on, or from the bases on her soil, naturally the question arises as to how much new construction should be undertaken there.

Is it sound for Congress to authorize the building of additional military housing in Japan if we are to be confronted with a statement by the Japanese Government that the use of the bases there which those housing units would support cannot be used for purposes which are determined upon by the Government or in accord with what we thought was understood at the time the base agreements were reached?

The tenure of the Japanese bases is involved in the ratification of the new treaty now pending in the Japanese Diet. It would be naive to assume that the debate on the ratification will escape questioning on the use of the bases. The values to Japan will be discussed pro and con. I believe that eventually the treaty will be ratified both there and here in the Senate, but there could be some clarification of its provisions before this happens and this might take a little time.

Debate in Japan will have its repercussions in Korea, in the Philippines, and in the Ryukyus group, including Okinawa. This all may be regrettable, but anything less than honest appraisal of the situation serves neither the cause of sound security planning, nor budgetary expenditure.

The involvement of Pakistan is probably more closely related to questions of appropriations for military support in the mutual security bill than construction authorizations. Yet the use of the airfield at Peshawar and its facilities establishes an interest in decisions that will be taken.

Around the Mediterranean the bill carries only limited construction authorizations, notably one facility on the island of Crete. That program, so far as I can see, should not be disturbed by anything in the current situation.

As for Morocco, the subcommittee handling the bill has had its reservations with respect to additional construction there since 1953, and in recent years there has been a realization that we were gradually phasing out deployment of our forces there. So no new construction is proposed in this bill for Morocco.

Moving into Europe, the situation is quite stable, and though there has been some lag in siting rocket stations for antiaircraft facilities in West Germany, the political situation is stable and construction authorizations in the bill are relatively small. It is my personal belief, however, I should remark in passing, that the United States should not have to spend a single dollar in military construction in West Germany. The West German economy is flourishing.

Physical facilities will remain there for German occupancy and use long after our troops have come home. The early installations were built by occupation deutsche marks; the new ones or additions and improvements should be financed by the Germans themselves. They had a favorable balance of trade last year thanks in large part to the $750 million poured into their economy by the 250,000 Americans there. The United States had a trade imbalance approaching $4 billion.

Let it not be forgotten that the favorable balance of trade of West Germany is in part due to the $750 million poured into their economy by the quarter million Americans, civilian and military, residing there.

The physical works in Germany authorized in the bill before us are not large, but if I had my way every dollar spent on them would be bought by deutsche marks.

In concluding, Mr. President, I suggest that the Senate understand that the Subcommittee on Military Construction and the Appropriations Subcommittee for the Defense Department be given some leeway in tentatively approving revisions in the programs and projects authorized in this bill if the Defense Department's continuing review of programs indicate that modifications should be made. I know of no way to write that into statutory form other than by the provisions for emergency funds and transfers that are already in the bill. But recognizing the nature of this year and the hope of everyone to avoid special sessions, I venture the opinion that the Congress in January will not be too critical if some of the authorizations carried in this bill are not exercised and if some appropriations based hereon may be reprogramed within the general purposes that have been justified.

Some flexibility is needed in the present situation.

I wish to repeat that, Mr. President, because I do not want to be misunderstood. I am not suggesting that we establish a precedent whereby the Defense Department could come in with new projects and claim they were authorized because the total dollar sign in the authorization was not exceeded. In fact, in this bill at one point we specifically provide that the total amount of the expenditures under a category shall not exceed the individual line items. We do that because it has come to the attention of the subcommittee of the Committee on Appropriations for these expenditures that in the past few months a theoretical 5 percent overrun on all projects, which it has been customary to allow on individual projects if needed, had been added together by the Defense Department and used as if that created

an authorization for an amount greater than the total amount originally carried in any bill.

My own opinion is that that is an unsound practice. When the matter came to the attention of the Subcommittee on Appropriations for the Defense Department, I suggested that the opinion of the General Accounting Office be asked on this matter as a guard against trouble in the future. And in this bill we have placed language to prevent such an interpretation on authorizations contained herein.

I am suggesting that if a review of the new world situation should indicate that some authorizations in the bill for proposed construction for the Defense Department or Air Force are for facilities which might not become available for their use, they should not regard this bill as a mandate or a directive to proceed to build them anyway. The services should not use authorizations in this bill unless the facilities when constructed are to be available for the purposes for which they were justified in the requests submitted.

On the other hand, if a needed facility can be provided by a slight change in location or some adaptation, Congress should be charitable in approving that flexibility.

In closing, Mr. President, may I repeat that we live in a fateful era. Events overtake policies. But man can still be master of his destiny, under God. We have been given the greatest means of communication the world has ever had.

There ought not to be misunderstandings among the peoples of the earth. We should be able to understand them and they should be able to understand us if somehow all could operate under the Golden Rule—that one should treat another as he would like to be treated. That is not a maxim exclusive to any one religion. It is a code of conduct that people of every background instinctively understand.

It is my earnest prayer that in the forthcoming summit conference of the heads of state of four great powers, Mr. President, that the common concern of all men for peace and security and the dignity of man may triumph over clouds of doubt and fear. If there is a will by all, there is a way.

Mr. STENNIS. Mr. President, the Senator from Mississippi understands that the Senator from Virginia [Mr. BYRD] has completed two amendments which were not before the subcommittee and not before the full committee, except that they got in at the last minute without time for review. Since that time the committee has had a chance to examine them, and looks with favor on them. I ask unanimous consent that I may yield to the Senator from Virginia for the purpose of discussing and offering the amendments, if he sees fit.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Without objection, it is so ordered.

Mr. BYRD of Virginia. Mr. President, I appreciate the kindness of the Senator from Mississippi. First I wish to join my other colleagues in paying tribute to the fine work the Senator from Mississippi has done with respect to this bill. He has been very diligent and conscientious. He is one of the ablest men in the Senate. This is one of the most difficult bills that any committee has to prepare, dealing, as it does, with military construction authorizations.

I wish also to say that I was very deeply impressed with the statement made by the ranking minority Member, the Senator from South Dakota [Mr. CASE], with respect to the military situation throughout the world by reason of the recent U–2 incident in Russia, and perhaps the necessity of making changes in our military defense by reason of this occurrence and other things.

The amendment I desire to call up is identified as "5–12–60—B."

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The CHIEF CLERK. At the proper place insert the following new section:

SEC. . (a) The first sentence of section 303(c) of the Career Compensation Act of 1949 (37 U.S.C. 253(c)) is amended by striking out the period at the end thereof, and inserting in lieu thereof a comma and the following: "except that no transportation of any item of baggage or household effects of a member of any uniformed service may be made by commercial air carrier at a rate exceeding the cost of the transportation thereof by other means unless the Comptroller or the Deputy Comptroller of the military department concerned has certified that the military requirements of that uniformed service do not permit its transportation by any other means."

(b) The amendment made by this section shall take effect on the first day of the second month beginning after the date of enactment of this section.

Renumber succeeding sections accordingly.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Virginia [Mr. BYRD].

Mr. CASE of South Dakota. What is the question?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Virginia.

Mr. CASE of South Dakota. I should like to make a suggestion before it is adopted.

Mr. LONG of Louisiana. Mr. President, may we have an explanation of the amendment before we vote on it?

Mr. BYRD of Virginia. Mr. President, the amendment relates to abuse in the use of commercial airfreight in the shipment overseas of the household effects of uniformed personnel in the armed services. It is based on an official audit report by the Comptroller General of the United States. The language of the amendment was drafted by the Senate legislative counsel, and approved by the General Accounting Office.

The Comptroller General's report covered an audit of 13 Army and Air Force cases in which it was found that commercial airline shipments cost five times as much as the charges would have been for available and adequate surface transportation. The cost of these 13 shipments ranged from $2,700 to $21,700 each.

The total cost in the 13 cases was $125,470 compared with surface transportation costs which would have totaled $22,984 if that means of transportation had been used. In one case the shipment by commercial airfreight from Texas to Pakistan cost $14,830, whereas surface transportation would have cost $1,750, and the shipment would have arrived a week earlier.

The number of such commercial airfreight shipments was found by the Comptroller General to be averaging between 250 and 300 a year. The greatest frequency was found in shipments for military officers ordered to and from military advisory group duty in foreign countries.

The Comptroller General's report points out that under military regulations and the Career Compensation Act of 1949, "household effects of members of the uniformed services may be shipped without regard to the comparative costs of various modes of transportation," and under present practice final determination is most often made by local transportation officers.

From these audits, the Comptroller General concluded that such shipments should be by less expensive surface transportation, including MATS, "unless there are cogent reasons which are fully documented, justifying commercial air shipment," and he recommended that commercial air shipments should require official approval at high level in the respective military departments.

The amendment I propose has the approval of the Comptroller General. It would simply require certification by the Comptroller or Deputy Comptroller of the respective military departments that such items shipped by commercial air freight, at costs higher than other means of transportation, are necessary to the military requirements of the service.

I think adoption of the amendment will result in the saving of a considerable sum of money. I am offering the amendment at the suggestion of the Comptroller General, and I hope it will be adopted.

Mr. CASE of South Dakota. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. I yield.

Mr. CASE of South Dakota. I had hoped the Senator would submit his amendment with the change of words in line 3, page 2, from "any other" to "less expensive." It seems to me that the way the language was drawn, it would not permit the shipment by commercial air carrier even if that were the cheapest method of carrying the commodities.

Mr. BYRD of Virginia. I agree with the Senator from South Dakota. I have discussed the matter with him, and I modify my amendment accordingly.

Mr. CASE of South Dakota. I thank the Senator. Perhaps I should say that the amendment is very much in order. It is a needed guard against the payment of excess costs for a shipment which is not a necessary military requirement.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The question is on agreeing to the

amendment, as modified, of the Senator from Virginia [Mr. BYRD].

The amendment, as modified, was agreed to.

Mr. BYRD of Virginia. Mr. President, I submit an amendment designated "5–12–60—C" and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place it is proposed to insert the following new section:

SEC. . No obligation shall be incurred by any military department under any cost-reimbursement type contract, as fee or otherwise, for payment to the contractor, as consideration for agreeing to accept reimbursement for any costs of performance after the time reasonably necessary for the submission of billings for and reimbursement of such costs, in excess of the return on comparable amounts for comparable periods, calculated on the basis of the average market yields of marketable obligations of the United States having a maturity of less than two years and current at the time such costs of performance were incurred.

Mr. BYRD of Virginia. Mr. President, this amendment likewise was recommended by the Comptroller General. It relates to cost-plus-fee contracts by military departments. It is based on an official audit report by the Comptroller General of the United States. The language of the amendment was originated by the General Accounting Office, and it has been perfected by the Senate legislative counsel.

Under cost-plus-fee contracts, military departments reimburse the contractors for project costs incurred as the work progresses. The fee is added as profit. Until 2½ years ago these contractors were reimbursed for 100 percent of costs while the job was being done.

In 1957, when we were scrapping the statutory debt ceiling, the Air Force found itself $2 billion over the Defense Department expenditure limit. This led to an expensive practice which is now increasing, although it was originated—in DOD Directive 7800.6, dated November 1, 1957—as an expedient temporarily to defer cash expenditures.

Under this practice the Government holds up 20 percent of its current payments for costs until delivery of the end items. The contractor temporarily is required to finance this so-called 20-percent withholding pending delivery when he is reimbursed in full.

In the arrangement the contractor is given "additional fee," or profit, as compensation for this financing service to the Government. The payment is called "additional fee," instead of cost, to evade the armed services procurement regulation which prohibits interest as a cost item under these contracts.

The Comptroller General, in recent audits, has found one case in which the additional fee totaled 25 percent a year for the use of the money the contractor advanced; in another case it ran to 13 percent, and so on.

In 26 recently examined Air Force contracts additional fees totaled $17.6 million. The three military departments have entered into hundreds of these contracts involving billions of dollars. The Comptroller General believes, if the practice is continued, these nonessential expenditures will run to hundreds of millions of dollars.

Need for continuing the practice does not now exist. The auditors found that the Government is receiving no significan benefit. Whitley C. Collins, president, Northrop Corp., agrees. I think the practice should be stopped outright, now. But the amendment I am proposing does not go that far.

The amendment, which is approved by the Comptroller General, simply provides that the additional fees for this purpose shall not exceed the interest the Treasury would have to pay on the money if it borrowed it for the same period. There is ample precedent for such a provision, and information as to the Treasury rate is readily available.

I hope the amendment will be adopted.

Mr. CASE of South Dakota. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. I yield.

Mr. CASE of South Dakota. I commend the Senator from Virginia for giving us the benefit of his extraordinary ability to ferret out leaks in Federal expenditures, and particularly for calling them to our attention at this time.

I was amazed to read a memorandum on this subject, and amazed at the figures which have been developed to indicate the amount of money which, apparently, the Federal Treasury has been called upon to pay as a sort of special interest charge on payments deferred, evidently, long beyond the need of the Government for the deferment of the final payment. It is understandable, and probably desirable, that the final payment should not be made on some projects until the projects have been fully tested and inspected, and the Government has been satisfied that it got what it wanted. However, deferments which have resulted in something akin to an interest charge amounting to 25 percent are unconscionable.

The amendment offered by the Senator from Virginia is very much in order and should be accepted without opposition.

Mr. BYRD of Virginia. I thank the Senator from South Dakota.

Mr. STENNIS. Mr. President, I desire to reiterate what the Senator from South Dakota has said. I was very much impressed—in fact, to a degree shocked—by the facts stated in the memorandum which supports the amendment. I heartily support each of the amendments, and wish also to commend the Senator from Virginia, who has been valuable to us heretofore, as he is now with reference to matters in this bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Virginia [Mr. BYRD].

The amendment was agreed to.

Mr. STENNIS. Mr. President, I wish to complete a matter in which the Senator from Louisiana is interested. I said I would answer his question within a few minutes.

The Senator inquired about a small item relating to a naval base in Louisiana, which appears to have been stricken from the bill. It really has not been rejected at all, and is not stricken from the bill, because upon inquiry we found that included in this small amount of $58,000 are two or three different small items, all of which can be covered, and, as the committee understands, will be paid for out of what are called minor construction funds. The authorizations and the money for that kind of items are picked up out of leftovers. So it has not been found necessary to include this matter as a line item.

Mr. ELLENDER. Has the amount been authorized for this work?

Mr. STENNIS. Yes; the amount, in effect, is authorized, and the project, in effect, is authorized. Perhaps the money is now available to do the work. A line item appropriation will not be required.

Mr. ELLENDER. The House has included the item in the bill. I hope that if in conference the House insists that it is necessary to have language in the bill to cover the item, the Senator from Mississippi will agree to it.

Mr. STENNIS. We assure the Senator from Louisiana that we will take care of the situation. The Department of Defense—not the committee—reported that this item could be taken care of, and would be taken care of, otherwise. So I think the matter is just as safe as if it were provided for in the bill.

Mr. ELLENDER. I thank the Senator from Mississippi.

Mr. LONG of Louisiana. Mr. President——

Mr. STENNIS. I yield to the Senator from Louisiana.

Mr. LONG of Louisiana. I wish to ask the purpose of the item of $5,619,000 for the Naval Air Station at Guantanamo Bay, Cuba.

Mr. STENNIS. The primary item in that connection is the waterworks system there, which has been a problem for some time. Without refreshing my recollection on this matter, I recall that this item is for the last so-called increment of a rather extensive improvement program which has been going on. At one time, consideration was given to building it into a major base in the Atlantic. The item also involves the taxiway and extension of the runway there, so as to take care of jetplanes. A 3,000-foot extension of the runway is included in this item.

Mr. LONG of Louisiana. If the details are not satisfied, can the Senator from Mississippi tell us what are the line items for the $5,619,000?

Mr. STENNIS. This is for a continuation of a prior authorization which otherwise would lapse—and which, as I have said before, was for the building up of a major installation.

I shall read the Navy's comment on the item:

This covers the construction of a 3,000-foot extension to the runway and taxiway at the Naval Air Station, Guantanamo Bay, Cuba. This construction has been delayed because there were insufficient appropriations available to cover the entire fiscal year 1959 Navy construction program, and this item was not contained in the fiscal year 1960 funding program approved by the Congress.

To state the matter in a different way, this is an old authorization, which merely is being brought forward in order to avoid having it automatically lapse under general law. The matter was skipped in the 1959 appropriation bill. It was eligible for construction, but insufficient funds to take care of all of the item were appropriated. And it was omitted in the 1960 appropriation bill. This item will renew the authorization.

Mr. LONG of Louisiana. The point which concerns me—and perhaps others may also be concerned about it—is the lack of security for the United States in regard to that base, to begin with. We know that the Communists are strongly entrenched in the Cuban Government. Some persons think Fidel Castro himself is a Communist. I wonder whether we are justified in spending $5,619,000 in a land where, so far as we know, we are now being told to leave.

I suppose the Senator from Mississippi noted in today's newspapers that mobs are shouting that the U.S. forces should leave Cuba.

Mr. STENNIS. Yes; and I am in sympathy with the feelings of the Senator from Lousiana in regard to this matter, and I am glad to discuss it. But I believe we should authorize this program, at least, so it will be available if the situation there clears up. It seems that the President has adopted an attitude of "wait and see." Sometimes we get a little impatient with that.

But I approve of the idea of renewing this old authorization; and I think we are safe in doing so.

Mr. CASE of South Dakota. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I am glad to yield.

Mr. CASE of South Dakota. I think this illustrates what I was trying to say a little while ago; namely, that recent events are changing the picture somewhat. I think the situation to which the Senator from Louisiana has directed attention might well be included within that general description of the projects in regard to which I suggested that a degree of flexibility should be considered—in other words, that the Department should not consider these authorizations as mandatory projects, but should be expected to assess the situation and be sure we are going to be able to get our money's worth for what is authorized to be spent.

Mr. LONG of Louisiana. Of course, some of us feel that so long as the Government of Cuba is not demonstrating friendship for the United States, but, in fact, is demonstrating outright hostility for the United States, we might just be building the Communists a good base and runways which eventually could be used by unfriendly planes against the United States.

I know the Department usually prepares its budget about 1 year in advance, and then sends it to the Navy, and then it goes back to the Department of Defense, and then it goes to the Bureau of the Budget. So the chances are that this item was probably included by the Navy as long as 1 year ago at a time when the United States was getting along very well with Cuba.

I suggest to the Senator that a second reason why we should give second thought to this item for Guantanamo Bay is that to some degree it is a make-work project for the employment of a large number of unemployed workers who were displeased by Castro, by one means or another, by requiring American firms there to shut down.

Mr. STENNIS. I think the Senator's remarks are very timely. I did not mean to suggest that the program should be proceeded with. I understand it is not even included in the appropriation bill this year. This is just a matter of bringing forward an old authorization. So I agree with the Senator.

Mr. President, in the Army section of the bill there is an item which requires special explanation, I think, because it involves a change. I understand that the Senator from Illinois [Mr. DOUGLAS] will offer an amendment in connection with it.

It is a request by the Army for a construction fund of $3,314,000 for construction at Natick, Mass., of the facilities to house the Food and Container Institute; and $720,000 is going to be required for the movement of equipment and the making of minor modifications at the new location. That matter is included in the budget; and the Army's request was taken up, and a case for it was made by the Army; namely, to move this entire experiment and research installation and all the incidental activities in regard to the Food and Container Institute research program from what is called the Chicago Administration Center, in Chicago, Ill., to Natick, Mass. All of it is handled by the Quartermaster Research and Engineering Command, a unit of the Quartermaster Corps of the Army, which has been in operation for several years.

As I have said, the amount involved for the construction program is $3,314,000.

Their estimate was that it would reduce the annual operating cost of the Army by an estimated $1,297,000 annually, which at that rate would amortize the one-time cost of this operation in 3 9/10 years. They claim it would enhance the overall Army operational efficiency in connection with the work being carried on.

With all deference to the structure at Chicago, it seems that the large Chicago Administration Center building there is used for military activities. But it is impossible to carry on this activity there—so the Army says it has found—on the basis of efficiency, insofar as the proper use of funds, and so forth, is concerned.

We heard some very fine statements about the matter, and it was fully presented to the committee by gentlemen from Chicago who really knew the subject; and we also received testimony from the Senator from Illinois [Mr. DOUGLAS] and also an additional statement by him, as I recall.

The committee considered all those matters, but decided that a case in favor of the proposed change had been made.

Mr. President, I am not attempting to keep the floor; but I ask unanimous consent that at this time I may yield to the Senator from Illinois [Mr. DOUGLAS], if he wishes to submit amendments, and then to the Senator from Massachusetts [Mr. SALTONSTALL].

Mr. DOUGLAS. Mr. President, I offer the amendments which I send to the desk, and ask to have read; and I also ask that the pages distribute copies of the amendments to the desks of all Senators.

The PRESIDING OFFICER. The amendments offered by the Senator from Illinois will be stated.

The CHIEF CLERK. It is proposed on page 72, beginning with line 3, to strike out all down through line 5.

On page 113, line 3, to strike out "$79-552,000" and insert in lieu thereof "$75,-924,000."

On page 113, line 6, to strike out "$147,482,000" and insert in lieu thereof "$143,854,000."

Mr. DOUGLAS. Mr. President, I wish to thank the Senator from Mississippi for the courtesy which he showed in permitting the delegation from Chicago to state the facts in this matter, and I also want to say that I know in matters of this kind it is very hard for a senatorial committee to carry out an independent investigation, and that, almost of necessity, they are forced to rely upon the representations which are made to them by the military authorities. So I hope the Senator from Mississippi and the other members of the committee which heard this matter will not regard me as being unduly critical of them individually.

The purpose of my amendment is to strike from the bill the authorization of a transfer of the Food and Container Institute from Chicago to new buildings in Massachusetts.

The Quartermaster Corps has for a long time had designs upon this facility in Chicago, and has been determined to transfer the Food and Container Institute to this new center of theirs which they have been building in Natick, Mass.

As far back as 1952 we asked the Quartermaster Corps whether they had any designs to transfer the Food and Container Institute to Natick; and I shall submit for the RECORD statements by Defense Department officials and by the generals in the Quartermaster Corps disavowing any intent to make this transfer. But we have had the suspicion for a number of years that this was a design by the Quartermaster Corps and by the Army; and while, from year to year we were told that we were unduly suspicious, at last it has happened.

On the face of it, to transfer a food and container institute from the Middle West, which is the center of the food industry, both in the production and in the processing of food, and which is also the center of the container industry, to a peripheral area of the country, nonagricultural in nature, seems extremely foolish.

On the floor of the Senate the other day, I said that I thought a transfer of an institute for research into food and containers from Chicago to Massachusetts would be like transferring an institute for the study of arctic diseases to Puerto Rico. I say that analogy is

guarded, in language, and, if anything, is an understatement.

Mr. President, I shall develop this argument in some detail. Let me say that what the Quartermaster Corps is proposing to do is to break up the so-called administrative center in Chicago, which occupies 1,800,000 square feet of space, and which houses 26 separate Army functions, plus 8 non-Army activities. They propose to break it up, and scatter the units which are contained therein, most of them being moved to other regions in Chicago, but transferring the Food and Container Institute to Natick, Mass. From these moves they claim that large economies will result, and these are the asserted justification for the proposal.

The General Accounting Office has subjected the claims of the Army to a very stringent analysis; and while the Army attempted to reply, that reply is, in my judgment, wholly inadequate.

It is true that the present administrative center probably has much more space in it, and occupies a larger area, than is needed to carry on the 34 different functions. But it is perfectly obvious that economies could be effected even in the present buildings—there are really three connected buildings—by giving up one or two of the buildings, or giving up a floor or two in the buildings, thus shrinking the space for the present functions within the existing buildings. The space thus freed could be used for other Government services. That in itself would take care of most of the claimed economies for the move.

So I would suggest that what the Quartermaster Corps has been doing has been seeking to find excuses to justify a prearranged plan of constructing still support that contention in a statement shall submit more detailed evidence to support that contention in a statement which will later be included in the RECORD.

The Quartermaster Corps is intent on building a new structure, and it uses as justification the claimed economies to be achieved by constructing a new building in Natick and by moving most of the other functions to other locations in Chicago. I personally am very dubious as to whether any new structure is needed; but, if it is needed, we have produced evidence to indicate that it can be constructed for approximately the same cost in Chicago itself, and that there is no need for the transfer of the facility itself to Natick.

We have an extremely good institute of technology in Chicago, the Illinois Institute. It is one of the three or four best engineering and technical institutes in the country.

The Illinois Institute has offered to make available space upon its campus for a new structure and has had informal negotiations about the possibility and estimated cost of constructing a new building there for the Food and Container Institute. Their offer was turned down by the Quartermaster Corps under very extraordinary conditions.

The record will indicate that the representative of the Quartermaster Corps in the informal conversations with representatives of the Illinois Institute of Technology, told them he wanted somewhere between, roughly, 200,000 and 300,000 square feet of space. I believe the Quartermaster Corps representatives do not deny this impression which they gave to the Illinois Institute. And the Illinois Institute officials replied according to the Army that, in their judgment, to construct the desired new building would cost approximately $6 million.

The Quartermaster Corps then compared this estimate of $6 million with the estimate of $3,628,000 for the construction in Natick, and pointed to the $2,400,000 saving as an indication of the superiority of the Natick site.

The giveaway in this whole matter is that the Natick costs are for only 121,000 feet of space, whereas the Quartermaster Corps asked the Illinois Institute to submit an offer on from 200,000 to 300,000 feet of space. So the Quartermaster Corps was comparing horses and apples. Rather, either inadvertently or by design, the Quartermaster Corps has led the Illinois Institute down the garden path into a proposal based on about twice the footage that the Natick project was based upon. It took the public hearing and Illinois Institute's subsequent letter to "smoke that out" of the Quartermaster Corps.

We also asked the Illinois Institute to figure what the cost would be for a new building, and what the cost would be for moving, inside Chicago, for a building with 121,000 feet, the same area as planned at Natick. We got the information only the day before yesterday, on the very day the Armed Services Committee was marking up the military construction bill finally. We rushed the information over, with a covering letter, to the Senator from Mississippi [Mr. STENNIS], the chairman of the subcommittee. I assume that the decision probably had already been made. It is hard for the committee to reverse itself.

I also made the documents available in the CONGRESSIONAL RECORD for the day before yesterday, so that the Members of the Senate could read them.

In brief, the Illinois Institute now says it could construct a building on or next to its campus in Chicago conforming to all of the standards, comprising a little over 121,000 square feet, for $3,690,000, and that this would include the moving costs from the present headquarters into the new building. This compares with an appropriation authorization at Natick of $3,628,000. In other words, the Chicago bid is only $62,000 more than the Natick bid.

I will say in passing that the General Accounting Office is very critical indeed of the estimate which the Quartermaster Corps put together for $3,628,000 at Natick. The General Accounting Office believes the cost will run well over $4 million—indeed, very much more than $4 million.

Mr. President, I do not blame the Subcommittee on Military Construction Appropriations for not being able fully to digest this information when it came to them at the last moment. It was not the fault of the Illinois Institute or of the Senator from Illinois that the information did not reach the subcommittee earlier. There was no delay, I assure the Senate.

However, I think the Senate should now consider this matter with all the facts before it. There is really no difference in the cost. If anything, the cost is less in Chicago, because the Quartermaster Corps estimates of cost are very dubious and understated, in the opinion of the General Accounting Office, and are not well founded.

I wish now to develop the question of the relative superiority of location for a moment. The Food and Container Institute has been in Chicago for almost 40 years. It has been in full force in Chicago for a quarter of a century. It works closely with the food and container industries, and with the universities, through exchanges of information, cooperation in application of new discoveries, discussion of procurement matters, and through research contracts. Over 100 of its 250 civilian employees are classified as scientific and technical. It has developed a highly skilled personnel.

The Chicago Association of Commerce & Industry submitted a table showing how the industrial concerns dealing with food are primarily based upon Chicago. That also is in the hearings. I wish to mention some of the items.

The Chicago Board of Trade is certainly the world's leading market in futures trading in grains.

The city is first among all metropolitan areas of the Nation in meat production. Despite the growing decentralization in the market, Chicago is still the national center of the sales market for meat.

Chicago is the center of distribution for the dairy industry.

Chicago is the center of the confectionery industry in the United States, producing about one-fourth of all candy manufactured in the country.

The Chicago Mercantile Exchange is the Nation's leading futures market in butter and eggs.

The major portion of America's fruit and vegetables funnel through Chicago. In fact, more fresh produce passes through Chicago than passes through any other similar center in the world.

Chicago handles enough grain to be known as the Nation's third largest granary. The value of crops harvested within a 500-mile radius of Chicago is 41 percent of the national total.

Among the large firms which are in Chicago engaged in baking are the Continental Baking Co., Schulze & Burch Biscuit Co., Ward Baking Co., Gordon Baking Co., Piper Baking Co., the Great Atlantic & Pacific Tea Co., United Biscuit Co., and so on and so forth.

The Chicago area manufactures more containers of all kinds than any other area in the Nation.

There are at least 12 important universities carrying on research and graduate work as to food and container technology within a radius of several hundred miles, many inside Chicago itself.

We have in Chicago the largest collection of libraries devoted to food products.

A very large number of industrial firms have signed a letter urging that the Food and Container Institute be kept in Chicago. The list includes:

Daniel F. Gerber, president, Gerber Baby Foods, Fremont, Mich.

William A. Beich, vice president, Paul F. Beich Co., Bloomington, Ill.

Russell D. L. Wirth, president, Red Star Yeast & Products Co., Milwaukee, Wis.

J. Clyde Loftis, president, Kraft Foods Co., Chicago, Ill.

Daniel J. Uhrig, president, American Bakeries, Co., Chicago, Ill.

R. G. Lucks, president, California Packing Corp., San Francisco, Calif.

K. W. Brighton, vice president and general manager, American Can Co., Barrington, Ill.

Roscoe G. Haynie, president, Wilson & Co., Inc., Chicago, Ill.

Herbert R. Stratford, executive vice president, Morton Salt Co., Chicago, Ill.

Dale W. Johnson, manager, Edible Protein Products, Central Soya Co., Inc., Chicago, Ill.

A. V. Williams, vice president, Lawry's Products, Inc., Los Angeles, Calif.

G. F. Atkinson, general manager, Durkee Famous Foods Division, the Glidden Co., Chicago, Ill.

C. S. Bridges, president, Libby, McNeill & Libby, Chicago, Ill.

W. G. Mason, vice president, marketing, the Quaker Oats Co., Chicago, Ill.

P. K. Bates, Ph. D., general manager of research, Carnation Co., Van Nuys, Calif.

G. C. Scott, president, research, Green Giant Co., Le Sueur, Minn.

J. B. Pardieck, president, California Vegetable Concentrates, Inc., Huntington Park, Calif.

Douglas S. Steinberg, president, National Confectioners Association, Chicago, Ill.

John T. Walsh, director, American Dry Milk Institute, Inc., Chicago, Ill.

M. A. Peterson, general manager, Idaho Potato Growers, Inc., Idaho Falls, Idaho.

George L. Sternfield, executive vice president, Kitchen Art Foods, Inc., Chicago, Ill.

C. L. Griffith, president, the Griffith Laboratories, Inc., Chicago, Ill.

Robert W. Reneker, vice president, Swift & Co., Chicago, Ill.

Arthur T. O'Connor, secretary-treasurer, Dean Milk Co., Franklin Park, Ill.

Robert J. Greenebaum, president, Inland Steel Container Co., Chicago, Ill.

R. Bruce Holmgren, editor, Package Engineering, Chicago, Ill.

Harold M. Mayer, vice president, Oscar Mayer & Co., Chicago, Ill.

Dwight P. Joyce, chairman and president, the Glidden Co., Cleveland, Ohio.

Philip N. Wrigley, president, Wm. Wrigley, Jr., Chicago, Ill.

H. L. Slaughter, vice president, Durkee Famous Foods Division, the Glidden Co., Cleveland, Ohio.

One could go on. It is interesting to note that the sole witness who could be brought before the committee to testify from the industry in favor of Natick was William Hampton, the director of research of the Ocean Spray Cranberry Co., of Duxbury, Mass.

I like cranberries. I suppose the Massachusetts cranberries are as good as any other cranberries, though we rather prefer those from Wisconsin. However, the sole witness from all of industry who testified in favor of transferring this Institute to Natick was the representative of the Ocean Spray Cranberry Co. This is a veluetio ad absurdum. I would like to say "horseradish." But I will say "cranberries."

I do not believe cranberries should weigh so heavily in the scale compared with all other products.

Mr. President, I think we should go slow on this matter. I think we should not authorize the appropriation, and that the committee should go into the question more thoroughly. We should not take so implicity as true the claims of the Quartermaster Corps. We have apparently had the cards stacked against us from the very start. I am confident that if a thorough investigation is made, it will be found, first, that merely by reducing the amount of space used in the present buildings, adequate economies can be effected without any physical relocation and, second, if a physical relocation is carried out, it can be done with greater effectiveness and at no greater cost with the new building on the grounds of the Illinois Institute of Technology in Chicago.

I ask unanimous consent that a more detailed statement which I have prepared on this subject be printed in the RECORD at the conclusion of my remarks. I hope that when the Senate comes to a final decision, we shall not decide the question with only four or five Senators in the Chamber. I hope, therefore, that this item, which is an authorization, may be eliminated and that we may have a more thorough examination of the subject.

The PRESIDING OFFICER. Without objection, the statement may be printed in the RECORD, as requested.

(See exhibit 1.)

EXHIBIT 1

STATEMENT BY SENATOR DOUGLAS

The item of $3,628,000 for research, development and test facilities, and troop housing at Natick, Mass., which my amendment would strike from the bill, would in effect authorize the transfer of the Quartermaster Corps Food and Container Institute away from Chicago where it has been located for many years to Massachusetts.

I believe this proposal is most unwise and should be deleted from the bill. It would remove this important research facility from the area that is the heart of the food and container industry. The proposal was put forward without adequate consideration of the alternative possibilities for new building in Chicago at the Illinois Institute of Technology for virtually the same cost. And the savings claimed by the Army for this move, as examined by the GAO, are greatly exaggerated, if not wholly dubious.

A brief examination of each of these points should make clear the desirability of removing this item from the bill.

1. FOOD AND CONTAINER INDUSTRY CENTER IS ONLY SENSIBLE LOCATION

Dating back in some of its functions to 1921, the Food and Container Institute was originally established in Chicago as the Subsistence Research Laboratory in 1936, grew rapidly in World War II to a function employing nearly 300 persons, and has performed vital services in all succeeding years with personnel now totaling about 250 civilian and 60 military employees.

Here it has performed basic research and development in food nutrition, stability, and acceptance; in military rations and food products for the Armed Forces; in containers; and in irradiation processes. The Institute has also carried on a standardization program for related research and engineering and has given technical services and engineering support to other military activities.

It works closely with the food and container industries and universities around the country through research contracts. Over 100 of its employees are classed as scientific or technical.

In the light of these functions, Mr. President, the only sensible location for this work is in Chicago, for the following reasons:

(a) The contacts with the food and container industries, with which the Quartermaster Corps spends large amounts of its money each year, are most easily maintained in Chicago, which is admittedly the center of the Nation's food and container industries. Chicago is in the heart of the country's richest agricultural area. It produces more meat products than any other city. It ranks second in grain mill products. It is a leading distribution center for dairy products, poultry and eggs, fruits, etc.

Similarly Chicago is the country's major producer of containers of all kinds. It leads in tin can production and is very high in paperboard container production.

Chicago is accordingly the most convenient location for the Army to secure the assistance of the industry technologists from industry advisory committees. There are 17 such committees, and in addition 29 task groups cooperating with the Institute.

There are more food and container trade associations located in Chicago than anywhere else, another important source of contacts.

It is no wonder that officials of such companies as the following have urged that this Institute not be moved away from Chicago:

Kraft Foods Co.; American Bakeries Co.; California Packing Corp.; American Can Co.; Wilson & Co.; Morton Salt Co.; Central Soya Co.; Libby, McNeill & Libby; Quaker Oats Co.; Carnation Co.; Green Giant Co.; California Vegetable Concentrates, Inc.; National Confectioners Association; American Dry Milk Institute, Inc.; Idaho Potato Growers, Inc.; Kitchen Art Foods, Inc.; Swift & Co.; Dean Milk Co.; Inland Steel Container Co.; Oscar Mayer & Co.; Wm. Wrigley, Jr., Co.; and Glidden Co.

Only an official of the Ocean Spray Cranberry Co. of Duxbury, Mass., out of all the food industries, appeared in favor of the Natick move.

(b) Because of the concentration of the industry in Chicago and the development of related research in nearby universities, the Chicago area presents unmatched private research facilities to cooperate with the Institute. Over 100 such industrial research laboratories are listed in the materials I inserted in the RECORD on Wednesday. Major scientific research facilities are also available at the University of Chicago, Northwestern University Technological Institute, Illinois Institute of Technology, Armour Research Foundation, American Meat Institute, the University of Illinois Medical Center, and Argonne National Laboratory. The technical libraries are also numerous, including the John Crerar Library, one of the greatest scientific libraries in the world.

(c) Chicago is the best center for recruiting technical personnel, both because of the abundance of industry research in the vicinity and because educational institutions doing graduate work in food technology are more numerous in the Midwest than in any other part of the country.

It seems to me that the Army has underestimated the importance of this factor also in recommending the move from Chicago to Natick. Mr. William G. Mason, who testified at the hearings in behalf of the Chicago Association of Commerce and Industry, and is himself a vice president of the Quaker Oats Co., made it clear that the Institute has built up a very competent personnel, including many highly skilled individuals. He also expressed a doubt that many of them would go to Natick, if this change is made. Is it really worthwhile to tear this Institute out by its roots and break up the manpower group that has provided such excellent scientific and research services to the country?

(d) Retention of the Institute in Chicago would enable it to maintain its present close relationship with the Military Subsistence Supply Agency and the Army Subsistence Center, with which there are frequent conferences and contacts. I am told that the improvements and developments in relation to rations result in new and revised specifications which are used by the subsistence agencies for the procurement of subsistence supplies, and that a nearby location is therefore of great importance.

(e) Since by General Seeman's admission in the hearings, almost half of the Quartermaster Corps' research and development activities are contracted out, the proximity of the Institute to the institutions which receive these contracts is also of importance. The summary of these contracts prepared by the Chicago Association of Commerce indicates that in dollar volume over $1,900,000 of these contracts are in the Middle West and on the west coast, whereas only $422,000 of these contracts are in the East (including New York, Pennsylvania, and the District of Columbia). In terms of the number of contracts, nearly 72 percent are in the Middle West and West and only 22½ percent in the East.

In the light of the great advantages which the Chicago location offers, therefore, I believe it would be folly to transfer the Food and Container Institute from Chicago to Natick—and it appears that a preponderant segment of the related and cooperating industries agree.

As I said on Wednesday in the Senate, it would make about as much sense to locate a laboratory on Arctic diseases in Puerto Rico.

2. ALTERNATIVE CHICAGO POSSIBILITIES NOT FULLY EXPLORED

In its justification of the proposed move because of claimed economies, the Army reports that it conferred with officials of the Illinois Institute of Technology in Chicago about placing the new building on that campus if the present facility is vacated. But the Army memorandum submitted to the Armed Services Committee asserted that the Illinois Institute "offer" came to "approximately $6 million," as compared with the estimated cost of $3,628,000 at Natick.

It now appears from the letter I placed in the RECORD on Wednesday, however, that the conversations with the Illinois Institute officials were based on an assumed building area of 200,000 to 300,000 square feet. On the other hand, the new buildings at Natick are planned for 121,000 square feet at the most—and General Seeman's latest memo refers to only 112,000 square feet.

The Illinois Institute vice president, Mr. Raymond J. Spaeth, in his letter of May 9 to me has stated that on this reduced area of 121,000 square feet—as contrasted with the 200,000 to 300,000 square feet earlier discussed—they could erect the necessary laboratories so that, with moving costs (which are included in the $3,628,000 figure in the bill), the total cost in Chicago would come to $3,690,170.

This is only $62,000 more—or about 2 percent—than the figure submitted by the Army.

The GAO, which has made some sweeping criticisms of the Army claims of possible economies, pointed out that in July 1959: "Although the advantages of affiliation with the IIT were considerable, the cost factors, when compared to relocation at the Quartermaster Research and Engineering Center at Natick, were considered so unfavorable that the proposal was not further explored in detail" (p. 29).

But since they were comparing such unlike areas, it is no wonder the advantage was all with Natick.

I certainly think Congress should go slow to break up a highly efficient operation and scientific team in Chicago on the basis of alleged savings to the Government most of which vanish into thin air when the basis of comparison is a fair one. I cannot understand why the Army did not explore this move more fully last year. But at least now that we know the Quartermaster Corps did not ask the Illinois Institute to submit a proposal based on the same size facility as at Natick—which General Seeman admitted in response to Senator Cannon's questions at the hearing (p. 576)—and did not try to find out the costs of any comparable new facility in Chicago, I believe Congress should not accept the Army's recommendation on this item as adequately justified.

3. THE SAVINGS CLAIMED BY THE ARMY FOR THE TRANSFER TO NATICK ARE PROBABLY NONEXISTENT

The Army's plan in connection with the proposed move of the Food and Container Institute to Natick is primarily supported by the claim of operating economies made possible through vacating the present building where it is now located in Chicago, the so-called Chicago Administration Center.

This building—really three connected buildings—has 1.8 million square feet of space. It presently houses 26 different functions of the Quartermaster and Fifth Army, four other Defense Department activities, and various other functions of four other Government departments. All of these would have to be relocated or otherwise cared for. It is no simple operation.

The new plans for the Department of Army functions provide for the use of only 266,000 square feet as against the 1,071,000 square feet the Army is now using at the Chicago Administration Center. Over half of this space reduction (499,000 square feet) is accounted for by eliminating the space for administrative personnel—and the saving through reduction in that personnel (261 employees) is a further major part of the claimed savings.

But two things should be said. First, the savings from this large reduction in space and administrative personnel depends only in small part upon the move to Natick. Most of it can also be made by vacating the present building and moving the Food and Container Institute into new and smaller quarters in Chicago.

And secondly, the GAO points out that "most of the savings which may be realized are contingent upon the ability of the Army to perform the operations within the sharply reduced space requirements estimated by the Army for the relocation sites" (p. 7). (For instance they cut the Food and Container Institute space from 188,000 to 121,000 or 112,000 square feet, depending upon which figure of General Seeman's is used.) And the GAO further states: "It is, of course, quite possible that in any given case, or in all the moves proposed, the projected space needs will be found inadequate or the support costs at the relocation sites will be greater than estimated, or that both situations will occur" (p. 14).

The GAO also declares that it found the estimated support costs at the various relocation sites understated, the costs of relocating the other tenants understated, and the relocation costs of nonmilitary activities not considered at all.

Thus the claimed savings through inactivating the Chicago Administrative Center building are held by GAO to be exaggerated.

But the essential point is that most of them (the only exception being the saving from placing the Food and Container Institute under the administrative operation of the present Natick command) could also be secured from inactivating the Chicago Administration Center building and moving the Institute to a new location in Chicago.

Taking special note of the drastic space reductions planned by the Army for the functions now performed at the CAC, the study by the GAO also developed an estimate for possible future savings in the same CAC buildings, but with the present functions compressed into the proposed smaller space, and with other Government tenants making a full use of the whole CAC building space. Interestingly enough, these projections develop an ultimate annual savings of $1.3 million (p. 21), which is greater than the exaggerated claim of $1,297,000 annual savings by the Army—although the savings in the first 7 years when new equipment costs would be amortized is estimated below the Army figures.

It is also interesting to note that the Army is able to get cost figures which are apparently somewhat lower at Natick (although General Seeman concedes that unit construction costs are virtually the same) because the existing development building at Natick is a specially designed laboratory structure, the entire first floor of which is now devoted to office use. They plan to convert this to laboratory use (and extend the development building also) and relocate the present office personnel in a less costly new office facility. In other words, part of this costlier laboratory structure represents past Government expense.

Another interesting point in the GAO analysis is that the annual savings properly allocated to Natick alone in recurring costs resulting from the closing of the C.A.C. building in Chicago is only $281,285 (schedule A). At this rate it will take a lot longer than the claimed 3 years to amortize the cost of the new construction at Natick—which is $3,628,000 under this bill, but which GAO estimates will come with relocation costs to $4,542,000 (schedule B).

In any case, the study which GAO made left it in sufficient doubt about the claimed savings from inactivating the C.A.C. building and the possibilities of more economical use of it than at present, that GAO declared the "C.A.C. facility should be studied further * * * before a final decision is made regarding the ultimate use or disposal of this facility" (p. 22).

The case for economy in the proposed move, therefore, seems to fall apart, and I believe the Senate has before it a simple question of where this food and container research function can best be performed. For the reasons which I outlined at the start, I believe there can be only one answer to this question, Chicago. And I hope we shall not make the mistake of moving this vital Laboratory, breaking up the scientific group long assembled at the present site, damaging the performance of the Government's own work and making more difficult the essential cooperation with related industries and the recruitment of new personnel.

I hope, therefore, that my amendment may be approved.

QUARTERMASTER CORPS IS GOING BACK ON ASSURANCES AGAINST MOVE AWAY FROM CHICAGO

When the initial appropriation for the Natick research center was before the Senate in 1952, I specifically raised the possibility that that might be the opening move in a more extensive plan to transfer the Food and Container Institute from Chicago also.

In a letter from the Department of Defense placed in the RECORD by the Senator from Minnesota [Mr. HUMPHREY], however, it was categorically stated, "The Quartermaster Corps Food and Container Institute will remain at its present location in Chicago, Ill." (CONGRESSIONAL RECORD, June 30, 1952, vol. 98, pt. 7, p. 8590). Previously the distinguished Representative from Massachusetts [Mr. MCCORMACK], had stated in the House that the Natick facility would not house all the Quartermaster research, just that research concerned with protecting the soldier from all weather conditions where he may be called upon to fight. He added, "There is no provision to take care of the Food and Container Institute at Chicago." (CONGRESSIONAL RECORD, March 25, 1952, vol. 98, pt. 3, p. 2855.)

Similar assurances had been given in the hearings on the authorization bills in 1947:

"Mr. JOHNSON of California. Does this laboratory * * * contemplate research on foods?

"General DORIOT. No, sir. I should say not. Food technology, the application of the industrial side of it, the assay food as a military weapon, so to speak, is in Chicago, because that is where the industry is." (Hearings on H.R. 612, p. 3985.)

"General MIDDLESWART. We feel we can do a much better job if we put all of it, except for food, which we intend to leave in Chicago, into this consolidated laboratory" (p. 3988.)

And again in the hearings in 1948—

"Dr. HUNTER (technical director, Research and Development, Quartermaster Corps). The food work is in Chicago and does not become a part of this discussion here." (Hearings on S. 286, p. 25.)

Against the background of these repeated assurances, we surely cannot be blamed for feeling that we have been booby-trapped by the Quartermaster Corps. Regardless of that, however, the basic question is, where can this function be most efficiently and economically run. And the Army has not to my mind justified the move to Natick, and the proposed expenditure of $3,628,000 to start it in motion.

The PRESIDING OFFICER. Does the Senator from Illinois [Mr. DOUGLAS] wish his amendments to be considered en bloc?

Mr. DOUGLAS. Yes; of necessity they must be so considered because the first part of the amendments strikes out the individual item, whereas the two latter paragraphs of the amendments deal with the reduction in totals which would be occasioned if the earlier item is eliminated.

Mr. SALTONSTALL. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I am glad to yield to the Senator from Massachusetts.

Mr. SALTONSTALL. I should like to defend for a moment the action of the subcommittee and the full committee of the Armed Services Committee in including this item for the Natick Research and Engineering Center in the military construction authorization bill.

I am opposed to the amendment offered by the Senator from Illinois, which would strike out the funds for the movement of the Food and Container Institute from Chicago and its construction at Natick, Mass. The Department of the Army, the Department of Defense, the Bureau of the Budget, the subcommittee of the Armed Services Committee of the Senate, and the full committee of the Armed Services Committee of the Senate have approved this move, and the Comptroller General estimates it will save approximately a million dollars a year. The Army puts the savings at nearer $1,300,000 a year. The amount provided in the bill for the move is $3,628,000, which includes the new construction and equipment. It is an addition to the Natick Research Center, which is the headquarters of the Quartermaster Research and Engineering Command.

At Natick at the present time there are installations valued at approximately $11,800,000. This provision would add $3,628,000 to that amount, and would provide for new and converted space in the amount of 121,235 square feet.

Included in this amount would be an addition to and conversion of a development building, animal laboratory facilities, addition to an enlisted men's barracks, and a new office and laboratory building, all of which is included in the $3,628,000.

At the present time the center does the Quartermaster research work for the Armed Forces in clothing, in atmospheric conditions, and in all other investigations which contribute to better health of members of the Army. It is desired to put the food and container research there also, as it is all a part of the same undertaking.

I do not object to the Senator from Illinois [Mr. DOUGLAS] opposing this move because the laboratory in Chicago has been there, as he stated, for a number of years. But I do say that Massachusetts is just as good a food research center as is Illinois. I call attention to the facilities of the Massachusetts Institute of Technology, the University of Massachusetts, and the Arthur D. Little Research Laboratory, which are all working on the question of food research.

In addition I remind the Senator from Illinois that the products of the Birdseye Food Co., for example, were developed entirely in Massachusetts. That is a national product today. So we do know something about food.

I also point out that the geographic distribution of industrial food laboratories, as shown in a study prepared by the National Academy of Sciences as of 1956, shows that the great majority of food research laboratories are in the East rather than in the Chicago area.

Originally the Senator from Illinois wished to rehabilitate the warehouse where this laboratory is now located in Chicago. The Army calls it a white elephant. That proposal was dropped. The present proposal is to have new construction at the Illinois Institute of Technology. But one thing the proposal does not state is whether the Armed Forces will construct a building on land of the Illinois Institute of Technology or whether they will lease a building which would be built by the Illinois Institute itself.

The Senator states that the building would require about 121,000 square feet of space, and that the cost of such a structure in Illinois would be only slightly greater than the cost would be in Natick. I point out to him that if the structure were built in Illinois, there would have to be about 40,000 square feet additional—the Army only estimates that; without a detailed study it is not sure—for administrative purposes.

I also point out that this 40,000 square feet at $22 a square foot would add another $800,000 to the cost. That expenditure would not be necessary in Natick because of consolidation with present administrative services. Also if the project is built at Natick, there would be employed 220 technical people instead of the 252 now employed in Illinois.

So there are these reasons—fundamental financial reasons, economic reasons, and research reasons—why all of this research work for the Armed Forces should be concentrated at Natick. A subcommittee of the House is studying this subject. If the bill is in conference, the matter will be open when we get the report of the subcommittee of the House. If that report is adverse to Natick, of course, what I am saying to the Senate is of very much less value. If it is in favor of Natick, it makes even a stronger case than the Army, the Defense Department, and the Bureau of the Budget are now making.

As it was pointed out, this building will be paid for, in savings, in approximately 3 to 5 years. I say that advisedly, because if it is figured at $1,300,000, it will be paid for within that period. If the figure is less, it will take a little longer.

I would say that my colleague from Massachusetts [Mr. KENNEDY], who is very busy at the present time, could not be in the Senate this afternoon, and he has authorized me to speak in his behalf on this subject; he is in accord with me regarding this transfer.

So I hope that the amendment offered by the Senator from Illinois [Mr. DOUGLAS] will be defeated, and that the unanimous report of the Committee on Armed Services on this subject will be sustained, and that this matter will be taken to conference, where we can discuss it on its merits.

Mr. DOUGLAS. Mr. President, there are a few points which the Senator from Massachusetts made that I believe should be answered. One is his statement that if the facility remains in Chicago it would need 40,000 more square feet for administrative purposes, whereas that would not be needed in Natick.

This seems to me a figure which has been drawn out of the hat to justify a predetermined decision. The square footage needed for research purposes and the facilities connected with this food and container research come to 121,000 feet. To say that a third more is needed for administrative purposes is extraordinary and incredible.

Mr. SALTONSTALL. Mr. President, will the Senator yield? I believe I can give the exact statement of the Army on that subject. Would he prefer not to yield at this time?

Mr. DOUGLAS. I am glad to yield.

Mr. SALTONSTALL. In relation to this subject, to which the Senator is now addressing himself, the Army says:

It does not cover facilities for housing additional station overhead requirements which would be necessary to accommodate the necessary overhead if the F and CI were continued in Chicago at IIT. Provision of this additional space would invalidate IIT purported equivalent costs.

Mr. DOUGLAS. I should like to say, in reply, that some reasonable space for administrative personnel would be understandable, but not 40,000 square feet. Furthermore the General Accounting Office has pointed out that if we take in all of the probable costs, the costs at Natick would not be $3,628,000, but over $4 million. So that this is a very dubious advantage which the Senator mentions. It is clearly outweighed by the enormous advantages of locating this research work in the midwest, in Chicago.

I appreciate the fact that Massachusetts is a center of food consumption. I had never thought it was also a center of food production or processing. In spite of the high standing of the Massachusetts Institute of Technology, I had never thought that much of its work was done in the field of foods. It is a great engineering institution, but not a food center. There are in the Chicago area no less than 100 industrial research laboratories dealing primarily with foods and containers. There are scientific research facilities in the field of foods available at the University of Chicago, Northwestern University, the Illinois Institute of Technology, the Armour Research Foundation, the American Meat Institute, the University of Illinois Medical Center, and the Argonne National Laboratory. The John Crerar Library, one of the greatest scientific libraries in the world is located in Chicago.

In addition, Chicago is the best center for the recruiting of technical personnel in the field of food technology.

I introduced for the RECORD on Wednesday the information about the geographical distribution of the Food and Container Institute's research contracts. By the admission of General Seeman himself, almost a half of the Quartermaster Corps research and development activities are contracted out. If we analyze these contracts, we find that by volume more than $1,900,000 are in the Middle West and on the West Coast, whereas only $422,000 of these contracts are in the East, including New York, Pennsylvania, and the District of Columbia. In terms of the number of contracts, nearly 72 percent are in the Middle West and West, and only 22 percent in the East.

So I submit it would make about as much sense to transfer the Food and Research Institute to Natick, Massachusetts, as it would be to locate a laboratory on Arctic diseases in Puerto Rico.

I believe we have now a sum total of perhaps six or seven Senators on the floor, and I would not like to have this issue decided at this time. Therefore I suggest the absence of a quorum.

Mr. DIRKSEN. Mr. President, will the Senator withhold that suggestion for a moment?

Mr. DOUGLAS. I withhold it.

Mr. STENNIS. Mr. President, I yield to the Senator from Illinois.

Mr. DIRKSEN. Mr. President, I wish to talk very briefly on this subject, and I shall try to summarize it as I see it. What is involved here is the transfer of a function and a facility from the city of Chicago to the city of Natick, Mass. I can readily understand the desire of my distinguished friend, the Senator from Massachusetts, to have the transfer made. I am sure he understands our desire to retain the center in the city of Chicago, if we can.

We hope it will be left there. We believe that the arguments which have been adduced in behalf of the transfer are, first, that it would effectuate a consolidation of certain activities. Second, and I suppose this is to be conceded according to the report by the Comptroller General, that some savings might be effected.

I should point out, however, that the Comptroller General's report dealt entirely, as I understand, with the money savings, and gave no effect to a good many other factors.

In the first instance, I believe the Army overstated the economies, and perhaps the General Accounting Office did likewise, because they sent first one report to my office, and then a few days later they sent a revised report, indicating the economies were not quite as substantial as were first indicated by the Army or the Comptroller General.

I am concerned with the argument as to why this Institute ought to remain in the city of Chicago and in the State of Illinois. I will summarize the argument in this way. First, the economies were overstated and were concerned only with the dollars involved. Second, I believe the Comptroller General's report indicates that there would be circumscribed space at the Natick installation. In fact, Mr. Weitzel's letter to Representative YATES, dated April 27, 1960, has this statement in it:

> It is important to note, however, that most of the savings estimated by the Army and by us depend upon the ability of the Army to perform the operations within sharply reduced—by 75 percent—space requirements estimated by the Army for the relocation sites.

I think it is a very significant thing; and if that were taken into account, and if the matter were rationalized on a comparable area basis, doubtless no such savings could be established.

The third reason I would cite is that this center has been located in the city of Chicago, or its forerunner has been located there, since 1921. That means that some kind of function like this has been in the State of Illinois for 39 years, and I think there ought to be a preponderant argument before there is approval of the proposal to relocate this Container Institute.

Fourth, the facility was located in Chicago because of the proximity to the procurement agencies of the armed services. There are so many of them there, and I think that is the reason why the center was established there in the first instance. Those procurement and supply agencies are still there, or are in that general area. Hence, that is another valid reason why the proposal to move the center to Massachusetts should not be lightly undertaken.

Fifth, I submit that this function was located in Chicago because of the proximity of laboratories and libraries. One needs only to examine the hearings and note the long list of laboratories and other facilities to get some hint that actually that area is the center for that kind of function.

Beginning at page 562 of the hearings, there are listed, first, the industrial research laboratories in the Chicago area dealing with foods; second, the laboratories dealing with containers; and then the major Chicago trade associations in the food and container field. Nowhere else in the country are there facilities to match them.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the lists of the various facilities.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

ENCLOSURE 1. INDUSTRIAL RESEARCH LABORATORIES IN THE CHICAGO AREA

(Source: Industrial Research Laboratories of the United States (10th ed.) Publication 379, National Academy of Sciences, National Research Council, Washington, D.C., 1956.)

A. FOODS

American Bakeries Co., 919 North Michigan Avenue.

American Dry Milk Institute, Inc., 221 North La Salle Street.

American Institute of Baking, 400 East Ontario Street.

American Meat Institute Foundation, 939 East 57th Street.

American Research & Testing Laboratories, 32 North State Street.

Armour & Co. Research Division, Union Stock Yards.

Armour & Co. Auxiliaries Division, 1355 West 31st Street.

Beatrice Foods Co., 1526 South State Street.

Best Foods, Inc., The, 2816 South Kilbourn Avenue.

Chicago-Allis Manufacturing Co., 113–25 North Green Street.

Chicago Dairy & Food Laboratories, 6930 North Clark Street.

Chicago Pharmacal Co., 5547 North Ravenswood.

Columbus Laboratories, The, 31 North State Street.

Continental Can Co., Inc.—Metal Division, 76th and Loomis Boulevard.

Continental Coffee Co., 641 North Orleans Street.

Cook Chocolate Co., 4825 South Rockwell Street.

Dawes' Laboratories, Inc., 4800 South Richmond Street.

Dickinson Co., Albert, The, 2750 West 35th Street.

F. & F. Laboratories, Inc., 3501 West 48th Place.

Fermco Chemicals, Inc., 4941 South Racine Avenue.

Feuer & Associates, Bertram, 664 North Michigan Avenue.

Food Technology, Inc., 5903 Northwest Highway.

General Foods Corp.-Perkins Products Co., 7400 South Rockwell Street.

Glidden Co., The, Food Division (Durkee Famous Foods), 2670 North Elston Avenue and 3702 Iron Street.

Griffith Laboratories, Inc., The, 1415 West 37th Street.

Hales & Hunter Co., Red Comb Laboratory, 140th and Stewart Avenue.

Independent Biscuit Manufacturers' Co., 7002 North Clark Street.

Industrial Bio-Test Laboratories, Inc., 4122 South Union Avenue.

Institute of American Poultry Industries, I.A.P.I. Egg Products Laboratory, 110 North Franklin Street.

James Laboratories, The, 189 West Madison Street.

Johnson Products Co.—Keto Laboratory, 4603 South State Street.

Kitchen Art Foods, Inc., 2320 North Damen Avenue.
Kohnstamm & Co., Inc., H., 11 East Illinois Street.
Laboratory of Vitamin Technology, Inc., 7737 South Chicago Avenue.
Liquid Carbonic Corp., The, 3100 South Kedzie Avenue.
Long Co., W. E., 188 West Randolph Street.
Miner Laboratories, The, 9 South Clinton Street.
Morton Salt Co., Development Division, 1357 North Elston.
Peter Hand Foundation, 1632, North Sheffield Avenue.
Quaker Oats Co., The, 345 East 25th Street.
Reliable Packing Co., 1440 West 47th Street.
Scientific Oil Compounding Co., Inc., 1637 South Kilbourn.
Siebel Sons' Co., Inc., J. E., 4055 West Peterson Avenue.
Stange Co., William J., 342 North Western Avenue.
Swift & Co., Union Stock Yards.
Synthetical Laboratories, The, 5558 West Ardmore Avenue.
Vico Products Co., 2817 North Oakley Boulevard.
Vitamins, Inc., 809 West 58th Street.
Wahl-Henius Institute, 1135 Fullerton Avenue.
Wilson & Co., Inc., 4100 South Ashland Avenue.
Wrigley Co., Wm., Jr., 301 East Erie Street.
Corn Products Refining Co., Argo, Ill.
Jewel Tea Co., Inc., Barrington, Ill.
Wilson & Co., Inc., Calumet City, Ill.
Victor Chemical Works, Chicago Heights, Ill.
General American Transportation Corp., East Chicago, Ind.
Fearn Foods, Inc., Franklin Park, Ill.
Furst-McNess Co., Freeport, Ill.
National Dairy Products Corp., Kraft Foods Co., Glenview, Ill.
Grayslake Gelatin Co., Grayslake, Ill.
Pratt Food Co., Hammond, Ind.
Armour & Co., Kankakee, Ill.
Allied Mills, Inc., Libertyville, Ill.
American Can Co., Maywood, Ill.
United Biscuit Co. of America, Melrose Park, Ill.
American Maize-Products Co., Roby, Ind.
Dean Milk Co., Rockford, Ill.
California Packing Corp., Rochelle, Ill.
Julep Co., The, Sycamore, Ill.
Koller & Koller, Villa Park, Ill.
Wander Co., The, Villa Park, Ill.
Morton Salt Co., Woodstock, Ill.

B. CONTAINERS

Celotex Corp., The, 205 West Monroe Street.
Chicago Carton Co., 4200 South Pulaski Road.
Container Corp. of America, 10 North Clark Street.
Container Laboratories, Inc., 112 West Kinzie Street.
Continental Can Co., Inc., Central Research & Engineering Division, 7622 South Racine Avenue.
Continental Can Co., Inc., Millsplastic Laboratory, 2930 North Ashland Avenue.
Cracker Jack Co., The, 4800 West 66th Street.
Cromwell Paper Co., 4801 South Whipple Street.
Daubert Chemical Co., 4700 South Central Avenue.
Ekco Products Co., 1949 North Cicero Avenue.
Glidden Co., Protective Coating Division, 1856 North LeClaire Avenue.
Inland Steel Container Co., 6532 South Menard Avenue.
Liquid Carbonic Corp., The, 3100 South Kedzie Avenue.
Meyercord Co., 5323 West Lake Street.
Precision Scientific Co., 3737 West Cortland Street.
Rapid Roller Co., 2550 South Federal Street.
Stone Container Corp., 4200 West 42d Place.
Transparent Package Co., 3520 South Morgan Street.
Triangle Package Machinery Co., 6655 West Diversey Avenue.
Visking Corp., 6733 West 65th Street.
White Cap Co., 1819 North Major Avenue.
Apollo Metal Works, Bedford Park.
Dearborn Glass Co., Bedford Park.
Youngstown Sheet & Tube Co., East Chicago, Ind.
Borg-Warner Corp., Marbon Chemical Division, Gary, Ind.
Glidden Co., the Chemical, Metal, and Pigment Division, Hammond, Ind.
Dearborn Chemical Co., Lake Zurich.
American Can Co., Maywood.
Atlas Powder Co., Zapon Finishes Laboratory, North Chicago.

ENCLOSURE 2. MAJOR CHICAGO TRADE ASSOCIATIONS IN THE FOOD AND CONTAINER FIELDS

A. FOODS

Chicago Candy Association, 306 North Union Avenue.
Independent Grocers' Alliance Distribution Co., 131 South Wabash Avenue.
Mayonnaise & Salad Dressing Manufacturers Association, 100 East Ohio Street.
National Association of Retail Grocers, 360 North Michigan Avenue.
National Association of Retail Meal & Food Dealers, Inc., 500 North Dearborn.
National Cheese Institute, Inc., 100 North Franklin Street.
National Confectioners' Association of the United States, Inc., 36 South Wabash Avenue.
National Fruit & Syrup Manufacturers Association, 38 South Deaborn Street.
National Pickle Packers Association, 202 South Marion Street, Oak Park.
National Retail Tea & Coffee Merchants Association, 222 West North Bank Drive.
National Soup Mix Association, 125 East Church Street, Libertyville.
National Split Pea Association, 332 South Michigan Avenue.
Research & Development Associates, Food & Container Institute, Inc., 1849 West Pershing Road.
Salt Producers Association, 231 North La Salle Street.
American Meat Institute, 59 East Van Buren Street.
American Meat Institute Foundation, 939 East 57th Street.
National Livestock Producers Association, 139 North Clark Street.
National Livestock and Meat Board, 407 South Dearborn Street.
Packers & Sausage Manufacturers Association, 100 West Monroe Street.
American Corn Millers Federation, 140 South Dearborn Street.
Cereal Institute, Inc., 135 South La Salle Street.
Chicago Association of Stock Exchange Firms, 120 South La Salle Street.
Millers National Federation, 309 West Jackson Boulevard.
Association of Vitamin Chemists, Inc., 7737 South Chicago Avenue.
American Butter Institute, 110 North Franklin Street.
American Dairy Association, 20 North Wacker Drive.
American Dry Milk Institute, 221 North La Salle Street.
American Farm Bureau Federation, 2300 Merchandise Mart.
Evaporated Milk Association, 228 North La Salle Street.
Illinois Dairy Products, Association, 309 West Jackson Boulevard.
Milk Foundation, Inc., 28 East Huron Street.
National Cheese Institute, Inc., 110 North Franklin Street.
National Dairy Council, 111 North Canal Street.
National Poultry, Butter & Egg Association, 110 North Franklin.
National Soybean Processors Association, 3818 Board of Trade Building.
Poultry and Egg National Board, 185 North Wabash Avenue.
Pure Milk Association, 343 South Dearborn Street.
American Bakers Association, 20 North Wacker Drive.
American Institute of Baking, 400 East Ontario Street.
American Society of Bakery Engineers, 121 West Wacker Drive.
Associated Food Retailers of Greater Chicago, Inc., 500 North Dearborn Street.
Bakers Club of Chicago, 112 West Randolph Street.
Canned Chop Suey Foods Industry, 332 South Michigan Avenue.

B. CONTAINERS

Chicago Paper Box Suppliers Association, 1210 Ridgewood Drive, Northbrook.
Fibre Box Association, 224 South Michigan Avenue.
Folding Paper Box Association of America, 222 West Adams Street.
Paraffined Carton Association, 111 West Washington Street.

Mr. DIRKSEN. Mr. President, the Comptroller's Office, in dealing with money, does not take this into account. Yet I think it is one of the most important factors to be considered when we are dealing with research operations in the field of food and containers.

Next, I point out the impressive number of organizations which are opposed to the removal of this center. They are listed on page 544 of the hearings. I ask unanimous consent that this very impressive list, including packing companies and food processing companies of all kinds, may be printed at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Daniel F. Gerber, president, Gerber Baby Foods, Fremont, Mich.
William A. Beich, vice president, Paul E. Beich Co., Bloomington, Ill.
Roscoe G. Haynie, president, Wilson & Co., Inc., Chicago, Ill.
Herbert R. Stratford, executive vice president, Morton Salt Co., Chicago, Ill.
Russell D. L. Wirth, president, Red Star Yeast & Products Co., Milwaukee, Wis.
J. Clyde Loftis, president, Kraft Foods Co., Chicago, Ill.
Daniel J. Uhrig, president, American Bakeries Co., Chicago, Ill.
R. G. Lucks, president, California Packing Corp., San Francisco, Calif.
K. W. Brighton, vice president and general manager, American Can Co., Barrington, Ill.
Dale W. Johnson, manager, edible protein products, Central Soya Co., Inc., Chicago, Ill.
A. V. Williams, vice president, Lawry's Products, Inc., Los Angeles, Calif.
G. F. Atkinson, general manager, Durkee Famous Foods Division, the Glidden Co., Chicago, Ill.
C. S. Bridges, president, Libby, McNeill & Libby, Chicago, Ill.

Mr. DIRKSEN. Mr. President, next I point out the close liaison which has been established between the food industry and the trade organizations, on the one hand, and the Container Institute, on the other. It seems to me that we would be fairly undoing the work of certainly more than a quarter of a century, and perhaps 40 years, if this removal were undertaken.

Next, I point out the availability of technical personnel. I doubt very much that if the center were removed to Massachusetts, technical personnel in the numbers which are available in the Chicago area, because of the concentration of laboratory work there, would ever become available. That is not the least of the attractions for maintaining this operation in Chicago. There are contacts with the food industry, with the packing plants, with the canners, with the bakers, with the confectionery groups.

One could continue to name almost every food group in the category. There is no other area, and certainly no other city, anywhere in the United States, which offers comparable contacts with which this work is concerned.

Then, of course, there is the question of central transportation, not only as it involves the transportation of commodities, but also the transportation of persons.

Then, too, an offer has come from the Illinois Institute of Technology, which on its own campus, in the near Southside in Chicago, could make quarters and facilities available for this purpose. There is precedent for that. The kind of function which has been identified with Duke University has been taking place for years. I can see no good reason, under the circumstances, why a similar contact and a similar contract could not be negotiated with the Illinois Institute of Technology.

I think the evidence is clear that there are no adequate facilities available at Natick for the moment—at least, I gathered that from such engineering evidence as I could find in the RECORD. It is pretty clear as to what will happen. It will mean that there will be subsequent requests for appropriations for facilities of one kind and another. Why undertake that, and why undertake the removal costs and the relocation costs at this time, when this function has been operating in a very satisfactory fashion?

I think other evidence also could be adduced to support the contention which my colleague [Mr. DOUGLAS] makes, and which I make, that the proposed removal should not be effected; and if the Army has an abiding interest in it, it certainly merits far more consideration.

I hope, therefore, that the pending amendments will prevail, and that another good, long look can be taken before the proposed transfer is undertaken.

The House of Representatives was persuaded on that point, and included no comparable provision in the bill. I do not believe, therefore, that the Senate ought to act until we have had another look at the matter and have had a more thorough investigation made. I hope, therefore, that the Senate will not approve the transfer, and will support the pending amendments.

Mr. SALTONSTALL. Mr. President, will the Senator from Mississippi yield, to permit me to reply to the Senator from Illinois?

Mr. STENNIS. I yield.

Mr. SALTONSTALL. The distinguished Senator from Illinois, the minority leader, has stated that the Comptroller General merely talks about the cost involved but does not consider the question of efficiency. I point out that the headquarters for the research work of the Army Quartermaster is now located at Natick, and that if the new building is constructed in Chicago, all reports from Chicago will have to go through Natick and then to Washington, in order to have the operation unified.

Furthermore, the present building is so inefficient that the proposed move has been stimulated. As I told the distinguished Senator from Illinois [Mr. DOUGLAS], the Army today considers the building to be a white elephant. They cannot rent the parts of it which they are not using. So the building has become extremely inefficient.

The revised suggestions concerning Illinois are to erect new buildings on the grounds of the University of Illinois, rather than to try to rebuild the present quarters.

The reason why the research work was originally in Illinois is that other Army research was located there. But that has been moved out, now, except for the food research.

I also point out to the Senators from Illinois that it is not a question of the procurement of a large amount of food. The Army now, as I understand, procures food from various parts of the country for its research. The amount of food necessary for the research is very small. So there is no question about transportation.

The Senator from Illinois also pointed out that additional new facilities might be needed. The Army made it very clear that while they probably will, in the future, enlarge the Natick facilities, or request the enlargement of the Natick facilities for other purposes, the amount of $3,628,000 is all that will be needed for the movement of the food research laboratory to Natick, and construction of the other related facilities I mentioned earlier.

I should say also that this proposal is an initiation on the part of the Army, pure and simple. As a Senator from Massachussetts, who worked originally with Members of the House to establish research efforts for other purposes, I did not know about this matter until it was actually presented in this year's budget. It was proposed by the Army, the Department of Defense, and the Bureau of the Budget, to provide greater efficiency and savings.

I hope the amendments will not prevail.

Mr. DIRKSEN. Mr. President, if the Chair will bear with me, I wish to make a brief reply.

Essentially, Mr. President, this installation is for a container-research operation. If research is to be done in that field, where should the operation be located, if not in the center of the country which has the greatest amount of container research and container facilities to be found in any place, not only in the United States, but, I venture to say, in the whole wide world.

As a youngster—in the rather mischievous days when probably my sense of right and wrong was not too fixed, and I was still in knee pants—when some of my friends proposed that we raid a farmer's apple orchard and purloin some apples, and when one suggested that we go to Farmer Miller's place, my answer usually was, "Let's go to Farmer Jones' place."

Then one of the group would ask, "Why?"

My reply would be, "Because there are apples on his trees."

Mr. President, in Chicago there are "apples on the trees." The container people and the food people and the laboratory people and the facilities and the technicians are there. So it seems to me that, by every rule of logic, that is the place for this kind of function to be established and maintained.

Therefore, Mr. President, on that basis I am willing to submit this question to the wisdom of the Senate.

The PRESIDING OFFICER. The question is on agreeing to the amendments of the Senator from Illinois [Mr. DOUGLAS].

Mr. DOUGLAS. Mr. President, an informal count shows only five Senators on the floor. I should not like to have the decision as to these amendments reached by so small a number of Senators. Therefore, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendments, en bloc, offered by the Senator from Illinois to the committee amendment. [Putting the question.] The ayes appear to have it.

Mr. SALTONSTALL. Mr. President, I ask for a division.

On a division, the amendments to the committee amendment were rejected.

The PRESIDING OFFICER. The committee amendment is open to further amendment. If there be no further amendment to be offered, the question is on agreeing——

Mr. STENNIS and Mr. HOLLAND addressed the Chair.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Mr. President, under the agreement, I had the floor, but I now yield the floor.

CRITICISM BY PRESIDENT NASSER, OF UNITED ARAB REPUBLIC, OF RECENT ACTION OF U.S. SENATE

Mr. JAVITS. Mr. President, I should like to say a word about a recent speech by President Nasser, of the United Arab Republic, in which he called the Senate of the United States some pretty harsh names, which I think is most unfortunate, and which related to the antiboycott amendment adopted by the Senate.

I call attention to this because the attack, made in a speech in Al-Mansurah on May 7, 1960, aside from its reference to propaganda matters, charges that the Senate of the United States, by its ex-

pression of opinion in the antiboycott amendment adopted to the mutual security bill, was not properly defending freedom. He said that Members of the Senate "pretend that freedom has touched their consciences and hearts." I quote further: "All the world exposes them because if they truly spoke of freedom, they would discuss the freedom of all peoples everywhere."

It seems to me this charge ought to be answered and put in focus. It is precisely because the Senate felt it was defending one of the most fundamental freedoms, namely, the freedom of navigation, in this instance through the Suez Canal, in compliance with international law and international agreements solemnly entered into by the Government of Egypt itself, agreements going back to 1881, which are indisputable elements of a peaceful world, that the Senate took the action it did.

Let it not be forgotten that the United States came to the rescue of Egypt in 1956, when she had closed the canal to world shipping—indeed, barred world shipping from the canal by making it unusable by sinking ships in it when the forces of the United Kingdom, France, and Israel went into action in an effort to keep the Suez Canal open. When the United States came to the rescue of Egypt and got it out of the predicament which could have caused its government to fall, President Nasser made certain commitments to the United Nations itself, which are being violated in this absolutely illegal fashion, and which the sense of the Senate has condemned.

Mr. President, I speak only because I think the Senate was absolutely right in acting as it did, because it held to high moral principles, and principles of freedom, and because it is those very principles of freedom which enable the people of Egypt to have an opportunity in a free world.

For myself, and I am sure every Member of the Senate feels the same way, I express the greatest feelings of friendship for the people of Egypt, the greatest desire to see progress made among them and the Arab world. But progress cannot be achieved—as a matter of fact, it can only be frustrated—by denying to any of the peoples of the world the fundamental freedom of the right of unobstructed passage through international waterways.

I hope very much the people of Egypt may see clearly that the Senate, in enacting the provision which it did, was defending the interests of the people living in a free world—the interests of the United States, and the interests of every other country, including Israel.

Mr. President, it is very easy to paint this action only as an element in the conflict between the Arab States and Israel. I have very strong feelings on this subject. I think it is shameful and not in the interest of world peace that we allow the state of ferment to continue as the result of the United Arab Republic's insistence on maintaining a state of war with Israel.

But the fact is not germane to this situation. In acting as it did with respect to the declaration on freedom of navigation, the Senate was acting in the interest of the peace of the world, in the interest of the freedom of access of shipping to international waterways, and in the interest of maintaining international law and international commitments.

Mr. President, one must speak of this whole situation more in sadness than in anger; and I believe the efforts of President Nasser to read into this action some deep, dark, and conspiratorial motives will fall of their own weight. It was the sense of the Senate to maintain freedom, whereas Egypt's action in boycotting certain shipping through the Suez Canal is a boycott of freedom; and it is very important we should here assure the people of Egypt that we desire very much to safeguard freedom.

Mr. CASE of South Dakota. Mr. President, will the Senator yield for an observation on this subject?

Mr. JAVITS. I yield.

Mr. CASE of South Dakota. I merely wish to express again the hope that, in some way, something can be done to relieve the tensions which are responsible for the feeling, for the remarks, for the legislative riders, and so forth, which result in this situation. I think if the Senate or the United Nations could come forward with a real solution of the refugee problem, many of these situations could be eliminated. I hope that authority will be extended beyond June 30 to take care of the refugees. But, aside from that, I think it is time we have a cure for the sore that has been festering now for more than 12 years.

Mr. JAVITS. No one would more dearly desire an Arab-Israel peace settlement than I would. I think the United Nations is exactly the right forum to carry through such a reconciliation. I hope and pray for the day when it may be effected. As I have always been, I shall be again extremely anxious to see that there is a spirit of compromise and sacrifice by both parties, who I think have suffered under the dreadful situation.

I think it is fair to point out that, notwithstanding every effort of the free world to bring about peace, including resettlement of Arab refugees, and an opportunity to those who wish to do so to be repatriated to Israel, this whole effort has been constantly frustrated by the feeling, apparently, on the part of President Nasser and other leaders in the Arab world, that it was more advantageous to them to use the refugees as a political dagger at the throat of Israel than it was to take care of their kinsmen in an appropriate and humane way.

Mr. CASE of South Dakota. Mr. President, I would not want my failure at this time to say more on the subject to be interpreted to mean that I accept all of the characterization of the situation which has been given by the Senator from New York. I will say that I welcome the statement the Senator has made about hoping for and desiring a solution to the problem.

I think anyone who visits that area must be impressed by the fact that so long as the situation continues it is a reproach to the world, it is a reproach to the United Nations, and it is a reproach to humanity for children to be born into the world and to grow up in the conditions of these refugee camps.

I was at the camp at Jericho. I saw the children there, who were 8 or 9 or 10 or 12 years old, with no knowledge of the world other than what they obtained from the hovels in which they lived in the refugee camp. It suggests that something ought to be done. There ought to be a permanent solution, rather than continue to have the situation fester as it is.

Mr. JAVITS. I, too, have visited an Arab refugee camp on the Gaza Strip during the small moment of time it was possible for me to do that, in 1956.

I think the United Nations has done an outstanding job, I will say, considering the limitations which have been put upon it.

I do not wish my colleague to join me in the statement I am about to make, but I feel deeply that this is a reproach mainly to the Arab States, which have stood in the way of resettlement and of repatriation, or some combination of both.

I understand, I think, the feelings of my colleague, but a study of this matter and of its history indicates no reproach to the United Nations, which is more than anxious to do something about the problem. The same is true with respect to the civilized world.

We have had appropriations earmarked by the Congress lying in the bank, completely fallow, because it was not possible to use them due to the fact that the Arab States will do nothing about cooperating in an effort to bring about resettlement or repatriation of these people.

I repeat, I am not trying to induce my colleague to agree with me. I wish to make it very clear that we may have a disagreement on this point, but I would be less than truthful if I did not state my own views.

Mr. CASE of South Dakota. Mr. President, the Senator from South Dakota always respects the right of every other Senator to make clear his own position in a statement.

Understandingly, Mr. President, I would not want to put words in the mouth of the Senator from New York, or to attempt to make a statement for him. Since the matter came up, it seemed to be an opportunity to emphasize the fact that some attention should be given to the problem. I certainly do not pretend to go into the merits of the problem, or its background or history. I could, if I were so disposed and time permitted, pay some tribute with respect to what has been accomplished in the reconstruction of Israel. I admire what has been accomplished there. At the same time, I cannot help feeling that some burden ought to lay pretty heavily upon the conscience of the world, which has been unable to find a solution which would prevent a continuation of the situation which does exist in these refugee camps.

Mr. JAVITS. I thank my colleague.

Mr. CASE of South Dakota. I thank the Senator for yielding.

ADDRESS BY UNDER SECRETARY OF STATE DOUGLAS DILLON

Mr. JAVITS. Mr. President, Under Secretary of State Douglas Dillon, with whose name there is increasingly being associated the proposals for cooperation between the countries of the Western community and the United States, in an effort to help the less-developed areas to a greater extent even than is being done now and to cooperate in other respects in the fields of trade and aid, gave an address at the 12th annual New Jersey Business Conference, Rutgers University, New Brunswick, N.J., on May 12, 1960, in which he eloquently set forth what the United States is trying to accomplish in this whole field in a very splendid way.

Mr. President, I ask unanimous consent that the address by Under Secretary of State Douglas Dillon may be printed in the RECORD at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNDER SECRETARY OF STATE DOUGLAS DILLON AT 12TH ANNUAL NEW JERSEY BUSINESS CONFERENCE, RUTGERS UNIVERSITY, NEW BRUNSWICK, N.J., MAY 12, 1960

It is always a pleasure to come home to New Jersey, and I am honored to participate in this important conference on the Rutgers campus. Your theme—"America's position in world commerce"—is directly related to the major issues of our day. Its choice and your attendance here are proof that New Jersey's business community is keenly aware of the problems of our times, and is dedicated to the search for workable solutions.

The times clearly call for strenuous efforts to maintain and reinforce our international economic position if we are to successfully meet the two major challenges which confront us today:

The first is the worldwide offensive mounted by the Soviet Union against our system of free institutions.

The second is the desperate struggle of more than a billion people in the free world's newly developing areas to escape their traditional poverty, sickness, and illiteracy, and to achieve dignity, independence, and material progress within a framework of meaningful freedom.

These two challenges are closely intertwined. For the Communist leaders are making a major effort—supported by a high rate of economic growth in the Soviet Union—to persuade the peoples of the newly developing areas that their best hope of achieving progress is by taking the Communist path.

At no time in history has our free way of life been under greater pressure. We must energetically demonstrate that freedom, rather than communism, can best meet man's universal aspirations for spiritual and material growth. The newly developing nations are watching to see which system can perform best—ours or the Communists. How well we perform will largely determine not just our own well-being, but the course of world events as well. The private American businessman has a vital role to play in this competition. For he is the very heart of the system which the Communists are striving to destroy.

If we are to succeed, we must constantly strengthen our economy, both at home and abroad. The goal of domestic growth is closely related to success in our efforts to help the newly developing areas. Growth at home makes it easier to marshal the resources so desperately needed to foster growth abroad. Equally important, growth at home provides confidence abroad in free enterprise and promotes faith in the United States as a nation worthy of emulation.

A high growth rate should be our goal even if communism simply didn't exist. But we cannot ignore the fact that industrial production in the Soviet Union is presently expanding at more than 8 percent annually, compared with our own rate of about 4½ percent. The Soviet Union continually uses this comparison to project its own Communist image to the newly developing countries as the ideal blueprint for economic progress. It would, of course, take the Soviets many years to make good their boast of catching up and surpassing us. But catch up they may—unless we bestir ourselves. We cannot afford to be complacent, especially when we reflect that with an annual gross national product only 45 percent of our own, the Soviets, by concentrating on areas which contribute most to industrial and military strength, are already able to fully match our military efforts.

The last 2 years have highlighted the importance of a substantial export surplus. Today, any businessman who works to sell American made products abroad should know that he is contributing directly and importantly to our national security.

In order to counter the Soviet threat, we have been forced to deploy strong military forces overseas. These forces, together with those of our allies, provide the security shield behind which the free world can live and work in peace. Our own defense expenditures abroad cost the United States between $2½ and $3 billion a year in foreign exchange. In the long run, we must look to our export surplus to provide this sum. A much smaller, but equally important, requirement for expenditure abroad comes from our foreign aid programs. The larger part of the expenditures under these programs are made in the United States—and, hence, have no effect upon our balance of payments. Nevertheless, the net dollar outflow for all forms of foreign aid—military and economic—amounts to a little over $700 million a year.

Both expenditures—to maintain substantial American military forces abroad, and to operate our foreign aid programs—are absolute necessities if security, stability and progress are to be maintained in the free world. Both are ultimately dependent upon a continued and substantial U.S. export surplus.

In the years immediately following the war, we had no export problems because we were the only large-scale producer. Our sales were limited only by the availability of dollars in other countries. To use the vernacular, our exporters "never had it so good." Today, however, the other industrialized free nations have recovered from the ravages of war. Our friends in Europe and Japan provide strong competition. In some areas, their costs of production are lower than ours. In many others, this is not the case. But they work night and day to increase their exports. This is the normal situation for an industrialized nation such as ours. The time has come when we Americans must give exports the same sort of priority and attention.

The Departments of State and Commerce are now embarked with other interested Government agencies on an intensified new program to stimulate greater interest in foreign trade in American business circles. We are moving energetically to provide better Government facilities, both at home and abroad, to assist American firms in selling their goods and services in foreign countries. But despite everything that we in Government can do, the promotion of exports remains essentially a task for private business. The basic drive must come from the business community.

Over the past 15 months, the Department of State has been seeking to persuade our friends and allies in Western Europe and Japan to eliminate discrimination against our exports which were originally invoked to protect meager foreign exchanges reserves during the postwar period of the so-called "dollar shortage." Fortunately, now that the financial problems that originally brought these discriminations about have been overcome, the need to do away with them has been recognized by our trading partners. Great progress has already been made. Our estimates indicate that Western European actions to remove discriminations last year increased our potential markets by roughly half a billion dollars a year. The momentum is being maintained and gives hope that by the end of this year, postwar discriminations against our exports will be virtually a thing of the past.

Our efforts to open markets long closed to American products are only a part of our drive to expand exports.

We are constantly seeking reductions of tariffs affecting our exports, and we are alert to forestall the erection of new barriers to American products.

With this in mind, we have been closely following developments in Western Europe, where one important regional economic group—the European Economic Community—has been established, and a second—the European Free Trade Association—will soon come into being.

The European Economic Community, often referred to as the Common Market or the "Six," represents a far-reaching effort on the part of France, Germany, Italy, and the three Benelux nations, to merge their economies into a single entity.

The Common Market Treaty calls for complete free trade inside the Community, with a uniform level of tariffs and a common commercial policy toward the rest of the world. The Treaty also provides for free movement of workers and capital, and for harmonized agricultural and financial policies—all overseen by common institutions.

The United States has long favored the goal of economic integration in Western Europe. We believe that a strong, single unit, closely allied with us and other Atlantic nations, is highly desirable for reasons of free world security, political cohesion, and economic growth and stability. We therefore support the objectives of the European Economic Community.

At the same time, we are urging the Community to adopt liberal trading policies and, in particular, to establish as low a common tariff as possible. For this reason, among others, we welcomed the proposal that the Common Market reduce its future common external tariff by 20 percent at the same time that it speeds up the creation of its customs union.

The second European regional grouping is the European Free Trade Association—also known as the "Seven." The EFTA, recently ratified by the parliaments of Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and the United Kingdom, provides for free trade in industrial goods among its members. Unlike the Common Market, which aims at a high degree of economic integration and very close political ties, the EFTA has no common tariff. It explicitly reserves to each member full control of its own external commercial and general economic policies. Its stated objectives are therefore not as far reaching as those of the Common Market.

You may have read reports that U.S. support for the European Economic Community in some way indicates opposition to the EFTA, or favoritism for the Six as against the Seven. I can assure you that this is not the case. There is no question of choosing sides. In indicating our support for the European Economic Community, based on political and security as well as on commercial policy considerations, we neither state

nor imply opposition to the European Free Trade Association.

We do not, however, share the belief of some of the Seven that the mere creation of the Common Market will inevitably cause such serious trade difficulties that Europe will be split in two. We favor negotiations between the Six and the Seven to work out individual commodity problems that are of particular importance to the countries concerned. We have always favored such negotiations. It is our considered opinion that if they are entered into in good faith and vigorously pursued, they can provide reasonable solutions to the complex problems of intra-European trade.

We have also pointed out to both European groupings the importance of their actions to the rest of the free world. We have stressed the fact that the most favored nation provisions of the General Agreement on Tariffs and Trade require that such special tariff concessions on individual commodities as the members of the two groups may grant each other must be extended to all other members of the GATT—including, of course, the United States. I am happy to say that this principle has been widely and generally accepted by the members of both groupings. You can be certain that we shall continue to urge the European Common Market and the European Free Trade Association to pursue increasingly liberal trade policies toward the United States and the rest of the free world.

I have every reason to hope that our efforts will be successful. But I should like to emphasize that we must maintain our own liberal trade policy if we are to expect other countries to join with us in liberalizing and expanding trade. If nations are to buy from us, they must also be able to sell to us.

The preservation of freedom must be a cooperative effort. Our friends and allies recognize this truth. As their economic strength develops they are assuming a steadily increasing share of the common responsibility for safeguarding the free world. For example, the annual military expenditures of our NATO allies have increased more than a billion dollars in each of the past 2 years and further substantial increases are in sight this year.

Our newly prospering allies are also playing a stronger role in speeding the growth of the developing areas. They have not only accelerated their direct financial and technical assistance to needy regions, but they have joined with us in strengthening the free world's institutions of economic cooperation. These major steps include the proposed establishment of a billion dollar International Development Association to complement the operations of the World Bank, and creation of a Development Assistance Group, through which our allies and ourselves are seeking ways and means of increasing the flow of capital to development-hungry areas.

Finally, 18 European nations have joined Canada and the United States in preliminary steps to reconstitute the Organization for European Economic Cooperation into a major instrument for meeting the challenges we now face. Once the reconstituted OEEC is a reality, with full membership for Canada and the United States, more effective collaboration will be possible in promoting sound economic growth and in mobilizing the resources of its industrialized members to help the newly developing lands.

The increased help which other industrialized countries are extending to newly developing areas is a welcome and most important development. However, these increased contributions from others should not be regarded as a substitute for our own contributions, which must be continued at adequate levels through our mutual security program.

This includes military assistance and defense support grants to nations on the periphery of the Sino-Soviet empire whose economies are otherwise unable to sustain the defense establishments they must have to resist Communist military pressure. It includes loans for sound productive purposes through our Export-Import Bank and our Development Loan Fund. It also involves furnishing ideas and skills to the newly developing countries through technical, educational, and cultural programs.

We can go forward confident in the knowledge that other countries are working with us in the great struggle to preserve and expand freedom. We no longer stand alone but the basic American effort must come from private business which, after all, is freedom at work. Private business is the mainstay of our growth here at home. It is to private business that we must look for much of the investment capital and technical know-how so desperately needed in the newly developing countries. And it is to private business that we must look for our all-important export surplus. By accepting this challenge—each in your own way—you will be serving your own best interests at the same time as you serve the cause of freedom for all mankind.

ADDITIONAL JUDGESHIPS FOR NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a hard-hitting report published on the front page of this morning's Wall Street Journal on the clogged condition of Federal court calendars, where almost half of the civil cases get to trial after a delay of up to 4 years.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CLOGGED COURTS—BACKLOGS REMAIN HIGH DESPITE STEPPED-UP EFFORTS TO CUT THEM—MANY FEDERAL CASES DELAYED UP TO 4 YEARS—CONGRESS STALLS ON NEW JUDGESHIPS—A MAJOR CULPRIT: THE AUTO

(By Lyle W. Denniston)

Eleven long years ago, before the Korean war, a small Nevada company called Sensytrol Corp. filed a court claim charging Radio Corp. of America with infringement of a patent on a basic radar technique. That claim is still awaiting trial, much to the plaintiff's distress.

Emil K. Ellis, New York lawyer fighting the case for Sensytrol, says the company "has been at a standstill because of its inability to do anything until this claim is settled; we've been the victim of years and years of delay." RCA attorneys, in turn, blame the plaintiff for part of the wait, saying the company failed to produce requested information on time. Anyway, the case is practically a life-and-death affair for Sensytrol, Mr. Ellis contends. "Its only asset is this claim to infringement."

This frustrated seeker of what it deems to be justice is one among a legion of businesses, public agencies and plain citizens caught in the toils of courthouse congestion and delay. These ailments are plaguing much of the U.S. legal process despite growing attempts at a cure.

The new lawsuits that go to court today face this prospect: At least two-thirds of them will still be there 6 months from now. A sizable number—nearly 50 percent of the civil cases that go into Federal courts—will have to wait from 1 to 4 years even to get to trial.

CHRONIC CONGESTION

Justice delayed, warn the highest authorities, can be justice denied. U.S. Chief Justice Earl Warren, who presides over the entire Federal judiciary, has complained that "choking congestion is so chronically prevalent that it is compromising the quantity and quality of justice available to the individual citizen." Clogging of courts, adds Supreme Court Justice William J. Brennan, Jr., "is a problem of such gravity at some places as to threaten an actual breakdown in the administration of justice itself."

At the end of December, latest reports show, a total of 65,962 civil cases were pending in Federal district courts. Add the 8,321 criminal cases, and the caseload is big enough to keep the district judges busy for a year even if no more cases were to go to court. The total backlog at the end of 1959 was 2,894 cases smaller than the year before, largely due to a mid-1958 law that trimmed Federal court jurisdiction slightly. However, the 1959 Labor Reform Act, with its controls on unions, is expected to produce almost enough cases to take up the slack.

State courts, too, are clogged; in some, it takes 5 to 6 years to get a case to trial.

WORK GROWS FASTER THAN MANPOWER

It would be easy to attribute this logjam to one simple fact: The courts' workload has increased faster than the juidcial manpower handling it. And that certainly is part of the story. Population and economic growth, along with the increasing complexity of modern life, breeds more and more legal combat.

Chief Judge Sylvester J. Ryan, of the southern district of New York cites the continuing swell of court business confronting the same number of judges, and asks rhetorically: "How long can you whip a willing horse?" His 18-judge court, the biggest and busiest of all Federal courts, disposed of 1,231 more civil cases in the 9 months ended March 31 than a year earlier, but the backlog only dropped by 430 cases. The reason: New cases came into court at a sharply increased pace.

But some of the blame for congestion must also be laid to lawyers' delaying tactics and outmoded court procedures. And there's an element harder to pinpoint: Many Federal judges are old, and some, court students suggest, are downright lazy or even incompetent. Not only do Federal judges average more than 60 years in age, but their jobs are guaranteed for life, a fact that tends to insulate them from criticism and pressure.

The most obvious remedy for court congestion—addition of more judges—has been proposed, but is not likely to be applied in Federal courts anytime soon. The Federal judiciary has asked Congress to create 46 new judgeships. So far the Senate Judiciary Committee has voted to create 22, while a House Judiciary Subcommittee wants to add 40. But there the matter lies.

AN INCENTIVE FOR CONGRESS

Trying to pry loose a bill for more judges, President Eisenhower told Congress in his special message last week it would be heartless to continue to neglect delayed justice. Furthermore, to entice the Democratic-controlled Congress to act, the administration has promised to name Democrats to half of any new judgeships created.

But even this is doing little to advance the judgeship bills. By delaying any action until next year, when they hope the White House will be in their hands, the Democrats see a chance to snare all new judgeships, not just half, for their party. With less than 2 months left in 1960's congressional session, judicial expansion seems all but dead for this year.

Any shortage of judicial manpower may not be entirely Congress' fault, however. At the moment, nine seats on the Federal district bench stand empty—one of them has been vacant for a year—and it's the President's responsibility, primarily, to fill them. One of these vacancies, it's true, has been open only a month, and for two of the others, nominations are pending. But part of

the delay in proposing nominees is the need for clearing them with Senators; sometimes the lawmakers can't agree among themselves or with the administration on the man.

Meantime, the pressure of congestion is bringing a tinkering with court procedures that may ultimately change much of the character of U.S. justice. In some instances, cases are being streamlined at pretrial conferences. Arbitration is being tried to decide lesser cases. For certain types of cases, the time-consuming use of juries is being reduced in favor of decision by a judge alone.

SOME PROGRESS MADE

Through such devices, some progress is being chalked up. Last year, in a 4-month experimental project, Chief Judge William F. Smith and 14 other Federal judges pounced on 1,170 cases on the docket in Brooklyn Federal court. When they had finished, 901 of the cases had been disposed of altogether. The object of the venture was to examine each pending case carefully at a pretrial conference, sharply pare the issues and the testimony to be relied upon at the trial, then promptly put it through a trial before a judge.

Even with the tinkering done so far, however, most civil cases still face long delays. "Human roulette, that's what we're playing," complains Philip F. Di Constanzo, a Brooklyn lawyer who handles hundreds of individuals' accident-injury cases. Not long ago, one of his clients, Italian immigrant Joseph Giuffre, collected $45,000 for fractures to both legs in a dock accident about 8 years earlier. The longshoreman couldn't work, Mr. Di Constanzo relates, but "still the case had to lie and wait its turn."

Consider the case of Charles Novak and Francis Savage, teenagers at the time, who were driving through South Boston on February 7, 1953. As their car moved into the crossing of A and West Third Streets, so did an Army truck. The streets were slippery, brakes didn't hold and the two vehicles crashed. Guardians for the boys took Uncle Sam to court, claiming the Army driver was at fault and asking $35,000 for injuries. That was 7 years ago. Still no settlement is in sight.

A CLASH OVER COPPER

Business and industry, of course, get on the judicial treadmill, too. Two years ago, Ferric Industries, Inc., a New York company, made a plea for a quick trial, "for reasons of hardship," of a damage suit that was already 3 years old. The trial is now set to start in Boston in June. Ferric and a German company, Klockner & Co., contend Bay State Smelting Co., Inc., of Somerville, Mass., didn't carry out 1954 and 1955 contracts to supply copper to Ferric for export to Klockner. Bay State argues it couldn't get an export license for copper because of a then-existing Government embargo, so the only way it could comply with the contract was by breaking the law. Ferric says Bay State only was obliged to deliver the copper, not export it. Ferric and Klockner say canceling of the contracts has caused them damage because "the price of copper has risen materially."

Docket congestion exists mostly in big-city areas. But that's where most of the cases are filed, so delay there has its widest impact. Thus, far more people are affected by the four-plus years it takes to get an average case to trial in Cook County superior court in Chicago than by the wait of only 4 months in Washoe County district court in Reno.

Among the courts that sit in metropolitan centers, delay and congestion are confined to the trial courts—the Federal district courts and their counterparts at the State level. These are the tribunals that get the cases first, and they dispose of most of them. At the Federal level, only about 5 percent of all cases are appealed.

PRIORITY FOR CRIMINAL CASES

Most stalled cases are civil ones. Criminal cases commonly get priority handling and they're relatively few in number, anyway. Among civil suits, the delayed ones most often fall into one of three categories: Personal injury cases charging negligence, as in the Giuffre case in Brooklyn; patent infringement complaints, such as Sensytrol Corp.'s case against RCA; or antitrust cases, such as the Government's still-pending attempt—begun in 1956—to break up the merger of Continental Can Co. and Hazel-Atlas Glass Co.

Personal injury suits dominate the backlog, simply because they pour in so fast; they make up roughly a third of all civil cases filed in Federal courts. Patent infringement and antitrust cases drag on because of the complex technical and economic issues they raise.

Federal appeals courts, including the one at the top—the U.S. Supreme Court—are practically abreast of their work. Together they consider only about 4,000 cases a year. The U.S. Courts of Appeals, on the level below the Supreme Court, "are disposing of their business in less than 7 months for the median case," according to U.S. Court Administrator Warren Olney. Though Justice Felix Frankfurter thinks the Supreme Court considers too many cases, Justice William O. Douglas just as stoutly insists it's a myth that the Court is overworked.

The congestion that does exist is blamed variously upon economic growth, the birth rate, the automobile, Congress, the judges, lawyers, and legal habit.

"The truth is," Chief Justice Warren has declared, "that for every inch we gain, the normal healthy economic and population growth of our country extends a yard—leaving in its wake a whole new volume of litigation for the courts."

"Perhaps the biggest culprit," Attorney General William Rogers has suggested, is the auto. Cases spawned by car accidents, he noted, make up nearly a fourth of all private civil suits taken into Federal courts. This had led to some vigorously challenged suggestions that auto cases be taken out of court and put before an administrative body.

SOME HELP FROM CONGRESS

Congress now and then helps the judiciary fight congestion with such laws as the 1958 act sharply curtailing the opportunity to get cases into a Federal court just because the people involved lived in different States. However, Congress has lately been unresponsive to what many consider the real need: More judges.

Ranking next to criticism of legislators for failure to help judges cure congestion is criticism of judges for failing to help themselves. Chief Judge Charles E. Clark of the second circuit court of appeals phrases it kindly: "The caliber of judges, particularly as judicial administrators, varies greatly." A high-level Government attorney is much less charitable: "Some of these men on the bench don't belong there."

INERTIA AND COMPLACENCY

Paul Cotter, Senate Appropriations Committee staff member, found in a 1959 survey of a score of Federal courts that "some of the judges are overworked while a minority of the judges appear to do little." He concluded: "In some courts, inertia and complacency predominate."

Whatever a judge's energies and talents, however, his output is also influenced by the procedure that surrounds his work. Mr. Cotter's report complained that some of the courts he visited "are hopelessly enmeshed in outmoded, inadequate, and, at times, amateurish and most unbusinesslike practices and procedures." Improved court procedures, Administrator Olney comments, are as necessary as adequate judgepower.

Almost as often as judges and their aids are blamed for delay, lawyers' tactics are found at fault. "Stalling tactics," Attorney General Rogers has complained, "are used too often by some lawyers without justification." After all, Judge Clark of the second circuit court declares. "We must recall that defense lawyers' primary responsibility is to win cases for their clients, not to improve law administration for the public. A pleading order delaying and worrying a plaintiff is but an obvious and a natural strategy."

Though some court reformers are willing to forgive some intentional delay as part of the game, they're less tolerant of delay that comes when too many cases are handled by too few lawyers. The Federal district court in the District of Columbia now has a rule that any lawyer who has more than 25 cases on the docket can't get a postponement of a case on grounds he's tied up in another court, unless it's the U.S. Supreme Court or the U.S. Court of Appeals in the District of Columbia. The object: Get the lawyer to drop some cases or hire more help.

Mr. JAVITS. Mr. President, last session my colleague [Mr. KEATING] and I pressed repeatedly for action by the Senate Judiciary Committee on Federal judgeship nominations and stressed the urgent need for seven additional judges in three Federal courts in the New York area. Eventually, action on the nominations was forthcoming, and today there is only one vacancy on the Federal bench in New York. Also, the Judiciary Committee has reported a bill recommending the creation of 30 new judgeships, including 1 for the Second Circuit Court of Appeals and 3 in the southern district of New York. Meanwhile, the House Judiciary Committee is at work on a bill to create two new Federal judgeships in the second circuit—two judgeships in the eastern district and four more in the southern district, which is in close accord with the number called for in the bill I introduced with the junior Senator from New York [Mr. KEATING] last year.

The need for new judgeships as contemplated by the House Judiciary Committee is a far more realistic number so far as New York is concerned. The judges in the southern district carry the heaviest caseload in the country, an average of 633 per judge as of March 31, 1960. Although the eastern district shows a caseload of 306 cases per judge, the pressure is also close to unbearable, for in both these districts the litigation is often of an unusually involved nature, and the time required on the average case is normally much greater than is the experience in other Federal districts, and delays in excess of 4 years are commonplace. On the Second Circuit Court of Appeals the judges are carrying the second highest caseload in the country.

In his recent legislative message, the President singled out the need for increasing Federal judgeships as an urgent national issue demanding "swift action" by Congress, since, he reported, "in certain districts injured people must wait over 4 years for justice or compromise their rights—a fact well known to New Yorkers. He reaffirmed the administration's support of the Judicial Conference's recommendation that approximately 40 new judgeships be created.

Here in the Senate, I urge the leadership to schedule action in the very near future on the judgeship bill reported by the Senate Judiciary Committee. We

all recognize that there is a traditional reluctance to move forward on such matters in a campaign year. But so long as the Congress does not act and an intolerable caseload burden continues to build up in so many areas of the Nation, then the Congress must share part of the responsibility whenever justice delayed because of the endless logjam of cases results in justice denied.

AMENDMENT OF TITLE 14, UNITED STATES CODE, RELATING TO PERSONNEL OF THE U.S. COAST GUARD

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business may be temporarily laid aside, and that the Senate proceed to the consideration of Calendar No. 1410, H.R. 9449.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, the bill has the approval of the majority leader. The bill was reported unanimously by the committee. I ask that the bill be passed.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill (H.R. 9449) was ordered to a third reading, read the third time, and passed.

CONSTRUCTION AT MILITARY INSTALLATIONS

The Senate resumed the consideration of the bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes.

The PRESIDING OFFICER. The committee amendment is open to further amendment.

Mr. HOLLAND. Mr. President, will the Senator yield to me?

Mr. STENNIS. The Senator may have the floor in his own right.

The PRESIDING OFFICER. The Senator from Florida is recognized.

Mr. HOLLAND. Mr. President, at noon today, at about the time the Senate convened, the administrative assistant of the junior Senator from Oklahoma [Mr. MONRONEY] got in touch with me quite hurriedly to say that the two Senators from Oklahoma were detained out of the city today by necessitous official duties and that a matter would come up in regard to the particular bill under discussion which was of great concern to both Senators, but especially of great concern to the junior Senator from Oklahoma. The administrative assistant brought me the papers in regard to the matter, one of which was a letter of May 13 to the Senator from Oklahoma [Mr. MONRONEY] from Julian H. Zimmerman, Commissioner of the Federal Housing Administration. There were also various briefs, and a proposed amendment to the pending measure in connection therewith.

Mr. President, I found, upon examining the papers, that the questions raised which concerned the Senators had to do with section 810 of the Federal Housing Act. The matter related to an amendment which was placed in the Housing Act last year, in the field of military housing construction for families, on the motion of the junior Senator from Oklahoma [Mr. MONRONEY]. It appears that under said section 810 the Commissioner of the FHA can, in certain cases, move to provide family housing in the area of military bases for occupancy by military personnel, by families of military personnel, or by families of key civilian personnel, as the Senator from Florida understands.

The point made was that in the action by the other body upon this bill there was a provision enacted to the effect that, from the time of enactment of this bill, any item to appear under that section 810 must be a line item or specific provision in the authorization bill.

The Senator from Oklahoma, by request, transmitted this information to me. To the request was attached, as I have said, communications from the FHA. It has been stated there are certain projects which do not appear in the line items contained in the present bill, which the Senator from Oklahoma thinks could most advantageously be handled by making an exception of 1,500 family housing units from the new provision in the House bill, which, as I understand it, has been approved by the committee and incorporated in the pending measure today.

The time afforded me for investigation of the matter was not great, but I noticed at once that the reason why the matter was referred to me for handling was that one of the first items in the group of bases that were said to require this kind of handling was an item for 300 family units for the Canaveral guided missile base, which is generally referred to as the Patrick Air Force Base complex near Cocoa, Fla. I have never heretofore requested, and I do not now propose to request, of this subcommittee or of Congress any action affecting any such project at any base in my State upon any other basis than that it can be completely justified. In this instance it would have to be justified in conference, because I have no detailed information on the subject.

I immediately consulted the two Senators from Arizona, since Fort Huachuca, Ariz., was one of the bases mentioned to which this problem pertained and found they had been apprised of the need for 150 housing units of this kind there. I have endeavored to consult other Senators from States where bases were said to be affected but have been unable to do so. Since the matter had been called to my attention by the Senator from Oklahoma [Mr. MONRONEY], I felt that I should check on an item alleged to affect his State. Upon checking with the Assistant Secretary of the Air Force, who, I understand, is handling this matter for the Department of Defense, I found that in his opinion 150 units would be adequate to take care of the situation at the Oklahoma base.

The office of Assistant Secretary Bryant, who is handling this matter, stated that when they received word of the action of the House, they asked the three branches of the service—the Army, the Navy, and the Air Force—to contact their farflung bases and to advise them of items which they felt should appear as line items. They said they had not yet had an answer from any except the Navy, and the answer from the Navy came within the last few days covering three or four needs which I understood from them were incorporated in the present bill; and I have so understood on checking further today. The information from the Army and the Air Force has not yet been received.

In view of the announcement made to me by the distinguished chairman of the subcommittee and other members of the subcommittee, who think the items in this field should be handled henceforth as line items so that Congress can retain complete jurisdiction, I know of no method to attack this problem except by offering line items affecting the three or four needs which we have had time to check on, with the completely distinct understanding that unless they are justified in conference, I do not expect them to remain in the bill. I have never asked a member of this committee to include any such item for any base in my State, and if the base in my State that I have mentioned, at Canaveral, does not show a clear requirement for attention of this kind, I hope that the item will not be left in the bill.

Mr. President, I have drafted an amendment containing the two items—one for the Patrick Air Force Base providing for 300 family home units, and one, as a courtesy to the Senator from Oklahoma [Mr. MONRONEY], for the Clinton-Sherman Air Force Base at Clinton, Okla., for 150 units, the same to appear after line 14 on page 121 of the bill, with the distinct understanding which I have just stated, and I hope that the committee in its judgment will feel that that is a fair way to approach this problem, to see whether or not there exists a case of real need for immediate construction of additional family housing under the program mentioned and in the two bases mentioned which determination may be made before the conference or during conference.

The PRESIDING OFFICER. The amendment offered by the Senator from Florida will be stated.

The LEGISLATIVE CLERK. On page 121, after line 14, it is proposed to add the following:

Patrick Air Force Base, Cocoa, Florida, three hundred units; Clinton-Sherman Air Force Base, Clinton, Oklahoma, one hundred and fifty units.

Mr. STENNIS. Mr. President, I will make very few remarks now as a background for the consideration of the two amendments. I wish to call the attention of the Senator from New Mexico [Mr. ANDERSON] and the Senator from

Arizona [Mr. HAYDEN] to these remarks. I have discussed this subject with the Senator from Florida [Mr. HOLLAND], the Senators from New Mexico and Arizona, and on behalf of the committee, we expect to join in the request that the amendments under the conditions stated be adopted by the Senate. However, I do think a firm background statement ought to be made.

A year ago, in the regular housing bill passed by the Senate there was a section, about which the Subcommittee on Military Construction was not consulted, which provided that 5,000 units of housing could be constructed by the Federal Housing Administration for military use or for civilians employed by the military. There was no limitation. There was no line item requirement as to where the units would be located or anything like that. The first the Senator from Mississippi heard about it was when it was explained that this would be a fine new program, and that the military would not have to put up any money. They would not have to guarantee anything except to promise to rent the residences for the first 5 years of their useful life. That seemed to me to be a very attractive program. I thought well of it. As time rocked on, this program was authorized on a 5,000-level basis in another nonmilitary bill regulating military matters.

This is the program as of today:

The Federal Housing Administration said:

> We will build the houses, but if we find certain things connected with the program, the military will have to underwrite and guarantee the program. You do not have to promise to rent the housing, but you must promise to pay for it.

One hundred million dollars in principal amount, in round numbers, was authorized by the Congress under the conditions which I have briefly outlined.

The House of Representatives, alert, as it usually is, very promptly amended the bill with a provision that before the military could be liable for any of this money, there would have to be a line item authorization.

The provision commended itself to us very highly. It was passed, I think, on March 7, and nothing was said about it. No one appeared before our committee against the provision. I did not hear anything from the Housing Administration until the day the bill was to go before the full committee. There were requests of various kinds for amendments, but we did not adopt the amendments.

There has been no proof of need for any of these units at any of the military installations. The Senator from Florida [Mr. HOLLAND] said no agency except the Navy had reported any kind of need. By the way, we put the Navy's request in the bill, and on the floor of the Senate the Senator from the State in which the installation was to be placed asked that it be removed. That is the softness of this program. I say this with deference to all Senators.

In the past day or two, all of a sudden, presumably through the activities of the Federal Housing Administration, Senators have been consulted about an alleged need. Senators are not prepared to prove that there is need.

There is a certain amount of fairness involved here, which dictates that the requests of these Senators be not left out entirely; otherwise they would be excluded from the operation of the 5,000-unit law, which I believe is a bad provision. We agree to join the Senators in the amendments and take them to conference, with the understanding that the justification for these proposals and the need for them will have to be shown before we get to conference and before we can make an outright fight for these amendments.

I believe that fairly sums up the situation. I felt compelled to make this statement. It is partly, we feel, a matter of an agency of Government going after the business. We do not have any real proof and I am sure the Senators do not have any real proof or had any real proof given to them with respect to the actual need. Of course, we can call up a general, and naturally he will say that he feels some need, and will tell us about it. That is all right, too.

We carefully considered all of this Capehart matter and went through it and combed through it, and tried to bring out what we thought was fair. We do not think it is fair to exclude the wishes of these Senators. Therefore, I think what is proposed is the right thing to do.

Mr. HOLLAND. I shall conclude in less than 30 seconds. I wish to express my appreciation to the Senator from Mississippi. His action is eminently fair. If the actual need and the pressing need is not established, the Senator and his conferees can exclude these items, so far as I am concerned, and he is invited by me to do so if that proof is not produced. I know only of the tremendous congestion at Canaveral. I told the Senator that I had not been approached from that angle, that I was not able to tell him that I knew of the urgent need or the immediate need to go ahead with this matter, but I told him it exists, or the Senator from Oklahoma would not have told me so.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Florida.

The amendment was agreed to.

Mr. GOLDWATER. Mr. President, I send an amendment to the desk and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 121, after line 14, it is proposed to insert:

> Army Electronic Proving Grounds, Fort Huachuca, Arizona, one hundred fifty units.

Mr. GOLDWATER. Mr. President, I wish to comment briefly on what the distinguished Senator from Mississippi has said. I thank him for his understanding of this problem. I have not been contacted by the FHA. I have contacted them rather strongly to do something about the housing situation at Fort Huachuca. In my opinion, if the FHA were doing the job it should be doing in that area, it could supply the need for housing. However, they have been reluctant to operate in that area. It is a reluctance I do not believe is justified. They say that the community is not a permanent one. If spending $80 million for a military base does not mean that the community is a permanent one, I do not know what could.

As an Arizona businessman I should like to open a business in that community. I do not go into a place that I consider to be a bad business risk. This request, coming from Senators, as it does, is not the military urging the FHA, but others urging the FHA to do their job, so the military will not have to be bothered with this.

I wish again to thank the Senator from Mississippi for his willingness to take this problem to conference.

I could not prove this case if I stood here for 10 years. I do know that because one agency of the Government has been sitting on its hands we have the problem of providing housing, and this is our only means of trying to do something about it.

Mr. STENNIS. Huachuca is an installation which is relatively remote, and there are 100 units of Capehart housing in the present bill for Huachuca.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona.

The amendment was agreed to.

Mr. ANDERSON. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 21, after line 14, it is proposed to insert:

> White Sands Proving Grounds, White Sands, New Mexico, two hundred and fifty units.

Mr. ANDERSON. The able Senator from Mississippi understands the circumstances involved in this case. I have recently been in New Mexico, so I am aware of the fact that additional housing is required at the White Sands Proving Grounds. I know that approval was given at the proper levels for 299 units, but that this matter may have been brought up late. I have suggested to the Senator from Mississippi I should like to have him take the amendment to conference. I believe the need for the housing can be justified. At noon I talked again to Maj. Gen. W. E. Laidlaw, the Commanding General at White Sands, and he expressed to me again the need for this housing.

If the able Senator from Mississippi will take the amendment to conference, and there finds the facts as I understand them, very well. If not, I know what he will do with it there. I wish to present it in the same fashion that the able Senator from Florida presented his amendment with respect to this particular housing.

Mr. STENNIS. I thank the Senator. I am glad to join in the request that the amendment be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New Mexico [Mr. ANDERSON].

The amendment was agreed to.

Mr. MANSFIELD. Mr. President, I have been listening to this debate with great interest, because I have heard from FHA, not from the Glasgow Air Force Base. I have asked one of my assistants to find out the number of units in question. I am at a loss as to what to do, because I have every faith and confidence in the diligence and fairness of the committee; however, if there is something which would rule out Glasgow Base. I should like the advice of the chairman as to what I should do.

Mr. STENNIS. Under the terms of the provisions in the housing bill the Senator would not be eligible unless an amendment were added to this bill. This is not the Capehart program. The Senator would not be eligible for the program the Senator from Florida and other Senators have discussed, unless an amendment for a line item at Glasgow Base is included in the bill.

I should like to yield to the Senator from California, a member of the subcommittee, and a very valuable member of it, who has worked on the bill with great interest and effectiveness. I should like to have him say something about the bill, if he would.

Mr. ENGLE. I thank the distinguished Senator for yielding to me. With reference to the bill, I believe the careful and excellent work demonstrated by its excellent presentation is largely due to the patience and courtesy and effort and broad knowledge and experience which the distinguished Senator from Mississippi has in this very complicated field. His detailed knowledge of the various military establishments throughout the Nation and the world is a tremendous asset, not only to our committee, but also to the entire country. He has handled the long and complicated hearings on the subject matter with great patience and great courtesy, not only to all the members of the subcommittee, but also with respect to all the witnesses who appeared before the subcommittee.

I am frank to say that I doubt very much if there is anyone in the executive department who has both the experience and knowledge with respect to this particular subject matter the Senator from Mississippi possesses. I believe it is a commentary upon the kind of government we have, that in the executive department we have one crew working, one crew coming, and one crew going. There is not the continuity of service in the Defense Department, as an illustration, which we have in this subcommittee, where over a number of years both the Senator from Mississippi and the Senator from South Dakota [Mr. CASE], the ranking Republican member of the subcommittee, have dealt with this subject.

The Senator from South Dakota [Mr. CASE], the ranking Republican member of the subcommittee, began to deal with these subjects as a member of the Committee on Armed Services of the House and as a member of the Committee on Appropriations of the House. He continues to add to that experience as a Member of the Senate.

I express my gratitude to the chairman of the subcommittee for the outstanding work he has done on this particular bill, and I express my appreciation also for the contributions which have been made by the distinguished Senator from South Dakota.

Mr. STENNIS. I thank the Senator from California for his kind remarks.

Mr. CASE of South Dakota. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

Mr. CASE of South Dakota. I do not wish to let the opportunity pass without thanking the Senator from California for his very generous compliment. It was my privilege to serve for many years on the House Subcommittee on War Department Appropriations.

Earlier this afternoon I made some reference to the contribution made by some members of the subcommittee. The membership of the subcommittee was enlarged this year. Formerly there were three members; this year there were six. I have said on various occasions that I thought the additions to the subcommittee greatly strengthened it.

The Senator from Nevada [Mr. CANNON], the Senator from California [Mr. ENGLE], and the Senator from Maryland [Mr. BEALL] all have made real contributions to the work of the subcommittee this year.

I believe the Members of the Senate know that the Senator from Washington [Mr. JACKSON], the Senator from Mississippi [Mr. STENNIS], and I have found it easy to work together on a bill in which partisan questions seldom arise. They certainly have not arisen this year. Each of the new members of the subcommittee has brought special talents to the work of our group. They have attended faithfully the meetings of the subcommittee. As a result of the efficient work of the committee, including that of our efficient clerk, Gordon Nease, the bill, we really felt, when reported to the Senate represented as good a bill as could be presented, considering the perplexing problems which confront any committee which attempts to deal with these subjects.

I express my personal appreciation to the chairman for his unfailing courtesy and his diligence during the entire consideration of the bill.

Mr. STENNIS. I thank the Senator from South Dakota. I have previously expressed my appreciation for his fine work on the bill.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. MANSFIELD. Mr. President, I join with the Senator from California, the Senator from South Dakota, and other Senators who have spoken so highly concerning the diligence and attention to duty on the part of this particular subcommittee. I have found all its members to be very cooperative. I have extremely high personal regard for the chairman of the subcommittee, the Senator from Mississippi, and for all the other members of the subcommittee as well.

The chief counsel of the subcommittee, Mr. Gordon Nease, has been very helpful on the occasions when I have gone to him for assistance, and in trying to find my way out of various morasses in which I have become encumbered.

As insurance, and with the proviso that the chairman of the subcommittee will strike it out if I am in error, I ask that the amendment I have at the desk be read at this time.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 21, after line 14, it is proposed to insert:

Glasgow Air Force Base, Montana, one hundred units.

Mr. STENNIS. In accordance with the sentiments I have expressed with reference to similar amendments, I join in the request of the Senator from Montana that the Senate adopt the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Montana.

The amendment was agreed to.

Mr. STENNIS. Mr. President, earlier in the day a number of relatively minor items, totaling about $5 million, were presented to the Senate. They are necessary to put various municipal airports and a few airbases in condition for the Air National Guard to assume its newly assigned duties under the revised North American air defense plan.

Because this matter was rushed considerably in the last few weeks, one item, which is on the borderline, was not included in the list of airports approved by the Air Force. It was presented by the Senator from Tennessee [Mr. KEFAUVER]. It is exactly on all fours with the description I have heretofore given. It adds the sum of $800,000 for the extension of the runways at McGee-Tyson Airport, Knoxville, Tenn. The extension of the runways will be necessary if the F–104 planes are operated from that airport.

In order to afford the Air Force more time in which to consider this item, whether favorably or not, the Senate, I believe, should adopt the amendment and take it to conference, so as to fill out the pattern which has been presented, even though it does not quite meet the requirements which the other facilities meet. With that understanding, I offer the amendment and ask that it be adopted.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 140, after line 9, it is proposed to insert:

McGee-Tyson Airport, Knoxville, Tennessee: Operational facilities, $800,000.

On page 145, line 5, it is proposed to strike out "$12,997,000" and insert in lieu thereof "$13,797,000."

Mr. CASE of South Dakota. Mr. President, I shall not object to the amendment, but I should like the RECORD to show that in not objecting to it, the Senator from South Dakota would not want to be regarded as putting any obligation on the members of the committee to hold the amendment in conference if we should fail to find complete justification for it.

On the other hand, since the end of this session of Congress is approaching,

and there may not be another opportunity to consider the item, I would not want the improvement to be deferred if the investigation showed it is important and essential. Therefore, I have no objection to taking the amendment to conference, with the understanding that we shall get further testimony before the conference ends.

Mr. STENNIS. For the information of the Senator from South Dakota, I expressly said in my remarks that the amendment would be accepted pending its justification by the Air Force before the final conference session. I had conferred briefly with the Senator from South Dakota before offering the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Mississippi.

The amendment was agreed to.

Mr. STENNIS. Mr. President, the Senator from Louisiana [Mr. LONG] raised a question about an item in the bill of something like $5 million for Guantanamo Bay. He was told that that was merely to bring forward a current authorization which would otherwise expire. I was not certain then what the situation was with reference to the appropriation for this year. However, there is no request for an appropriation this year for that project, so it is merely a matter of bringing it forward for consideration in future years.

Mr. President, all of us owe a special debt of gratitude to the very capable gentleman who is our clerk. Even though this is only the second year he has been with us, he has acquired an expert knowledge of all the matters reflected in the bill. It is a year-around problem to keep up with them. They are reflected in the vast number of items which reach around the world, even as the new submarine *Triton* has done. Sometimes we, too, have to travel under water.

On behalf of all members of the committee, I wish to thank him especially for the way he has mastered this subject, and for his very sincere and, at the same time, very modest approach to this far-reaching work.

Mr. Nease is assisted very ably by Mrs. Edna Johnson, who also, as one of the secretaries to the Committee on Armed Services, is becoming an expert on military installations.

Mr. President, so far as I know, there are no further amendments or matters to be taken up in connection with the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute, as amended.

The amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on the engrossment of the amendment and third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The question is, shall the bill pass?

The bill (H.R. 10777) was passed.

Mr. STENNIS. Mr. President, I ask unanimous consent that the bill as passed by the Senate be printed, so as to show the amendments adopted by the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I move that the Senate insist upon its amendments, request a conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. STENNIS, Mr. JACKSON, Mr. CANNON, Mr. CASE of South Dakota, and Mr. SALTONSTALL the conferees on the part of the Senate.

Mr. CANNON. Mr. President, I should like to join in the tributes which the Senator from California [Mr. ENGLE], the Senator from Montana [Mr. MANSFIELD], and the Senator from South Dakota [Mr. CASE] have paid to the distinguished Senator from Mississippi [Mr. STENNIS] for his outstanding work in connection with the military construction authorization bill.

I also wish to associate myself with the remarks of the Senator from California [Mr. ENGLE] in paying tribute to the ranking minority member of the subcommittee which handled the bill, the Senator from South Dakota [Mr. CASE].

The writing up of the bill took a great deal of time, much effort, and considerable knowledge and understanding of many difficult problems.

These members of the subcommittee have performed in a most admirable manner; and I am very happy to have had the privilage and the opportunity of serving on the subcommittee with them.

Mr. STENNIS. Mr. President, I thank the Senator from Nevada for his very kind remarks. His assistance to us in the writing up of the bill was most valuable.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the Acting President pro tempore:

H.R. 8042. An act to authorize the Secretary of Commerce to resell any two of four C1–SAY–1-type vessels to the Government of the Republic of China for use in China trade in Far East and Near East waters exclusively;

H.R. 9449. An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes;

H.R. 11510. An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes; and

H.J. Res. 352. Joint resolution to authorize preliminary study and review in connection with proposed additional building for the Library of Congress.

AUTHORIZATION FOR VICE PRESIDENT OR PRESIDENT PRO TEMPORE TO SIGN ENROLLED BILLS OR JOINT RESOLUTIONS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that during the adjournment following today's session, the Vice President or the President pro tempore be authorized to sign enrolled bills or joint resolutions duly passed by the two Houses and found to be truly enrolled.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1267, Senate bill 2131, and that it be made the pending business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on the District of Columbia with amendments.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, at this point I should like to ask the acting majority leader a question: In addition to the bill which just now has been made the pending business, what measures are likely to be called up on Monday or Tuesday?

Mr. MANSFIELD. Offhand, without having much in the way of prior knowledge, I understand that earlier this week the majority leader informed the Senate that bills such as the community television antenna bill, which has to do with community antennas; the so-called Stella bill; and other measures then listed in the CONGRESSIONAL RECORD, will be brought up at the appropriate times next week.

Mr. DIRKSEN. With respect to the so-called community antenna bill, I should like to say that a number of Senators will be out of town—necessarily absent—on Monday, but will be back in time for consideration of the bill on Tuesday. Therefore, I hope the bill will not be called up for action on Monday.

Mr. MANSFIELD. I can assure the distinguished minority leader that the bill will not be called up on Monday.

DECISION OF SENATOR MURRAY NOT TO STAND FOR REELECTION

Mr. ENGLE. Mr. President, the announcement of the senior Senator from

Montana [Mr. MURRAY] of his decision not to run for reelection to the Senate brought many expressions of sorrow at the announcement, and many expressions of praise of the distinguished senior Senator from Montana, by his colleagues. Similar expressions, of both sorrow and praise, have been made by the press in Montana and by the press throughout the Nation.

At this time, I wish to have some of those editorial and newspaper comments and commendations printed in the RECORD.

Mr. President, the Montana Standard of May 1, 1960, in an editorial entitled "MURRAY's Action Has Many Repercussions," dealt with the long and distinguished record of the senior Senator from Montana, and made a number of statements in regard to his political activities in the State of Montana over a period of many years. I now read from that editorial:

After all, he won election to the Senate five times against some of the strongest opposition his own party and the Republicans could muster. And there were many who felt he would secure the nomination again this year had he remained in the race.

When first elected to fill out 2 years of Senator Walsh's term in 1934, he had a plurality of nearly 40,000 votes in polling almost 117,000. He beat Representative Scott Leavitt in that race.

In 1936 he beat Democratic Representative Joseph P. Monaghan of Butte in the primary by about 2,200 votes and then trounced GOP State Senator T. O. Larson of Choteau by 61,700 in the general election, even though Monaghan ran in that race as an Independent. That time MURRAY polled nearly 122,000 votes.

He defeated Monaghan again in the primary of 1942, by nearly 20,000 votes, but edged past Republican Wellington D. Rankin by only 1,212 votes in polling 63,700 in the general. That was his closest escape from defeat, as he won the primary by nearly 49,000 in 1946 and then trounced Tom J. Davis of Butte in the general by more than 30,000 in racking up a 125,000-vote total.

The Senator captured his party's primary by more than 60,000 in 1954, his last time out, and got nearly 115,000 votes in the general to defeat Representative Wesley A. D'Ewart by only 1,728 votes.

Mr. President, the editorial presents a remarkable chronicle of the political campaigning by one of the greatest Democratic Members we have had in the U.S. Senate.

I ask unanimous consent that the entire editorial, from which I have read an excerpt, be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL EARTHQUAKE—MURRAY'S ACTION HAS MANY REPERCUSSIONS

The decision of Senator JAMES E. MURRAY to give up his seat in the U.S. Senate clarifies some of Montana's political air. It also results in widespread repercussions.

To some Democrats in the race it is a golden opportunity. Every candidate in that primary now can look upon himself as the chosen one who will represent Montana, along with MIKE MANSFIELD, in that exclusive "club of 100" which has so much to say about the lives and destinies of all of us.

To the Republican candidates, this also may appear as a bright spot in their political careers. Each of them, too, now must be certain in his own heart that this is the once-in-a-lifetime opportunity to win, not only the nomination, but also the grand prize as well.

Some of the latter, it appears may be a little bit miffed. Those are the candidates who were sure this was the year when JIM MURRAY was to be beaten, either because of his age or for other reasons. Their disappointment must be leavened by the realization that his decision not to run again removed from the field a man who even at age 84 was not to be taken lightly when it came to getting votes. After all, he won election to the Senate five times against some of the strongest opposition his own party and the Republicans could muster. And there were many who felt he would secure the nomination again this year had he remained in the race.

When first elected to fill out 2 years of Senator Walsh's term in 1934, he had a plurality of nearly 40,000 votes in polling almost 117,000. He beat Representative Scott Leavitt in that race.

In 1936 he beat Democratic Representative Joseph P. Monaghan of Butte in the primary by about 2,200 votes and then trounced GOP State Senator T. O. Larson of Choteau by 61,700 in the general election, even though Monaghan ran in that race as an Independent. That time Murray polled nearly 122,000 votes.

He defeated Monaghan again in the primary of 1942, by nearly 20,000 votes, but edged past Republican Wellington D. Rankin by only 1,212 votes in polling 83,700 in the general. That was his closest escape from defeat, as he won the primary by nearly 49,000 in 1948 and then trounced Tom J. Davis of Butte in the general by more than 30,000 in racking up a 125,000-vote total.

The Senator captured his party's primary by more than 60,000 in 1954, his last time out, and got nearly 115,000 votes in the general to defeat Representative Wesley A. D'Ewart by only 1,728 votes.

Now, aside from the impact his action will have on the other candidates this year, the Senator's retirement carries with it broader implications. This is particularly true because this is a presidential election year.

Certainly the full import of the decision will reflect throughout the Nation. Montana, many times considered not worth too much bother in a presidential race because of the limited population and the comparatively small number of electoral votes, may assume a place of more importance in the national election picture.

And, with this State playing host to the Nation's Governors at Glacier National Park late in June, Montana should surge to the forefront as a sounding board for national political interest.

Mr. ENGLE. Mr. President, the Daily Missoulian, of Friday, April 29, 1960, published an editorial entitled "Senator MURRAY Decides To Retire." The editorial makes the following comment, in part:

We admire Senator MURRAY for finally bowing to the inevitable. He has ample reason to take great pride in that the voters have kept him in the Senate longer than any other Montanan.

* * * * *

Senator MURRAY has more than earned the rewards of retirement. Montanans generally, irrespective of party, will wish him sufficient restoration of health for real enjoyment of the greater leisure that will be his upon the expiration of his term next January 3.

I ask unanimous consent that the entire editorial, from which I have read excerpts, be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Daily Missoulian, Apr. 29, 1960]

SENATOR MURRAY DECIDES TO RETIRE

No one likes to admit, even to himself, that age has taken its toll to the extent that he isn't "up to par" and should therefore give way to a successor considerably nearer the prime of life.

That was the proposition JAMES E. MURRAY had forced upon him in reaching yesterday's decision to withdraw from the field of aspirants to the Senate seat he has occupied since November 7, 1934.

From the Senator's limited activities it is quite obvious that he hasn't the strength to make an all-out campaign for either renomination or reelection. General recognition of that fact is largely responsible for the large field of younger men in the primary Senatorial races of both the Democratic and Republican Parties.

Without question the Senator had hoped that deference to his record, age, and Senate seniority would allow him an easy field in his quest of a sixth consecutive election.

But younger men, of both parties, could not square that idea with either their personal or party ambitions. That's why, in whatever direction he looks, about all the Senator is able to see is younger men anxious to pull him out of and then sit in his Senate seat.

With understandable reluctance, Montana's senior Senator has decided to walk the plank voluntarily as he has seen many elderly colleagues do in his more than 25 years in Washington. Recent predecessors in that role were the highly respected Arthur Capper, Republican, of Kansas, and Walter F. George, Democrat, of Georgia.

We admire Senator MURRAY for finally bowing to the inevitable. He has ample reason to take great pride in that the voters have kept him in the Senate longer than any other Montanan. As he looks around in his final days in the Senate he sees only one man who is older, THEODORE FRANCIS GREEN, Democrat, of Rhode Island. He also, by voluntarily retiring, is conceding that it would be better for his State to have a younger Senator. And throughout the Senate there are only three men who have been there longer than Mr. MURRAY: CARL HAYDEN, Democrat, of Arizona, dean of the Congress, and the renowned HARRY F. BYRD, Democrat, of Virginia, and RICHARD B. RUSSELL, Democrat, of Georgia.

Senator MURRAY has more than earned the rewards of retirement. Montanans generally, irrespective of party, will wish him sufficient restoration of health for real enjoyment of the greater leisure that will be his upon the expiration of his term next January 3.

Mr. ENGLE. Mr. President, in the People's Voice, of April 29, 1960, appears an editorial entitled "MURRAY Has Served Montana Well." In addition to other statements, we find the following in the editorial:

MURRAY, during his more than a quarter of a century on Capitol Hill, has brought great honor and recognition to the constituents of his sparsely settled State. He has always been in the forefront of battle in behalf of legislation aimed at furthering the American dream of achieving the finest possible life for all its citizens.

Let me add, Mr. President, that that has been the foremost characteristic of Senator MURRAY's service in the Senate.

I read further from the editorial:

He has fought the good fight for better, more humane consideration of the problems of the aged, for better education for all our

children, for better health for all Americans, for a great dignity for the ordinary man whether he be in blue overalls, on Main Street or of the professions.

In recent years, the value of MURRAY's seniority became recognized throughout the Western States, as he chairmaned the important Senate Interior and Insular Affairs Committee. In that capacity his has been a powerful voice for the development needs of the West, for resource conservation, for multiple-purpose projects, for building a solid base on which a flourishing economy would incubate and grow.

Mr. President, this editorial gives a fine, excellent, and eloquent summary of the great services rendered by Senator MURRAY, not only to his State, and not only to the Far West, but also to the entire Nation.

I ask unanimous consent that the editorial, from which I have read excerpts, be printed in full at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MURRAY HAS SERVED MONTANA WELL

Senator MURRAY's decision to retire at the end of his present term came as a mild but not entirely unexpected surprise. The weight of years and the exhausting duties of his office have taken their toll. He has justly earned the privilege of being Montana's "Senior Statesman."

MURRAY, during his more than a quarter of a century on Capitol Hill, has brought great honor and recognition to the constituents of his sparsely settled State. He has always been in the forefront of battle in behalf of legislation aimed at furthering the American dream of achieving the finest possible life for all its citizens.

He has fought the good fight for better, more humane consideration of the problems of the aged, for better education for all our children, for better health for all Americans, for a greater dignity for the ordinary man whether he be in blue overalls, on Main Street or of the professions.

In recent years, the value of MURRAY's seniority became recognized throughout the Western States, as he chairmaned the important Senate Interior and Insular Affairs Committee. In that capacity his has been a powerful voice for the development needs of the West, for resource conservation, for multiple-purpose projects, for building a solid base on which a flourishing economy would incubate and grow.

Senator MURRAY, in the telegram announcing his decision to retire, said, "I shall always be proud of the confidence placed in me by the people of Montana * * *." Senator, I am sure that most Montanans join us in saying you richly earned that confidence which the people exhibited five different times in the polling places, beginning with 1934.—H.L.B.

Mr. ENGLE. Mr. President, on May 8, 1960, in the Washington Post, in the column, "The Washington Merry-Go-Round," by Drew Pearson, under the headline, "Senator MURRAY Will Be Watching," Mr. Pearson wrote the following, in part:

For a quarter of a century, MURRAY, a millionaire, has battled for the underdog. He worked for social security, public housing, public power, fair employment standards, health insurance. And he battled right up to the present. During the civil rights debate, he slept in his office and shuffled into the Senate Chamber for quorum calls while younger Senators were still in their beds.

Mr. Pearson went on to say:

But MURRAY is proudest of the Full Employment Act which he pushed through Congress in 1946 and which pundit Walter Lippmann described as the most important legislation in 50 years.

I would say that statement is certainly true, and it indicates the very broad scope of Senator MURRAY's attention and interest to the problems of our Nation. He dealt not only with those problems which were crucial to the State of Montana and the Far West, but he took a vital interest, in the early days of the Franklin Roosevelt administration, in the Wagner Act and other legislative proposals started during that era, and which are still a part of the law.

So it can properly be said that Senator MURRAY is proudest of the Full Employment Act of 1946, which, as Walter Lippmann said, was the most important legislation in 50 years, because it indicated the adoption of a new principle by the Federal Government; that is, the responsibility of the Federal Government itself for the employment of the people of this country, as well as in maintaining throughout this Nation a sound and growing and prosperous business economy.

Mr. President, I ask unanimous consent that the article, parts of which I have read, may be made a part of the RECORD in toto at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR MURRAY WILL BE WATCHING

(By Drew Pearson)

A few days before his 84th birthday, Senator JIM MURRAY, Democrat, of Montana, his shoulders stooped and his walk slowed to a shuffle, reluctantly agreed to give up the Senate seat he had held for 26 years.

But to those who persuaded him to retire, the old warhorse snorted: "If I don't like my successor, I'll be back 6 years from now running for the job again."

MURRAY's departure will mark the passing of an era. He is the last of the Senators who pioneered the social reforms of the Roosevelt New Deal.

For a quarter of a century, MURRAY, a millionaire, has battled for the underdog. He worked for social security, public housing, public power, fair employment standards, health insurance. And he battled right up to the present. During the civil-rights debate, he slept in his office and shuffled into the Senate Chamber for quorum calls while younger Senators were still in their beds.

When Representative LEROY ANDERSON, Democrat, of Montana, made MURRAY's age an issue in the Montana Democratic primary, the 84-year-old Senator showed that he had answered six times more quorum calls than the Congressman.

It was back in 1906 that MURRAY broke into politics as county attorney for Silver Bow County, Mont. He climbed the political ladder until he was elected to the Senate in 1934—the second year of the New Deal. Quickly he established himself as a fighting liberal, and when his retirement was announced, he was leading the Senate fight for Federal funds to build more schools and raise teachers' salaries.

A stanch Catholic, he stood for separation of church and state. He was also continuing a long, bitter struggle with the American Medical Association for Government health insurance to pay medical bills.

But MURRAY is proudest of the Full Employment Act which he pushed through Congress in 1946 and which Pundit Walter Lippmann described as the most important legislation in 50 years.

No wonder when MURRAY's retirement was announced it brought 3 hours of eulogies from both Democratic and Republican Senators. The old man sat through the speeches, head bowed, eyes misty.

Mr. ENGLE. Mr. President, in the publication Labor of May 7, 1960, under the title "Great Liberal Figure—MURRAY To Leave Senate After 25 Years' Service," that article has this to say about Senator MURRAY:

The son of an immigrant railroader, "JIM" MURRAY became a man of wealth. In politics, however, union observers recalled this week, Senator MURRAY has always fought for the underdog.

I ask unanimous consent that the entire article, from which I have read an excerpt, be made a part of the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GREAT LIBERAL FIGURE—MURRAY TO LEAVE SENATE AFTER 25 YEARS' SERVICE

One of the Senate's great liberal figures, Senator JAMES E. MURRAY, Democrat, of Montana, announced last week that he will not run for reelection next November. Now 83, and a Senator for over a quarter-century, MURRAY indicated he wants to "spend my remaining years in less arduous pursuits."

The son of an immigrant railroader, "JIM" MURRAY became a man of wealth. In politics, however, union observers recalled this week, Senator MURRAY has always fought for the underdog.

He's credited with a big role, back in the 1930's in passage of the Wagner Act guaranteeing collective bargaining, of the Social Security Act, of the Railroad Retirement Act, and many others. Perhaps his greatest triumph came in 1946 when Congress passed the Full Employment Act, which bears MURRAY's name as chief Senate sponsor.

As chairman of the Senate Interior Committee, MURRAY has also consistently championed conservation and development of natural resources, observers recalled. His successor next year in the Interior Committee is slated to be Senator CLINTON ANDERSON, Democrat, of New Mexico.

In the words last week of Congressman LEE METCALF, Democrat, of Montana, "Senator MURRAY's fights in behalf of the poor, the sick, the oppressed, have changed the attitudes of the entire Nation." MURRAY's announcement also brought an outpouring of tributes from Senate colleagues of both parties.

In his election campaigns, the Montana Senator always had the warm endorsement of organized labor, including the railroad unions. Railway Labor's Political League had also endorsed MURRAY this year, after he indicated earlier in the year that he planned to run for reelection.

MURRAY's withdrawal left three announced candidates for the Democratic nomination to fill his seat. They are Montana's two Congressmen, Metcalf and LeRoy Anderson, plus John Majan, a Helena attorney. The Montana primary takes place June 7.

Mr. ENGLE. Mr. President, during the recent tributes to Senator MURRAY

it became necessary for me to leave the floor before I could get recognition. In addition to my comments on the editorials which have just been made a part of the RECORD, I should like to add my personal regret that Senator MURRAY is to withdraw as a candidate for reelection to the Senate.

Senator MURRAY and I have been friends a long time. I worked very closely with him during the period of almost 16 years that I served in the House of Representatives. He and I had many mutual interests. The district I represented in the House comprised over 600 miles of the Sierra Nevada Mountains. It has many of the same problems as Montana—in the fields of mining, livestock, lumber, water conservation, recreation, and farming. I am deeply indebted to Senator MURRAY for his constant and effective cooperation in handling legislation affecting these vital interests. As chairman of the House Interior and Insular Affairs Committee, I worked closely with Senator MURRAY in his capacity as chairman of the Senate Interior and Insular Affairs Committee. The great record made by the Senate Interior Committee under Senator MURRAY's chairmanship should not be lost sight of while we properly pay tribute to his leadership in other fields.

Senator MURRAY has been chairman of the Senate Interior and Insular Affairs Committee during a tremendous growth of western water development programs. Three-fourths of a billion dollars in water projects for California alone have been authorized. These include additions to the Central Valley project, which was started when Senator MURRAY first came to the Senate. Some of the better known ones are the Trinity River Project, the American River development, including the Folsom project, the Sacramento Valley canals, the Monticello project, and the Cachima and Santa Maria projects in Santa Barbara, and the Casitas project in Ventura County. But the whole West has gone forward during the time of Senator MURRAY's leadership of the Senate Interior Committee. The Upper Colorado Basin project, currently under construction, was authorized by his committee. This is probably the last very large irrigation, flood control, and power project in the Far West. The Hungry Horse Dam in Montana was built during his service. He has been a dedicated public servant in the field of water conservation and public power development.

Not to be overlooked is his contribution to the mining industry, which he knows so well. The stockpiling program initiated immediately after the Second World War had his blessing and his aid and the consistent support, not only of his committee, but of his very efficient committee staff. Senator MURRAY has done everything in his power to maintain a strong, vigorous, and prosperous domestic mining industry.

Not the least of the major legislation to Senator MURRAY's credit is the entry into the Union of our two new States—the State of Alaska and the State of Hawaii. These measures were handled by the Senate Interior Committee.

In the last few Congresses, the Senate and House Interior Committees handled approximately 20 percent of the public laws passed by the Congress and signed by the President. The high percentage of the public laws taken care of by the Senate Interior Committee is an index of the industry and the constructive legislation managed by that great committee under Senator MURRAY's chairmanship; and I am proud to have had the honor of serving as chairman of the House Committee on Interior and Insular Affairs during 4 years of that time.

In all of this work in recent years, I have been the constant beneficiary of Senator MURRAY's friendship and his powerful assistance. The entire West loses by the retirement of Senator MURRAY from the U.S. Senate. The Nation, too, is the loser, because his interest and his influence have gone far beyond the regional achievements with which his name has been so intimately associated, and for which he will be long remembered in his home State and in the Far West.

Senator MURRAY can be justly proud of his leadership in legislation on labor, public welfare, and education. These are subjects of nationwide interest and impact. Senator MURRAY was one of Franklin Delano Roosevelt's leaders in the U.S. Senate when his great program was put together in the early years of the New Deal.

Senator MURRAY's interest and support of constructive liberal legislation has continued down through the years. He retires from the U.S. Senate with a remarkable record of achievement, to the sorrow and with the plaudits of his colleagues, and with the deep appreciation not only of the people of Montana, but of the whole Nation.

THE B–70 INTERCONTINENTAL BOMBER PROGRAM

Mr. ENGLE. Mr. President, on January 11 of this year I expressed myself at length on the administration's folly in "gutting" the B–70 intercontinental bomber program. That was only a few weeks after the decision had been made. In the months since then, several congressional committees have heard a mass of testimony on this subject from defense officials and Air Force officers. In the main, this testimony fully confirms the judgment of those of us who have criticized the administration's decision.

I will not dwell on the transparent effort of defense officials to deny that the decision was budgetary. It was claimed that the choice was made on technical grounds. The B–70 was said to be in competition with other weapons systems, including the advanced B–58 and four ballistic missiles—the Atlas, Titan, Minuteman, and Polaris.

Since this particular testimony was given, an Air Force team of experts rejected the proposed advanced B–58 as technically inadequate to perform the mission that would have been required of it. As for the B–70's competition with ballistic missiles, I feel this argument is a prize sample of the administration's foggy defense thinking. If the B–70 is in competition with them, how much more are they in competition with one another? If one has five weapon systems—four ballistic missiles whose capabilities largely duplicate one another, and one manned bomber—does it make sense to eliminate the bomber and keep all four of the duplicative systems? Does this square with the Defense Department's repeated statements that a mixed force of manned and unmanned weapons offers the best defense?

I am not arguing for cancellation of any missile programs, which I believe to be absolutely essential to the Nation's security, but I am drawing attention to the pathetic logic used by administration apologists to justify the B–70 decision. I think it is an insult to the public intelligence to claim that, with Air Force leaders and even the Chairman of the Joint Chiefs of Staff arguing for the B–70, the decision to scrap it was a technical one. Can it be seriously maintained that the status of the B–70 would have come into question if there had been no pressure to slash the budget? I submit, Mr. President, that the administration's story about technical reasons for the decision was put forward in order to stave off far more embarrassing admissions. It would not do to acknowledge that our national defense is being shortchanged—that essential elements of our security are being sacrificed so that the President may go out of office with a balanced budget.

However, the most remarkable aspect of the B–70 testimony is not the double talk of the defense officials, but the unanimous agreement of professional Air Force men on the need for the B–70 intercontinental bomber. They told us frankly that it was essential for the Nation's defenses, that they had lost their battle for it, and that as good soldiers they have accepted the decision of their superiors. When I hear men speak with such forthright integrity, my pride in our country and my confidence in its fundamental strength are refreshed and recharged.

Let us for a moment review the basic thinking that went into the formulation of the B–70 program, and let us also note that these facts and beliefs are not controverted by the administration today.

It is axiomatic among military planners that a mixed force composed of weapons with various capabilities constitutes a surer defense than a force which depends on a single type of weapon, because it contains the inherent flexibility to probe for enemy weaknesses and to react skillfully to the enemy's varying tactics. It is safe to say that no war in history has been fought and won just as it was planned beforehand. In fact, wars have usually been won by the side best able to vary its attack to exploit the weaknesses of the other.

Translated into the structure of our present strategic retaliatory force, this principle means the use of both manned

and unmanned weapon systems. The unmanned systems, represented by the ICBM's and the submarine-launched Polaris missile, have obvious advantages. They are so swift—covering intercontinental distances in half an hour—that in a surprise attack they give the victim only a few minutes warning, at best. Moreover, this same speed is baffling to the designer of defensive counter weapons. Some observers have been so carried away with these advantages that they have called the ICBM the "ultimate weapon."

But the ballistic missile also has some clear disadvantages which require us to deploy another, completely different, type of weapon to give our defense structure the most elementary insurance. One of these disadvantages is that the weapon and its base are vulnerable to preemptive attack. That is, if one thinks an enemy has unleashed an attack, one cannot get the missile up in the air and let it cruise around while the attack is confirmed. The missile, once well launched, cannot be called back.

For this reason we must operate on the assumption that it will have to ride out the attack. To this end we plan hardened and mobile bases for our most advanced type missiles. But the principle still holds that we cannot cut the rope on our missile until we have been hit.

With only this weapon in our strategic arsenal, our survival depends on the degree of success of an enemy's initial surprise assault. The effectiveness of our defense becomes a function of the enemy's efficiency, not of our own. We have lost control of our own defense.

Secondly, the ballistic missile offers no means of reporting back to our command centers on the results of our counterattack. As a practical matter, once a nuclear war has begun we would have little or no intelligence about the enemy. We would not know where we have hit the enemy. We would not know where to hit him again. We would not know where his remaining shots are coming from. The only way we would know that he is still in business is by the punishment he would be delivering on us. This, I maintain, is a classic example of finding out the hard way. It could well mean that we would find out too late.

These are some of the reasons why our professional airmen insist upon manned weapons in our defense force. A manned bomber does not have to ride out an enemy attack. It can be up and away at the first warning, without waiting to find out whether the attack is the real thing, a feint, or an error. If the warning turns out to be false, the bomber can be recalled to its base.

Once the battle is joined, the bomber provides a means of firsthand observation over enemy targets. It can vary its attack to suit the situation. And it can report back on the remaining targets to be destroyed.

The value of these attributes of the manned bomber is not limited to actual warfare. Equally important to all of us is that they promise such a certain and accurate retaliation that an enemy would be deterred from attacking us in the first place. For this reason the universal mobility of the bomber is especially important. Because it can be exercised throughout the world, potential aggressors as well as uncommitted peoples can see it. It is its own powerful argument for peace. As Gen. Thomas White has pointed out, it is not enough for us to say to other nations, "Oh, you should see the submarines we have under the sea and the missiles we have in these holes all over the United States." With the manned bomber, seeing is believing.

Now, if the manned bomber is an essential part of our deterrent force, are we seeing to it that we continue to maintain this deterrent in the future? The B–70 intercontinental bomber was conceived for just this purpose. With its curtailment to prototype status, where does that leave us? Gen. Thomas Power has told us that as a general rule of thumb, a bomber is obsolete in 10 years. He further said that the B–52 even with the improved capabilities that will be provided for it, will become obsolete any time in the mid-1960's. That is, the performance of Soviet interceptors and surface-to-air missiles will by that time be such that the B–52 will no longer be a serious threat.

It happens that, through the foresight and initiative of Air Force planners, the B–70 was programed to come into operation at about the time that the B–52 would become obsolete. In comparison to the B–52, the B–70 has an astounding performance. It will have a speed of mach 3 or 2,000 miles per hour—more than three times faster than the B–52. In contrast to our experience with other supersonic aircraft, it can maintain this mach 3 speed throughout its entire mission, while also maintaining an intercontinental range.

This speed is above the speed of the fastest Soviet interceptors that are coming into operation. Moreover, due to certain aerodynamic and thermodynamic problems, at such speeds, it is not likely that the Soviets can build an interceptor that could make the B–70 obsolete within the immediate foreseeable future.

So far as altitude is concerned, the B–70 flies above 70,000 feet, which is higher than the utmost reach of Soviet defenses—either interceptors or surface-to-air missiles. Moreover, the B–70 has a substantial growth potential to still higher altitudes, so that in this dimension, as well, it promises to hold up strongly as a retaliatory threat for many, many years.

Thirdly, the B–70 would carry a full complement of the most advanced defensive countermeasures known, in order to confuse and divert enemy weapons. It also contains provision for substantial increase in electric power capacity, so that it can make use of new advances in the countermeasure state of the art.

As a result of its superior performance, the B–70 would obsolete the present Soviet defensive system. If the Soviets wanted to build a system that would be at least competitive with the B–70, they would have to spend a far greater amount than the cost to this country of the B–70 program.

In short, the B–70—as it was planned—offers assurance that it can get through to enemy targets in the period following the obsolescence of the B–52. As Gen. Nathan Twining has told us, it is the only manned weapon system that was programed for this role. There is no substitute. But since last December, the B–70 has been removed from the role.

There has been no denial on the part of the administration of the considerations that I have just discussed. Instead there has been only a vague and unsupported explanation that the B–70 is in competition with four ballistic missile programs. This explanation, Mr. President, is deliberately vague. It cannot get specific. If it does, it has to face up to the fact that our retaliatory force needs an effective manned intercontinental bomber, and that the only effective intercontinental bomber planned for the future is the B–70.

If we do not provide such a weapon, are we keeping faith with the brave crewmen who will have to fly our bombers in case of war? As Gen. Thomas Power has told us, "I think if men are going to have to go over there with the sophisticated defenses, this country owes it to them to give them a modern piece of equipment so it can survive."

Mr. President, I call for a reinstatement of the B–70 to its full weapon system program, and to this end, the provision of adequate funds in the 1961 budget.

AREA REDEVELOPMENT BILL—VETO MESSAGE (S. DOC. NO. 95)

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the veto message by the President of the area redevelopment bill be laid before the Senate.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair) laid before the Senate the following message from the President of the United States, which was read and, with the accompanying bill, was ordered to lie on the table and be printed:

To the Senate of the United States:

I return herewith, without my approval, S. 722, the area redevelopment bill.

For 5 consecutive years I have urged the Congress to enact sound area assistance legislation. On repeated occasions I have clearly outlined standards for the kind of program that is needed and that I would gladly approve.

In 1958 I vetoed a bill because it departed greatly from those standards. In 1959, despite my renewed urging, no area assistance bill was passed by the Congress.

Now in 1960, another election year, a new bill is before me that contains certain features which I find even more objectionable than those I found unacceptable in the 1958 bill.

The people of the relatively few communities of chronic unemployment—who want to share in the general prosperity—are, after 5 years, properly becoming increasingly impatient and are rightfully desirous of constructive action. The need is for truly sound and helpful legislation on which the Congress and the Executive can agree. There is still time, and I willingly pledge once again my wholehearted cooperation in obtaining such a law.

S. 722 is seriously defective in six major respects which are summarized immediately below and discussed in detail thereafter.

1. S. 722 would squander the Federal taxpayers' money where there is only temporary economic difficulty, curable without the special Federal assistance provided in the bill. In consequence, communities in genuine need would receive less Federal help for industrial development projects than under the administration's proposal.

2. Essential local, State, and private initiative would be materially inhibited by the excessive Federal participation that S. 722 would authorize.

3. Federal financing of plant machinery and equipment is unwise and unnecessary and therefore wasteful of money that otherwise could be of real help.

4. The Federal loan assistance which S. 722 would provide for the construction of sewers, water mains, access roads, and other public facilities is unnecessary because such assistance is already available under an existing Government program. Outright grants for such a purpose, a provision of S. 722, are wholly inappropriate.

5. The provisions for Federal loans for the construction of industrial buildings in rural areas are incongruous and unnecessary.

6. The creation of a new Federal agency is not needed and would actually delay initiation of the new program for many months.

I

The most striking defect of S. 722 is that it would make eligible for Federal assistance areas that don't need it—thus providing less help for communities in genuine need than would the administration's proposal. S. 722, as opposed to the administration bill, would more than double the number of eligible communities competing for Federal participation in loans for the construction or refurbishing of plants for industrial use—the main objective of both bills. Communities experiencing only temporary economic difficulty would accordingly be made eligible under S. 722 and the dissipation of Federal help among them would deprive communities afflicted with truly chronic unemployment of the full measure of assistance they so desperately desire and which the administration bill would give them.

II

Lasting solutions to the problems of chronic unemployment can only be forthcoming if local citizens—the people most immediately concerned—take the lead in planning and financing them. The principal objective is to develop new industry. The Federal Government can and should help, but the major role in the undertaking must be the local community's. Neither money alone, nor the Federal Government alone, can do the job. The States also must help, and many are, but in many instances and in many ways they could do much more.

Under S. 722, however, financing of industrial development projects by the Federal Government—limited to 35 percent under the administration's proposal—could go as high as 65 percent, local community participation could be as low as 10 percent, and private financing as little as 5 percent. Furthermore, although S. 722 conditions this assistance on approval by a local economic development organization, if no such organization exists one can be appointed from Washington.

III

S. 722 would authorize Federal loans for the acquisition of machinery and equipment to manufacturers locating in eligible areas. Loans for machinery and equipment are unnecessary, unwise, and costly. Much more money would be required and unnecessarily spent, much less money would find its way into truly helpful projects, and manufacturers would be subsidized unnecessarily vis-a-vis their competitors.

IV

S. 722 would authorize further unnecessary spending by providing both loans and grants—up to 100 percent of the cost—for the construction of access roads, sewers, water mains, and other local public facilities.

Grants for local public facilities far exceed any appropriate Federal responsibility. Even though relatively modest at the start, they would set predictably expensive and discriminatory precedents.

With regard to loans for such purposes, exemption from Federal income taxes makes it possible today for local communities in almost every case to borrow on reasonable terms from private sources. Whenever such financing is difficult to obtain, the need can be filled by the existing public facility loan program of the Housing and Home Finance Agency—a program which S. 722 would needlessly duplicate and for which an additional $100 million authorization has already been requested.

V

S. 722 would make a minimum of 600 rural counties eligible for Federal loans for the construction of industrial buildings in such areas. The rural development program and the Small Business Administration are already contributing greatly to the economic improvement of low income rural areas. Increasing the impact of these two activities, particularly the rural development program, is a preferable course.

VI

Finally, S. 722 would also create a new Federal agency and would, in consequence, mean many unnecessary additions to the Federal payroll and a considerable delay in the program before the new agency could be staffed and functioning effectively. None of this is necessary, for all that needs to be done can be done—much better and immediately—by the existing Department of Commerce.

Again, I strongly urge the Congress to enact new legislation at this session—but without those features of S. 722 that I find objectionable. I would, however, accept the eligibility criteria set forth in the bill that first passed the Senate even though these criteria are broader than those contained in the administration bill.

Moreover, during the process of developing a new bill, I would hope that in other areas of past differences solutions could be found satisfactory to both the Congress and the Executive.

My profound hope is that sound, new legislation will be promptly enacted. If it is, our communities of chronic unemployment will be only the immediate beneficiaries. A tone will have been set that would hold forth, for the remainder of the session, the hope of sound and rewarding legislation in other vital areas—mutual security, wheat, sugar, minimum wage, interest rates, revenue measures, medical care for the aged, and aid to education to mention but a few.

Only this result can truly serve the finest and best interests of all our people.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 13, 1960.*

Mr. DOUGLAS. Mr. President, one of the difficulties in our American political system is that the President is at once the ceremonial head of our Government and the Chief of State, and also the Chief Executive and the leader of his party. When one criticizes the President, therefore, one is always accused of belittling the ceremonial head of the Government or the Chief of State. Nevertheless, if the President, as party leader, writes a message which is ignorant, unduly unctuous, and hypocritical, the message cannot escape criticism because of the fact that the man who signed his name to it also happens to be the ceremonial Chief of State.

Of course, President Eisenhower, in all probability, did not write this message. This was written for him either by someone in the executive office, or, as is more probable, by someone in the Department of Commerce.

I have a real liking for the President. It is in no personal sense, therefore, that I repeat, this message betrays ignorance, it is unctuous and hypocritical, and it is greatly mistaken in its attitude toward what is happening in this country.

The President says that he is for area redevelopment. My reply is that one can only tell whether a person is for area redevelopment or not by his actions and not by his words.

I should like very briefly to summarize some of the things which have been happening in the last 4 or 5 years.

In 1955 I introduced a bill to provide for area redevelopment. The administration opposed that bill. We passed the bill through the Senate, in the concluding days of that Congress. The bill went to the House. Informal requests were

made that the House permit the matter to come before the House under unanimous consent, but the Republican leaders of the House refused to give the unanimous consent, so the bill died in the House.

In 1957 I introduced another area redevelopment bill. It passed the Senate. The RECORD shows that in the Senate the bill received only 15 Republican votes. The bill was opposed by the Republican leadership in the Senate. The bill went to the House. The distinguished present occupant of the chair, the Senator from West Virginia [Mr. BYRD], was then a Member of the House of Representatives. The Senator from West Virginia knows that the House Republican leadership opposed the measure. The bill was sent to the President, and the President vetoed it. Incidentally, that veto helped to defeat the former Senator from Maine, Mr. Payne, and helped to defeat the two former Republican Senators from West Virginia.

I introduced an area redevelopment bill again in 1959, and we got only four Republican votes in the Senate for it. The bill went to the House, and the House Banking and Currency Committee recommended a bill in substantially similar form to the Senate bill, but the Committee on Rules for approximately a year has refused to allow the bill to be submitted to the House for action.

It is well known that the Rules Committee of the House consists of 12 members, 4 of whom are northern Democrats, 4 Republicans, and 4 southern Democrats; and the coalition of 4 Republicans and 4 southern Democrats prevented that bill from being approved by the Rules Committee.

Finally, it was brought up this year on Calendar Wednesday and passed by the House. And by recent action the Senate accepted the House bill. This time we got five Republican votes, the remainder of the Republicans voting against the measure.

Mr. President, since I began to speak, I have been able to obtain the party votes in the House in 1958 and 1960. On the important vote to consider in 1958 the yeas were 216, and the nays 170.

Of the 216 Members who voted yea, 159 were Democrats, and only 57 were Republicans.

Of the 170 who voted nay, 57 were Democrats—almost all of them southern Democrats—and 113 were Republicans, showing that the Democrats voted 3 to 1 for the bill, and the Republicans voted, roughly, 2 to 1 against the bill.

On the vote on recommital, the vote against recommital and for the bill was: Democrats 139; Republicans 49.

For recommittal, against the bill, the Democrats were 54, and the Republicans 116.

Once again, the Democrats, in this case, voted approximately 2½ to 1 for the bill. The Republicans voted 2 to 1 against it.

This year, 179 Democrats voted for the passage of the bill and only 23 Republicans voted for it.

Sixty-nine Democrats voted against the bill, and 115 Republicans voted against it.

The Democrats in the House voted almost 3 to 1 for the bill; the Republicans voted precisely 5 to 1 against it.

Mr. President, I do not read these figures with any pleasure. It was the pick of the crop of the Republicans who voted with us. The five Republicans in the Senate who voted with us are splendid gentlemen. We hope to acquire a few more.

However, the President and his party leaders have made this a party issue. We tried to prevent it from becoming a party issue We took Senators Payne, Beall, and Cooper into full partnership, and played them up as coauthors, but the administration has now made it a party issue.

What is wrong in trying to provide employment in areas of high and persistent unemployment?

Now the President has vetoed this measure for a second time, and yet he has the nerve to say that he has always been for area development. The action of the President reminds of the nursery rhyme passage which we all know so well. The little girl asked:

> Mother, mother, may I go out to swim?

And the mother replied:

> Yes, my darling daughter. Hang your clothes on a hickory limb, but don't go near the water.

That is precisely like the action of this administration. They say they are for area redevelopment, but on every effective move we make to get area redevelopment they throw their full strength on the floor of the Senate and on the floor of the House to kill it; and then, when over all those obstacles we pass a bill, the President vetoes it.

In the ballad of Reading Gaol, Oscar Wilde wrote:

> For each man kills the thing he loves,
> By each let this be heard—
> Some do it with a bitter look
> Some with a flattering word.
> The coward does it with a kiss,
> The brave man with a sword.

I would much rather have area redevelopment put to death with the sword by an outright attack on it rather than have it kissed and embraced first and then put to death. Let there be no hyprocrisy in this matter. The administration is opposed to area redevelopment. It is opposed to helping the areas of this country with high and chronic unemployment. At the same time it is opposed to aiding these areas, it is demanding $4 billion for foreign aid.

When the House bill was under consideration I brought into the Senate Chamber a volume, which the Senator from Alaska [Mr. GRUENING] had compiled, what listing I thought were all the projects which this administration had supported since 1955 only, in countries abroad. There were 104 countries listed, with every conceivable type of project under the sun. I announced that the document weighed 5 pounds, 7 ounces. I now find that the listing by the Senator from Alaska [Mr. GRUENING], which is the best we have had to date, covers only about one-half of all the projects the administration has favored abroad since 1955, and it does not include the projects under the Development Loan Fund.

I have before me a list of such projects for 1 year only. It probably weighs a half pound, and more is coming. All this is for abroad but there is nothing for the unemployed ones at home.

Mr. President, whoever wrote this message—and I suspect it was Frederick H. Mueller, the Secretary of Commerce—makes the President say:

> The people of the relatively few communities of chronic unemployment—who want to share in the general prosperity—are, after 5 years, properly becoming increasingly impatient and are rightfully desirous of constructive action.

He goes on to say that this bill would squander the Federal taxpayers' money where there is only temporary economic difficulty.

As of May of this year there are now 40 major areas which would qualify and 103 minor areas which would qualify under the terms of the bill which the President vetoed. I prefer the Senate formula for area participation to the formula which the House finally adopted.

However, the mere qualification of an area would not mean that the loan would have to be made; and we can assume that the Administrator would pick out the areas of greatest need and make loans to them.

I ask unanimous consent that a list of the regions which would be eligible under the bill as it went to the President be printed in the RECORD at this point in my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

TENTATIVE LIST OF URBAN AREAS THAT MAY QUALIFY FOR FEDERAL ASSISTANCE AS AREAS WITH SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT UNDER LEGISLATIVE PROPOSAL [1]

MAJOR AREAS [2]

Area redevelopment bill as passed by Congress

Forty Major Areas

Connecticut: Bridgeport, New Britain.
Indiana: Evansville, Terre Haute.
Kentucky: Louisville.

[1] This listing is preliminary and tentative and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2- to 5-year period, generally extending through March 1960. Later data, now becoming available for some areas, could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual—basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

[2] Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on a bimonthly basis.

Maine: Portland.
Massachusetts: Brockton, Fall River, Lawrence, Lowell, New Bedford, Springfield-Holyoke, Worcester.
Michigan: Detroit, Flint.
Minnesota: Duluth-Superior.
New Jersey: Atlantic City, Newark, Paterson, Trenton.
New York: Albany-Schenectady-Troy, Buffalo, Utica-Rome.
North Carolina: Durham.
Pennsylvania: Altoona, Erie, Johnstown, Philadelphia, Pittsburgh, Scranton, Wilkes-Barre-Hazleton, York.
Rhode Island: Providence.
Tennessee: Chattanooga.
Texas: Beaumont-Port Arthur, Corpus Christi.
Virginia: Roanoke.
West Virginia: Charleston, Huntington-Ashland, Wheeling.

SMALLER AREAS [3]

One Hundred and Three Smaller Areas

Alabama: Florence-Sheffield, Gadsden, Jasper, Talladega.
Alaska: Anchorage.
Connecticut: Ansonia, Bristol, Danielson, Meriden, Middletown, Norwich, Thompsonville, Torrington.
Illinois: Centralia, Harrisburg, Herrin-Murphysboro-West Frankfort, Litchfield, Mount Carmel-Olney, Mount Vernon.
Indiana: Connersville, Vincennes.
Kansas: Coffeyville-Independence-Parsons, Pittsburg.
Kentucky: Corbin, Hazard, Madisonville, Morehead-Grayson, Owensboro, Paducah.
Maine: Biddeford-Sanford, Lewiston-Auburn.
Maryland: Cambridge, Cumberland.
Massachusetts: Newburyport, North Adams.
Michigan: Bay City, Iron Mountain, Marquette, Monroe, Port Huron.
Mississippi: Biloxi-Gulfport.
Missouri: Flat River, Joplin, Washington.
Montana: Butte, Kalispell.
New Jersey: Bridgeton, Long Branch.
New York: Amsterdam, Auburn, Elmira, Gloversville, Jamestown-Dunkirk, Newburgh-Middletown-Beacon, Ogdensburg-Massena-Malone, Plattsburgh, Wellsville.
North Carolina: Fayetteville, Hendersonville, Lumberton, Mount Airy.
Ohio: Portsmouth-Chillicothe.
Oklahoma: Ardmore, McAlester, Muskogee, Okmulgee-Henryetta.
Pennsylvania: Berwick-Bloomsburg, Butler, Clearfield-Du Bois, Indiana, Kittanning-Ford City, Lewistown, Meadville, New Castle, Oil City-Franklin-Titusville, Pottsville, Sayre-Athens-Towanda, St. Marys, Sunbury-Shamokin-Mt. Carmel, Uniontown-Connellsville, Williamsport.
Tennessee: La Follette-Jellico-Tazewell.
Texas: Laredo, Texarkana.
Virginia: Big Stone Gap-Appalachia, Richlands-Bluefield.
Washington: Aberdeen, Anacortes, Bellingham, Bremerton, Port Angeles.
West Virginia: Beckley, Bluefield, Clarksburg, Fairmont, Logan, Martinsburg, Morgantown, Parkersburg, Point Pleasant-Gallipolis, Ronceverte-White Sulphur Springs. Welch.
Wisconsin: La Crosse.

[3] Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "smaller areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000, is not available in Washington on a consistent basis.

Mr. DOUGLAS. I would like to comment upon some of these places. For example, in the State of West Virginia, which the present occupant of the Chair [Mr. BYRD] so well represents, there has been high and persistent unemployment for at least 5 years, and in my judgment, possibly for 10 years, but our records do not go back of 1955. This is true of the major areas such as Charleston, Huntington, and Ashland, but also the coal-mining areas of southern West Virginia have been in that condition for a long time. I can testify that the coal-mining areas of southern Illinois have had high and persistent unemployment for at least 10 years; they are areas such as Centralia, Harrisburg, Herrin, West Frankfort, Litchfield, and Murphysboro. Other regions with high unemployment in southern Illinois are Mount Carmel, Olney, Mount Vernon, and Cairo.

We know well what has been happening in the textile centers of Massachusetts. Lowell, Lawrence, Fall River, and New Bedford, amongst the major areas, have had high unemployment for the past 5 years. Brockton, Springfield, the Holyoke region, and Worcester have had high unemployment for the past 2 years. I have personally visited North Adams and Adams, and I know that they are in dire straits and have been for several years.

Among the towns in Pennsylvania which are in trouble is the great railroad center of Altoona and the coal and steel cities of Johnstown, Scranton, Wilkes-Barre, and Hazleton in the anthracite region, and more recently York, are all experiencing great economic difficulties.

Then there are a large number of other areas, such as the Clearfield bituminous region, Shamokin, and the Mt. Carmel region, Oil City, Franklin, Titusville.

This continuing high and long-continued unemployment is not confined to any area of the country. Evansville and Terre Haute have been in difficulties for the last 5 years. Biddeford and Sanford in Maine have been for several years. The Senator from Kentucky [Mr. COOPER] has truthfully and eloquently spoken of the great privation in eastern Kentucky, in the coal mining regions of that State.

The textile towns of Connecticut and of those producing hardware are in difficulty. Chattanooga, Tenn.; Roanoke, Va.; Albany, Schenectady, and Troy, N.Y.; Utica and Rome, N.Y.; Duluth and Superior in Minnesota; Flint, Mich., and Louisville, Ky., are other cities which are in trouble.

This is a nationwide problem. It was created primarily by the fact that industries will decline, notably textile and coal mining, but also where the timber is cut off and a natural resource is exhausted, and where there are changes in technology such as the substitution of diesel engines for coal-burning locomotives. It has caused trouble in Altoona. Jobs disappear, and a large number of men and their families are stranded.

We are not proposing Federal handouts. We are proposing pump-priming loans to get these localities at least partially back on their feet.

The President makes much of the fact that a Federal loan might go up to 65 percent. Yes; it might. But it is not compelled to. That is merely the upper limit. He says the local participation could go as low as 10 percent, and private financing as little as 5 percent. That is theoretically possible.

However, a prudent administrator would, except in cases of great need, try to get the localities and individual industries to put up as much money as they could, and only use the Federal loans to stimulate local action.

There has been a difference of opinion as to whether the Federal loans should merely be for real estate and building, or whether they should include machinery and equipment. I may say that machinery and equipment were originally included in the bill at the suggestion of the then distinguished junior Senator from Connecticut, a Republican, who had a great deal of experience in the metal industries. He felt that a loan merely for plant and land would not be adequate.

The President is critical that we have a program for rural regions of this country as well as for the industrial regions. This shows ignorance. There is a great deal of unemployment and underemployment in the rural regions of America. Farm income has fallen by approximately $4 billion in the 7½ years that the Eisenhower administration has been in office. Last year the total farm income was only $11 billion; $3½ billion of this consisted of food grown on the farm and the rental value of the farm housing. So the net cash figure was only $7½ billion, to be shared among 4,600,000 farms, or an average of approximately $1,650 per farm, or $32 a week. That was the average. Of course far more than 50 percent received less than this amount.

We have a tremendous amount of rural poverty in this country and of unutilized farm time. One of the things which these areas need is to have factory employment brought to them so that the members of the family can work in the factories, and in the off seasons, when the farmers are not busy themselves, they can work there too.

The President does not like to have this measure provide loans to localities for public facilities, and says we already have a program. Well, we have checked up on that. We find that the present community facility loan program has funds for public facilities of only $25 million remaining of which $23 million has already been pledged. Furthermore, this is designed simply for sewers and other things. A locality, if it is to draw industry, must have, instead, industrial water. This requires small lakes, and, in some cases, not so small lakes, and industrial parks, whereby groups of industry can come in and subdivide buildings and they need access roads built to these industrial parks and electricity and

power facilities. These things cost money, and a locality will really need to have these facilities in order to attract industry. So that the bill provides for these loans at low rates of interest; and where a community is not able to fully make a pledge, small grants are provided as well.

The President is critical of our bill because it provides for retraining workers. That is extremely important. Workers in industry who have been unemployed need to be given new skills in order to find work in new industries which are brought in. So it is necessary to have a program of retraining. It is also necessary that during the period that the workers are learning, there should be a limited amount of subsistence payments to them. That is what we provide.

The veto is very disappointing, and it does not reflect credit upon whoever wrote it. I had hoped that the President would acquaint himself personally with the situation, which he evidently chose not to do. I know that probably it will be difficult to override the veto, in view of the almost solid Republican vote against the measure.

It is my personal belief, however, that it would be desirable to have one more lineup, so people may know on which side they stood, and also to give a chance to those who have fought this bill to come over at the last minute. I believe in deathbed repentances. I believe they have spiritual value. A chance should be given to the sinners to join the forces of the righteous. I do not want to condemn them permanently. I do say this, Mr. President, that the rollcalls on these bills will resound through the country during this next year.

Approximately 6⅓ million workers live in areas of chronic labor surplus. They represent, roughly, one-tenth of the total national civilian labor force, and they accounted, recently, for about 17 percent of the total national unemployment. On the average, more than 12 percent, at the time I compiled these figures last fall, of the labor force in those areas was unemployed. This is not short-time employment. These figures represent large numbers of people who in the main have been unemployed year after year after year.

It is very interesting to observe that the conservative Government of Great Britain, headed by Mr. Macmillan, a highly conservative Tory, has put into effect a law to provide aid for the distressed areas of Great Britain. Whether my bill was copied by the Tories or not, I do not know. I hope it was.

It is well known that Chancellor Adenauer used this method to absorb the refugees who swarmed into Germany to escape from the Russians. Chancellor Adenauer, I suppose, is about as conservative a person, economically, as can be found.

But in the United States, what seems to be acceptable to the British Tories and to the German Conservatives is rejected by the Republican Eisenhower administration. We did not ask for much money. We asked for only $251 million. Not much of that would have been spent in the first year. It was only an authorization. An appropriation bill would have been compelled to follow. Time would have been needed to create an administration to process applications, and so on. The bill was in no sense a budget-busting program. It was a constructive program. Now the President comes along and dashes the hopes of the people in these communities, and does so protesting that he is for area redevelopment.

Mr. President, I think that in the interest of restraint, I should stop at this point. We will let the country decide.

Mr. BYRD of West Virginia. Mr. President, the present administration continues to play the part of Scrooge in this country; yet it plays the part of Santa Claus to the rest of the world.

Today's veto of Senate bill 722, the depressed areas legislation, unalterably stands as evidence of the seeming disconcern for the people of this country who are jobless.

The President wanted a depressed-areas bill providing $53 million. If the President were fully aware of the joblessness in this country, his signature would have been on the bill sent to him by this body.

The Senate had previously passed an area-redevelopment bill providing for $389 million, but it accepted a $138 million cut by the House of Representatives, cognizant of the urgent need for such legislation. The $251 million measure that was finally agreed upon and sent to the White House was reasonable legislation. We should keep in mind that $251 million is but one-sixteenth of the amount requested by the President for foreign aid this year.

It should not be unreasonable to assume that the first duty of the Federal Government should be to serve and provide for the welfare of the people of this country. But in the thinking of the present administration, it appears that this theory is unreasonable.

For many years the administration has claimed that it is aware of the need for area redevelopment legislation, but for the second time in 2 years the President has vetoed legislation provided by Congress.

In 1958 the President vetoed Senate bill 3683. That bill would have provided, generally, the same assistance to chronically depressed areas that the measure vetoed today provided.

Those who opposed the bill called it excessive, and said it would cost too much money. But, in the opinion of those of us who supported the legislation, the economic merits were quite evident. Moneys expended would have come back to the Federal Government with profits. In other words, money outlayed by the Federal Government would have been returned, with interest, in future years. The bill would have meant money repaid in American dollars whereas loans to foreign countries under the foreign aid program are repaid in foreign currencies.

The legislation would have induced productivity and would have injected new vitality into those areas of joblessness. Workers could have been retrained for different jobs; local communities would have had funds for industrial development; and loans for construction of public facilities could have been provided.

Today, as in 1958, thousands of workers across America are disappointed. Their hopes for employment in the near future have been dashed again.

The responsibility was squarely on the shoulders of the President. He has failed in this responsibility. Depressed areas legislation has, once again, been vetoed.

What plans have been made by the administration to aid the displaced worker? How will it answer the thousands of urgings by unemployed workers for an opportunity to work again?

Congress did its job. Legislation was passed. Concurrence was easily reached because of the need for such a law to aid chronically depressed areas.

Mr. President, I recall the words of the American clergyman, William Ellery Channing, when he spoke of example:

> Precept is instruction written in the sand. The tide flows over it, and the record is gone. Example is graven on the rock, and the lesson is not soon lost.

The veto of the area redevelopment bill is another example of callous indifference on the part of the present administration toward depressed communities and unemployed men and women. It is an example "graven on the rock, and the lesson is not soon lost."

Mr. KEATING obtained the floor.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Does the Senator from New York yield to the Senator from Texas?

Mr. KEATING. I yield, provided I do not lose the floor.

JOSEPH C. O'MAHONEY: WYOMING'S GREAT SENATOR

Mr. YARBOROUGH. Mr. President, this week the distinguished and able senior Senator of Wyoming [Mr. O'MAHONEY], the outstanding constitutional lawyer of the Senate, announced his retirement from this body at the end of this year. His clear, vibrant, resonant tones will leave this Chamber, but his opinions on constitutional law are recorded in the permanent archives of the Nation for the guidance of this and future generations.

Mr. President, like all those who have come to know and appreciate the dedicated and courageous work of Senator JOSEPH O'MAHONEY, I want to associate myself with the many tributes which have been paid him for his wonderful service and to express sincere regret that time and circumstance have caused him to decide that he should not continue in the Senate past his current term.

It would require a book, perhaps several volumes, to properly record

the invaluable contribution Senator O'MAHONEY has made to the American way of life. Long before I came to the Senate, I admired his continuing and countless fights for the principles of freedom which have made our Nation great. Since coming to know him personally, I have learned to appreciate him even more.

It is remarkable how his magnificent stands for America and all Americans have bridged a span of time that connects the heroic past, which mirrors our proud heritage, to the shining future, which surely holds freemen's destiny.

Keeping the word "free" in our free-enterprise system is a requisite of life as we know and want it. Probably no man in the history of this body has worked harder and more persuasively for economic freedom. Unwaveringly he has fought for the public interest in business competition against giant special-interest trends toward monopolies and administered prices.

One of the foremost constitutional lawyers of our time, his sound opinions are usually heard when important questions of constitutional law come up for discussion in Senate committees or on the Senate floor.

But not only did he constantly work to preserve the idea of human liberty, as written into our Constitution, for all future generations; he also sought to preserve for those who will come later some of the vast expanses of natural beauty which all of us have inherited. He has worked for preservation of our great national parks and forests and for development of our Nation's natural resources for the benefit of all the people.

The most important, everlasting mark to his credit, I believe, is this: Not only did he stand for all of these things when first he came to the Senate, but he also held to his convictions and fought for these ideals throughout a long and glorious senatorial career.

We in Texas feel close to the people of Wyoming, and are proud of her history in the American West and in the westward expansion of the American people. Senator JOSEPH O'MAHONEY typifies the fierce spirit of independence and strong individual feeling for personal justice for every man, that typifies the American West.

The Texan love for Wyoming stems from our history. When the Civil War ended, Texas was bankrupt, but millions of wild Longhorn cattle roamed her reaches. The returned Confederates rounded them up and pointed them north. By 1868, these trail drivers with their longhorn steers and cowboys, were headed for the valleys and plains of Wyoming. Since the Republic and State of Texas, prior to the Compromise of 1850, had included a stretch of territory now a part of Wyoming, Texans, for decades, had looked at Texas maps that carried them up the east side of the Rockies. They drove their herds into a Wyoming of Indians—with only a few white mountain men and trappers in the Territory.

By 1870, there were only 9,118 people in Wyoming; but the herds of Longhorns furnished employment, and soon the ranges were filled.

One of the Texans who followed a herd of cattle from Texas to Wyoming was John Benjamin Kendrick, who was born and grew up in east Texas, in Cherokee County, about 20 miles from the area where I was reared. As a young man of 22, he drove cattle to Wyoming in 1879, and stayed there to become one of Wyoming's great triumvirate of Senators—Francis E. Warren, John B. Kendrick, and Joseph C. O'Mahoney.

During Senator Kendrick's senatorial service, Senator JOSEPH C. O'MAHONEY became his executive assistant. When death called Senator Kendrick in 1933, the Governor of Wyoming appointed JOSEPH C. O'MAHONEY to succeed him. Except for a 2-year interregnum, he has been Senator since that time.

While Senator O'MAHONEY's service as a Senator for all the American people gives permanent luster to the character and ability of Wyoming's representatives here, we in Texas have a special pride in our historical ties with Wyoming. For years I have watched Senator O'MAHONEY's great career; for years, as a judge and lawyer in my home State, I paid intellectual tribute to his brilliance in the field of American constitutional government.

Senator O'MAHONEY's retirement will mark the loss from this body of a man who always held to his goals, even in the face of tremendous pressure, and in the face, at times, of fabulously powerful opposition. JOE O'MAHONEY is a remarkable American, and this Government and all America will miss his service here. He carries our good wishes and our esteem with him wherever he goes.

Mr. President, I thank the Senator from New York for yielding to me, so I could pay this tribute to Senator O'MAHONEY this week, during which he announced his prospective retirement.

Mr. KEATING. Mr. President, I have been happy to yield for that purpose, because earlier I also paid tribute to Senator O'MAHONEY. So I am glad that the tribute by the Senator from Texas will also appear in the RECORD.

THE FORTHCOMING SUMMIT CONFERENCE

Mr. KEATING. Mr. President, we stand today on the threshold of the summit conference. At this conference a small number of men will discuss problems that affect billions of people on the face of this earth. The word "summit" is, I feel, an appropriate term for this momentous gathering—not merely in the sense that it is to be a meeting of minds on the part of the leadership of East and West, but also in the sense that these men will sit and view the world from a point of vantage that commands a panorama of the entire world and its problems.

It would be heartlifting to all men to anticipate that such manifold problems, raised and debated in the assemblage of chiefs of state, will prove susceptible of solution, in whole or in part. However, the hard face of reality gives to us no smile of promise or hope in this regard. That is why we must steel ourselves against wishful thinking or illusory hopes as to positive and concrete achievements in the form of mutually agreed upon treaties. By the same token, however, it becomes sterile and defeatist to assume that no useful international purpose is served by gatherings such as the conference which will open in Paris on Monday.

It is unfortunate that the atmosphere of this meeting has been clouded by the recent plane incident. But that incident must not be considered the major deterrent to fruitful negotiations that it has been portrayed. Actually, the great shock wave that the incident induced has been followed by a wave of sanity. The emotional fireworks are burning out, as fireworks always do, for the world suddenly remembers that spying is as old as war is old, whether that war be hot or cold. By his habitually adroit technique, Khrushchev has gotten his propaganda mileage out of the incident; but he knows, as the world does, that the whole story of the incident began, not in the Government of the United States of America, not in the Office of the Chief of the CIA, not from an airstrip near the Soviet border, but in the very Kremlin, from which the loud cries of anguish and pain now emanate.

This fact must be remembered. It must be burned into the minds of those who speak of aggressive acts on the part of the United States. This world of nuclear force cannot abide a black shroud of secrecy. It is in the interest of peace, not of war; in the interest of humanity, not merely of the United States of America, that we have been obliged—as in our past history—to watch on the ramparts of freedom. Once the Kremlin rolls back its frontiers of darkness, once it gives up its weapon of secrecy, there will remain no need for us to send pilots aloft to seek the information on which our very survival may depend.

Actually, in the delicately balanced world of bloodless conflict in which we find ourselves today, it is imperative that we open all available doors to understanding, rather than to shut any one of them because of our conviction that that door leads nowhere. "Contact" and "discussion" are words we must keep alive if we are to keep alive our aspiration for the global harmony that is the true and God-given climate in which free men were destined to live.

The summit conference is not a secret meeting. The whole world is its audience. Nations and peoples will be apprised of declarations that are made, proposals that are advanced, positions that are defended. I believe sincerely that this open forum of international discussion represents a distinct advantage for our Nation. It will allow President Eisenhower to restate American ideals and American principles. It will

write indelibly into the minds of all peoples the role of our President as a peacemaker, rather than as the peace destroyer that the caricaturists of Soviet propaganda have painted him.

It is vain to suppose that the problems that confront the modern world are going to be solved in a matter of days by a meeting of world leaders. It is far more vain and futile to expect that they will be solved by hermetically sealing ourselves against these problems, by shutting the door on negotiations, and isolating ourselves in the ivory tower of unreality.

It is my belief that new avenues of hope may be opened up by the very fact of nuclear stalemate—that is, by the mutual realization that the awesome armaments of today leave man only the choice between annihilation and accommodation.

The alternative to an attempt to destroy each other is, perforce, the reconciliation to the idea of living with each other, with all the implications of detente and of flexibility that such a modus vivendi involves.

Indeed, the climate of detente is already perceptible, evoked by the hard fact of geopolitics that war cannot resolve a single one of the questions that plague the European family of nations, or, indeed, the world family. This atmosphere of détente is sought, as well, as a kind of long breathing spell—better, a respite from strife—that will allow the great powers to mind the manifold problems of an evolving world where new directions, new pressures, new challenges call imperiously for the attention and the energies of the leadership nations.

We are too prone to think largely in terms of the East-West struggle yet a multitude of the shaping forces of history lie outside this struggle, and constitute a concrete and immediate preoccupation. To these forces, to the problems they pose, to the challenges they present, each of the great powers must commit itself.

For our own part, we have legitimate and demanding preoccupations in our own hemisphere. An expanding population requires a concurrent expansion of our economy. The increased cost of providing more governmental aid and services to more people has to be equated with the financial demands of the total Defense Establishment. In addition, the searchlight of our own interest, which has been beamed to Europe during the past years, must be directed increasingly to the neglected areas of our own hemisphere.

England, too, has preoccupations that lie outside the context of East-West struggle. The recent Commonwealth Conference reminds us that England belongs to a family other than NATO, and that the Commonwealth family poses to England a unique problem she has never been called upon to face before. This is an integration problem on a massive international scale. In substance, it is the question of integrating politically the old-line white nations of the Commonwealth with the emerging, self-conscious, and racially sensitive new nations of Africa and south Asia.

More immediate and compelling, perhaps, is the need of France for a period of détente. With the problem of Algeria so immediate and so real, the problem of East-West relationships is an untimely intrusion. The heart of France's military power remains in Algeria, not in Europe. The drain of the war in Algeria seriously limits France's ability to play the effective role in NATO that has been assigned to her.

And, in the case of Russia, the iron fist that she shakes at the world must not be misconstrued as a symbol of total power, without flaw, without weakness. We know that the Soviet farm problem has been met by many answers, but not yet by the right one. We know of areas of unrest, not only in the captive nations, but also in the homeland of the U.S.S.R. And we know that Red China, bulging and brooding in the near distance, is a neighbor that, paradoxically, is the same uncomfortable enigma to Russia that Russia represents for us.

The great power preoccupations I have touched upon must be taken into account if we are to view the summit and its prospects in true perspective.

Our stand on the question of West Berlin has been made abundantly clear. We view it, not as mere geography, but as a symbol of where free men must take their stand if they are to breathe life and meaning into the principles they espouse. Soviet Russia may rattle its saber over this issue, but it knows full well that to unsheathe that saber would bring the holocaust it is not at all disposed to precipitate. We have two Germanies—East and West—as the summit conference opens. We shall have two Germanies when it closes; and this situation must persist so long as the concept of free elections remains unacceptable to the Kremlin.

No man, no nation, has anything to fear from peace with justice; and it will be precisely as advocates of peace with justice that President Eisenhower and Secretary Herter will sit down at the summit conference, next Monday, in Paris. Their mission is not to transform the world before our eyes, but to build hope in the hearts of men, to reaffirm our dedication to the principles by which we live, to state before the court of humanity, the historic cause of free men and free institutions.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, May 13, 1960, he presented to the President of the United States the enrolled bill (S. 2778) to amend the act relating to the Commission of Fine Arts.

ADJOURNMENT TO MONDAY

Mr. BYRD of West Virginia. Mr. President, I move that the Senate do now adjourn until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 6 o'clock and 8 minutes p.m.) the Senate adjourned until Monday, May 16, 1960, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate May 13, 1960:

In the Army

The following-named officers to be placed on the retired list in the grade indicated under the provisions of title 10, United States Code, section 3962:

To be lieutenant generals

Lt. Gen. Williams Stevens Lawton, O14924, Army of the United States (major general, U.S. Army).

Lt. Gen. Francis William Farrell, O12784, Army of the United States (major general, U.S. Army).

Lt. Gen. Charles Edward Hart, O15788, Army of the United States (major general, U.S. Army).

Lt. Gen. George Windle Read, Jr., O12603, Army of the United States (major general, U.S. Army).

Lt. Gen. Samuel Tankersley Williams, O8472, Army of the United States (major general, U.S. Army).

Lt. Gen. William Howard Arnold, O15558, Army of the United States (major general, U.S. Army).

The following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to positions of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Maj. Gen. David William Traub, O17110, U.S. Army, in the rank of lieutenant general.

Maj. Gen. Robert Jefferson Wood, O18064, U.S. Army, in the rank of lieutenant general.

Maj. Gen. John Lawrence Ryan, Jr., O16451, U.S. Army, in the rank of lieutenant general.

Maj. Gen. William Peirce Ennis, Jr., O16436, U.S. Army, in the rank of lieutenant general.

In the Navy

Capt. William C. Mott, U.S. Navy, to be Judge Advocate General of the Navy for a term of 4 years with the rank of rear admiral.

Coast and Geodetic Survey

Subject to qualifications provided by law, the following for permanent appointments to the grades indicated in the Coast and Geodetic Survey:

To be lieutenants (junior grade)

Ray M. Sundean	Morton K. Meiers
Lawrence S. Brown	Robert M. Davidson
Karl R. Anderson	Ray E. Moses
George M. Poor	Pat T. Redden
James A. Ten Eyck	Douglas J. Wilcox
Gordon N. Orr	Frederick A. Ismond
Charles K. Townsend	Peter A. Martus
Ronald L. Newsom	Donald R. Tibbit
Donald W. Moncevicz	Charles G. Elliott
Doyle D. Harper	Gerald C. Saladin
Will Connell	Donald C. McIntosh
Richard L. Hess	Michael L. Olivier

To be ensigns

James Collins	William D. O'Neill
William A. Drohan	Archibald J. Patrick
Douglas O. Farrand	William G. Proffitt, Jr.
Richard Hull	E. Douglas Schwantes, Jr.
Bernard F. Karwisch	
Thomas E. Krakowski	Robert H. Seay
Henry A. Mathis, Jr.	Charles D. Strawman
George A. Maul	R. Lawrence Swanson
Park A. Nelson	

EXTENSIONS OF REMARKS

New York State Cooperation With the Federal Government in the Atomic Energy Field

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1960

Mr. KEATING. Mr. President, I wish to invite attention today to the fine spirit of cooperation which exists between New York State and the Federal Government with regard to the framing and establishment of New York's atomic energy regulation program.

An amendment to the Atomic Energy Act which was enacted last year provides for the assumption of exclusive State regulatory control in the field of atomic energy. New York has been for several months endeavoring to work out a regulatory program which will be acceptable to the Atomic Energy Commission under this authority.

In accordance with a recent bill enacted by the legislature, the State is presently drafting its proposed agreement which will be submitted to the Atomic Energy Commission in the very near future.

Mr. President, these events represent a significant step. As the President has so clearly stated, it is important that we recognize "the need to increase the functions and responsibilities of the States as a safeguard against excessive centralization of governmental power in this country." I am hopeful that New York's efforts in this field will set an example which other States will follow.

Mr. President, I ask unanimous consent to have printed at this point in my remarks a press release from Governor Rockefeller, which includes an exchange of letters between the President and the Governor on the vitally important subject of atomic energy regulation.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany.

Governor Rockefeller today made public an exchange of correspondence between the President and the Governor, and between the Atomic Energy Commission and the Governor, on the subject of atomic energy regulation.

The correspondence disclosed that the Atomic Energy Commission has expressed the hope that the State of New York take the lead in reaching an agreement with the Commission on atomic energy regulatory control and thereby "serve as an example for other States to follow."

Authority for such an agreement was contained in an amendment to the Federal Atomic Energy Act, adopted last year, which would provide for the assumption by the State of exclusive regulatory control within the State of radioisotopes, natural uranium and thorium, and fissionable material in quantities of less than a critical mass.

In his response to the President, Governor Rockefeller said that "I am pleased to assure you that we shall make every effort to cooperate with the Commission in arriving at an agreement that will serve as a valuable precedent in safeguarding the public health and safety and in introducing into the regulatory control of atomic activity the competence and high regard for the public interest which exists among State authorities."

Legislation expressly authorizing the Governor to enter into such an agreement with the Commission was adopted by the New York State Legislature in its last session, and the State's office of atomic development was at the same time authorized to enter into related subsidiary agreements with the Commission on behalf of the State.

The regulatory authority that would be assumed by the State under the proposed agreement would primarily be administered by the State department of health, the State department of labor, and the New York City Department of Health, with the State office of atomic development functioning in a coordinating role.

The texts of the letters from President Eisenhower and the Atomic Energy Commission to Governor Rockefeller, and his responses, follow:

THE WHITE HOUSE,
Washington, April 11, 1960.

Hon. NELSON A. ROCKEFELLER,
Governor of New York,
Albany, N.Y.

DEAR NELSON: I have often stressed the need to increase the functions and responsibility of the States as a safeguard against excessive centralization of governmental power in this country. Public Law 86-373 was enacted in response to a recommendation by the Joint Federal-State Action Committee.

The law authorizes the Atomic Energy Commission to enter into agreements with the Governors of the States under which the States will assume responsibility for specified regulatory functions now performed by the Commission for the promotion and regulation of the peaceful uses of atomic energy. Following consultations with representative State groups, the Commission has prepared proposed criteria to guide both parties in reaching agreement on the transfer of these functions.

I have asked the Chairman of the Atomic Energy Commission to send copies of the proposed criteria to you. Your views, and those of the other Governors, will be important in determining the actual criteria to be applied. I request that you give this matter your personal attention and ask that you send your views as soon as possible to Mr. John A. McCone, Chairman of the Atomic Energy Commission. Mr. McCone and his staff will welcome an opportunity to meet with you or your representatives to discuss the proposed criteria and other aspects of the program authorized under Public Law 86-373.

This legislation is a constructive step toward a better distribution of functions between the Federal Government and the States. I know that you share with me the hope that more such steps to expand State responsibility will be taken in the future.

With warm regard.

Sincerely,

DWIGHT EISENHOWER.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., April 12, 1960.

Hon. NELSON A. ROCKEFELLER,
Governor of New York,
Albany, N.Y.

DEAR GOVERNOR ROCKEFELLER: Within the past few days, President Eisenhower wrote to you about the importance he attributes to the reapportionment of responsibilities between the States and the Federal Government and mentioned the authority granted by Public Law 86-373 to take such steps in the atomic energy field. Our first step in implementing this proposal is the development of criteria for use in the discontinuance of the Atomic Energy Commission's responsibilities over certain radioactive material and the assumption of those responsibilities by the States through agreements with the AEC.

Therefore, I am sending copies of our "Proposed Criteria for Guidance of States and the AEC in the Discontinuance of AEC Regulatory Authority Over Byproduct, Source, and Special Nuclear Materials in Less Than a Critical Mass and the Assumption Thereof by States Through Agreement." Also enclosed are the following background materials: Public Law 86-373; a summary of AEC policies and procedures of the regulation and licensing of source material, special nuclear material, and byproduct materials; and AEC regulations applicable to source, special nuclear materials, and byproduct material.

My fellow commissioners and I are looking forward to receiving your comments on the proposed criteria and to working with you to achieve the objectives of Public Law 86-373.

Because of the great interest of your State in atomic energy and of your many atomic energy activities, we hope that you would be willing to take the lead in this matter of reaching an agreement and to serve as an example for the other States to follow. If we or our staff can facilitate your consideration of this material, please let us know.

Sincerely yours,

JOHN F. FLOBERG,
Acting Chairman.

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, April 26, 1960.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Thank you very much for your letter of the 11th and the related material which was sent to me by the Atomic Energy Commission on April 12th at your request. I share your view that the law authorizing Federal-State agreements in the atomic energy field constitutes a constructive step toward a better distribution of atomic functions between the Federal Government and the States, and wish to advise you that we are proceeding immediately to evaluate the Commission's proposed criteria with the objective of submitting our views to the Commission within the next few weeks.

We are gratified that the Commission, in recognition of our interest and activity in atomic energy, has expressed the hope that New York State would be willing to take the lead in reaching an agreement and to serve as an example for other States to follow. We are mindful of the responsibility that this imposes upon us, and I am pleased to assure you that we shall make every effort to cooperate with the Commission in arriving at

an agreement that will serve as a valuable precedent in safeguarding the public health and safety and in introducing into the regulatory control of atomic activities the competence and high regard for the public interest which exists among State authorities.

We look upon this new step as a milestone in the development and control of atomic energy, and we shall do all that we can to insure its success.

Sincerely,

NELSON A. ROCKEFELLER.

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, Apr. 26, 1960.

Hon. JOHN A. MCCONE,
Chairman, U.S. Atomic Energy Commission, Washington, D.C.

DEAR JOHN: I am inclosing a copy of a letter I have sent to the President advising that New York State will submit its comments on the Commission's criteria for proposed Federal-State atomic energy agreements to you within the next few weeks.

We deeply appreciate the confidence in New York State evidenced by the expression of the Commission's hope, contained in Acting Chairman Floberg's letter to me of April 12, that we take the lead in reaching an agreement with the Commission and thereby serve as an example for other States to follow. We shall make every effort to achieve this desirable objective.

With best wishes.

Sincerely,

NELSON A. ROCKEFELLER.

SENATE

MONDAY, MAY 16, 1960

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

God of our fathers, and our God, with this new week, our prayerful thoughts leap the sea to the summit consultations where the fate of the turbulent world may hang in the balance.

In all this meeting of minds, we would be vividly conscious of spiritual resources. We are grateful for the leaders of free men who are there with a faith that colors their outlook, that determines their objectives, that stretches out their horizons, and which is linked to the supremacy of things unseen.

Fortified by that faith, may Thy benediction rest upon the leaders of the free world, face to face with ideas of the earth, earthy doctrines, alien to the emancipating revelation which has lifted mankind from the cave to the cathedral.

At this altar of divine grace, we rejoice in the moral majesty of a creative creed whose fundamental belief is, not in material might, or in scientific achievement, but in the dignity of the individual made in the image of God and in the eternal laws of the Creator which for men and nations only are the paths to abundant life.

In spite of the formidable forces arrayed against us, grant to those who stand for us and speak for us before the bar of world opinion and judgment the triumphant assurance that they who are for us are more than those against us.

In the dear Redeemer's name we ask it. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Friday, May 13, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on May 13, 1960, the President had approved and signed the following acts:

S. 1062. An act to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidations of insured banks;

S. 1328. An act for the relief of Parker E. Dragoo;

S. 1408. An act for the relief of Ronald R. Dagon and Richard J. Hensel;

S. 1410. An act for the relief of Jay R. Melville and Peter E. K. Shepherd;

S. 1466. An act for the relief of Sofia W. Sarris;

S. 2173. An act for the relief of Mrs. John Slingsby, Lena Slingsby, Alice B. Slingsby, and Harry Slingsby;

S. 2234. An act for the relief of the estate of Hilma Claxton;

S. 2309. An act for the relief of Gim Bong Wong;

S. 2333. An act for the relief of the heirs of Caroline Henkel, William Henkel (now deceased), and George Henkel (presently residing at Babb, Mont.), and for other purposes;

S. 2430. An act for the relief of certain employees of the General Services Administration;

S. 2507. An act to relieve Joe Keller and H. E. Piper from 1958 wheat marketing penalties and loss of soil bank benefits; and

S. 2778. An act to amend the act relating to the Commission of Fine Arts.

REPORT OF NATIONAL MONUMENT COMMISSION—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and referred to the Committee on Interior and Insular Affairs:

To the Congress of the United States:

I am enclosing for the consideration of the Congress a report of the National Monument Commission submitted as directed by the act of August 31, 1954. I have requested the Secretary of the Interior to submit to the Congress a proposed bill embodying the Commission's recommendations.

The Commission's report recommends an approved design for the Freedom Monument, asks that the Commission be authorized to erect the monument, suggests that the number of private citizens serving on the Commission be increased from four to eight, asks the Congress to authorize the appropriation of $12 million as the Federal share of the cost of construction, and requests that the Commission be authorized to solicit private contributions for the remaining cost of the monument.

The act of August 31, 1954, created the National Monument Commission for the purpose of securing designs and plans for a useful monument to the Nation symbolizing to the United States and the world the ideals of our democracy as embodied in the five freedoms—speech, religion, press, assembly, and petition—sanctified by the Bill of Rights adopted by Congress in 1789 and later ratified by the States.

I believe it important that the story of the noble ideas which shaped our country's beginning, its course, its great moments, and the men who made it possible, be ever present in the minds of Americans. This purpose can be furthered in a variety of ways, but the simplest and most effective of all methods in my judgment is to present it impressively in visual form. The erection of the Freedom Monument would accomplish that objective. The National Capital area is adorned by a galaxy of memorials to individuals but nowhere in the Nation's Capital or this Nation can one find a memorial to the principles and ideals upon which our Government is based.

The Commission, since its creation, has placed the ideas I have mentioned on the drawing board. It is intimately acquainted with the problems involved in the erection of the Monument; it has advanced the memorial; and I recommend that the Commission be authorized to complete the task.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

REPORT OF NATIONAL CAPITAL HOUSING AUTHORITY—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and, with the accompanying report, referred to the Committee on Banking and Currency:

To the Congress of the United States:

In accordance with the provisions of section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1959.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

REPORT OF U.S. CIVIL SERVICE COMMISSION ENTITLED "EMPLOYEE TRAINING FOR BETTER PUBLIC SERVICE"—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States,

which was read and, with the accompanying report, referred to the Committee on Post Office and Civil Service:

To the Congress of the United States:

The Government Employees Training Act (Public Law 85–507) directs the Civil Service Commission to submit annually to the President for his approval and transmittal to the Congress a report with respect to the training of employees of the Government under the authority of the act. I am transmitting to you with this letter the Commission's report entitled "Employee Training for Better Public Service."

It is my firm conviction that training has long been essential for the successful operation of Federal agencies. Today's demands, however, bring a new urgency to training, especially for our career managers. I have, therefore, recently asked all agency heads to strengthen their programs for the selection, development, and training of these key officials. This directive is in addition to that issued in 1955 which supported all types of training.

The action of the Congress in broadening authority to train Federal employees was a healthy and progressive move. The Commission's report shows that Federal officials have made intelligent use of their authority under the act and that it has helped to meet an urgent need. I was particularly interested in the Commission's comments on "The Future," which point out two important areas needing improvement—planning, and budgeting and scheduling for training activities.

The Commission's report is encouraging and its suggestions to the agencies sound. A good beginning has been made under the authority granted by the Congress.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 3338) to remove the present $5,000 limitation which prevents the Secretary of the Air Force from settling certain claims arising out of the crash of a U.S. Air Force aircraft at Little Rock, Ark.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. VINSON, Mr. KILDAY, Mr. DURHAM, Mr. RIVERS of South Carolina, Mr. ARENDS, Mr. GAVIN, and Mr. VAN ZANDT were appointed managers on the part of the House at the conference.

The message further announced that the House had agreed to the amendment of the Senate to the joint resolution (H.J. Res. 640) to authorize and request the President to issue a proclamation in connection with the centennial of the birth of General of the Armies John J. Pershing.

ENROLLED JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled joint resolution (H.J. Res. 602) authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week, and it was signed by the President pro tempore.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Flood Control, Rivers and Harbors Subcommittee of the Committee on Public Works and the Communications Subcommittee of the Committee on Interstate and Foreign Commerce, were authorized to meet during the session of the Senate today.

DEVELOPMENTS IN PARIS

Mr. JOHNSON of Texas. Mr. President, according to the news dispatches from Paris, Soviet Premier Khrushchev seems determined to destroy the summit conference even before it starts. This development has implications which must be considered with great care and calmness by all the freedom loving peoples of the world.

I doubt whether thoughtful people anticipated too much out of the summit conference under any circumstances. Nevertheless, the United States can never place itself in the position of refusing to negotiate in good faith whenever there is even a remote possibility of reducing world tensions and of setting the footsteps of humanity upon the road to peace.

However, several days ago it became apparent that Premier Khrushchev was in no mood for orderly negotiations. The manner in which he handled the U–2 plane incident was clearly an indication that he planned to make the summit conference either a shambles or a forum for Soviet propaganda. These indications were more than confirmed by the manner in which the Soviets have acted in the past 2 days.

Premier Khrushchev arrived in Paris with what every correspondent has described as a display of toughness.

A few hours ago he withdrew his invitation to President Eisenhower to visit the Soviet Union; and now we are informed that Mr. Khrushchev's price for negotiating at all is one that obviously is unacceptable to the United States. In other words, he is not going to discuss the issues upon which there might be some possibility of agreement, unless there are first discussed issues upon which there is no possibility of agreement.

This development is one which will disappoint the whole world. But the world has become accustomed to such disappointments.

Mr. President, this is not the first time the Soviets have deliberately broken up an international meeting, and probably it is not the last. The world would have a great deal more faith in Soviet intentions if these Communist leaders were capable of negotiating real issues, sometime, at some place, without a drum-fire propaganda campaign.

As the situation now stands, in the minds of men and women everywhere is the question of whether the Soviet Union actually wants a world of peace, or whether it prefers constant tensions which must end in disaster.

Mr. DIRKSEN. Mr. President, I have had no opportunity to familiarize myself with the statements and the facts with respect to the summit conference which have appeared on the ticker. However, I am advised that, first, the invitation for President Eisenhower to visit the Soviet Union has been withdrawn. What the facts and circumstances are, I do not know. But it would appear to me, offhand, that this comes as something of a significant confession that evidently the Soviet leaders—meaning Mr. Khrushchev and all his associates—are quite alarmed about the effect the warm personality of the President of the United States would have on the Soviet Union and upon its people.

The second thing I glean from all this is that Mr. Khrushchev must be alarmed that a great country like the United States has penetrated Soviet security, notwithstanding all the boasts which have been made to the whole wide world and to the Soviet people. This certainly puts Mr. Khrushchev in a delicate position with respect to his own people. It is understandable, then, how irritation and an irksome attitude on his part would finally eventuate in a denunciation of the United States and a denunciation of the President of the United States.

I have been informed that the President was absolutely firm in his own attitude. I applaud him for it, and I am sure the people of this country will applaud him for it, because it is the only kind of attitude the Soviet leaders can well understand, as we learn when we look into history in retrospect.

The tragedy of it all is that all this could have been understood without the necessity of the President's making a trip to Paris in the first instance. The Soviet leaders must have known, before they arrived for the conference, that this

was going to be the "play," and they could just as well have uttered their intentions first, as last; and then we could have known, and on that basis could have absented ourselves from the conference, or else could have had a conference without the Soviet leaders.

A moment ago I was officially advised that very shortly the President will make a statement from Paris. I am confident it will be a firm statement from a man who is noted for his firmness in an hour of challenge and crisis.

Mr. MANSFIELD. Mr. President, the news from Paris is discouraging, but I would remind my colleagues and my countrymen that this is a time, not to give vent to our emotions, but to remain calm in the face of the danger which confronts us. I have said this before. I will say it again.

The events of the past week, accentuated by the reports of today's summit meeting, should bring home to all—to the Russians, to Americans, and to peoples everywhere—a realization of how slender is the reed by which we clinch to a civilized survival. That is the fact, and it ought now to be visible to all. Yet this blazing fact is in danger of being lost at Paris. National passions rise up on all sides to overwhelm it. The struggle of propaganda takes precedence over it. The incident is not being appraised in terms of its deep implications for the present state of the world's tensions.

Let me say with all the seriousness that I possess that if this game goes on in its present vein—this game of propaganda and counterpropaganda, this game of probe and counterprobe, this game of charge and countercharge, this game of invite or not to invite—there will, indeed, be a monumental wreckage to study. But it will be for some other generation, not this one, to study it. For the wreckage will be not just a plane. It will be the charred remnants of the civilization which houses living mankind.

That is the grim and fundamental reality which confronts the chiefs of state. There is no room at this meeting for displays of outraged indignation on anyone's part. There is no room for propaganda plays designed to bring to any nation the label of sole custodian of peace or the sole source of provocation to war.

At this critical juncture the four men who meet are in every sense the principal guardians of humanity's highest hopes—perhaps of the human species itself. This may well be the decisive moment when the deadly game begins to end in the beginnings of a beginning of a durable peace, or drift into the path of inevitable war. If they maintain that perspective, these men will put aside, and they will urge their peoples to put aside, the dangerous provocations and the glib propaganda. They will see these provocations, this propaganda, for what they are, fragments embedded in the great wound which festers in mankind and threatens the very existence of civilization.

I would express the hope that President Eisenhower and Mr. Khrushchev would meet privately, lay their differences on the table, talk them out, and then, along with their colleagues, Prime Minister Macmillan and President De Gaulle, recognize the danger which faces civilization—not just the United States and the U.S.S.R.—and do their utmost to bring a modicum of peace and stability to all mankind.

The hopes of mankind are wrapped up in the deliberations of these four men. Let us pray that these hopes will not be treated lightly, but with the profound gravity to which they are entitled. It is not a question of saving face; it is a question of saving civilization.

Mr. BUSH. Mr. President, I applaud the statements of the majority leader and the minority leader and also the Senator from Montana. I believe what they have said would meet the approval and the enthusiastic backing of a large majority of the Senate, and it is fitting that these three leaders in the Senate should at this time speak out as they have so eloquently done this morning.

Mr. GORE. Mr. President, the feeling of resentment must be unanimous among the American people that the President has been insulted by Mr. Khrushchev. I agree with the junior Senator from Montana that it is a time when one must hold his emotions in rein. That is necessary, because the consequence of tragedy in Paris today could be grave, indeed. Unless the rift can be healed by statesmen of good will and noble purpose, one consequence—one regrettable consequence—might be an intensification of the armaments race, the easing of which the people of the world had earnestly hoped for.

I thought it was most appropriate that the Chaplain of the Senate prayed for careful, dispassionate, earnest consideration at the summit conference when the Senate convened a few moments ago.

I believe the American people can trust President Eisenhower to react as the gentleman that he is, as a military leader, as a man of honor, as an embodiment of the pride, of the hopes, and the aspirations of the American people for peace.

Mr. President, Senators will recall that I am one of those who have had misgivings about a haphazard approach to a conference among heads of state. Regrettably, the events of today demonstrate the unwisdom of substituting personalized diplomacy for the hard work and a careful step-by-step solution of international problems by painstaking negotiation through the customary courses of diplomacy. That, however, is beside the point just now. What does the future hold?

We must look to our strength. We must look to the strength of our resolution, to the strength of our dedication to the central pulse of our creation. We must look to the strength of our defense and that of the free world.

Mr. Khrushchev created the Berlin crisis. We have an agreement about Berlin. It was Mr. Khrushchev who created the current Berlin crisis, the problem, and then demanded that we settle it to his advantage. Peace is not promoted by such threats and tactics.

By "blowing up" the reconnaissance aircraft incident out of all proportion to its importance, the Russian dictator has undertaken to place the blame upon the United States for failure of the conference, while making it impossible for the conference to succeed other than through an acceptance by the Western Powers of the Khrushchev formula.

As it is reported now, Khrushchev is demanding an ignoble apology by the President of the United States of America as the price of further conferences. If true, our President will react honorably.

Events of the next decade, Mr. President, may well determine whether a free, unregimented society such as ours, through the processes of democracy and persuasion, can successfully cope with the challenge of a completely regimented society, a dictatorship which now engulfs one-third of the world and surges with the monolithic unity of totalitarianism.

To provide the answer, the United States must reassess its policies, must rededicate itself to its fundamental purpose—to the goal of greatness to which destiny beckons it.

Several Senators addressed the Chair.

The PRESIDENT pro tempore. The Senator from Wisconsin is recognized.

Mr. WILEY. Mr. President, the deliberate act of Khrushchev to scuttle the conference reflects once more the twisted, unreliable, tortuous line of Communist policy. I said "the deliberate act."

We saw Khrushchev get off the plane smiling. He had made some preliminary remarks before coming to the conference. Everyone thought there was to be a homecoming of nations, with a big purpose of arriving somewhere. Instead of that, Khrushchev "blew his top." The arrogant way in which he made the demand for the apology of the President of this country at the opening session of the conference is in itself most reprehensible and not in accordance with reasonable conduct of international affairs. What he did causes every person who has a thinking apparatus to ask why he did it. The answer must be that he did it for home consumption. Things are not going very well within the borders of Russia.

The history of the Soviet espionage and subversion—yes, outright aggression—the world knows. Every country in Europe knows of it. Then Khrushchev puts on a stage play. I do not think he has fooled very many people by it. He has, however, created another crisis—and it is a crisis.

Khrushchev knows that today we have Colonel Abel, a Soviet spy, in a U.S. prison. He knows also that Switzerland "kicked out" a couple of spies the other day.

What does Khrushchev think? Does he think that Europe and the rest of the world are simply children in evaluating

these conditions? What about these things, Mr. Khrushchev?

After long months of attempting to get an agreement for a summit conference, Khrushchev now throws the world hopes out the window and throws out the window the hoped-for agreement which might lessen world tensions. The world, I believe, will hold him accountable.

Of course, we know his motives. First, we let him come to this country. We treated him like a gentleman. By the usual trickery of Communist policies, he has now denied the equivalent right to our President, the right to meet the Russian people. Why is this? Is he fearful the salesmanship of the Chief Executive of this country is such, in relating the facts, that the Russian people might, indeed, say to Mr. Khrushchev, "We do not like your lies. We do not like the way you behave. We like the way the American Nation treats its people and the way the President of that Nation treats the people."

Of course, Khrushchev, as an international poker player, thought he had a trump card. As a matter of fact, it was only a deuce. He has already overplayed his hand.

Now we will all wait to see what the President will have to say. I am sure we will find he will call a spade a spade. He will not mince any words.

As I understand the situation, Khrushchev is proposing another adjournment of 8 months. Perhaps he hopes then there may be a new President whom he can handle.

He is going to be fooled. No candidate for the Presidency has any confidence in Khrushchev's methods or his promises. They know the history of Mr. Khrushchev and Stalin. I believe the American people should consider this food for thought when they select the next President of the United States.

Yes; these are challenging times, and it is up to all of us to realize, as has been suggested already, that we should not go off halfcocked ourselves, but think sanely. But, more than that, we should keep the Nation alert and adequate.

Mr. CARLSON. Mr. President, Mr. Khrushchev by his action this morning, in canceling President Eisenhower's visit to Russia, has again demonstrated to the world that he has no desire to live in the world as a neighbor with neighbors.

I wish to associate myself with the remarks which have been made by the majority leader, the minority leader, and the assistant majority leader, as well as others, on the floor of the Senate, in regard to the most delicate situation that is confronting this Nation and the world today at the summit meeting. I am pleased by the calm statements and carefully selected remarks which have been made this morning on the floor of the Senate. All who have spoken realize the seriousness of the situation.

I have a personal feeling with regard to this which I should like to state. Mr. Khrushchev, through his provocative remarks and propaganda during the last week, has let the world know that he did not dare have the President of the United States visit the Soviet Union, because of his position, because of his personal appeal, and because of his fine method of meeting folks in various countries, which has been demonstrated time and again. I regret it sincerely, because I believe it would have been a great thing for the Soviet nation—the rulers and the people of that nation—to have had an opportuntiy to come in contact with the President's thinking and his personality at a time when the world sorely needs that type of leadership.

I believe that on this occasion all of us should be proud of the fact that we treated Mr. Khrushchev as a ruler of a great country, and that we gave him every consideration when he was in the United States on his visit. Every courtesy was extended to him, and all doors were opened to him. Now he has demonstrated to the world that he does not care to live in a neighborly fashion with the rest of the world.

It is our duty now to remain calm and deliberate and take no hasty action, but realize that we are living in a very difficult time.

Mr. DODD. Mr. President, I have listened with great interest to the statements made this morning by the distinguished majority leader, the very able assistant majority leader, the gentle minority leader, and other leading Members of the Senate on both sides of the aisle regarding the latest developments in Paris. Certainly I wish to commend all of them for the interest which they have expressed at this critical hour.

I am sure all of them agree with me that while this is a time for sanity and self-control, it is, as well, a time for reflection, and also a time for all of us to wake up and recognize that we have been pursuing a course which has led this Nation perilously close to grave disaster.

A few months ago, just 7 months ago, I stood in my place here on the floor of the Senate and tried my best to warn my colleagues and my countrymen of what I thought was a great blunder: to bring to the United States of America, and indeed to its capital, this very citadel of freedom itself, to this Senate Chamber, one of the greatest tyrants in world history, and give him a cloak of respectability and acceptance by the forces of justice and decency in the world.

But that is past history, sad history, tragic history. Let us learn its lesson well.

Since then, it seems to me, we have moved step by step closer to what I described a few minutes ago as a grave disaster. For, Mr. President, unless we mend our ways disaster will visit us. There are several points that ought to be made this morning. One of them is that we should never have agreed to attend a so-called summit meeting without knowing in advance what is going to be talked about; that we should not go to such a meeting like country bumpkins.

That is what happened in 1955. I was a Member of the other body at the time, and I raised my voice then, and at that time I said I thought it was wrong to do so. But we went and accomplished nothing and suffered a setback. Some of us hoped we would learn a lesson then. But we kept right on from one mistake to another.

Now this has happened. It was all predictable, I say. I do not believe that Khrushchev ever intended to have President Eisenhower visit the Soviet Union, because he knew the President's visit would threaten his control over the people he holds in subjection under his tyranny. He knew it would threaten, as well, control over the millions of people he holds in confinement in the captive nations. He could never permit President Eisenhower, with his frankness and honesty and his captivating personality, the opportunity to talk to the Russian people who are held in thralldom by the evil dictatorship of the Soviet Union.

So I repeat it was predictable. The tragedy of it is that we welcomed Khrushchev to our own country and thereby increased his prestige and standing in the world and furthered his evil plans. While this is no time for violence and no time for recklessness, it is, however, a time for reflection, for prayerful reflection.

Right now I am sure Khrushchev is carrying on a massive propaganda effort to get us to permanently suspend all nuclear testing. Many well-intentioned people are being used by him. Insofar as my limited talents are concerned I tried to make this clear here in the Senate last Thursday. There are better informed persons in Congress on this subject than I, persons with more prestige and more experience in this field. I say they should speak up and tell the people the facts and what needs to be done. Senator ANDERSON has done so, so have other Senators, but much more should be said and done by the President.

We all want peace, but we want peace with honor and peace with justice. We cannot blunder our way to peace. We cannot beg our way to peace. We cannot wish our way to peace. We must work and pray our way to peace if we want to have it.

The effort by the Soviet Union to stymie us and cripple us and paralyze us with respect to nuclear testing is another massive move by this evil force in the world to destroy us and to destroy our allies who are with us in this fight for freedom. Let them not succeed. From this hour forward let us give up all self-deception and speak and act like free men who know the truth and are not afraid.

So I hope that we will wake up.

I say to the President that he need not feel embarrassed or deeply disturbed. He can come home to the American people and to his free friends in the world. We will receive him well. His only fault is that he trusted this evil man too much, but he did so with all good intentions for our country.

It has almost become something to be ashamed of for people to talk about freedom and patriotism and liberty, and about fighting and dying for the things that are right. A man is made to feel like a fool or knave when he speaks of these things. What must we do to awaken in our people the spirit of justice and freedom? What must we do to teach them not to be frightened into peace at any price?

That is the great lesson to be learned from this calamity. Let us be strong in our faith in freedom, and brave in the face of threat and bring to our side free men everywhere. Let us recall the days of our early founding, when only a handful of people on a strip along the Atlantic Ocean gained the respect of the world because these men were not afraid to stand up and fight for freedom.

Mr. SCOTT. Mr. President, will the Senator from Connecticut yield?

Mr. DODD. I yield.

Mr. SCOTT. I am personally very much thrilled at the sensible, courageous, and patriotic position taken by the distinguished Senator from Connecticut. Whenever in this country we are confronted by a crisis, it is, in my judgment, important that voices such as that of the Senator from Connecticut be heard to summon the country to a unified recognition of the fact that America is not only the strongest nation in the world in its armament, in its resources, and in its physical attributes, but that there exists within us a moral strength and a pride in our national history which will resist the sharp tactics of a bully and a blusterer, and which support the President in the kind of situation which has developed today.

While I shall speak further on this subject later, in my own time, at this moment I wish particularly to congratulate the Senator from Connecticut, who is never wanting in the expression of the kind of patriotic and forthright views which make so clear the attitude of most Americans. Truly this is not a time in our country for sissies or pantywaists or timid apologists, because the need and the circumstances call for unified support of our country.

Mr. DODD. Mr. President, I deeply appreciate the remarks of the Senator from Pennsylvania. He understands this situation. He can help us all to better understand.

The sorriest spectacle of all, to me, is Khrushchev, of all people, lecturing President Eisenhower on morality. Certainly a new, all-time low has been hit in the world when a man of Khrushchev's record, having the blood of millions on his hands can lecture a man like Dwight Eisenhower about morality. Perhaps this incident will help to wake up the American people. Think of a man who has never kept his word, who is full of deceit, who has caused all kinds of trouble in the world, a bloody butcher, lecturing a fine human being like President Eisenhower, who every honest man and woman in the world recognizes to be such, on the subject of morality.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

PROPOSED TRANSFER OF VESSEL BY NAVY DEPARTMENT TO THE AMERICAN LEGION, ELLSWORTH, MICH.

A letter from the Assistant Secretary of the Navy (Material), reporting, pursuant to law, that the Department of the Navy proposes to transfer the vessel *Flamingo* (MSCO–11) to Jansen-Richardson Post No. 488 of the American Legion, Ellsworth, Mich.; to the Committee on Armed Services.

REPORT ON PROGRESS OF LIQUIDATION OF NATIONAL DEFENSE, WAR AND RECONVERSION ACTIVITIES OF RECONSTRUCTION FINANCE CORPORATION

A letter from the Administrator, General Services Administration, Washington, D.C., reporting, pursuant to law, on the progress of the liquidation of the national defense, war and reconversion activities of Reconstruction Finance Corporation, during the quarter ended March 31, 1960; to the Committee on Banking and Currency.

AMENDMENT OF ACT RELATING TO FORT HALL INDIAN IRRIGATION PROJECT

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to supplement and amend the act of June 30, 1948, relating to the Fort Hall Indian irrigation project, and to approve an order of the Secretary of the Interior issued under the act of June 22, 1936 (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT ON BUSINESS TRANSACTED BY BANKRUPTCY COURTS

A letter from the Director, Administrative Office of the U.S. Courts, Washington, D.C., transmitting, pursuant to law, tables of bankruptcy statistics, for the fiscal year ended June 30, 1959 (with an accompanying document); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution of the Council of the City of New York, N.Y., relating to the submission by the President of the United States of a peace formula at next summit conference between the United States and Russia; to the Committee on Foreign Relations.

RESOLUTION OF KANSAS LIVESTOCK COMMISSION

Mr. CARLSON. Mr. President, at the last session of the Kansas Legislature additional funds were voted for the expansion of the program of brucellosis eradication.

Under the new program there will be approximately 50 counties out of the 105 which have been certified, or which are in the process of being certified.

At a meeting of the Kansas Livestock Commission a resolution was adopted urging Congress, through the Department of Agriculture, Animal Disease Branch, to make available additional funds to assist the State in carrying out this program.

I ask unanimous consent that this resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Legislature of the State of Kansas at its 1960 finance session has made State funds available for the brucellosis eradication program in Kansas for the fiscal year beginning July 1, 1960, in the sum of $382,945, and reappropriated unused funds; and

Whereas the brucellosis eradication program in Kansas has been stepped up so that there is now approximately 50 counties out of the total of 105 which have been certified, or which are in the process of certification; and

Whereas it is the present administrative goal of the office of the livestock sanitary commissioner, working in cooperation with the Federal officials in this State to complete the brucellosis testing program in this State by the end of fiscal year 1962: Now, therefore, be it

Resolved by the Livestock Commission of the State of Kansas, That the Congress of the United States through the Department of Agriculture, Animal Disease Branch, make available Federal funds for cooperative brucellosis eradication work in Kansas in an amount comparable to the Kansas appropriation, and in an amount adequate to meet the stepped-up program, and complete the State certification goal of 1962.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations, without amendment:

S. 2581. A bill to amend the act of June 1, 1948 (62 Stat. 281), to empower the Administrator of General Services to appoint nonuniformed special policemen (Rept. No. 1351);

H.R. 7681. An act to enact the provisions of Reorganization Plan No. 1 of 1959 with certain amendments (Rept. No. 1353); and

H.R. 9983. An act to extend for 2 years the period for which payments in lieu of taxes may be made with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments (Rept. No. 1352).

By Mr. McCLELLAN, from the Committee on Government Operations, with amendments:

S. 2583. A bill to authorize the head of any executive agency to reimburse owners and tenants of lands or interests in land acquired for projects or activities under his jurisdiction for their moving expenses, and for other purposes (Rept. No. 1374).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 700. A bill for the relief of Mladen Carrara, Tonina Carrara, Ante Carrara, and Zvonko Carrara (Rept. No. 1356);

S. 993. A bill for the relief of Christos G. Diavatinos (Rept. No. 1357);

S. 2277. A bill for the relief of the Geo. D. Emery Co. (Rept. No. 1358);

S. 2740. A bill for the relief of Julia Sukkar (Rept. No. 1359);

S. 2942. A bill for the relief of Eugene Storme (Rept. No. 1360);

S. 3049. A bill for the relief of Oh Chun Soon (Rept. No. 1361);

H.R. 1402. An act for the relief of Leandro Pastor, Jr., and Pedro Pastor (Rept. No. 1364);

H.R. 1463. An act for the relief of Johan Karel Christoph Schlichter (Rept. No. 1365);

H.R. 1516. An act for the relief of Juan D. Quintos, Jaime Hernandez, Delfin Buencamino, Soledad Gomez, Nieves G. Argonza, Felididad G. Sarayba, Carmen Vda de Gomez, Perfecta B. Quintos, and Bienvenida San Agustin (Rept. No. 1366);

H.R. 1519. An act for the relief of the legal guardian of Edward Peter Callas, a minor (Rept. No. 1367);

H.R. 3253. An act for the relief of Ida Magyar (Rept. No. 1368);

H.R. 3827. An act for the relief of Jan P. Wilczynski (Rept. No. 1369);

H.R. 4763. An act for the relief of Josette A. M. Stanton (Rept. No. 1370);

H.R. 8798. An act for the relief of Romeo Gasparini (Rept. No. 1371); and

H.R. 11190. An act for the relief of Cora V. March (Rept. No. 1372).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 3032. A bill for the relief of Samuel Pisar (Rept No. 1362).

By Mr. EASTLAND, from the Committee on the Judiciary, with amendments:

S. 3130. A bill for the relief of Anne Marie Stehlin (Rept. No. 1363); and

H.R. 1542. An act for the relief of Biagio D'Agata (Rept. No. 1373).

By Mr. DIRKSEN, from the Committee on the Judiciary, without amendment:

S. 3366. A bill to amend title 18, United States Code, sections 871 and 3056, to provide penalties for threats against the successors to the Presidency and to authorize their protection by the Secret Service (Rept. No. 1354).

By Mr. O'MAHONEY, from the Committee on the Judiciary, without amendment:

S. 2744. A bill to extend the term of design patent No. 21,053, dated September 22, 1891, for a badge, granted to George Brown Goode and assigned to the National Society, Daughters of the American Revolution (Rept. No. 1355).

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

Mr. WILEY, from the Committee on the Judiciary, reported favorably the nomination of Lyle F. Milligan, of Wisconsin, to be U.S. marshal for the eastern district of Wisconsin, for the term of 4 years.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BUSH:

S. 3549. A bill to amend the act of September 14, 1959, with respect to sales and use taxes imposed by States on sales and other business activities in interstate commerce, and authorizing studies by congressional committees of this type of taxation; to the Committee on Finance.

(See the remarks of Mr. BUSH when he introduced the above bill, which appear under a separate heading.)

By Mr. O'MAHONEY:

S. 3550. A bill to establish a national policy for the acquisition and disposition of patents upon inventions made chiefly through the expenditure of public funds; to the Committee on the Judiciary.

(See the remarks of Mr. O'MAHONEY when he introduced the above bill, which appear under a separate heading.)

By Mr. SCHOEPPEL:

S. 3551. A bill for the relief of Kay Addis; to the Committee on the Judiciary.

By Mr. GREEN:

S. 3552. A bill for the relief of Arsene Kavoukdjian (Arsene Kavookjian); to the Committee on the Judiciary.

S. 3553. A bill to amend section 304 of the International Claims Settlement Act of 1949, as amended, to provide for the payment of certain American claims arising out of the war with Italy; to the Committee on Foreign Relations.

By Mr. ENGLE:

S. 3554. A bill to provide for the conveyance of certain land to the State of California; to the Committee on Interior and Insular Affairs.

By Mr. CLARK (for himself, Mr. RANDOLPH, Mr. HARTKE, and Mr. MCGEE);

S. 3555. A bill relating to the training and utilization of the manpower resources of the Nation, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. CLARK when he introduced the above bill, which appear under a separate heading.)

By Mr. FONG (for himself and Mr. LONG of Hawaii):

S. 3556. A bill to compensate the State of Hawaii for not having been treated on the basis of equality with the other States in regard to payments made pursuant to titles I, IV, X, and XIV of the Social Security Act; to the Committee on Finance.

(See the remarks of Mr. FONG when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSON of Texas (for himself and Mr. ANDERSON):

S. 3557. A bill to expand and extend the saline water conversion program under the direction of the Secretary of the Interior to provide for accelerated research, development, demonstration, and application of practical means for the economical production, from sea or other saline waters, of water suitable for agricultural, industrial, municipal, and other beneficial consumptive uses, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. JOHNSON of Texas when he introduced the above bill, which appear under a separate heading.)

LIMITATION OF IMPOSITION OF STATE USE TAXES ON OUT-OF-STATE CONCERNS

Mr. BUSH. Mr. President, I introduce, for appropriate reference, a bill to limit the imposition of use taxes by States on sales and other business activities in interstate commerce, and authorizing studies by congressional committees of this type of taxation. A companion bill is being introduced in the House by Representative EMILIO Q. DADDARIO, of Connecticut's First District.

Mr. President, businessmen and manufacturers in my own State of Connecticut, as well as in other States, have been alarmed by the predicament in which they have been placed by the U.S. Supreme Court decision in the Scripto, Inc., against Carson case, decided March 21, 1960. This decision would permit any State having a use-tax law to compel an out-of-State seller "at retail" to act as tax collector and file periodic tax returns, even though the only connection of the seller with the taxing State is that orders are solicited there by an independent representative who acts for other firms as well.

An equally troublesome situation has existed for some years as a result of the Supreme Court decision in the *General Trading Company* case (322 U.S. 335), which permits States to impose the same responsibilities on out-of-State sellers who send traveling salesmen to solicit business in the taxing State.

The unfortunate result of these two decisions is that manufacturers, large and small, are faced with the prospect of learning the details of the sales- and use-tax laws of every State in which they do business, collecting use taxes from their customers and filing periodic tax returns. This imposes an impossible burden, particularly on small business, and is a serious interference with interstate commerce.

A similar problem arose last year in connection with State taxation of net income derived from interstate commerce. As a result, Congress enacted Public Law 86–272, limiting such taxation and authorizing the Committee on the Judiciary of the House and the Committee on Finance of the Senate to make full studies leading to uniform standards to be observed by the States.

The bill I have introduced would amend Public Law 86–272 to include sales and use taxes within the scope of the studies to be conducted by the two committees, and to limit the imposition of use taxes by the States on activities in interstate commerce. I hope it will receive prompt consideration.

Mr. President, I ask unanimous consent that the text of the bill may be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3549) to amend the act of September 14, 1959, with respect to sales and use taxes imposed by States on sales and other business activities in interstate commerce, and authorizing studies by congressional committees of this type of taxation, introduced by Mr. BUSH, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act relating to the power of the States to impose net income taxes on income derived from interstate commerce, and authorizing studies by congressional committees of matters pertaining thereto", approved September 14, 1959 (Public Law 86–272), is amended by adding at the end thereof the following new titles:

"TITLE III—SALES AND USE TAX MINIMUM STANDARD

"SEC. 301. (a) No State, or political subdivision thereof, shall have power to impose, after the date of the enactment of this title, a use tax assessment upon any person with respect to sales in interstate commerce if the only business activities within such State by or on behalf of such person during

the period for which such assessment is imposed were or are either, or both, of the following:

"(1) the solicitation of orders by such person, or his representatives, in such State for sales of tangible personal property, which orders are sent outside the State for approval or rejection, and, if approved, are filled by shipment or delivery from a point outside the State; and

"(2) the solicitation of orders by such person, or his representative, in such State in the name of or for the benefit of a prospective customer of such person, if orders by such customer to such person to enable such customer to fill orders resulting from such solicitation are orders described in paragraph (1).

"(b) The provisions of subsection (a) shall not apply to the imposition of a use tax assessment by any State, or political subdivision thereof, with respect to—

"(1) any corporation which is incorporated under the laws of such State; or

"(2) any individual who, under the laws of such State, is domiciled in, or a resident of, such State.

"(c) For purposes of subsection (a), a person shall not be considered to have engaged in business activities within a State merely by reason of sales in such State, or the solicitation of orders for sales in such State, of tangible personal property on behalf of such person by one or more independent contractors, or by reason of the maintenance of an office in such State by one or more independent contractors whose activities on behalf of such person in such State consist solely of making sales, or soliciting orders for sales, of tangible personal property.

"(d) For purposes of this section—

"(1) the term 'independent contractor' means a commission agent, broker, or other independent contractor who is engaged in selling, or soliciting orders for the sale of, tangible personal property for more than one principal and who holds himself out as such in the regular course of his business activities;

"(2) the term 'representative' does not include an independent contractor; and

"(3) the term 'use tax assessment' means any assessment, fine, or penalty imposed or levied under the provisions of the retail sales and use tax law of any State because of the failure or refusal of a seller either to: (A) register as a seller or dealer; (B) collect a use tax from a purchaser; (C) file a use tax return; or (D) remit the use tax to such State.

"(e) The provisions of subsection (a) shall not be construed to prohibit the collection, after the date of the enactment of this title, of any use tax assessment which was assessed on or before such date for a period ending on or before such date.

"SEC. 302. If any provision of this title or the application of such provision to any person or circumstance is held invalid, the remainder of this title or the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

"TITLE IV—STUDY AND REPORT BY CONGRESSIONAL COMMITTEES

"SEC. 401. The Committee on the Judiciary of the House of Representatives and the Committee on Finance of the United States Senate, acting separately or jointly, or both, or any duly authorized subcommittee thereof, shall make full and complete studies of all matters pertaining to the imposition of sales and use taxes by the State on sales and other business activities which are exclusively in furtherance of interstate commerce, or which are a part of interstate commerce, for the purpose of recommending to Congress proposed legislation providing uniform standards to be observed by the States in imposing sales and use taxes on such sales and business activities.

"SEC. 402. The committees shall report to their respective Houses the results of the studies authorized by this title together with their proposals for legislation on or before July 1, 1962."

NATIONAL POLICY FOR ACQUISITION AND DISPOSITION OF PATENTS

Mr. O'MAHONEY. Mr. President, as chairman of the Standing Subcommittee of the Judiciary Committee on Patents I introduce, for appropriate reference, a bill to establish a national policy for the acquisition and disposition of patents upon inventions made chiefly through the expenditure of public funds.

Though the Congress of the United States has the sole power under the Constitution to legislate for the issuance of patents and although in the past 20 years, according to the figures of the National Science Foundation, the taxpayers of this country have expended almost $36 billion for scientific research and development, some of the agencies of our Government have actually, without statutory authority, authorized some of their employees to apply for patents resulting from work accomplished by the expenditure of money and the use of facilities of the Government. Congress has passed no general law dealing with this problem, and there is such a diversity of policy among the agencies that it amounts to little less than a scandal.

PURPOSE OF PATENT AUTHORITY IS TO PROMOTE SCIENCE

It should be understood by all that the issuance of a patent by the United States to an inventor is the grant of a limited monopoly, just as a copyright is to an author. The authority extended to Congress by the framers of the Constitution was for the promotion of "the progress of science and useful arts," to use the language of our fundamental law.

Knowing that they were dealing with monopoly and that their purpose was for the general welfare, not for the concentration of economic power, the framers of the Constitution were careful and precise in the words which they used to grant this power to Congress. They are to be found in section 8 of the first article of the Constitution, section 8 being the section which defines the legislative powers that the Congress has. The clause reads as follows:

> The Congress shall have power * * * to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries.

BUSINESS WOULD USE PATENTS TO PROMOTE MONOPOLY

In modern times various types of organized business have made every effort to convert the exclusive rights for limited times to monopolies of greater extent and more permanent life than was contemplated by the brainy men who drafted our Constitution of political liberty and economic freedom. As a consequence, patent law has become a complex matter with which few people, and even comparatively few lawyers, are familiar.

It is not surprising, therefore, that instead of preserving a method of promoting the progress of science and the useful arts many organizations and individuals have made attempts to use patents for the purpose of concentrating control of science and the useful arts in the hands of those who would use them for the purpose of hampering free enterprise and promoting monopolistic control.

Such is the case now in the field of Government research and development which is pursued by way of expenditure of the taxpayers' funds for contracts or grants.

LARGE SUMS SPENT BY GOVERNMENT AGENCIES ON RESEARCH

An examination of the last 10 years reveals that five Government agencies have each spent more than $1 billion on scientific research. In every case this money has been appropriated in order that the United States would have the advantage of publicly subsidized research in the field of science so that it might more effectively defend its people. These agencies in the order of their approximate expenditures are as follows: The Air Force, $11 billion; the Navy, $7 billion; the Army, $5 billion; the Atomic Energy Commission, $2 billion; the Department of Health, Education, and Welfare, $1 billion.

GREATEST BENEFIT GOES TO CONTRACTORS AND EMPLOYEES

Several other agencies are involved in these research and development contracts, as well as financial grants to non-Government institutions to engage in scientific study for the promotion of the general welfare, for it has long been recognized that this Nation is deeply involved in an international arms race. In the cases of only two agencies, the Atomic Energy Commission and the National Aeronautics and Space Administration, has the Congress by law specified that title to the inventions discovered by reason of the subsidized programs should remain in the United States. The Department of Health, Education, and Welfare has freely made available to the public, by dedication or by Government ownership of patent titles, most of the inventions produced under its jurisdiction. On the other hand, most of the inventions produced by the $23 billion spent by the three Armed Forces have been privately patented with the Government receiving only a royalty-free license to use them for governmental purposes.

This was not done by law, but by contract, and the provision for a royalty-free license to the Government under the contracts is only a device to make it appear that the contractors and their employees were somehow entitled to receive the patents.

Under our theory of a free enterprise system a royalty-free license to the Gov-

ernment is of no purpose, for it means that the Government would use the patents for industry, trade, and commerce in competition with the people of the country. It is not the objective of our system to have the Government in competition with its citizens.

As a result of this method devised for the contracts the real beneficiaries of the patents are not the people, not the Government, but the contractors and their employees, who are thus able to exclude small business enterprises completely from the field of science entered as a direct result of the Government subsidy.

STATUTE IS INADEQUATE

One reason for what thus appears to be a shocking failure of the Government to provide adequate patent protection for its people, itself, and the fundamental system of free competition to which we are devoted appears to be the failure of Congress to have been specific about the disposition of patent rights when it passed the National Science Foundation Act in 1950. Congress enacted that law to promote basic scientific research, because it recognized that there was no agency in existence to see that the research needed for promotion of the general welfare was carried out in such a way as to insure maximum benefits to the people. The weakness of this statute resides in the fact that it provides only that scientific research contracts should contain provisions covering the disposition of invention "in a manner calculated to protect the public interest and the equities of the individual or organization with which the contract or other arrangement is executed" (sec. 12(a)). No attempt was made in the statute to define such equities, clearly a statutory power.

That the Congress had no real intent of delegating away its legislative power was indicated by section 3(8)(c) which provides for an annual report by the Foundation giving to the Congress "information as to the acquisition and disposition by the Foundation of any patents and patent rights." Despite this clause, the Foundation has never acquired any patents at all.

Not only is that true, but Congress later in the enactment of the Space Act and in the extension of the Atomic Energy Commission patent policy in 1957 has specifically declared that title should be taken by the United States.

It seems to be obvious in the circumstances that the Congress should now make an opportunity to resolve this dilemma.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3550) to establish a national policy for the acquisition and disposition of patents upon inventions made chiefly through the expenditure of public funds, introduced by Mr. O'MAHONEY, was received, read twice by its title, and referred to the Committee on the Judiciary.

MANPOWER ACT OF 1960

Mr. CLARK. Mr. President, at this time I wish to proceed for a total of 8 minutes, despite the limitation of time applicable to the morning hour.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. CLARK. Mr. President, on behalf of myself, the Senator from West Virginia [Mr. RANDOLPH], the Senator from Indiana [Mr. HARTKE], and the Senator from Wyoming [Mr. MCGEE], I introduce, for appropriate reference, a bill which we have entitled the "Manpower Act of 1960."

This bill carries out another of the recommendations of the recent report of the Special Committee on Unemployment Problems, on which my three cosponsors and I had the privilege to serve.

Our committee concluded that—

> The Federal Government should maintain a continuing concern for the Nation's overall manpower resources, requirements, and utilization, including the problem of underemployment. Both the legislative and executive branches should be concerned with prospective manpower dislocations resulting from automation and technological change and with the manpower needs which must be determined as a basis for training and counseling programs.

The committee recommended that a permanent subcommittee be established within the appropriate Senate committee to concern itself with manpower resources, requirements, and utilization, and that either a new or an existing agency of the executive branch be charged with corresponding responsibility.

The distinguished chairman of the Committee on Labor and Public Welfare, the respected senior Senator from Alabama [Mr. HILL], has taken steps to create the subcommittee which we recommended. He has designated the senior Senator from West Virginia [Mr. RANDOLPH] to be the chairman, and I have the honor to be among the members, along with the senior Senator from Michigan [Mr. MCNAMARA], the junior Senator from Texas [Mr. YARBOROUGH], the junior Senator from Vermont [Mr. PROUTY], and the junior Senator from North Dakota [Mr. BRUNSDALE].

This bill would carry out the other half of the recommendation of the Special Committee on Unemployment Problems, by establishing in the Executive Office of the President a Council of Manpower Advisers.

This measure follows the pattern of the Employment Act of 1946 and establishes a corresponding mechanism.

It declares a policy that—

> It is the continuing responsibility of the Federal Government to assist in development of policies and programs for the adequate training and useful utilization of the manpower resources of the Nation in pursuit of our national goals.

It calls for an annual manpower report of the President. The Council of Manpower Advisers would assist the President in the preparation of this report, as the Council of Economic Advisers assists him in the preparation of the economic report. On a continuing basis, the Council would conduct studies, appraise Government programs, and make such other reports and recommendations as the Council or the President might consider necessary.

Mr. President, those of us who served on the Special Committee on Unemployment Problems were deeply impressed with the extent of manpower wastage in the United States.

The waste which we observed is of two kinds:

First, far too many people—3,660,000 at last count—are doing nothing at all. This is the problem of unemployment.

Second, far too many people are doing far less than they are capable of doing. This is the problem of underemployment and of undertraining and undereducation.

And to these I would add a third kind of waste: Too many people are doing the wrong things, when viewed from the standpoint of our national goals.

The tragedy of this immense waste becomes clear when we consider our policies in contrast to those of the Soviet Union and the Communist bloc as a whole.

In Communist countries, unemployment is not tolerated.

In those countries, capable students are kept in school and paid handsome stipends to continue in specialized and professional education to the limits of their capabilities.

In those countries, manpower is assigned to whatever jobs are considered most valuable in the service of the state.

Now, I do not propose that we in this country use the Soviet methods of compulsion. Indeed, I would oppose any suggestion to that end. But I wonder whether we do not have to find ways of achieving, through various voluntary methods of inducement, guidance, and counseling the same ends which the Soviet Union achieves through compulsion.

I wonder whether we can compete with a mobilized and dedicated Communist opponent when we permit our basic resource—the brains, skills, and talents of our men and women—to be only partly utilized and often in the wrong places in terms of our national objective.

Mr. President, my colleagues on the special committee and I came to the conclusion that it is time for the Government of the United States to take a hard and continuing look at the waste and misutilization of manpower resources. To express it more positively, it is time to take a hard and continuing look at how we can train, develop, and utilize the manpower resources of our Nation to the fullest possible extent to best serve the purposes of our free society and discharge our responsibilities for leadership of the free world.

The problem, as I have expressed it before, is nothing less than the problem of staffing freedom. We are trying now

to staff freedom without benefit of a national personnel policy, a national personnel plan, or even a national personnel agency.

This bill would create such an agency. The Council of Manpower Advisers would look into the future and project the needs of our country for manpower at all levels. It would concern itself with the shortages or prospective shortages of highly trained people, such as teachers, doctors, natural and social scientists, engineers, and persons trained to represent our country in working with other peoples abroad. It would also concern itself with the adequacy of the supply of subprofessional and skilled and semiskilled workers.

It would consider whether the inducement for men and women to go into fields where they are needed are insufficient, and, if they are insufficient, what might be done about it. It would concern itself with the ability of our training and educational institutions to prepare the number and kinds of people which the projections show will be required. It would review our guidance, counseling, and placement services, including those of our schools and of the U.S. Employment Service.

It would concern itself with the manifold barriers that prevent so large a share of our young men and women from continuing in school until they have developed their potential skills, talents, and abilities to the full, and what might be done to remove those barriers. In our hearings in many parts of the country, our special committee was much impressed with the number of people—particularly young people—who were idle and looking for work, at the same time that jobs in those same communities needed to be filled. But the young people, many of them school dropouts, did not have the training necessary to enable them to fill the jobs that were available.

Much of our unemployment is thus the consequence of a lack of matching up of the skills of the persons who are available with the skills required by the jobs to be filled. It seemed clear to us that vocational, specialized, and professional training of all kinds must be better planned, based on the best available knowledge of job requirements now and in the future. This problem is heightened by the headlong pace of technological change and automation, which displace and dislocate workers and create new requirements.

A related problem is the failure to utilize fully the skills and talents of older workers, of women, and of minority groups because of prejudice and discrimination against the members of these groups.

The bill specifically directs the new Council to coordinate its activities with those of the Council of Economic Advisers in order to promote maximum employment.

Mr. President, I do not mean to derogate the excellent work being done on specific aspects of the manpower problem within various departments of the Government, particularly the Department of Labor. But I am convinced that the absence of concern for this problem at the highest levels of policymaking renders the experts and their work far less effective than they should be. The Council of Manpower Advisers and the annual Manpower Report of the President would focus attention on manpower problems and lead to the development of recommendations for action that the Congress does not now receive.

I hope, Mr. President, that hearings can be held on this bill in order to enable us to illuminate this problem further. I ask unanimous consent that a section-by-section summary of the bill may be inserted in the RECORD at this point in my remarks.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the section-by-section summary will be printed in the RECORD.

The bill (S. 3555) relating to the training and utilization of the manpower resources of the Nation, and for other purposes, introduced by Mr. CLARK (for himself, Mr. RANDOLPH, Mr. HARTKE, and Mr. MCGEE), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

The section-by-section summary presented by Mr. CLARK is as follows:

SUMMARY OF MANPOWER ACT OF 1960

Section 1 is the short title of the bill.

Section 2 is a declaration of policy that it is the continuing responsibility of the Federal Government to assist in development of policies and programs for the adequate training and useful utilization of the manpower resources of the Nation in pursuit of our national goals.

Section 3 establishes a Manpower Report of the President. The report shall be submitted within 60 days after the beginning of each regular session of the Congress and shall set forth—

Anticipated future requirements for various occupational groups and categories of trained manpower;

An analysis of current manpower resources and utilization, with special emphasis on unemployment and shortages of trained personnel;

Techniques used by employers and by labor for transition of employees from obsolete jobs, upgrading of the work force, and other matters; and

Recommended policies and programs for the more effective training and utilization of manpower resources in the light of projected requirements.

Section 4 established a Council of Manpower Advisers in the Executive Office of the President. The Council will consist of three members appointed by the President and confirmed by the Senate. The Council, with the assistance of specialists including representatives from education, labor, industry, and the general public, shall assist and advise the President in the preparation of the Manpower Report and make recommendations with respect to the achievement of the policy set forth in this act. It will conduct studies, appraise Government programs, and make such other reports in the field of manpower and advise the President as may be necessary.

COMPENSATION TO STATE OF HAWAII, RELATING TO CERTAIN TITLES OF SOCIAL SECURITY ACT

Mr. FONG. Mr. President, on behalf of my colleague, the junior Senator from Hawaii [Mr. LONG] and myself, I introduce, for appropriate reference, a bill which would equalize Hawaii's treatment under titles I, IV, X, and XIV of the Social Security Act, which provide respectively for old-age assistance, aid to dependent children, aid to the blind, and aid to the permanently and totally disabled.

My bill would compensate the State of Hawaii for sums she should have received over what she has received since the Social Security Act Amendments of 1958 were enacted. Prior to that time all of the States and Territories received funds on the same basis under the public assistance titles of the Social Security Act. The Federal Government paid four-fifths of the first $30—$24—and matched the States on a 50–50 basis for payments over that amount up to a combined Federal-State maximum of $65.

The 1958 amendments, however, introduced a new concept into these titles by providing increased funds for those States with average per capita incomes lower than the national average. Under the formula adopted at that time the Federal Government continues to pay four-fifths of the first $30 but above this base a higher amount is paid to States whose per capita income is below the national average while the 50 percent matching is continued for those States whose per capita income is equal to or above the national average.

The 1958 amendments provided that Hawaii should also continue to receive only the 50 percent matching rather than come under the per capita income provision. This legislative fiat was clearly unfair to Hawaii. Not only did Hawaii have per capita income figures fully as adequate and reliable as those of the various States, but these figures were used in the same 1958 amendments in connection with the child welfare program. These figures have also been used by the Department of Health, Education, and Welfare since 1956 to determine Hawaii's allocation under section 6 of the Water Pollution Control Amendments Act.

As a result of this inequity, Hawaii has lost approximately $20,000 per month since October 1958, for a total of approximately $360,000 up to March 31, 1960. Although this sum is not large, it is an important and substantial matter to the State of Hawaii.

The bill calls for an appropriation of the amount Hawaii would have received had it been given equitable treatment. I would like to point out that there is precedent for reimbursing Hawaii when it has been treated in such manner:

The provisions of the Federal Aid Road Act approved July 11, 1916—39 Stat. 355—were extended to Hawaii by an act of Congress—43 Stat. 17—approved March 10, 1924, and Hawaii received its

initial Federal-aid highway allocation of $365,625 for the 1925 fiscal year. The Congress by an act approved February 23, 1931—46 Stat. 1415—appropriated $880,000 for Federal-aid highways in Hawaii which was the amount Hawaii would have received from 1917 to 1925 if it had been included in the original act.

I urge that early consideration be given this measure so that payment may be made to Hawaii to correct the inequity resulting from the 1958 amendments to the Social Security Act.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3556) to compensate the State of Hawaii for not having been treated on the basis of equality with the other States in regard to payments made pursuant to titles I, IV, X, and XIV of the Social Security Act, introduced by Mr. FONG (for himself and Mr. LONG of Hawaii), was received, read twice by its title, and referred to the Committee on Finance.

EXPANSION AND EXTENSION OF SALINE WATER CONVERSION PROGRAM

Mr. JOHNSON of Texas. Mr. President, by 1975 America will face a severe and possibly disastrous shortage of water unless we take steps now to avoid it.

This is a cruel fact, Mr. President, and it concerns not only arid sections of our country where water shortages occur daily, but also the traditionally water-rich regions where spot shortages are appearing. Our water problem is not regional. It is nationwide.

We have the resources to meet this problem, in the sea water around us and in the underground reservoirs of brackish water beneath us, but our present efforts to convert these vast reservoirs of saline water into usable form are inadequate to meet the national demand for water in the decades ahead. These efforts, though they have made progress, are small compared to the technical difficulties standing in the way of economical saline conversion. These difficulties give no promise of any dramatic breakthroughs. Rather, they require sustained research and development on a great number of engineering questions so that, as we find answers, we may gradually reduce the cost of conversion.

We are in a race against time. For the sake of our homes, our cities and towns, our industry and agriculture, we cannot afford to delay.

I am therefore introducing a bill to provide for an accelerated program of research and development to find economical means of converting saline water. The bill will remove present restrictions of time and money on saline development and will offer loans to communities wishing to build developmental conversion plants. I believe it will put us in a position to meet our coming water crisis.

THE PROBLEM OF SUPPLY—TODAY AND TOMORROW

The dimensions of this crisis, as they can be seen today and reasonably estimated for the future, may come as a surprise. Here are some statistics which indicate the gravity of the situation for our entire Nation:

The U.S. Geological Survey reports that the total national supply of readily available water is about 515 billion gallons daily. With our current population of about 180 million, our daily water requirements are about 312 billion gallons, or about 60 percent of the available supply. And already severe shortages face parts of the Nation.

By 1975, however, our population will reach 235 million and our daily water requirements will be 453 billion gallons. Since there is no reason to expect that we will have expanded our natural supply of water much above the present 515 billion gallons, we will then be using nearly 90 percent of our available supply. Since we have shortages today when we use only 60 percent of the supply, it is not difficult to imagine the severity of the shortages which will confront us when we consume 90 percent.

As an indication of how water use grows, U.S. daily water consumption in 1900 was an estimated 40 billion gallons. By 1940, it had grown to 135 billion gallons; today it is 312 billion.

Population growth is only one reason for the steep increase in our water consumption. Our rapid industrial growth and the increasingly complex production techniques that accompany it call for progressively more water. Today, industry uses 40 percent of all the water we consume and this proportion is growing rapidly.

Consider this: It takes 60,000 gallons of water to make a ton of steel; 240,000 gallons to make a ton of newsprint or a ton of acetate, and 660,000 gallons to make a ton of synthetic rubber. All major industries are heavy users of water; they expand only where local water supplies can support expansion.

Mr. President, we need not look into the future for signs of water shortage; the distress flags are flying in many communities across the Nation today. According to Geological Survey, there are 1,000 communities in 47 States which were forced by shortages to restrict water use in 1957. In my own State of Texas that year, residents of Dallas lined up to buy water at 50 cents a gallon—double the price of gasoline.

In some gulf and Atlantic coast States, overtaxed and underground reservoirs and streams have been depleted to the extent that contaminating salt water is seeping in with harsh consequences for the communities involved.

As a result of actual or prospective situations of this sort, many communities have put in requests for experimental saline conversion plants provided under Public Law 85–883. More than 200 communities offered building sites to the Office of Saline Water—although this act provided only $10 million to build plants—and this number included many in the East. Official interest was shown by New York, Rhode Island, New Jersey, North and South Carolina, Florida—indeed by every State on the coastal perimeter of the United States.

Complicating the problem of local water supplies is the fact that many municipal water plants were built 20, 40, or even more years ago. They tapped the most readily available and cheapest water sources, and now these communities are finding that it is too expensive to go further afield to get new fresh water supplies. Californians will soon be asked to approve a $1.75 billion bond issue so that water for southern California can be brought from the north 400 miles away, across a 4,000-foot mountain range.

A special master of the U.S. Supreme Court just handed down a decision concerning the diversion of water from the Lower Colorado River. Arizona, California, Nevada, and New Mexico were all eager to use this water. A shrinking supply, coupled with increasing demand for water, led to the competition between the States for its use, according to the Court's master.

It is plain that the water crisis is already widespread and severe in some areas. It is also plain that this crisis can only get worse unless we act.

THE AVAILABILITY OF SALINE WATER

We can, of course, conserve water in many ways and I urge that we do it. We can save water with new dams and reservoirs, by improving pollution control, by better industrial reuse of water, and sewage disposal. We can do all these things, but they can only make our available natural water supply go a little further; they cannot increase that supply.

To do this, we must turn to our inexhaustible sources of saline water. We are well situated to do so: 55 percent of our population, and 65 percent of our industry, are in States bordering the ocean. Some of our States literally float on submerged salt water seas; others have extensive underground deposits of brackish water. The water is there; it is up to us to find ways to tap it in time.

CONGRESSIONAL BACKGROUND

The problems of which I have spoken, Mr. President, are not new to Congress. The Senate just last year appointed a select committee, under the chairmanship of the distinguished Senator from Oklahoma [Mr. KERR] to make a complete study of the Nation's water resources and find ways to conserve and develop them. This committee has been hard at work, and I am told we will have its report next year.

The history of congressional interest in saline conversion goes back at least to 1952, when Congress, at the request of President Truman, authorized a 10-year research program to search for economical conversion methods. This led to the creation of the Office of Saline Water in the Department of Interior, but with an average annual budget of less than $1 million.

Again, in 1958, Congress authorized the construction of at least five saline conversion plants over a 7-year period, but with a total program cost of no more than $10 million. Construction is due to start soon on three plants, and design is under way on two more.

It is obvious that these two temporary programs, for all they have accomplished, are too small and hamstrung by legislative restrictions to meet the growing water crisis our Nation faces. It is senseless that these programs should be temporary, due to end before they have found concrete solutions to the problems that face us.

Considering the nature of these programs, I think the Office of Saline Water has done an admirable job with the facilities and funds at its disposal.

The Office operates through research grants to public and private institutions, as well as other agencies of the Federal Government. But it has never had its own laboratory or test facilities, and its small technical staff is confined to directing and coordinating the activities it contracts for.

Furthermore, its research work has been restricted as more conversion pilot plants have gone into operation—the OSW now has 11 of these working—and research work will likely be cut back further as more funds are needed to run pilot plants. In fiscal 1960, the Office is operating on a budget of $1,755,000, plus $1,850,000 for plant construction. For fiscal 1961, the administration has asked for $1,355,000, plus $2,040,000 for demonstration plant construction.

These amounts are most inadequate for the Office of Saline Water to do the job it must do—and which we so desperately need to have done.

PROGRESS SO FAR; DIFFICULTIES AHEAD

In the nearly 8 years since we established a research program to find cheap ways to convert saline water, we have turned up much promise of succeeding. But it is clear that we must broaden and strengthen our efforts.

Already, the cost of converting saline water has come down sharply. Ten years ago, the cheapest we could make usable water from sea water was about $4 a thousand gallons. Now, some plants can do the job for $1.75 a thousand, and a plant under construction in Freeport, Tex., is expected to cut this even more, to $1 a thousand.

But this is not enough when you consider that most municipal water in the United States costs in the neighborhood of 30 cents per thousand gallons.

There is every reason to believe intelligent research will bring costs down to an economical point. Indeed, already it is cheaper for some communities to convert water.

Coalinga, Calif., for example, was hauling in water at a cost of $9.35 per thousand gallons. Now, residents are drinking fresh converted water which costs $1.45 per thousand.

But scientists and technicians tell me there is still no assurance that they have even hit on the proper way to convert salt water economically.

Research currently centers around five main areas. They are:

First. Distillation—an age-old process brought up to date. Great cost-cutting progress has been made in the conservation of heat and scale and corrosion control.

Second. Solar distillation—using heat from the sun.

Third. Membrane conversion—using a combination of thin membranes and electric currents to screen out dissolved salts.

Fourth. Freezing—an experimental method. Frozen water crystals separate themselves from salt crystals, and researchers are trying to find ways to remove the salt from the ice.

Fifth. Other chemical and electrical methods—using gas hydrates, controlled absorption, and other experimental means.

Researchers feel there is little chance of a revolutionary advance in saline water conversion. Instead, they believe that only continuous and more intensive research can bring the answer to a host of engineering questions. These questions are minor in themselves but, if solved, they can produce gradual cost reductions with the cumulative effect of a major breakthrough.

I believe we have reached a crucial point in the development of saline conversion. We must remove the present restricted limits of time and finances from the program and establish it as a continuing project subject to annual appropriations. We must begin also to translate research programs into operating plants. I have included this provision under title II of the bill, which authorizes loans to communities and other public bodies to build saline conversion plants and to have one-quarter of their loans canceled if the Office of Saline Water uses these facilities for research and demonstration of conversion processes.

Title II of the bill is similar to bills which have been introduced in the House by Representatives ASPINALL, RHODES, SAYLOR, WAINWRIGHT, UDALL, and WILSON and in the Senate by Senator ALLOTT, on behalf of himself and Senators CASE of South Dakota, CHAVEZ, KUCHEL, ENGEL, GOLDWATER, FONG, and LONG of Hawaii.

SUMMARY OF BILL

Here is a summary of what this bill calls for:

First, research. Funds available to the Office of Saline Water for research contracts averaged only $36,000 a year from 1953 to 1958. This is insufficient. Research should be stepped up on small conversion units, on extraction and use of byproducts, on the nature of heat exchangers and compressors, the use of atomic energy, and many other technical problems. Unallocated funds should also be available to take advantage of new ideas that come along from sources outside the Government. We should have $2 million available for this whole area of general and fundamental research in fiscal 1961.

Second, process development. Processes resulting from research must be tested in large-scale pilot plants to be demonstrated on a practical scale. Pilot plants are expensive, but the Office of Saline Water had an average of only $200,000 a year available for their construction from 1953 to 1958. A reasonable figure for process development in fiscal 1961 would be $2.6 million.

Third, demonstration plants. The test methods proven to have potential in pilot plants need to be tested full scale. Often "bugs" are discovered in full-scale plants which did not show up in pilot plants, and they serve as practical training grounds for operating converters.

Most technicians and scientists agree that the five plants being built under the 1958 law will be only a start, since varying conditions in different sections of the country require different processes. The use of gas hydrates in conversion, for example, is rapidly nearing the stage of development where it will be ready for demonstration. Of the five plants in the works, none use this process.

The entire demonstration program could be speeded greatly by appropriating for fiscal 1961 the rest of the original authorization of $10 million, or $8,150,000.

Fourth, a test site and laboratory. The entire program of saline conversion research has been hampered by the lack of a central test site and laboratory. The Office of Saline Water does not even have a central staff. Right now, OSW research is carried on at widely dispersed places under unsatisfactory conditions. What's more, the entire OSW staff numbers just 25, only 10 of whom are scientists and engineers who direct and coordinate research by the Government and private contractors.

A central laboratory, located near both sea and brackish water, would give the program a good boost. It would not reduce the number of contracts for outside research, but rather would likely increase private work because of more research ideas which would come up.

Fifth, coordination of research at home and abroad. There is a great deal of scientific interest in saline conversion in other nations, as well as in the United States. OSW would profit if it could keep up with this work by having available both domestic and foreign scientific literature and issuing its own periodical information; by inspecting conversion sites at home and abroad; by taking part in conferences relating to saline conversion, and by correlating all this information for easy use.

About $500,000 a year would provide for this.

Sixth, economic studies. One of the greatest unknowns about saline conversion is its cost. Without accurate cost studies, communities cannot intelligently decide whether they should install saline conversion facilities, and as current water supplies diminish, this factor will become increasingly important.

Continuous economic studies and water market surveys could be made for about $500,000 a year.

The second part of the bill contains the important provision for aiding construction of conversion plants. Right now, commercial conversion of saline water would probably be cheaper for many communities than obtaining water from natural sources. But these communities understandably hesitate to put money into plants which may, in later years, turn out to be high-cost operations.

Federal assistance, in the form of loans, is necessary to bridge for a few years the gap between experimental plant operation and practical application of conversion plants. Such a program would also help get new plants built and operating, and would add to the stock of technical and cost information and speed the entire program.

The appropriations suggested in this bill would amount to about $17.5 million for fiscal 1961. A part of this would be nonrecurring—the amounts for construction and plant site acquisitions, for example. Loans under title II would be automatically appropriated as the loans are made.

This expenditure is one of the best our country could make in its future. There is no question that it would hasten the day when we can assure adequate water supplies, not only to our own cities and towns, but also to other parched communities throughout the world through the dissemination of what we learn. We are in a good position to meet a coming crisis right now.

Mr. President, I introduce the bill and ask that it be printed, and I ask unanimous consent that it may lie on the desk for the remainder of the week, to enable other Senators who may wish to do so to add their names as cosponsors.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the request of the Senator from Texas is granted, and the bill will lie on the table until May 21.

The bill (S. 3557) to expand and extend the saline water conversion program under the direction of the Secretary of the Interior to provide for accelerated research, development, demonstration, and application of practical means for the economical production, from sea or other saline waters, of water suitable for agricultural, industrial, municipal, and other beneficial consumptive uses, and for other purposes, introduced by Mr. JOHNSON of Texas (for himself and Mr. ANDERSON), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

NATIONAL STANDARDS FOR UNEMPLOYMENT INSURANCE SYSTEMS—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of May 9, 1960, the names of Senators HART and BARTLETT were added as additional cosponsors of the bill (S. 3505) to revise, extend, and improve the unemployment insurance program, and for other purposes, introduced by Mr. MCCARTHY (for himself and other Senators) on May 9, 1960.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MANSFIELD:

Address delivered by him before State Society of West Virginia, May 1-4, 1960, upon the designation of Senator RANDOLPH as West Virginia's Son of the Year.

By Mr. WILEY:

Excerpts from address delivered by him over Wisconsin radio stations, relating to legislative program.

By Mr. ENGLE:

Editorial entitled "A Congressman Reports," published in the Sacramento Union of May 2, 1960.

PRESIDENT'S VETO OF SENATE BILL 722, THE AREA RELEVELOPMENT BILL

Mr. BUSH. Mr. President, I deeply regret that the Democratic majorities in control of this Congress sent to the President of the United States an area redevelopment bill, S. 722, which he was compelled to veto.

I conclude, reluctantly, that the majority party, with cynical disregard of the genuine needs of so-called depressed areas, attempts to create an issue for the approaching presidential campaign. The President's opponents have callously chosen this course, instead of cooperating with him to enact sound legislation which could give genuine, not illusory, help to areas of the country where chronic employment exists.

Senate bill 722 was sent to President Eisenhower in the expectation, nay in the hope, that he would veto it. The bill deliberately invited a veto in an obvious attempt to reap political capital from human misery.

Before it is too late, I hope that the majority will have sober second thoughts about the wisdom of this political cynicism and will accept the President's conciliatory offer to cooperate in obtaining sound legislation, an offer expressed in the following paragraph of his veto message:

> The people of the relatively few communities of chronic unemployment—who want to share in the general prosperity—are, after 5 years, properly becoming increasingly impatient and are rightfully desirous of constructive action. The need is for truly sound and helpful legislation on which the Congress and the Executive can agree. There is still time and I willingly pledge once again my wholehearted cooperation in obtaining such a law.

My conclusion that politics was the motive behind sending this bill to the President in its present form is strongly reinforced by the strange and silent reversal of position by its supporters on the runaway shop or industry-pirating problem.

I invite the attention of my friends from the South to the fact that the antipirating provisions of the bill have been strengthened very considerably by House amendments which have not been discussed before in the Senate. I wonder if these amendments will diminish their expectations about benefits to be derived from the bill.

I recall that in opposing my own attempts to have effective anti-pirating language inserted in the bill, its author, the able senior Senator from Illinois [Mr. DOUGLAS] stated very candidly that one of his reasons was his fear of loss of southern support.

When S. 722 was before the Senate last year, I offered amendments to prohibit the use of Federal funds for the purpose of relocating a business establishment from one area to another.

The bill as presented to the Senate proposed to permit such a relocation if it did not result "in substantial detriment to the area of original location by increasing unemployment."

The danger of such a weasel-worded, vague standard to the heavily industrialized States of the North and Northeast was clearly brought out in a colloquy between the distinguished senior Senator from Ohio [Mr. LAUSCHE] and myself, which appears in the CONGRESSIONAL RECORD, volume 105, part 4, page 4942, as follows:

> Mr. LAUSCHE. Am I correct in my understanding that under the language of the bill Congress would say to one area, "You can get Federal money for the purpose of damaging a community in Ohio and benefiting yourself"?
>
> Mr. BUSH. That is correct.
>
> Mr. LAUSCHE. "Unless it is shown that you propose to damage it substantially, that money will be available to you."
>
> Mr. BUSH. That is correct. But who is to determine what is "substantial detriment"? The poor administrator? I submit to the Senator from Ohio that he would have an impossible assignment.
>
> Mr. LAUSCHE. In my opinion, that provision, in effect, would serve notice upon communities, "Come to the Federal Government and receive Ohio taxpayers' money, and with that money draw away from Ohio those industries and businesses which it has developed through good government and good service, and locate them in other communities."

Despite this clear inequity and injustice, the sponsors of the bill refused to tighten up the language. Their reasons were clearly disclosed by the able senior Senator from Illinois [Mr. DOUGLAS] when he said:

> The Bush amendment would cause many of our southern friends to oppose the bill in the belief it would finance businesses in staying where they are and not creating new employment opportunities in the South.

The Senate sent the bill to the House with the objectionable "substantial detriment" language in it, and the House Committee on Banking and Currency resisted all attempts within committee to have effective anti-pirating safeguards inserted.

Just before final passage in the House, however, anti-pirating amend-

ments were accepted with little discussion and no debate. Offered by the Honorable SEYMOUR HALPERN, Republican, of New York, these amendments modified the declaration of purpose of the bill, and section 6, concerning loans and participations.

In the declaration of purpose, the language was changed to provide that—

New employment opportunities should be created by developing and expanding new and existing facilities and resources rather than by merely transferring employment opportunities from one area of the United States to another.

The original language had stated that such opportunities should be created "without substantially reducing employment in other areas of the United States."

In section 6, the "substantial detriment" language was stricken from the bill, and language inserted to prohibit relocation assistance "when such assistance will result in an increase in unemployment in the area of original location."

Although I find the amendments adopted by the House not as effective in preventing industry pirating as those I had proposed last year, they represent a marked improvement over the original language of the bill.

The Halpern amendments make the bill less objectionable, but it still contains highly objectionable features, which are summarized in the President's message as follows:

1. S. 722 would squander the Federal taxpayers' money where there is only temporary economic difficulty, curable without the special Federal assistance provided in the bill. In consequence, communities in genuine need would receive less Federal help for industrial development projects than under the administration's proposal.

2. Essential local, State, and private initiative would be materially inhibited by the excessive Federal participation that S. 722 would authorize.

3. Federal financing of plant machinery and equipment is unwise and unnecessary and therefore wasteful of money that otherwise could be of real help.

4. The Federal loan assistance which S. 722 would provide for the construction of sewers, water mains, access roads, and other public facilities is unnecessary because such assistance is already available under an existing Government program. Outright grants for such a purpose, a provision of S. 722, are wholly inappropriate.

5. The provisions for Federal loans for the construction of industrial buildings in rural areas are incongruous and unnecessary.

6. The creation of a new Federal agency is not needed and would actually delay initiation of the new program for many months.

Because I agree with the objections to S. 722 which have been stated by the President, and because I resent the efforts which have been made to play politics with human misery, I shall vote to sustain the veto.

I ask unanimous consent to have printed in the RECORD following these remarks a brief comparison of the administration's area assistance bill (S. 1064 and H.R. 4278) with the area redevelopment bill (S. 722).

There being no objection, the statement was ordered to be printed in the RECORD.

BRIEF COMPARISON OF THE ADMINISTRATION'S AREA ASSISTANCE BILL (S. 1064 AND H.R. 4278) WITH THE AREA REDEVELOPMENT BILL (S. 722)

ADMINISTRATION BILL	S. 722
Title: Area Assistance Act of 1959.	Area Redevelopment Act.
Purpose: To assist areas to develop and maintain suitable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes.	To establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.
Organization: President appoints an Area Assistance Administrator who reports to the Secretary of Commerce.	Establishes the Area Redevelopment Administration as an independent agency.
Criteria for area eligibility: a. Labor market areas where the nontemporary unemployment meets three conditions:	a. Industrial redevelopment areas with unemployment of:
1. Rate is currently 6 percent, and	1. At least 6 percent at time of application, and
2. Rate has averaged at least 6 percent:	2. Twelve percent for 12 months, or
(a) For 4 out of preceding 5 years and has been 50 percent or more above national average, or	
(b) For 3 out of preceding 4 years and has been 75 percent or more above national average, or	
(c) For 2 out of preceding 3 years and has been 100 percent or more above national average, and	3. Nine percent for 15 out of 18 months, or
3. Nonagricultural employment has declined, or has increased less than in the country as a whole, during preceding 5 years.	4. Six percent for 18 out of 24 months, or
	5. Fifteen percent for 6 months if causes are not temporary.
(Eligible for loans and technical assistance grants.)	(NOTE.—The term "redevelopment area" may include one or more counties, or one or more municipalities, or a part of a county or municipality.)
b. One-industry towns, small towns in rural areas, and rural low-income areas.	b. Rural redevelopment areas with the largest number and percentage of low-income families and having a condition of substantial and persistent unemployment or underemployment. Includes 500 counties ranking lowest in level-of-living index or in production for sale.
(Eligible for technical assistance grants.)	
Loans: (a) $50 million for eligible labor market areas.	(a) $75 million for industrial redevelopment areas.
(b) None provided.	(b) $75 million for rural redevelopment areas.
(c) See housing amendments below.	(c) $50 million for public facilities.
NOTE.—Area assistance fund to be financed by congressional appropriation.	NOTE.—Area redevelopment fund to be financed by congressional appropriation.
Terms for industrial loans: (a) Up to 35 percent of project cost for 25 years at rate of interest to be determined; at least 15 percent funds from State or local sources.	(a) Up to 65 percent of project cost for 30 years with interest at Treasury cost plus one-half of 1 percent; minimum of 10 percent State or local and 5 percent private funds.
(b) Loans for land and buildings only.	(b) Loans for land, construction and machinery.
(c) Loans must be approved by State development agency.	(c) Loans must be approved by the official State or local development agency. If none exists, the administrator appoints a local redevelopment committee.
(d) Project must be consistent with an overall economic development program.	(d) Project must be consistent with an overall economic development program.
Grants: (a) No grants for community facilities. See housing amendments below.	(a) Authorizes $35 million for community facilities grants.
(b) Authorizes $3 million annually for technical assistance grants. Of this amount, $1.5 million is available for "one-industry" towns, small towns in rural areas, and low-income areas not otherwise eligible.	(b) Authorizes $4.5 million annually for economic studies and technical assistance grants.
Technical assistance: Technical advice and consultation on economic development problems available to all areas.	Information, advice, and technical assistance limited to redevelopment areas.
Housing amendments: (a) Amends title I of the Housing Act of 1949, as amended, to permit the rehabilitation of blighted industrial and commercial areas.	(a) Amends title I of the Housing Act of 1949, as amended, to permit the rehabilitation of blighted industrial and commercial areas. Limited to 10 percent of funds authorized for capital grants after January 1, 1959.
(b) Amends section 701 of the Housing Act of 1954, as amended, to extend urban planning assistance grants to cities, other municipalities, and counties of 25,000 or more located within areas of substantial and persistent unemployment.	(b) Amends section 701 of the Housing Act of 1954, as amended, to extend urban planning assistance grants to cities, other municipalities, and counties of 25,000 or more located within industrial redevelopment areas.

BRIEF COMPARISON OF THE ADMINISTRATION'S AREA ASSISTANCE BILL (S. 1064 AND H.R. 4278) WITH THE AREA REDEVELOPMENT BILL (S. 722)—Continued

ADMINISTRATION BILL	S. 722
(c) Amends title II of the Housing Amendments of 1955 to give first priority to applications for community facilities loans from areas of substantial and persistent unemployment.	(c) See above under Grants. (Authorization for $35 million.)
Vocational training: The Secretary of Labor and the Secretary of Health, Education, and Welfare assist in vocational training or retraining.	The Secretary of Labor and the Secretary of Health, Education, and Welfare assist in vocational training or retraining. One and one-half million dollars provided for assistance to State boards for vocational education.
Retraining payments: None provided.	Secretary of Labor makes retraining subsistence payments for up to 13 weeks for those undergoing vocational training or retraining.
Total costs: $53 million in loans and technical assistance grants. (Other costs not specified.)	Two hundred and fifty-one million dollars in loans and grants, including $10 million for retraining subsistence payments and $1.5 million for vocational training. (Other costs not specified.)

Summary costs of the administration bill and S. 722

	Administration bill	S. 722
Loans:		
Industrial areas	$50,000,000	$75,000,000
Rural areas		75,000,000
Public facilities		50,000,000
	[1] 50,000,000	[1] 200,000,000
Grants:		
Public facilities		35,000,000
Technical assistance (annually)	3,000,000	4,500,000
	3,000,000	39,500,000
Retraining subsistence training payments to States	None	10,000,000
Total, loans and grants	53,000,000	249,500,000
Administration	[2]	[2]
Vocational training (annually)	[2]	1,500,000

[1] Financed by congressional appropriation.
[2] Not specified.

ANOTHER EXAMPLE OF BUREAUCRATIC WASTE

Mr. WILLIAMS of Delaware. Mr. President, today I wish to call the attention of the Senate to another example of bureaucratic waste.

The Air Force has just bought 272,710 screws at $1 each from a contractor who even prior to the completion of the negotiations had purchased these same screws for 5½ cents each.

The pricing to the Government under this negotiated contract of the 272,710 screws at $1 each represented a profit on this one item alone of $257,810, or nearly 2,000 percent.

Under date of May 10, 1960, the Comptroller General forwarded to the Congress a report calling attention to this inexcusable extravagance of the Department of the Air Force under negotiated contract No. AF 01(601)-20268 with Thompson Ramo Wooldridge, Inc., Cleveland, Ohio. The total amount of this contract was $2,103,685 for fuel booster pump repair kits.

Thompson was awarded two production orders under contract -20268 calling for a total of 54,542 fuel booster pump repair kits. Based on the formula, a total price of $2,103,685, which included profit of 10 percent of estimated costs, was negotiated for the 54,542 repair kits.

The Comptroller General's review indicated that the contractor experienced costs under these two production orders totaling $980,796, and as a result the negotiated prices exceeded experienced cost by $1,122,889, or 114 percent.

The Cleveland Air Procurement District, Cleveland, Ohio, administered this contract, and the Auditor General, U.S. Air Force, has responsibility for the audit of contracts at Thompson's Cleveland plant.

The explanation of how the company and the Air Force arrived at the $1 figure for the screws included in these repair kits is even more fantastic.

The price was based on the overall cost of an emergency purchase of 116 screws which were shipped to Cleveland from New York by air special delivery. This special handling ran the cost of the 116 screws up to the $1 figure, and it was then used as a base for the pricing of the entire contract.

This is another typical example of the indefensible carelessness with which the Air Force has been negotiating contracts and wasting the taxpayers' money.

If the Air Force would conduct its purchasing program under the same commonsense arrangement as used by private industry by requiring competitive bids, the American taxpayers would get at least 25 percent more defense for the tax dollars now being spent.

Any buyer in private industry who through stupidity or gullibility agreed to such extravagant cost-pricing arrangements would be fired by his company. I most respectfully suggest that the Air Force start using the same procedure.

The time is long overdue when Congress should pass a law requiring that every agency of the Government use competitive bidding practices on all contracts wherever feasible.

I compliment the Comptroller General on the remarkable work being done by his auditors.

AMERICA PROVIDES EISENHOWER WITH "SECRET WEAPON" AT SUMMIT

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the RECORD a release I have prepared regarding the summit conference.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). Is there objection?

There being no objection, the release was ordered to be printed in the RECORD, as follows:

The American people can feel justifiable pride that they have provided President Eisenhower with a "secret weapon" to take with him to the summit meeting which starts in Paris today.

He and our allies enter negotiations with Russian Premier Khrushchev just as the U.S. economy has passed the annual rate of a half-a-trillion-dollar gross national product.

This is "secret" only in the sense that more explosive international developments of the past few days tended to obscure President Eisenhower's announcement last Wednesday that the annual rate for the gross national product was $500.2 billion for the first quarter of this year.

This is a "weapon" in the sense that it helps our people to wage peace, even as it would help our Nation to wage war. A half-a-trillion-dollar economy means that our Nation's production is big and growing bigger, that it is productive of more jobs, more homes, and an improved way of life for all our people. It describes in dramatic terms the great stake the American people have in a peaceful, productive world. But it also signifies the immense resources we have at our disposal in the event that an aggressor should be foolhardy enough to force us into war.

A figure of a half a trillion dollars is so astronomical that it needs some further defining and examples.

Half a trillion one-dollar bills would fill 1,000 standard size three-bedroom houses from basement to attic.

If we divide this half trillion dollars among every man, woman, and child in the United States today, every one of us would receive $2,778. A half a trillion dollars is more than the Federal Government spent from 1789 through the end of World War II in 1945.

It is nearly twice the national debt, and more than six times the annual expenditures of the Government today.

The gross national product represents the sum total of the market value of all production of goods and services by the Nation's economy. In terms of the disposition of this output, the half-a-trillion-dollar gross national product can be divided approximately

into the following basic categories of goods and services:

[In billions of dollars]

Personal consumption expenditures	328
Residential construction	22
Business investment in plant and equipment	47
Increase in business inventories	3
Federal Government purchases	55
State and local government purchases	45
Total	500

What does this huge gross national product mean to us, then, as American citizens? It means civilian employment of more than 66 million and unemployment at about 3.6 million. It means, in addition, supporting armed services of about 2.5 million men. It means payments of wages and salaries totalling some $290 billion a year. It means corporate profits before taxes of about $50 billion a year. It means farm proprietors' income of $12 billion, and business and professional income of $36 billion dollars annually.

A gross national product of half a trillion dollars involves the production of some 2.7 million net tons of steel ingots per week, up from about 1.8 million net tons a week in 1950. It means distribution of some 14.5 billion kilowatt-hours of electricity per week, compared to less than half that much, 6.2 billion kilowatt-hours in 1950. It means in general industrial production about 50 percent higher than 10 years ago, in 1950.

This high level of gross national product has made possible a standard of living far higher than that enjoyed by any other peoples in any other time and place. It is reflected in the fact that of the total of 86 million passenger automobiles in operation in the world, 57 million or 66 percent are in the United States. Of 25 million trucks operating in the world today, nearly 11 million are in the United States. As a matter of fact, by now over 15 percent of all American families own two or more cars. The United States has almost 64 million telephones in use, or 54 percent of the world's total of 118 million.

The high level of American output is reflected further in the fact that over 60 percent of all dwelling units are occupied by their owners. It means that almost all houses with electricity have refrigerators, 93 percent have electric washers, 90 percent have television sets, 73 percent have vacuum cleaners, 22 percent have freezers, 18 percent have electric or gas clothes dryers, and 13 percent have air conditioners.

It has made possible the fact that the average family now has $9,300 worth of life insurance, up from $4,300 10 years ago. It is related to the fact that there are now over twelve and a half million owners of shares of stock in American corporations.

Never before in the entire history of civilization has a gross national product of a half a trillion dollars been approached. And today the United States is the only nation which has reached this astounding level of output.

No other nation has achieved even half this level. The Soviet Union's gross national product is estimated at only $214 billion (in 1959).

The level of America's gross national product of itself puts the United States in a position of overwhelming influence in the world today. It makes it possible for us to spend $46 billion (in fiscal year 1961) on major national security needs while still permitting a continuing increase in consumer purchasing power and in the standard of living of the American people.

It makes it possible for the United States to be an effective leader of the free world, a rallying point in the long struggle against the tyranny of communism. We have been able to share some of our bountiful production with other peoples of the world, to alleviate suffering, to help people in underdeveloped parts of the world raise their standard of living, and to strengthen the bulwarks against Communist penetration in many areas of the globe.

A gross national product of half a trillion dollars thus thrusts great opportunities but also great responsibilities into the hands of our people.

We have not reached the level of a half-trillion dollars gross national product overnight nor has it been achieved without a great deal of hard work, ingenuity, and capital. The growth of our national output has nonetheless been phenomenal.

Even measured in constant dollars, as recently as 20 years ago, in 1940, the gross national product was less than half of what it is today. In 1935 it was a third of the present level. A quick indication of the growth of the Nation's gross national product since 1929 is shown in the following table, measured in both actual and constant (1959) dollars.

Gross national product, 1929–59

[In billions of dollars]

	In actual dollars		In constant 1959 dollars	
	Amount	Percent charge over previous year shown	Amount	Percent charge over previous year shown
1929	104.4		203.6	
1934	65.0	−37.7	155.1	−23.8
1939	91.1	+40.2	211.5	+36.4
1944	211.4	+132.1	366.3	+73.2
1949	258.1	+22.1	328.2	−10.4
1954	363.1	+40.7	408.8	+24.6
1959	478.8	+31.8	478.8	+17.1

Source: U.S. Department of Commerce. In "Economic Report of the President, January 1960," pp. 155, 156.

This increase is not due alone to the growth of the labor force. It is due much more to the incessant drive toward greater productivity through new inventions, new techniques of production and management, development of greater skills, and applications of large amounts of capital.

We can take great pride in having, as a Nation, achieved the point where our gross national product has reached a level of half a trillion dollars. This achievement is in reality a tribute to the industry, the imagination, and the ambitions of the American people. It is a demonstration to the world of what a free people can accomplish in building a Nation rich and powerful beyond the dreams of most of the world's inhabitants.

It is finally a challenge to us as a Nation to use our productive capacity and our native abilities in such a way that our children and our children's children will be able to live in a world of peace, able to develop their own capabilities to the utmost of their potentialities, and able to use the material blessings of our land in the service of the high and cherished ideals of our people.

All these facts—some spoken, some unspoken—will enter into the summit negotiations. They can be summed up by one final statistic.

Our President arrives in Paris as the leader of a Nation which produces more goods and services than that of the Soviet Union and Western Europe combined.

Mr. SCOTT. Mr. President, it is my judgment that Mr. Khrushchev has overplayed his hand. Evidently he has considerable fear, concern, and possibly fright over the attitude of the people in his own country, in view of his recent agitations before he went to Paris.

Mr. President, it is quite obvious to me that Mr. Khrushchev has decided that the most damaging rebuttal which could be given to his posturings and his violent outcries at home would be the appearance in Russia of President Eisenhower, and that Khrushchev fears most of all the wide popularity of President Eisenhower and the tremendous enthusiasm which undoubtedly would greet him, which he apprehends would serve to wipe out Khrushchev's recent utterances regarding one of our planes. It appears to me that Khrushchev has, for those reasons, deliberately sabotaged the summit meeting because it is necessary for him to fall back and regroup with as much bluster as possible.

The fact that he suggests a period of about 8 months before another meeting be called would also indicate that he fears the influence among his own people of President Eisenhower, and is willing to take his chances on what may occur in some future year.

Mr. DODD. Mr. President, will the Senator from Pennsylvania yield to me?

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Connecticut?

Mr. SCOTT. I yield.

Mr. DODD. Will the Senator from Pennsylvania agree with me when I say that it seems to me that at the time last September when we were talking about Mr. Khrushchev's proposed visit to the United States, one of the most sensible arguments offered in defense of his proposed visit here was that after Khrushchev's visit to us, our President would have an opportunity to go inside Russia and tell the truth there through personal appearances there.

As the Senator from Pennsylvania knows, I did not think much of the whole business. I admitted privately, and, I hope I did publicly. I do not recall, that, while a poor one, it was a reason in favor of the proposed visit by Mr. Khrushchev, although I was afraid the many grave disadvantages would outweigh that one advantage.

But is it not a great tragedy that we went so far as to allow Khrushchev to come here and build himself up, and now the excuse and apology and reason we offered for this blunder last September has been destroyed today?

Mr. SCOTT. I agree with the Senator from Connecticut.

Mr. Khrushchev is a great one for using proverbs and sayings. I am not aware that he reads the Bible; but surely he must somewhere have heard the saying of St. Paul—

Ye shall know the truth, and the truth shall make ye free.

Mr. CLARK. Mr. President, no one can condone the activities of Mr. Khrushchev at Paris, today. All patriotic Americans must rally behind the President of the United States, and must resent the insults which have been tendered to him and, through him, to our country.

I also hope that all Members of the Senate and all the American people will remember that the search for peace in our time is the most important issue which confronts the entire world—civilized, free, and slave—and that we must continue to search unremittingly for peace in our time, although the road ahead will apparently be much more difficult, at least for some months.

THE PRESIDENT'S VETO OF THE AREA REDEVELOPMENT BILL

Mr. CLARK. Mr. President, along with a number of my colleagues, I am grievously disappointed at the President's veto of the area redevelopment bill. Chronic and persistent unemployment, fortunately, is confined to relatively few areas throughout the United States. There, it is real and deep, and results in great suffering.

Each of the six reasons given by the President for vetoing the bill is without merit. One can only conclude that the President is looking for a political issue with which to beat the Democrats over the head.

First, he says the bill would squander the taxpayers' money where there is only temporary economic difficulty. The bill does not call for the expenditure of 1 cent. It is only an authorization bill. Moreover, communities whose economic difficulties are truly temporary will cease to be eligible once their unemployment rates drop below 6 percent. If the administration's own rosy economic forecasts are borne out, we should shortly emerge from the recession which began in 1958. Accordingly, it is simply not true that communities in genuine need would receive less help than under the administration's proposal.

Second, he says that local, State, and private initiative would be materially inhibited by excessive participation that the bill would authorize. But the Administrator could limit the Federal participation to any amount he saw fit. Any Administrator who permitted excessive Federal participation should, and probably would, be fired. Those of us who know at first hand about conditions in the depressed areas realize that many a community has been bled so white in its efforts to pull itself up by its bootstraps that substantial Federal participation, as authorized but not required by the bill, would be needed to rehabilitate the community.

Third, the President says that the Federal financing of machinery and equipment is unwise and unnecessary. Again, the bill merely authorizes, but does not require, such financing. No Administrator is ever expected to take actions which are unwise and unnecessary. If the President is right, the authority would never be used. But those of us familiar with these hard-pressed communities believe there might be occasions when the only way a sound new industry could be brought into a distressed community would be to provide financing for plant and machinery as well as land and buildings.

Fourth, the President complains that Federal loan assistance for public facilities is unnecessary because such assistance is already available under an existing Government program. But the fact is that money available under the existing public facility loan program of the Housing and Home Finance Agency is virtually exhausted. While the President has asked for it, it is not now there. Moreover, why not consolidate all the facilities for assisting chronically depressed areas under one agency, instead of dividing them between executive agencies, thus requiring additional coordination?

The President's suggestion that outright grants for public facilities are wholly inappropriate flies in the face of facts established not only in the hearings before the Banking and Currency Committee of the Senate, but also in the voluminous testimony taken by the Special Senate Committee on Unemployment Problems. Many a community is entirely unable to finance its facilities on a loan basis.

Fifth, the President complains that the provisions for Federal loans for creating industrial jobs in rural areas are unnecessary. Again the President appears unaware of the facts established by a wealth of testimony.

There are hundreds of rural counties as badly in need of economic rehabilitation as many of the distressed industrial areas. It would be grossly unfair to confine the relief to urban centers, when the need exists, to a like extent, in many rural areas.

Sixth, the President complains of the creation of a new Federal agency, but he should know that the reason why the Congress did not put this agency in the Department of Commerce is that his appointees in that Department have demonstrated their lack of sympathy with the program. The creation of a new agency would not mean the addition of any more personnel than would have to be added in the Department, because the workload would be the same. By simply transferring existing personnel in the Department of Commerce to be the nucleus of the new agency, he could eliminate any delay in getting the program started.

In short, the six reasons given for the veto are so hollow that it is clear this is merely a political veto.

It seems clear that the President, having promised to veto some Democratic bills, felt it necessary to make good on his promise.

The "cold war of partisan politics," which the President once predicted, he has apparently now initiated—and at the expense of thousands of men, women, and children to whom this bill held out the promise of jobs and bread.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate go into executive business, to consider the nominations on the Executive Calendar.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. CARLSON in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nomination of Edward K. Mills, Jr., to be a member of the Federal Communications Commission, which nominating messages were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

The PRESIDING OFFICER. If there be no reports of committees, the nominations on the calendar will be stated.

SECURITIES AND EXCHANGE COMMISSION

The legislative clerk read the nomination of Harold C. Patterson, of Virginia, to be a member of the Securities and Exchange Commission for the term expiring June 5, 1965.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

PUBLIC HOUSING COMMISSIONER

The legislative clerk read the nomination of Bruce Savaage, of Indiana, to be Public Housing Commissioner.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

MISSISSIPPI RIVER COMMISSION

The legislative clerk read the nomination of Maj. Gen. Thomas A. Lane, Corps of Engineers, to be member and president of the Mississippi River Commission, under the provisions of section 2 of an act of Congress approved June 28, 1879 (21 Stat. 37) (33 U.S.C. 642).

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

CALIFORNIA DEBRIS COMMISSION

The legislative clerk read the nomination of Col. John A. Morrison, Corps of Engineers, to be a member of the California Debris Commission, under the provisions of section 1 of the act of Congress approved March 1, 1893 (27 Stat. 507) (33 U.S.C. 661).

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

SUBVERSIVE ACTIVITIES CONTROL BOARD

The legislative clerk read the nomination of Francis Adams Cherry, of Arkansas, to be a member of the Subversive Activities Control Board for a term of 5 years expiring March 4, 1965.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

U.S. ATTORNEYS

The legislative clerk proceeded to read sundry nominations of U.S. attorneys.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations of U.S. attorneys be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

U.S. MARSHAL

The legislative clerk read the nomination of Oliver H. Metcalf, of Pennsylvania, to be U.S. marshal for the middle district of Pennsylvania for the term of 4 years.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

FARM CREDIT ADMINISTRATION

The legislative clerk proceeded to read sundry nominations in the Farm Credit Administration.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations in the Farm Credit Administration will be considered en bloc; and, without objection, they are confirmed.

U.S. COAST GUARD

The legislative clerk proceeded to read sundry nominations in the U.S. Coast Guard.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

APPOINTMENTS IN THE REGULAR AIR FORCE

The legislative clerk proceeded to read sundry nominations for appointment in the Regular Air Force.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

NATIONAL SCIENCE FOUNDATION

The legislative clerk read the nomination of Malcolm M. Willey, of Minnesota, to be a member of the National Science Board for the remainder of the term expiring May 10, 1964.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

PUBLIC HEALTH SERVICE

The legislative clerk proceeded to read sundry nominations in the Public Health Service.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

NOMINATIONS FAVORABLY REPORTED AND PLACED ON THE VICE PRESIDENT'S DESK WITHOUT PRINTING

The legislative clerk proceeded to read sundry nominations in the Regular Army and in the Regular Air Force, favorably reported and placed on the Vice President's desk without printing.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of all these nominations.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I wish to ask the acting majority leader what he foresees by way of the program for the remainder of today and for tomorrow.

Mr. MANSFIELD. It is my understanding that no controversial measures will be brought up today. There will be a number of printing resolutions and related legislation, reported from the Committee on Rules and Administration.

I wish to announce to the Senate that tomorrow, at the conclusion of the morning hour, the Senate will resume the consideration of Calendar No. 950, Senate bill 2653, to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

ORDER FOR CONSIDERATION TOMORROW OF THE COMMUNITY ANTENNA SYSTEMS BILL

Mr. MANSFIELD. Mr. President, in that connection I ask unanimous consent that at the conclusion of business today, Calendar No. 950, Senate bill 2653, to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems, be laid down as the pending business; and that tomorrow, at the conclusion of the morning hour, the Senate resume the consideration of that measure.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

REPRESENTATIVE DAVID M. HALL

Mr. ERVIN. Mr. President, David McKee Hall, the late Representative from the 12th North Carolina District, was born on May 16, 1918, in Sylva, the county seat of Jackson County, which is situated among North Carolina's beautiful "mountains with hills at their knees."

He was descended on both sides from God-fearing and hardy folk who fought for independence in the American Revolution, planted the first settlements in the scenic section of North Carolina west of Asheville, and made contributions of much consequence to the business, the educational, the professional, the political, and the religious life of the State.

David Hall was the namesake of his father, who followed agricultural and mercantile pursuits in Jackson County, and died at a comparatively early age.

The immediate family of his mother, who was born Edith Enloe Moore, has been especially noted for its legal ability, three of its members, namely, her father, Judge Frederick Moore, her uncle, Judge Walter E. Moore, and her brother, Judge Dan K. Moore, having served the State with great distinction as superior court judges. Mrs. Edith Moore Hall is now assistant dean of women at Western Carolina College in Cullowhee.

David Hall attended the public schools of Jackson County and Sylva. While participating in an athletic contest at the age of 12, he suffered a leg injury, which produced osteomyelitis and marked the beginning of recurring sojourns in hospitals and repeated surgical operations. Three years later this bone infection culminated in paraplegia, which confined him to a wheel chair the remainder of his life.

This tragic misfortune would have daunted a less heroic soul. But it served to refine and enrich the character of David Hall, who was steeled by it to meet in surpassing and unforgettable fashion the greatest test of courage on the earth, which is the capacity to bear disaster without cursing fate and losing heart.

Despite his crippling physical disability, David Hall asked of life no quarter. He had compensating gifts, some inherited and some acquired. He used them to the full. His handsome countenance, alert mind, gracious and sympathetic personality, and courageous and persevering spirit enabled him to emulate Tennyson's poetic character Ulysses and "drink life to the lees."

His recurring confinement to hospitals made his attendance at high school rather intermittent, and prevented his graduation. But it did not deter him from obtaining a thorough education in many fields. This is true because he read and remembered everything which came to hand.

Since he was unable to qualify for admission as a high school graduate, David Hall was enrolled as a special student when he entered the University of

North Carolina at Chapel Hill. While a student there, he took various subjects in the arts and sciences, and completed the regular course in the school of law.

His popularity among his instructors and college mates equaled that which he enjoyed in after years among the people. For this reason, he was called to many student offices. He served as magister of Vance Inn of Phi Delta Phi legal fraternity, secretary and treasurer of the university law association, dormitory president, interdormitory council president, member of the board of directors of Graham Memorial, member of the campus cabinet, and member of the advisory board of the dean of men. Moreover, he was granted the Phi Delta Phi award for outstanding achievement.

As a consequence of his excellence in legal scholarship, the faculty of the school of law took an unprecedented action in his behalf. It waived his lack of prescribed educational prerequisites, and permitted him to graduate at the commencement in June 1948 with the degree of bachelor of laws.

Having passed the North Carolina bar examination the preceding year, David Hall forthwith opened an office in Sylva and began the practice of law. His outstanding ability and tireless industry brought him a highly satisfactory clientele. The constantly increasing demands of his profession soon made it advisable for him to form a legal partnership with Lacy H. Thornburg as junior partner.

After his return to Sylva from Chapel Hill, David Hall maintained his residence at the ancestral home of the Halls, which stands upon a farm abutting the Tuckasiegee River near Webster and affords picturesque views of the surrounding countryside.

Notwithstanding the exacting demands of his personal affairs, David Hall participated in large measure in the activities of the various bar associations and the civic and religious undertakings of Sylva and Jackson County.

He was an Elk and a Rotarian, and held memberships in the American Bar Association, the North Carolina State Bar, and the Jackson County Bar Association.

He served as a member of the board and the chairman of the finance committee of the First Methodist Church of Sylva, president of the Jackson County Chamber of Commerce, member of the Jackson County Committee on Employ the Physically Handicapped, member of the Jackson County Committee on Morehead Scholarships, president of Jackson County Industries, secretary-treasurer of the Jackson County Savings & Loan Association, director of the Jackson County United Fund, and regional fund chairman of the American Red Cross. He was also a member of the National Rivers and Harbors Congress.

Both inclination and personality made it inevitable that David Hall should be deeply concerned with politics and public affairs. He described himself with accuracy as a Democrat "by heritage and choice," and a conservative by political philosophy. By the last term he signified his adherence to the old and tried against the new and untried.

He was exceedingly active in behalf of his party, serving at various times as president of the Jackson County Young Democratic Club, senior party liaison officer and member of the executive committee of the North Carolina Young Democratic Clubs, vice chairman of the Jackson County Democratic Executive Committee, and member of the Democratic Committee for the 20th Judicial District.

David Hall attained his first public office on November 2, 1954, when he was chosen by the people of Haywood, Henderson, Jackson, Polk, and Transylvania Counties to represent the 32d senatorial district in the North Carolina General Assembly of 1955. As State senator, he distinguished himself for his devotion to duty and sound judgment. Before the expiration of his senatorial term, he was appointed a member of the North Carolina Board of Water Resources by Gov. Luther H. Hodges.

Subsequent to the May 1958 primary, George A. Shuford, the Democratic nominee in the 12th North Carolina Congressional District for the 86th Congress, was compelled by illness to relinquish the nomination. Upon that occurrence, the Democratic committee for the district conferred the nomination on David Hall, who conducted a vigorous campaign throughout the 10 counties of the district and triumphed over his Republican opponent by a vote of 52,609 to 31,524. After qualifying as a member of the 86th Congress, he was assigned to the House Committee on Science and Astronautics and rendered services of great worth to his district, State, and country until his last illness overtook him.

David Hall was singularly fortunate in his choice of a wife. While he was a patient in Duke Hospital at Durham, N.C., he met, wooed, and won his nurse, Sarah McCollum, of Bradenton, Fla., a girl of unusual charm, whose brave heart matched his own. Their marriage took place on July 14, 1944, and was blessed by three winsome daughters, Sarah Anne Hall, Edith Allison Hall, and Hannah McKee Hall.

David Hall died at the C. J. Harris Community Hospital in Sylva, January 29, 1960. Two days later impressive funeral services in keeping with his simple faith were conducted for him by his pastor, the Reverend Asmond L. Maxwell, assisted by the Reverend Robert G. Tuttle, in the First Methodist Church of Sylva, and his body was laid to rest in a cemetery near Webster in the presence of a multitude of sorrowing friends and in sight of the beautiful "mountains with hills at their knees," which he loved with such intensity.

Despite his broken body, David Hall created a great character and lived a great life. At an earlier point in my remarks, I recounted the remarkable gifts, inherited and acquired, which I believe made this miracle possible. No one can assert with absolute assurance, however, that even these gifts would have sufficed had not two good women, one his mother and the other his wife, stood beside him with comfort and encouragement during the many dark hours when his body, racked with pain, tested his courageous heart to the uttermost.

Be that as it may, those of us who were privileged to know David Hall can say one thing with certainty. It is this: We have never known a more gallant soul. His courage was like that of the King's son in Edward Rowland Sill's inspiring poem "Opportunity":

This I beheld, or dreamed it in a dream;
There spread a cloud of dust along a plain;
And underneath the cloud, or in it, raged
A furious battle, and men yelled, and swords
Shocked upon swords and shields. A prince's banner
Wavered, then staggered backward, hemmed by foes.
A craven hung along the battle's edge,
And thought, "Had I a sword of keener steel—
That blue blade that the king's son bears—but this
Blunt thing!" he snapped and flung it from his hand,
And lowering crept away and left the field.
Then came the king's son, wounded, sore bestead,
And weaponless, and saw the broken sword,
Hilt-buried in the dry and trodden sand,
And ran and snatched it, and with battle-shout
Lifted afresh he hewed his enemy down,
And saved a great cause that heroic day.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD, immediately following my remarks, these items:

An outline of the remarks made by Representative David M. Hall's pastor, the Reverend Asmond L. Maxwell, at the funeral service held for him in the First Methodist Church of Sylva, in Sylva, N.C., on the afternoon of Sunday, January 31, 1960.

A resolution concerning Representative David M. Hall adopted by the Board of Commissioners of Buncombe County, N.C., on February 1, 1960.

Some 29 articles and editorials relating to Representative David M. Hall gleaned from various newspapers and magazines.

There being no objection, the outline, resolution, articles, and editorials were ordered to be printed in the RECORD, as follows:

OUTLINE OF REMARKS OF THE REVEREND MR. ASMOND L. MAXWELL AT CONGRESSMAN HALL'S FUNERAL SERVICE

The spirit of man is given by his Creator.

It is the unique quality in man. "God is a spirit" and "God created man in His own image."

It is a questing, a hungry, a restless spirit.

It is indomitable, invincible, unconquerable.

David Hall was richly blessed here. He had a double portion.

His indomitable courage is known to all.

His strong will to live in a large world.

His drive, control, discipline of his natural abilities.

His desire to grow, to learn, to achieve.

His faith in himself, his boundless energy, his unceasing hope.

His sense of duty, of mission, though he knew he lived on "borrowed time."

His impatience with any obstacle in his way.

All of these things were a reflection of God's spirit within.

But the spirit of man needs a Master. William Henley's "Invictus"—this is an arrogant, pagan philosophy:

"Out of the night that covers me,
Black as the pit from pole to pole,
I thank whatever gods may be
For my unconquerable soul.

"It matters not how strait the gate,
How charged with punishments the scroll,
I am the master of my fate;
I am the captain of my soul."

For the spirit of man must be conquered. His will must be subjected. His pride must be bent. His spirit must acknowledge its Master.

And David Hall knew this.

In all the battles he fought against insuperable odds—and won. There was one he could not afford to win. God, his Creator, must be acknowledged supreme.

One who was close to him, closer than I ever was, remarked that David's spirit became gentle, strong, yet tamed to the hand of his Master.

David loved life. He lived it fully, accepted it without resentment. He drank deeply at its springs. But I believe he had learned to live it in submission to the One who gave it, and at last, to surrender it back willingly. "The Lord hath given; the Lord hath taken away; Blessed be the name of the Lord" (Job).

Another who loved life was Robert Louis Stevenson. He wrote his own epitaph, "Requiem":

"Under the wide and starry sky
Dig the grave and let me lie,
Glad did I live and gladly die,
And I laid me down with a will.

"This be the verse you grave for me:
'Here he lies where he longed to be;
Home is the sailor, home from the sea,
And the hunter home from the hill.'"

PRAYER AND BENEDICTION

O Lord, support us all the day long of this troublous life until the shadows lengthen and the evening comes; and the busy world is hushed; and the fever of life is over, and our work is done.

Then, of Thy great mercy, grant us a safe lodging and a holy rest and peace at the last, through Jesus Christ, our Lord. Amen.

DAVID M. HALL, A MAN OF COURAGE

Resolution of Board of Commissioners of Buncombe County, N.C., concerning Congressman Hall

Be it resolved, That the highest possible tribute be paid to David M. Hall, Congressman of the 12th Congressional District.

In spite of a physical handicap which confined him to a wheelchair, Mr. Hall lived a full, active, productive and useful life, dedicating himself to governmental service, to the State as a member of the State senate, to his home county as attorney for Jackson County and to his country as Congressman of the 12th Congressional District.

His determination to carry on this record of public service in spite of serious illness is an inspiration to all people in public life.

Congressman Hall's undaunted courage, his concern for other people, his scholarly mind, faith and optimism earned for him the admiration and respect of the people of North Carolina; and be it further

Resolved, That a copy of this resolution be placed upon the minutes of this board, that a copy be furnished the press, and that a copy be sent to Mrs. Hall.

Approved as to form:

ROY A. TAYLOR,
County Attorney.
COKE CANDLER,
Chairman.
J. C. VANCE,
Member.
HARRY P. MITCHELL,
Member.

[From the Asheville (N.C.) Times, Aug. 2, 1958]

SYLVA LAWYER ABLE LEADER FOR WESTERN NORTH CAROLINA DEMOCRATIC FORCES—DAVID M. HALL FINE CHOICE AS CONGRESSIONAL NOMINEE

The choice of David M. Hall, of Sylva, as the 12th District's Democratic nominee for Congress, is a most admirable one. In making this emergency decision Thursday the district's Democratic congressional executive committee acted with political wisdom and a keen sense of responsibility to all western North Carolina in selecting such an excellent and popular replacement for Representative George A. Shuford.

For serious health reasons Mr. Shuford, now serving his third term, had to withdraw as his party's candidate after winning the nomination in the May primary. His record in Congress has been marked by dedicated and highly effective service not only to his district but to his State and Nation as well.

The true story to date of Mr. Hall, age 40, would fascinate and inspire anybody anywhere who loves to learn about physically handicapped persons who overcome all manner of tragic difficulties and push ahead to great achievements.

Mr. Hall is an outstanding Jackson County lawyer, civic, church, and political leader, a successful cattle raiser and enjoys a happy family life at his farm home. He is a former State senator and since 1955 has been a member of the State board of water commissioners. He accepted the congressional nomination from a wheelchair in which he has moved about skillfully much of the time since he was stricken with a rare bone disease as a boy of 12.

If Mr. Hall is elected to Congress in November, as he is virtually certain to be in this overwhelmingly Democratic district, he will be remarkable for other significant things too. He will be the first North Carolina Congressman to come from west of the Balsams since before the War Between the States and the first Congressman ever to come from Jackson County. Not in 50 years has this district's Congressman lived outside Buncombe or Henderson County.

Many thousands of citizens in the other eight counties of this district are mighty happy about this new situation. The Asheville Times is also delighted by it. We consider this a thoroughly wholesome and desirable development—good for western North Carolina and the Democratic Party therein. Mr. Hall possesses all the qualifications, in his fine mountain background and place of residence as well as in his splendid character and abilities, to represent western North Carolina in Congress.

If there are any political jealousies among the Democratic political leaders in the 10 counties of this district harmful to regional solidarity, in promoting the best interests of all western North Carolina, then we know of no better man than David M. Hall, of Jackson County, to break the spell and launch a new era of enlightened teamwork.

The job of a Congressman is to represent his district—every part of it—in the National Legislature with courage, intelligence, and devotion. He must know his district intimately, its needs and aspirations. He must be well grounded in State and National Government. He must understand politics and be a good politician himself. He must be a sound party man—in this case a Democrat—because to get good results in Washington a Congressman must function efficiently as a member of his party's legislative team.

The Times is convinced Mr. Hall has all these qualifications and is otherwise exceptionally well equipped to win in November and then represent the 12th District ably and faithfully in Congress. We cordially congratulate Mr. Hall and the district's Democratic executive committee for making him the party's nominee.

[From the Asheville (N.C.) Citizen Aug. 2, 1958]

IT'S TIME FOR DEMOCRATS TO UNITE

The action of the Democratic executive committee in naming David McKee Hall of Sylva as the party's nominee for Congress in the 12th District brought to a happy conclusion a period of political tension and turmoil.

It is hoped, with all earnestness, that the Democrats in the 10 counties of the district, from Cherokee to Buncombe, will now unite in support of the nominee as he faces Republican opposition in the general election in the fall.

The liveliness of the interest shown in the selection of a nominee to succeed the able and ailing Representative George A. Shuford, of Asheville, who withdrew, speaks well for the concern the people have in their representation in Congress. Other able men were considered for the nomination; each should feel honored.

Mr. Hall, an attorney and former State senator, fought his way to success over the handicap of a major body infirmity. At the age of 12 he suffered from osteomyelitis and 3 years later it resulted in paraplegia, making it necessary that he go about in a wheelchair.

His conquest of this disability demonstrated his patience and determination, his faith and courage. At the University of North Carolina at Chapel Hill, where he made an excellent scholastic record, he earned part of his way by reading to blind students and preparing law briefs.

After receiving his bachelor of law degree in 1948 and being admitted to the bar, he engaged in a rehabilitation work in New York, aiding H. A. Littledale in preparing the book, "Mastering Your Disability."

But the law had a great appeal and he returned to Sylva to practice, serving as attorney for Jackson County and for the towns of Sylva and Dillsboro.

His public service has had a wide range, including work with organizations devoted to the promotion of business, industry and tourism and membership in the State senate in 1955. He resigned his senate seat later that year to become a member of the State board of water commissioners.

The personable Mr. Hall, whose attractive and appealing qualities have won for him many friends, is 40 years old. He makes his home with his family on a farm near Webster.

Not only does he know the needs and interests of his home county, but he is familiar with the desires and aspirations of the entire district. A political conservative in his thinking, he has pledged, if elected, to work in behalf of the entire district.

During the four decades of his life he has been steeped in a family tradition of public service, a heritage that has given impetus to his own desire to serve.

His family has been prominent for generations in business, the legal profession and in politics.

The son of David McKee Hall and Edith Enloe (Moore) Hall, he is a grandson of Judge Fred Moore, a grand-nephew of Judge Walter E. Moore and a nephew of Judge Dan K. Moore, who but recently left the superior court bench to accept a post with the Champion Paper & Fiber Co. He is also a grand-nephew of the late E. L. McKee, of Sylva, whose wife, Mrs. Gertrude Dills McKee, served in the State senate.

In selecting a congressional nominee, the Democratic committee reached into a central

county of the district and tapped a man who, by heritage, training, and character, is equipped to be an excellent representative of the Democracy of this rugged mountain country. He should be elected.

[From the Sylva (N.C.) Herald, Aug. 4, 1958]

DAVID HALL AND JACKSON COUNTY HONORED

Following his nomination to succeed George A. Shuford as Representative in Congress from the 12th North Carolina District, David McKee Hall, 40, Sylva attorney, who won the vote of the 20-member congressional committee, said, "I accept the nomination with a great deal of humility. I pledge to expend every effort toward victory this fall for all the Democrats—in district, State, and Nation, and I will work untiringly for not part, but all, of the 12th District."

Knowing the game and fighting young Jackson native, who uses a wheelchair to propel himself about, we know he will do just that. And he is wasting no time in getting started to mend the fences in the Democratic ranks in the district as he starts out next week to make the rounds of visiting all of the counties in the district.

The citizens of Jackson County received the word of Hall's nomination with great enthusiasm and are proud to be represented in Congress for the first time by a man of his experience and ability. Having served his district as State senator, as member of the State water conservation committee, and in dozens of other fields of activity, politically and otherwise, has provided the young Democratic nominee with a wealth of knowledge that will fit him for the big job in Washington.

Mr. Hall, if elected this fall and there is little doubt but what he will win the election, will be assuming a position which will carry with it great opportunities and grave responsibilities. He will have an opportunity, as the first man to represent western North Carolina west of the Balsams, to prove to the district that a man west of the French Broad can do as much, if not more, for the entire district as many have in the past east of the French Broad. In serving in the U.S. Congress he will not only be serving the 10 counties of the 12th North Carolina District and North Carolina but the entire Nation as well.

The citizens of Jackson are quite sure that "Bud" Hall, as he is known by his friends, will serve his county, his State and his Nation with distinction, bringing honor to himself and to his native State and county. He will go to Washington with the best wishes of all the citizens of the district.

The congressional committee is to be recommended for having made a wise selection in the candidate to succeed George Shuford.

[From the Asheville (N.C.) Citizen, Aug. 4, 1958]

DAVE HALL: A FIGHTER WITH UNCONQUERABLE GRIT

(By John Parris)

WEBSTER.—To name a man to match my mountains is to name a fighter of unconquerable grit.

Such a man is David McKee Hall, a native-born, briar-sharp, 40-year-old mountain lawyer, who confounded the experts last week by being selected to run for Democrat George A. Shuford's seat in the U.S. House of Representatives in November. He's been a fighter all his life.

At 15, a bone infection called osteomyelitis cut his spinal cord and paralyzed him from the waist down.

That put him on his back, but not out of circulation.

Even then, it was still touch and go.

The doctors said it would either kill him or leave him helpless for the rest of his days.

But they didn't know Dave Hall.

He stubbornly refused to die or submit to a life of invalid despair.

He fought the disease—8 years in various hospitals and some surgical operations—fought it when everybody else said he didn't have a chance.

In the darkest days of his illness he kept on encouraging his doctors, his mother, and father, his friends, who found it hard to hold out even a little bit of encouragement for him.

They watched him suffer and they suffered, too.

And there was one man, closer to him than all the rest, who said, tearfully: "It's too much to bear. I couldn't blame him if he took a gun and ended it."

And, yet, this man knew nothing ever would cause this boy to take the easy way out. And the man was proud. More proud than that, if he could live to see him on his way to Congress, which he couldn't.

But while the others despaired, Dave Hall grinned through the pain and planned his future in a world where he expected to ask for no quarter.

In the hospital, and at home between operations, he read everything he could lay his hands on. He read dictionaries and encyclopedias, books on philosophy and economics, history, and geography, absorbed textbooks, newspapers, and news magazines.

He got through high school—he didn't graduate—and the University of North Carolina in a wheelchair, went on to law school, and at 26 married his nurse.

He entered the University of North Carolina as a special student. He aimed to be a doctor. He went into premedical school and the school officials and faculty members figured he wouldn't get through the first year.

But like a heap of others, they didn't know Dave Hall.

It wasn't that they didn't think he had the brains. They just didn't believe he would live long enough.

Dave set 'em back on their collective heels.

Strangely enough, he was a self-help student. He earned part of his educational expenses by reading to blind students, later, when he shifted from premed to law, by preparing law briefs.

His family background included a line of famous lawyers and jurists on his mother's side, and after a year of premed, although he was tops in his class, he shifted to law school.

As a matter of fact, he didn't have the academic requirements to permit him to enter the university's school of law. But again, the officials didn't expect him to finish the course and reckoned there was no reason to worry about what they would do if he did.

When Dave made the dean's list with an A average, they still didn't become concerned too much with the outcome, albeit they had to admit he was a very unusual young man. To be exact, quite a rare young man.

Through it all, Dave Hall kept going back to the hospital now and then, seeking to lick the malady that had struck him down once and for all.

In 1946, he heard about Manhattan's Institute for the Crippled and Disabled in New York.

He showed up in New York in July and announced firmly that he meant to walk by summer's end. Said the institute's medical director, George Deaver, "Certainly."

Dave could not dress himself or put on braces without help.

But after 6 weeks of pushups and other exercises to strengthen arms, shoulders, and abdominal muscles, he was ready to begin crutch work.

The goal at the institute is to become almost completely independent, to be able to go anywhere under your own power if you are paralyzed from the waist down, as Dave Hall was.

Par scores at the institute were:

Fifteen minutes to dress, 7½ to put on braces, 1 to get out of bed or rise from a chair, 30 seconds to open and close a door.

To graduate, institute patients had to be able to go up and down three steps in 1 minute, enter a bus in 10 seconds, cross a 48-foot street in 20 seconds (before the traffic light changed).

Dave Hall bettered par on every course.

He became the institute's pride and joy.

It's tough enough going for a man with all his facilities to negotiate across town in New York from the east side to the west side, especially hustling, bustling, dog-eat-dog, 42d Street and Times Square.

I know. I've been there. Many times. And I'll take a cab.

Dave Hall made it look easy.

He negotiated that mad, wild cross-town couple of miles like he was going from the living room to the kitchen. Swapped buses five times, hopped over curbs, thumbed his nose at Times Square traffic and crossed the no-man's land untouched, unharmed and without causing a single cabdriver to slam on his brakes or dent a fender.

He was so good, the institute got him to put on a show when the Congress of Physical Medicine came to New York early in September 1946, for its convention.

He hopped briskly onto a platform 18 inches high, dropped to the floor, and, by strategic use of his crutches, got up again in less than 30 seconds.

My wife was there. She witnessed the amazing demonstration.

Dave told the doctors that anybody with good arms and shoulders could learn to walk.

They didn't argue with him. They had seen, and they knew it was a fact.

Dave taught the folks at the institute things they didn't know were possible with crutches.

As a matter of fact, he opened up a whole, wonderful new life for folks doomed to a wheelchair.

Dr. Deaver offered him the Sun and Moon and stars to stay in New York. He was offered a post at New York University along with a place at the institute and an affiliation with an insurance company which would have assured him an income of a hundred thousand dollars a year.

It was hard to turn down. But Dave Hall was first of all a mountain boy. He loved the mountains, the mountain people. That's where his rootholds were, and that's where he wanted to settle down.

Besides, he had a couple more years in law school.

So he turned down the gold of New York, headed back for Chapel Hill to become the first special student to graduate from the University of North Carolina Law School and the first special student to receive an LL. B. degree.

To get his degree, he had to make up a lot of academic courses he had bypassed.

The hourly load to stay in school at the university is 12 and the maximum permitted is 18. Dave took twice the normal load. The professors had got wise to him and knew he could. So they let him take what he wanted, and he took 33 hours a quarter, studying high finance, advanced economics, banking, instead of knocking off the minor, crip courses which would have qualified him for his degree.

And then he headed for home to hang out his shingle.

Behind him was a record they wouldn't soon forget down at Chapel Hill. A record by a young fellow in a wheelchair with unconquerable grit.

The year he graduated from law school he was selected as one of the 12 outstanding law students in America.

While he was there he was a member of Vance Inn of the national honorary legal fraternity of Phi Delta Phi, serving as president, secretary and treasurer, as well as being elected exchecquer. He also was treasurer and secretary pro tempore of the University Law Association.

Add to these honors a host of others that shout: "Don't ever underestimate a man in a wheelchair."

He was dormitory president, interdormitory council president, a member of the board of directors of Graham Memorial, a member of the campus cabinet, on the advisory board to the dean of men, vice chairman and then president of the dormitory council of presidents.

For 1946–47 he was named Phi Delta Phi Law Student of the Year.

By the time he headed for the mountains and Sylva to hang out his shingle he had licked the malady that had struck him down in his 'teens but couldn't keep him down.

Ahead lay his future. He knew what he wanted. And he knew he would get it. He was a man now. A man of unconquerable grit.

DON'T UNDERESTIMATE THE MAN IN THE WHEELCHAIR

(By John Parris)

WEBSTER.—Don't let the wheelchair fool you, and don't underestimate the man in it.

You'll get your ears pinned back, if you do.

For David McKee Hall, albeit paralyzed from the waist down, is almost completely independent, able to go just about anywhere under his own power.

His capacity for work and for doing things is incredible. His stamina like his courage, is a wonder to behold.

He hunts, he fishes, and he swims.

He drives a car—averages some 30,000 miles a year—and mows his own lawn, which is the size of a country acre, if it's a foot.

He never has considered himself as an invalid, which he really isn't, and though he can't walk as other men walk, he doesn't consider that a handicap either.

"Never," he says, "never have I thought of myself as being other than normal. Physically, that is.

"As far as material things are concerned, I have as much or more than most people.

"The fact that I was confined to a wheelchair at 15 apparently didn't affect my ability to earn or to participate in civic, church and political affairs."

His philosophy might be summed up in something my grandfather, another mountain man, once said:

"It's up to you to whittle what you can with what you've got."

And Dave Hall's got a lot.

His mind is sharp as a meat ax.

He doesn't scare worth a darn.

He's tough when he has to be tough. But he's soft, too, and sentimental.

There's a bit of Lincoln about him. Something of Will Rogers.

He is quite as stubborn as Lincoln in supporting the people he trusts through thick and thin.

But don't cross him, brother, don't cross him.

He is deeply ambitious, the skilled man, utterly sure of his own skill and taking no nonsense about it from the unskilled.

He has taken great burdens and he has borne them well.

Folks will tell you he is a good father, a loving husband, and a considerate friend.

He does not seek intimates, yet draws men to him.

He knows his own value without pomp or jealousy.

He listens and talks with every sort of man.

He is a man who can reason, but he is a fighter.

His brain is as big as his heart and his heart is as big as Dave Hall.

He is a big man—broad shoulders, big hands, strong arms, a deep, infectious laugh, and a smile as big as all getout.

"Life," he says, "it is good. I've always had a good time."

His pet hobbies are fishing, boating, and swimming.

He likes to fish best of all. And he doesn't sit on the dock to do his fishing, either. He's a trout fisherman and he fishes the mountain streams.

He learned to swim, and well, before osteomyelitis cut his spinal cord and paralyzed him from the waist down at 15.

"For long-distance swimming," he explains, "I swim on my back. Can't kick but use a modified crawl without the kick when I swim on my stomach."

Last fall he went on a bear hunt to Mount Mitchell.

"I didn't get a shot," he said, "but we brought back a bear."

He isn't one for sitting back and letting somebody else do the work. Not even on a hunting or fishing trip. He's right handy with a skillet and likes to cook for the whole party, whether it's two or a dozen.

He lives here on the old home place which his great-grandfather gave to his grandfather Coleman Hall nearly a hundred years ago.

It passed out of the Hall family back in the early forties. But Dave bought it in 1950 and restored it to its onetime elegance.

Here, among other things, he raises cattle. horned Herefords. And his pride and joy is a prize bull from the Milky Way Farms named Larry Domino, who's worth a fortune.

Dave was born May 16, 1918. He attended Sylva High School from 1931 to 1933 and intermittently through the spring of 1938 without graduating.

It was February 1931 that he got sick, contracting osteomyelitis at the age of 12. And this resulted in paraplegia at the age of 15. He spent 8 years in various hospitals and had approximately 200 surgical operations before he licked the disease, albeit he was doomed to a future in a wheelchair.

He got a certificate of law from the University of North Carolina Law School in 1947, and an L.L.B. degree in 1948.

And then he returned to his home in Sylva to practice law and become a dynamo in a wheelchair.

He didn't sit in his office and let people come to him. He didn't let somebody else handle his cases when they came to trial.

From the beginning, Dave Hall was as busy as a bee. Folks from all over sought him out, brought him more work than he could handle, albeit he burned the midnight oil, which he still does, and forced him to expand his firm until it now is the largest in the county.

No man in his home town or county has taken a more active part in civic, church, and political affairs.

He has been attorney for the town of Dillsboro since 1948, for the county of Jackson since 1952, and has been regional fund chairman of the American Red Cross of the counties west of Buncombe for the past 3 years.

He was attorney for the town of Sylva for 1948 and 1949; president of the Jackson County Young Democratic Club from 1952 to 1954, and vice chairman of the Jackson County Democratic executive committee from 1948 until 1954.

He served in the senate of the 1955 North Carolina General Assembly, occupying seat No. 46.

In 1952 he was appointed to the 20th Judicial District Committee, and is now senior party liaison officer and member of the executive committee of the North Carolina Young Democratic Clubs.

Presently he is a member of the North Carolina Water Resources Commission.

He has served on the board of the Sylva Methodist Church, as well as being a trustee, and chairman of the church's finance committee.

He started the Jackson County Savings & Loan Association, of which he is secretary, and was instrumental in organizing Jackson County Industries, Inc., serving as its president from the beginning in 1953.

He has served on the board of the Jackson County Chamber of Commerce, is still a member of the chamber's industrial commission, and is a member of the Sylva Rotary Club.

His great-great-grandfather was Capt. William Moore, American Revolution, first white settler west of the French Broad in Hominy Valley near Asheville, and patriarch of the Moore clan in western North Carolina.

His uncle is Dan K. Moore, former judge of the superior court and now an executive of Champion Paper & Fiber Co. in Canton.

Dave is married to the former Miss Sarah McCollum, of Bradenton, Fla., who was his nurse at Duke University Hospital. They have three young daughters, Anne, who is 9, Allison, who is 8, and Hannah McKee, who is 3.

His father was the late David M. Hall, a prominent merchant and landowner. His mother is Edith Moore Hall, assistant dean of women at Western Carolina College.

He has two sisters, Mrs. Joe Dowdle, of Franklin, and Miss Lela Moore Hall, superintendent of public welfare for Harnett County. His brother, Robert, is an executive with the Bank of Asheville.

[From the Asheville (N.C.) Citizen, Nov. 5, 1958]

SWIRL OF ACTIVITY AHEAD FOR HALL

Representative-elect David M. Hall steps into a swirl of activity following his victory Tuesday over Republican W. Harold Sams.

In the next few weeks, he will name an administrative assistant and begin selecting a staff to man his Washington and district offices.

His choice for No. 1 assistant will be a key to the selection of other staff members. He may choose his top aid from a list of names he carries—names submitted by political leaders from throughout the district. Hall's had such a list for some time.

Or, Hall may look beyond designated favorites. He says he will "want to look over the field carefully." Holding that he owes no commitments to anyone, he says he would like to see some more names: "I haven't got all the names I'd like to see."

Hall has made one exception to his no-commitments boast: he has promised some people in a small county west of Jackson that he would, if elected, give a staff job of some sort to someone from that county. The post wouldn't necessarily be in Washington.

Clay, Graham, Cherokee, and Swain Counties lie to the west of Hall's native Jackson. He received powerful backing at the grassroots level from all four in his successful bid for the Democratic nomination. So, after his checkup, Hall hopes to spend the rest of next week in the Florida sun.

He'll return to his Sylva law office the following week—about November 17—and get

down to the business of collecting a staff and packing up for the big trip to Washington where he'll take his seat in Congress 4 months shy of 41 years of age.

Beyond his 2-year term, if there's a question mark over the 1960 Democratic choice, it doesn't appear to be worrying Dave Hall.

[From the Asheville (N.C.) Citizen, Nov. 5, 1958]

DAVE HALL'S VICTORY OVER SAMS REALLY A POLITICAL ANTICLIMAX

David Hall's conquest of GOP contender W. Harold Sams at the polls Tuesday was a political anticlimax.

Despite considerable Republican campaign activity, most knowledgeable observers—and nearly everyone else—would have conceded the chances of a Sams' upset very slim.

Hall's real victory came last summer in the 12th District's seething Democratic cauldron.

He came out on top of all these boiling developments.

Representative George A. Shuford, winding up 6 years in Congress, was the favored candidate for the party's renomination.

But wealthy Waynesville industrialist Heinz W. Rollman, who had actually been campaigning a year in advance came out openly against Shuford and began a free-spending blitz on the nomination.

Three other candidates dropped in their hats. Hall wasn't among them and no one even thought of him as a candidate at the time.

Shuford, who had already had two operations for cataracts, entered an Asheville hospital the week of the May 31 primary. After 3 days, his admission became known, but few details could be established beyond that he had entered for minor surgery and a checkup.

In the primary vote, Shuford bested the field of our opponents, although Rollman rounded up nearly 19,000 votes. Then, as losers' tempers flared, it developed that Shuford's illness was more serious, had resulted in strokelike complications, including some paralysis. He transferred to Bethesda Naval Hospital for treatment. While back at home Rollman and others began charging the voters had been deceived—that they would have voted otherwise if Shuford's condition had been known.

Denials or explanations generally were brushed aside. The political squabble spilled into print and downstate press reports began building up a picture of alleged conspiracies of silence.

Shuford eventually decided against a general election campaign because of his health.

This tossed the nomination into the lap of the almost unknown district executive committee—two representatives from each of the area's 10 counties.

Rollman cried that the nomination was his by rights of runnerup. The strong Buncombe political organization booster City Manager J. Weldon Weir of Asheville, Henderson hopeful advanced a familiar name—Monroe Redden, Jr.—son of a former district Congressman.

Only the far western area hailed the name of Hall.

Into a hot upper story chamber of the Swain County courthouse the day of the decision, delegates from all over the district were packed for the executive committee's meeting. Speeches were public, but the selection was to be private.

Nevertheless, after the first 20 minutes, it became obivous that if the committee had any idea of fulfilling the wishes of the people who'd turned out, it could scarcely help selecting the man in the wheelchair on the front row—David McKee Hall, paralyzed but powerful.

Rollman's name was never nominated in committee. The other major contenders lost where they needed to win. Hall and his uncle, influential Superior Court Judge Dan K. Moore, who'd just resigned from the bench to go into private industry, had done their work well.

The little counties carried the day. And that was the day that David picked off both Goliath and the GOP with smooth pebbles.

[From the Asheville (N.C.) Citizen Nov. 5, 1958]

HALL KEEPS ONLY PROMISE: ONE MADE TO HIS DAUGHTERS

(By John Parris)

WEBSTER.—Dave Hall grinned. "Yep," he said, "They say I'm going to Congress."

This was his reaction as the voters of the 12th Congressional District gave him a resounding victory Tuesday over his Republican opponent, W. Harold Sams of Asheville.

Hall, 40-year-old lawyer and native of Jackson County, welcomed the news of his election at his farm home here in Webster.

As the returns made it evident that Hall had chalked up one of the largest majorities in a 12th District congressional race, his first act as newly elected Congressman was to carry out the only promise he had made during the campaign.

That promise was to his three small daughters.

He had kissed them goodnight at 8 p.m. with the promise he would wake them when he learned of the outcome of the election.

And at 10:25 p.m. he roused them gently. They came wide awake. Their eyes sparkled through the sleep from which they had awakened. But they knew as only a child's faith knows.

"Daddy," said Anne, who is 10, "You beat him. I know you did."

Dave Hall grinned and kissed her.

And then Allison, who is 8, and Hannah, who is 4, hugged their daddy and set up a happy screaming, jumping up and down in their beds.

It was a happy, homey scene.

Nightlong, Dave Hall had sat in his wheelchair near the telephone at his home, with his family about him, listening to the returns as they came in.

And nightlong, his telephone had rung constantly, bringing the voices of friends calling to tell him how he was running in the various counties. And when the results were in and it was assured that he was the next Congressman from the 12th District, David Hall made his first public statement as the newly elected Representative from the 12th District.

He said:

"This is a great, heartfelt moment in my life.

"It is with a feeling of great pride and a sense of sincere responsibility that I accept this, the most important office that you, the voters of the 12th Congressional District of North Carolina can bestow.

"I pledge that I will dedicate myself and my office to true representation of all the people of this great district.

"And I wish especially to express my appreciation to my devoted wife and family and to my friends who have made it possible for me to attain this high position.

"I assure each and every one of you that this acceptance is with the deepest humility. And I trust that I can in my work merit the confidence you have placed in me."

[From the Waynesville (N.C.) Mountaineer, Nov. 10, 1958]

CONGRESSMAN HALL SETS SEVERAL RECORDS

For the first time in 47 years, a North Carolina Congressman has been elected west of the French Broad River.

The election of David M. Hall, of Sylva, on Tuesday set up a number of records—first he gathered more votes by several thousands than many political observers had predicted; he became the first man west of Asheville to get elected to Congress, and he is one of the youngest men of the district to ever sit in Congress.

Hall's hometown newspaper, the Sylva Herald said editorially:

"People of Jackson County have good reareason to be proud of David Hall, who on Tuesday was elected to serve the 12th District in Congress. He is believed to be the first man west of Haywood County to be named Congressman. And it has been 49 years since a Congressman came from the area outside Buncombe and Henderson Counties. The last one west of the French Broad was the late W. T. Crawford of Waynesville, who served in 1911."

Even though there has been a drought in having a Congressman from 6 of the 10 counties in the district, when Hall takes office in January he will carry with him experience gained while a State senator. And we do not expect other legislators in Washington to be "pulling the wool over his eyes." Hall knows politicians. How they work. And he understands their legal language, which often is designed to gain public opinion but has tricky phrases.

A native of Jackson, the 40-year-old Congressman received a certificate of law from the University of North Carolina Law School in 1947 and was named Phi Delta Phi Student of the Year. He was the first special student to graduate from UNC Law School with an LL. B. degree.

By showing that he could overcome a physical disability, having been confined to a wheelchair since he was 15, Hall knows which rows are hard ones to hoe better than the average person.

Knowing the game and fighting young Sylva attorney, who succeeds Congressman George Shuford of Asheville, we know Hall has a wealth of knowledge that will fit him for the big job in Washington. In addition to being State senator, he has served as a member of the State Water Conservation Committee and in dozens of other fields of activity, politically and otherwise.

His new job carries great opportunities and still graver responsibilities. The citizens of Jackson are quite sure that "Bud" Hall, as he is known by his friends, will serve his county, his district, his State and his Nation with distinction. He goes to Washington with the best wishes of all the citizens of the district.

[From the Asheville, N.C. Citizen, Jan. 8, 1959]

PROUD DAUGHTERS LOOK ON AS REPRESENTATIVE HALL TAKES OFFICE

(By Margaret Kernodle)

WASHINGTON.—It took a former President, Harry S. Truman, to attract the attention of three little North Carolina girls away from their father, Representative David M. Hall, Democrat, of North Carolina, in the House Wednesday.

Anne, 10, Allison, 8, and Hannah, 4, kept their eyes on their father from the time he entered the House in his wheelchair until Truman appeared in the gallery. Hall was crippled by a disease in childhood.

"President Truman sat just two seats away from me," Allison exclaimed.

She was a little reluctant to tell her father how impressed she was with the former President, as if she didn't really mean to take away any glory from daddy when he took his oath of office as a Congressman.

Hannah and Allison admitted they waved proudly at their father, but Anne said she was a little too grown-up to do that, though

she admitted she watched him almost constantly as the opening session of the 86th Congress got under way.

Hannah fought off a virus infection to make the ceremony and sat on her mother's lap.

Hall returned to his suite in the Old House Office Building for a reception for his family and close friends who came to Washington for the ceremony.

Also very proud of him was his mother, stately gray-haired Mrs. Edith Moore Hall, stunning in a navy blue outfit, who presided at the coffee table.

Here also were his sisters, Mrs. C. N. Dowdle, of Franklin, N.C., and Miss Lela Moore Hall, of Lillington, N.C.; his brother, Robert Hall, of Asheville, and his uncle, Dan Moore, former North Carolina superior court judge, of Asheville.

Hall succeeds Representative George A. Shuford, Democrat, of North Carolina, who retired at the end of the 85th Congress.

The Halls have a house in nearby Arlington, and the older daughters have entered public school there, three blocks away. But the Halls arrived ahead of their furniture. To the delight of the Hall daughters, furniture in the new house has consisted so far of only mattresses, a sofa and an army cot.

[From the Asheville (N.C.) Citizen, Feb. 9, 1959]

REPRESENTATIVE HALL AND OUTER SPACE

When committee assignment time came in the House in Washington, Representative David M. Hall, of Sylva, got exactly the opposite of what he had requested.

He wanted to start off on solid ground, asked to be put on the Interior Committee.

Instead, he was assigned to outer space, the first permanent new committee of both Houses of Congress since 1892.

The 12th district Democrat, a congressional freshman, married 15 years, admits his contact with the moon is remote. But he is modest in saying that. A mountain man, he has lived closer to the moon and the stars than his lowland colleagues.

Mr. Hall has accepted his assignment as offering a challenging opportunity for service.

The importance of the work of the Space Committee is spelled out in some points made by Representative OVERTON BROOKS, Democrat, of Louisiana, chairman of the new committee. He told Congressional Quarterly:

"Missiles will begin to replace manned aircraft by 1963.

"The defense budget soon will be divided into two parts—one for brush-fire wars and the other for all-out atomic missile wars.

"Interservice competition over control of missile development will grow more intense. The program should be unified under one department.

"Ultimately the United Nations or some other international agency will have to spell out outer space law.

"The national security aspects of space vehicles should be stressed now. Development of satellites will benefit later from this."

Mr. Hall, as a member of the Space Committee, is thus in a position to engage in pioneering legislative work in connection with the space race with the Soviet Union. For instance, there will be many problems dealing with international aspects of space and space law.

"We have no time to lose," added Representative BROOKS. "There is no doubt the Russians are ahead of us in some particulars," notably the thrust of their engines in their missiles. "I will not be satisfied until we have closed the gap in the missile and space race."

All of this leads to the fact that Representative Hall does face a challenging field of work, one that is vital to the future of America. He may have wanted Interior, but he is now in a position to serve the Nation on a legislative frontier that has no boundary and is fraught with meaning to the American people and the entire human race.

[From Reach, a bimonthly publication of the North Carolina division of vocational rehabilitation, Raleigh, N.C., of January–February 1960]

DAVID HALL, THIS IS YOUR LIFE

"Handicap," as defined by Webster, means to put at a disadvantage or to hinder; but had you been present on January 3, 1959, when David McKee Hall, paraplegic, quietly rolled his wheelchair into the Nation's Capitol to take the oath of office as a Member of the 86th Congress, representing the 12th Congressional District of North Carolina, you might have said, "Hall has revised Webster." And indeed you would have been quite correct, because his journey to Washington had been made over a long and toilsome road strewn with boulders of pain and suffering, blocked at intervals by detours of long, lingering months in hospital beds—all of which would have made a person of less fortitude, determination, and driving ambition turn back and thus confirm Webster's definition that a handicap is truly a hindrance. But because of his relentless drive, his complete unwillingness to admit defeat, his all-consuming ambition, the journey had been accomplished. And in so doing, he had lent inspiration and encouragement to others—both handicapped and physically fit—to complete the task at hand, to achieve that goal out yonder and to do it without complaining.

At the age of 12, David was a round, pudgy, pink-cheeked lad who had more than the normal boy's interest in fishing, hunting, scouting, football, and the like. That is, until the day that osteomyelitis destroyed the participation, even though it could not lessen the interest which remains intact to this day some 28 years later. And thus began the years of suffering, of excruciating pain, and of long, long months in Piedmont Hospital, Atlanta—years which deprived him of a secondary education because of the some 200 surgical operations he was required to undergo, and the repeated close brushes with death. At the age of 15, the infection affected his spinal cord to the extent that he was permanently paralyzed from the waist down and thereafter confined to a wheelchair life.

Throughout the 28 years his family physicians and close friends were constantly amazed at the indomitable courage he manifested at all times, never discouraged if his plans and activities were brought to an end by another painful hospital experience but always ready to begin a new project or complete the old one when given brief respites at home.

Then, with the discovery of the sulfa antibiotics, his hospital stays became less frequent and so he determined to enter the University of North Carolina; and like all his plans and ambitions, he carried this to a successful, brilliant conclusion by his graduation in 1948, thus becoming the first special student to graduate from the law school with an LL.B. degree. Thereafter, he passed the State bar examination and opened a law office in Sylva where he has been practicing law since that time. During the time he was in college, he was not only studying law himself, but was helping blind students by reading to them.

His subsequent achievements and accomplishments came as no surprise to those who know him best, for at last they were convinced that when David Hall said, "I will," it meant that he would and could. Because of his attitude and demeanor concerning his handicap, one forgets that he cannot stand up tall and straight or that he is denied the simple art of walking into a room. He has never sought concessions or privileges because of physical limitations, rather he prefers to take his turn always with the physically normal.

Too much cannot be said for his mental approach to his handicap. Gov. Luther H. Hodges said at the recent Young Democratic Club convention in Asheville that David Hall had exhibited more courage than any man he had ever known. The distinguished Senator SAM J. ERVIN, Jr., in introducing him at the 12th Congressional District rally in Bryson City, likened his courage and achievements to those of the knight described in the poem "The Broken Sword."

More important than these encomiums is the widespread influence he has had on other handicapped people by his inspiring example and the tangible things he has done for their benefit. Perhaps one of his most noteworthy contributions was in 1946, at Manhattan Institute for the Crippled and Disabled in New York. (See Time magazine, Sept. 16, 1946.)

Through his understanding and sincere appreciation of the vocational rehabilitation program, he has encouraged many handicapped people, especially other paraplegics, to develop their limited abilities. Searching out those in need of help and working in close cooperation with the vocational rehabilitation counselor, he has frequently made his office available for conferences and interviews between these individuals and the counselor which resulted in their receiving training and/or other rehabilitation services through which they gained a new lease on life.

For many years David Hall has devoted considerable time and effort in working with the local Committee on Employing the Physically Handicapped; he was instrumental in getting a survey made by the employment service on the county's labor supply which later led to the location of a new industrial plant in the community, thereby creating additional job opportunities for the unemployed. He has helped many handicapped people to secure gainful employment and thus become useful citizens who experience the satisfaction that comes with finding one's place in life.

He has served his district well in the House of Representatives and has been accorded recognition unusual for a freshman Representative. He was honored by being appointed to the House Committee on Science and Astronautics, the first permanent standing committee to be created by the Congress since 1892. As a member of this committee, he participated in an 11,000-mile factfinding inspection tour of the major research and development centers of Western Europe's NATO countries.

He served in the senate of the 1955 North Carolina General Assembly, has been a member of numerous boards and commissions, is active in the Methodist Church, and in local civic organizations.

The mountains, streams, and waterfalls of western North Carolina are dear to his heart. He enjoys swimming, hunting, and fishing. He lives on a farm adjacent to the Tuckasseegee River, in the beautiful restored old home of his ancestors at Webster, N.C., with his lovely wife, Sarah McCullom Hall, and their three daughters, Anne, Allison, and Hannah, ages 12, 10, and 5 years. Their happy homelife has been well described in many feature stories which have appeared in the Asheville Citizen.

Since this article on David Hall was started, his doctors have told him that he has cancer.

And like all the other obstacles which have confronted him, he has accepted this with the same calm, courageous attitude—not one of resignation, but one of continued determination which finds him now as a patient in Memorial Hospital, Sloan-Kettering Institute, New York, from where he radiates hope and confidence of recovery from the favorable report of his doctors there.

David Hall looks to the future and a continuing career of service.

[From the Asheville (N.C.) Citizen, Jan. 30, 1960]

DAVID HALL, 41, DIES AFTER LONG ILLNESS

SYLVA.—Twelfth District Congressman David M. Hall, stricken by cancer last November, died here at 5:45 p.m. Friday in C. J. Harris Hospital.

The 41-year-old Congressman was a native of Sylva. He was elected to represent the 10-county congressional district in the November 1958 general election. He had been expected to seek reelection this year.

Victim of a crippling bone infection at the age of 12, Hall underwent surgery December 10 in a New York hospital for removal of a cancerous growth on his bladder. He died of complications of the operation, including a kidney blockage.

RETURNED JANUARY 12

Specialists who performed the operation reported to Hall afterward that the cancer had been completely eliminated. Hall was returned to the hospital here January 12 to continue convalescence.

A paraplegic who had been confined to a wheelchair since the age of 15, Hall was an attorney by profession but had devoted some attention to farming.

Hall styled himself a political conservative in Democratic ranks. Before election to Congress, he had served in the North Carolina Senate and later, as a member of the North Carolina Board of Water Commissioners.

PICKED BY COMMITTEE

The Democratic district executive committee on July 31, 1958, chose Hall to run in place of Representative George A. Shuford, of Asheville, who had withdrawn as the Democratic nominee for reasons of health.

Recognized as an active Jackson County civic and political leader. Hall won the district committee's nomination from a field of five aspirants. In the general election, Hall overwhelmed his Republican opponent, W. Harold Sams, an Asheville attorney.

Thus, for the first time in more than two generations, the 12th District's Democratic Representative was a man from west of the Balsams.

A month after his election, Hall announced the opening of a full-time district office in Waynesville, the first time a congressional office had been established west of Asheville.

The district office functioned as a clearing house for citizens with problems needing congressional attention. As a convenience to constituents, a representative of the office followed a schedule of regular appearances in many western North Carolina towns and cities.

Hall was sworn into the U.S. House of Representatives on January 7, 1959.

Less than 2 months later, on February 23, he underwent surgery in Bethesda naval hospital in Washington for drainage of his right kidney after proper natural expulsion had failed. Physicians announced the following month that a second kidney operation might become necessary.

This operation, for the removal of scar tissue resulting from the kidney surgery, was performed November 10 in St. Joseph's Hospital in Asheville.

Three days later, physicians who performed the operation announced the finding of a malignancy in miscroscopic studies of the scar tissue. Hall went to New York soon afterward to begin a series of X-ray treatments preparing him for the December 10 operation for removal of the cancerous growth.

As a Member of Congress, Hall asked for Interior when committee assignments came around. He got Outer Space.

Commenting on the assignment Hall stated: "Except for the contacts with the Interior Department in my district, I am very happy with it."

Hall became top-ranking freshman Democrat on the space committee, the first permanent new committee of both Houses since 1892.

During the month he was sworn in, the Sylva Representative was elected treasurer of the 86th Congressional Club. The club, chiefly social, was composed of 63 freshmen Democratic House Members elected to the 86th Congress.

Hall was a strong supporter of timber management and development plans. He frequently called attention to western North Carolina's vast timber resources.

In September 1959 Hall went to London for a series of conferences in connection with the International Astronomical Federation Conference.

Born May 16, 1918 at Sylva, Hall was the son of Mrs. Edith Moore Hall of Sylva and the late David McKee Hall.

Despite his physical disability, Hall received a certificate of law from the University of North Carolina Law School in 1947 and an LL.B. degree in June 1948. Admitted to the bar in August 1947, he began active practice in Sylva in the fall of 1948.

His record at the university was outstanding, both in academic and extracurricular activities. He headed a number of important campus organizations including Vance Inn of Phi Delta Phi. He was the first special student to graduate from the University of North Carolina Law School with an LL.B. degree since the school's establishment.

In the summer of 1947, he appeared before the Congress of Physical Medicine in New York and gave a demonstration of new mobility methods being taught paraplegics. Although he seldom used them, Hall had mastered the ability to walk on crutches.

Among organizations in which he participated or held office were the Jackson County Chamber of Commerce, the Jackson County Industrial Committee, and Jackson County Industries, the Sylva Rotary Club and Sylva Methodist Church, Jackson chapter of the American Red Cross, and Morehead Scholarship Committee of Jackson County. He served as county attorney for 2 years and was town attorney for Sylva from 1948 until 1951. He had also served as attorney for the town of Dillsboro.

Hall had been active in county and district Democratic circles for more than 20 years. He had served as president of the Jackson County Young Democratic Club and as a member and officer in the Jackson County Democratic Executive Committee.

He was a grandson of the late Superior Court Judge Frederick Moore, grandnephew of Superior Court Judge Walter E. Moore, and grandnephew of the late E. L. McKee, and State Senator Gertrude Dills McKee, his wife.

He was a nephew of Superior Court Judge Dan K. Moore, of Sylva, now associated with Champion Paper and Fibre Co.

Survivors include his widow, the former Miss Sarah McCollum, of Bradenton, Fla., to whom he was married in 1944, and three daughters: Sarah Anne, 10, Edith Allison, 9, and Hannah McKee, 4; a brother, Robert C. Hall, of Asheville, and two sisters: Miss Lela Moore Hall and Mrs. Margaret Hall Dowdle, both of Franklin.

Services will be at 3 p.m. Sunday in Sylva Methodist Church. The Rev. Asmond G. Maxwell, pastor, and the Rev. Robert G. Tuttle, of Asheville, district superintendent of the Asheville District Methodist Church, will be in charge. Burial will be in the family plot in Webster Cemetery.

Pallbearers will be Ernest Burch, Andrew Wilson, Joseph T. Wilson, Lacey Thornberg, Malcolm Brown, Fred D. Cooper, E. L. McKee, and W. D. McKee.

Before his death, Representative Hall requested that in lieu of flowers, donations be made toward establishment of a David McKee Hall Scholarship Fund at Western Carolina College.

[From the Asheville (N.C.) Times, Jan. 31, 1960]

FUNERAL FOR HALL AT 3 P.M. TODAY

SYLVA.—Representative David M. Hall, the paraplegic freshman Congressman who died Friday of complications from cancer surgery, will be buried Sunday in the family plot at Webster.

Funeral services will be conducted at 3 p.m. in the Sylva Methodist Church by the Reverend Asmond G. Maxwell, pastor, and the Reverend Robert G. Tuttle, superintendent of the Asheville district of the Methodist Church.

The 41-year-old Hall had requested that in the event of his death flowers be omitted and expressions of sympathy be in the form of donations to a scholarship fund at Western Carolina College, where his mother is assistant dean of women.

Members of the North Carolina Congressional Delegation planned to come from Washington by train for the funeral. Representative GEORGE MILLER, Democrat, of California, was named to represent the House Space Committee, of which Hall was a member, at the services. Also accompanying the North Carolina delegation was Zeake W. Johnson Jr., House Sergeant at Arms.

(In respect to Hall, the House of Representatives has tentatively postponed its Monday program.)

A special primary and election will be necessary to fill the remainder of Hall's term, which expires next January. Roy A. Taylor, former State representative from Black Mountain, announced last week as a candidate for Hall's seat in the May Democratic primaries. Others being mentioned include State Senator William Medford of Waynesville and former Solicitor Thad Bryson, of Bryson City and Franklin, but neither has announced.

Hall won his congressional seat in 1958, after the Democratic nominee, Representative George A. Shuford of Asheville, withdrew because of ill health. Hall, the pick of the district Democratic committee, soundly defeated the Republican candidate, W. Harold Sams of Asheville.

He was sworn in last January, but 2 months later had to undergo surgery for drainage of his right kidney. During another operation, a month later, to remove scar tissue from the preceding surgery a malignant growth was discovered.

On December 10 the malignancy was removed in an operation at Sloan-Kettering Institute in New York. Hall returned home to recuperate, but his health began to decline and he entered the hospital here, where he died.

Surviving are the widow, the former Sarah McCollum of Bradenton, Fla., three young daughters; his mother, Mrs. Edith M. Hall, of Cullowhee; a brother, Robert C. Hall, of Asheville; and two sisters, Miss Lela Hall and Mrs. Margaret Hall Dowdle, both of Franklin.

[From the Asheville (N.C.) Citizen-Times, Jan. 31, 1960]

REPRESENTATIVE DAVID MCKEE HALL

Representative David McKee Hall's death has brought a deep sense of loss and of regret.

The freshman Congressman from the 12th North Carolina District died of complications following a cancer operation performed last December 10.

The gentleman from the valley of the Tuckasegee west of the Balsams was but 41 years of age.

In the prime of his maturity, death brought a close to what promised to be a distinguished career in the lower House of Congress. He was a member of the Space Committee.

He had intended to seek renomination in the May Democratic primary. He had many friends and wide support.

Illness was no new experience for Dave Hall. Crippled by a bone infection in his youth, he was a paraplegic. Since the age of 15 he had been confined to a wheelchair.

This physical handicap did not deter Mr. Hall from living a full and active life.

He was known for his faith and courage, his optimism in the face of adversity.

The quality of his mind and character led him to enter the field of public service. After studying at the University of North Carolina, where his record was outstanding, he practiced law in his native town of Sylva in Jackson County. He was not only proficient in his profession (he farmed also), but developed into a constructive civic leader.

For more than 20 years he was active in Democratic Party circles and he served in a number of official capacities, including membership in the State senate and on the North Carolina Board of Water Commissioners.

Representative Hall was a member of a prominent mountain family, many of whose members have won distinction in business, in the professions and in public life.

It is men like Dave Hall who have lasting contributions to the growth and development of this mountain region. He was deeply interested in serving the region and his fellow man and he did serve well and faithfully in all the posts to which he was called in civic and political life.

We have reason to remember Dave Hall, not the least by far being the record of courage which shone through his entire life. It becomes a legacy of his family and an inspiration to all who had the privilege of knowing him.

[From the Waynesville (N.C.) Mountaineer, Feb. 1, 1960]

LARGE CROWDS ATTEND LAST RITES OF REPRESENTATIVE D. M. HALL

A large number of Haywood County citizens were among the estimated 600 persons who attended funeral services for 12th District Congressman David M. Hall, Sunday afternoon in the Sylva Methodist Church.

The small church, with seats for only 200, was filled to capacity with many standing. An estimated 400 friends waited outside.

The service, conducted by the Reverend Asmond L. Maxwell, pastor, and the Reverend Robert G. Tuttle, superintendent of the Asheville district of the Methodist Church, was simple and impressive.

The active pallbearers were Ernest Burch, Andrew Wilson, Joseph T. Wilson, Lacey Thornberg, Malcolm Brown, Fred D. Cooper, E. L. McKee, and W. D. McKee.

A delegation of U.S. Congressmen and Senators included North Carolina's two Senators, SAM J. ERVIN, Jr., of Morganton, and B. EVERETT JORDAN, of Saxapaw, and HUGH Q. ALEXANDER, of Kannapolis, L. H. FOUNTAIN, of Tarboro, CHARLES R. JONAS, of Lincolnton, A. PAUL KITCHIN, of Wadesboro, ALTON LENNON, of Wilmington, RALPH J. SCOTT, of Danbury, and BASIL L. WHITENER, of Gastonia.

Representative GEORGE P. MILLER, Democrat, of California, attended as a representative of the House Space Committee of which Hall was a member. Zeake W. Johnson, Jr., House Sergeant at Arms, also was present.

Hall was buried in the family cemetery at Webster.

Representative Hall died Friday at 5:45 p.m. in the C. J. Harris Hospital in Sylva. A paraplegic, who had been confined to a wheelchair since the age of 15, he underwent surgery December 10 in a New York hospital for removal of a cancerous growth.

The 41-year-old Congressman was a native of Sylva. He was elected to represent the 10-county congressional district in November 1958.

He became top-ranking freshman Democrat on the Space Committee, the first permanent new committee of both Houses since 1892. He was a strong supporter of timber management and development plans. He frequently called attention to western North Carolina's vast timber resources.

In September 1959, Hall went to London for a series of conferences in connection with the International Astronomical Federation Conference.

Hall was the son of Mrs. Edith Moore Hall, of Sylva, and the late David McKee Hall. He was a grandson of the late Superior Court Judge Frederick Moore and a nephew of Superior Court Judge Dan K. Moore of Canton, now associated with Champion Paper & Fiber Co.

Despite his physical disability, he received a certificate of law from the University of North Carolina Law School in 1947 and the LL.B. degree in June 1948. He began his law practice in Sylva in the fall of 1948.

In the summer of 1947, Hall appeared before the Congress of Physical Medicine in New York and gave a demonstration of new mobility methods being taught paraplegics.

He participated and held office in the Jackson County Chamber of Commerce, the Jackson County Industrial Committee and Jackson County Industries, the Sylva Rotary Club, the Sylva Methodist Church, Jackson chapter of the American Red Cross, and the Morehead Scholarship Committee. He served as county attorney for 2 years and was town attorney for Sylva from 1948 until 1951. He had also served as attorney for the town of Dillsboro.

Active in county and district Democratic circles for 20 years, he had served as president of the Jackson County Young Democratic Club and as an officer in the Jackson County Democratic executive committee.

Surviving is his wife, the former Miss Sarah McCollum, of Bradenton, Fla.; three daughters, Sarah Anne, 10, Edith Allison, 9, and Hannah McKee, 4; a brother, Robert C. Hall, of Asheville; and two sisters, Miss Lela Moore Hall and Mrs. Margaret Hall Dowdle, both of Franklin.

[From the Waynesville (N.C.) Mountaineer, Feb. 1, 1960]

REPRESENTATIVE HALL WAS A MAN OF GREAT COURAGE

Representative David McKee Hall was a symbol of courage and determination.

Having suffered from a physical handicap for some 25 years, he never sought sympathy—never indulged in self-pity. He was, in turn, concerned over the welfare of others and made many valuable contributions to the civic, religious, business, and cultural life of his community and district.

An indication of his concern for his fellowman was one of his last requests—that a scholarship fund be established at Western Carolina College in lieu of floral offerings.

Representative Hall was an inspiration to people of all ages in all walks of life. He won out many, many times over great odds as he underwent numerous operations in an effort to regain his health.

He was a consistent fighter and never knew what it was to give up. The greater the odds, the harder he fought.

The adult life of Representative Hall was truly one of courage and determination—an inspiration to those who are prone to give up this side of success.

(From the Ashville (N.C.) Citizen, Feb. 1, 1960)

SIX HUNDRED FRIENDS AND NOTABLES ATTEND FUNERAL FOR HALL

SYLVA.—More than 600 persons attended funeral services here Sunday afternoon for Representative David M. Hall, 12th District Congressman who died Friday of complications from cancer surgery.

The small Sylva Methodist Church, with seats for only 200, was filled to capacity with many standing. An estimated 400 additional persons waited outside.

The service was simple and impressive. The Reverend Asmond L. Maxwell, pastor, described the 41-year-old Hall as a man with "indomitable courage known to all." Of Hall, the minister said:

"He had a strong will to live in a large world. He had drive, control, and discipline of his natural abilities. He had a desire to grow, to learn, to accomplish.

"He had faith in himself, boundless energy, unceasing hope, a sense of duty and mission although he knew he lived 'on borrowed time'."

Stricken by a crippling bone disease at the age of 12, Hall had lived most of his life in a wheelchair. During his life, he underwent more than 100 operations.

The last was performed December 10 in New York City for removal of a cancerous growth of the bladder. The Congressman's death resulted from complications of the operation, including a kidney stoppage.

Hall's casket was cloaked in white carnations. Organ music filled the church as the coffin was rolled to the front of the altar.

In addition to the minister, who was assisted by the Reverend Robert G. Tuttle of Asheville, superintendent of the Asheville district of the Methodist Church, the solemn procession into the church included the pallbearers, members of the family, and a delegation of U.S. Congressmen and Senators who came from Washington for Hall's last rites.

Included in the group were North Carolina's two Senators, SAM J. ERVIN of Morganton and B. EVERETT JORDAN of Saxapahaw and North Carolina Congressmen HUGH Q. ALEXANDER of Kannapolis, L. H. FOUNTAIN of Tarboro, CHARLES R. JONAS of Lincolnton, A. PAUL KITCHIN of Wadesboro, ALTON LENNON of Wilmington, RALPH J. SCOTT of Danbury, and BASIL L. WHITENER of Gastonia.

Representative GEORGE P. MILLER, Democrat, California, attended as a representative of the House Space Committee, of which Hall was a member. Zeake W. Johnson, Jr., House Sergeant at Arms, also was present.

Hall was buried in the family cemetery at Webster, a few miles south of Sylva. He was buried in the same plot with his father, David McKee Hall, who died in 1938.

The little cemetery is at the crest of a hill. Stretching for miles beyond the Cowee Mountains and at the foot of the hill the Tuckasegee River winds its way through the valley.

The cemetery is a short distance from the Hall homeplace, a stately home built by Hall's grandfather on the banks of the Tuckasegee.

At least 200 persons attended the burial services. The grave was thickly covered

with flowers even though Hall had requested that in the event of his death, flowers be omitted and expressions of sympathy be in the form of contributions to a scholarship fund at Western Carolina College.

Telegrams of sympathy were received by Hall's widow from dozens of congressional Members, other nationally known persons, and notables with whom Hall had been closely associated.

Governor Hodges wired: "Mrs. Hodges joins me in expressing to you our love and sympathy in your great loss."

Senator ERVIN's telegram read: "We sorrow with you and the other members of his family in Dave's passing. We have never known a more gallant person."

A telegram from Senator JORDAN stated: "Katherine and I deeply grieved to learn of the passing of our good friend Dave. He will be greatly missed by his host of friends throughout North Carolina and by his colleagues in the Congress. Dave will long be remembered for the great contribution he made to his community, State, and Nation and for his indomitable courage. Our deepest sympathy to you and the family."

Most of Hall's close 12th district friends were present for the funeral. Among them were Mrs. Edith P. Alley of Waynesville, who was in charge of his district office in Waynesville.

Hall's survivors include the widow, the former Sarah McCollum of Bradenton, Fla.; three small daughters; his mother, Mrs. Edith M. Hall of Cullowhee; a brother, Robert C. Hall of Asheville; and two sisters, Miss Lela Hall and Mrs. Margaret Hall Dowdle, both of Franklin.

[From the Winston-Salem (N.C.) Journal, Feb. 1, 1960]

DAVID M. HALL

In late August 1958—hardly 3 weeks after the 12th District's Democratic executive committee had named him as the party's nominee for Congress—David M. Hall was in Washington more or less looking around. Asked by a Journal reporter if he was certain of victory in the November election, he grinned.

"It isn't a question of whether I'm coming (to Washington) or not," he said. "It's just a question of how long I'll stay."

As it turned out, the reply was more prophetic than it was intended. Mr. Hall died Friday afternoon—having filled only half the term to which he had indeed been elected that following November.

He was not in Congress long enough to build up much of a legislative record, to bring his name to public attention outside his own district and State, or even to shed fully the label of the freshman. But, while they had not come to know his public side, there are those in Congress—as there are many in other sections of his own State—who readily admired his personal courage. For Mr. Hall had entered Congress, as he had gone into most of the undertakings of his life, in a wheelchair. And his ambition, his obviously unflagging optimism, his desire for public service, in spite of his handicap, earned him highest regard.

On that count alone, Representative Hall achieved something which some men with the ability to walk and the opportunity to stay in Washington longer never have reached.

[From the Shelby (N.C.) Daily Star, Feb. 1, 1960]

THE MARK OF A MAN

One must review with a mixture of respect, awe, and admiration the life of David M. Hall.

The man spent most of his 41 years confined to a wheelchair, but he was never one to whimper.

He survived countless operations, endured unbelievable pain and fought back every time. He insisted upon being his own man.

His courage, determination, and public-spirited law career led to his election to Congress from North Carolina's 12th District in 1958.

It looked for awhile that David Hall would win the fight against his most recent assailant—cancer. But the ravages of the disease finally broke the resistance of a body that had previously fought and won over seemingly insurmountable odds.

When Hall was elected to Congress we wrote that here was an example for the youth of our land prone to whine about the adversities of their lives where material things are concerned.

Here was a man, even though confined to a wheelchair, who insisted upon standing upon his own two feet.

And we'll wager he never stood taller than he does now.

[From the Durham (N.C.) Morning Herald, Feb. 2, 1960]

HEROIC COURAGE

Representative David Hall's life was short—he was only 41 when he died Friday—but it will long be cited in North Carolina as an example of heroic courage.

From the age of 15 Dave Hall had been confined to a wheelchair, a paraplegic. But the handicap which chained his body did not curb his mind and his confidence. He earned a law degree at the University of North Carolina, returned home to practice, and earned the respect and confidence of his neighbors. They sent him to the State senate. Then, when Representative Shuford declined the Democratic nomination in the 12th District after the 1958 primary, Hall was the choice of the district Democratic committee for nominee.

Ill health had plagued him during the little more than a year he had served in Congress. He was much in hospitals. Finally came the dread diagnosis, cancer. Characteristically, Dave Hall joined battle with this most formidable of foes. The courage, the confidence, and the will which had carried him so far were his to the end. And in his passing, Dave Hall has left an example which shines among the many shining pages of the records of those who refused to let physical handicap keep them from the high destiny they believed was theirs.

[From a Morristown, Tenn., newspaper]

Perhaps the greatest endowment to any child is the will to do.

Far greater than an inheritance of wealth or brains is that indefinable something lit early in a young person's mind and heart that inspires him with a determination to make the most of the gifts with which God has endowed him.

In the majority of instances, such a person does not have a super-abundance of gray matter; but he has something much better, commonsense and a tiny power motor somewhere in his makeup that keeps saying, over and over, to him: "I think I can; I think I can; I think I can."

Whatever the limitations of opportunity, and sometimes these opportunities are so limited as to appear practically nil, such a boy or girl has the drive to pick up straws and to keep using those straws until they have erected a house of brick and stone.

Such are the lessons of success which have painted such marvelous panoramas in the business history of the United States.

Although now in this country those who are unwilling to work and who feel that Uncle Sam owes them a living are embarked upon a governmental program to force the workers to more than divide with the drones, around us all the time are patterns of success positively amazing.

Such a pattern is the life of Congressman David M. Hall, freshman Democratic Representative from the State of North Carolina, who last week died in Sylva, N.C., at the early age of 41 years.

Direct cause of death was attributed to cancer, that dread disease that seems to be constantly increasing as a menace, not only to the old but to the young as well.

David Hall had been an invalid all of his life. Most boys would have given up from the very first, would have folded their hands, carried along with a grimace on their faces, been depressed, miserable, a happiness deterrent to themselves and all those around them.

Although a paraplegic confined to a wheelchair for 30 of his 41 years, Mr. Hall succeeded in obtaining his degree in law from the University of North Carolina, entered into all sorts of business ventures, as well as practicing his profession, married and became the father of three lovely little girls.

Greatly interested in civic affairs, Mr. Hall was also interested in the welfare of his State and of the Nation. He had made a name for himself in Washington where he was regarded as an able and patriotic Representative.

Last rites for young Hall were held the past Sunday in a small Methodist mountain church in his home city where his death had followed recent surgery for removal of cancer.

Among the 500 persons attending the services was the entire North Carolina congressional delegation, as well as many other notables of Washington who came to pay final tribute to a man whom all considered marvelous.

Rev. A. S. Maxwell, in speaking of the deceased, said:

"Hall was richly blessed here," said the Rev. A. S. Maxwell. "His indomitable courage is known to all.

"He knew he lived on borrowed time," Maxwell told the group which overflowed the small red brick church.

He recalled the Representative's "strong will to live in a large world * * * his drive, control, and discipline of his natural abilities * * * his desire to grow, to learn, to achieve * * * his faith in himself * * * his boundless energy * * * his unceasing hope * * * his sense of duty, of mission through life * * *."

As Maxwell spoke of the young Representative's traits, his widow and three small girls sat in a front pew, weeping softly.

Behind them sat Senators SAM J. ERVIN, Jr., and B. EVERETT JORDAN; the 11 North Carolina House Members; Representative GEORGE P. MILLER, Democrat, of California, of the House Space Committee on which Hall served; and Zeake Johnson, Sergeant at Arms of the House.

The 41-year-old Hall had requested that in the event of his death, flowers be omitted and expressions of sympathy be in the form of donations to a scholarship fund at Western Carolina College, where his mother is assistant dean of women.

A special election will be necessary to fill the remainder of Hall's term, which expires next January. Roy A. Taylor, former State representative from Black Mountain, announced last week as a candidate for Hall's seat in the May Democratic primaries.

[From the Sylva (N.C.) Herald, Feb. 4, 1960]

SCHOLARSHIP FUNDS SHOULD BE MAILED TO WCC PRESIDENT

Before his death, Congressman David M. Hall requested that in lieu of flowers, donations be made toward establishment of a

David McKee Hall Scholarship Fund at Western Carolina College.

Some who desire to contribute to this scholarship fund have raised a question as to procedure. The procedure is as follows:

Mail contributions to the scholarship fund to the President, Western Carolina College, Cullowhee, N.C. Checks should be made payable to the David McKee Hall Scholarship Fund.

The president's office will acknowledge the gifts and will notify the family of those who contribute to the scholarship fund.

[From the Sylva (N.C.) Herald, Feb. 4, 1960]

DAVID M. HALL, 41, DIES; FUNERAL SERVICES ARE HELD IN SYLVA SUNDAY AFTERNOON—CONGRESSIONAL DELEGATION AMONG 600 WHO ATTEND

Twelfth District Congressman David M. Hall, 41, of Sylva, stricken by cancer last November, died from complications of cancer surgery at 5:35 p.m., Friday, in C. J. Harris Community Hospital.

Funeral services were held at 3 p.m. Sunday at Sylva Methodist Church. The Reverend Asmond Maxwell, pastor, assisted by the Reverend Robert G. Tuttle, superintendent of the Asheville district of the Methodist Church, officiated. Burial was in the family cemetery at Webster.

Survivors include the widow, the former Sarah McCollum of Bradenton, Fla.; three daughters, Sarah Anne, 11, Edith Allison, 9, and Hannah McKee, 5; his mother, Mrs. Edith M. Hall, of Cullowhee; a brother, Robert C. Hall, of Asheville; and two sisters, Miss Lela Moore Hall, of Lillington, and Mrs. Margaret Hall Dowdle, of Franklin.

Pallbearers were Ernest Burch, Andrew Wilson, Joseph T. Wilson, Lacy Thornburg, Malcolm Brown, Fred D. Hooper, E. L. McKee, and W. D. McKee.

Victim of a crippling bone infection at the age of 12, Hall underwent surgery December 10 in a New York hospital for removal of a cancerous growth on his bladder. He died of complications of the operation, including a kidney blockage.

Specialists who performed the operation reported to Hall afterward that the cancer had been completely eliminated. Hall was returned to C. J. Harris Hospital January 12 to continue convalesence.

A paraplegic who had been confined to a wheelchair since the age of 15, Hall was an attorney by profession but had devoted some attention to farming.

On July 31, 1958, the 10-member Democratic district executive committee selected Hall over five other Democratic nominee aspirants for the post left open when Representative George A. Shuford, of Asheville, withdrew because of his health.

Hall won over his Republican opponent, W. Harold Sams, Asheville attorney, in the general election to become 12th District Congressman.

Hall's election marked the first time in 49 years that the 10-county area had had a Congressman outside Buncombe or Henderson Counties.

A month after his election, Hall announced the opening of a full-time district office in Waynesville, the first time a congressional office had been established west of Asheville.

Hall was sworn into the U.S. House of Representatives on January 7, 1959.

Less than 2 months later, on February 23, he underwent surgery in Bethesda Naval Hospital in Washington for drainage of his right kidney after proper natural expulsion had failed. Physicians announced the following month that a second kidney operation might become necessary.

This operation, for the removal of scar tissue resulting from the kidney surgery, was performed November 10 in St. Joseph's Hospital in Asheville.

Three days later, physicians who performed the operation announced the finding of malignancy in microscopic studies of the scar tissue. Hall went to New York soon afterward to begin a series of X-ray treatments preparing him for the December 10 operation for removal of the cancerous growth.

As a Member of the Congress, Hall became the top-ranking freshman member on the Outer Space Committee, the first permanent new committee of both Houses since 1892. In September, he went to London for a series of conferences in connection with the International Astronomical Federation Conference.

He received a certificate of law from the University of North Carolina Law School in June 1947 and an LL.B. degree in June 1948. He was admitted to the bar in August 1947.

Among organizations in which he participated or held office were the Jackson County Chamber of Commerce, the Jackson County Industrial Committee and Jackson County Industries, the Sylva Rotary Club and Sylva Methodist Church, Jackson County Chapter of the American Red Cross and Morehead Scholarship Committee of Jackson County. He served as county attorney for 2 years and was town attorney for Sylva from 1948 to 1951. He had also served as attorney for the town of Dillsboro.

Hall had been active in county and district Democratic circles for more than 20 years. He had served as president of the Jackson County Young Democratic Club and as a member and officer in the Jackson County Democratic executive committee.

Born May 16, 1918, at Sylva, Hall was the son of Mrs. Edith Moore Hall, of Sylva, and the late David McKee Hall.

He was a grandson of the late Superior Court Judge Fredrick Moore, grandnephew of Superior Court Judge Walter E. Moore, and the grandnephew of the late E. L. McKee and State Senator Gertrude Dills McKee, his wife.

Among the more than 600 persons attending the funeral services Sunday was a delegation of U.S. Congressmen and Senators who came from Washington.

Included in the group were North Carolina's two Senators, SAM J. ERVIN, of Morganton, and B. EVERETT JORDAN, of Saxapahaw, and Congressmen HUGH Q. ALEXANDER, of Kannapolis; L. H. FOUNTAIN, of Tarboro; CHARLES R. JONAS, of Lincolnton; A. PAUL KITCHIN, of Wadesboro; ALTON LENNON, of Wilmington; RALPH J. SCOTT, of Danbury; and BASIL L. WHITENER, of Gastonia.

Representative GEORGE P. MILLER, Democratic Congressman from California, attended as a representative of the House Space Committee. Zeake W. Johnson, Jr., House Sergeant at Arms, was also present.

Telegrams of sympathy were received by Hall's widow from dozens of congressional Members, other nationally known persons, and notables with whom Hall had been closely associated.

Moody Funeral Home was in charge of arrangements.

[From the Smoky Mountain Times, Bryson City, N.C., Feb. 4, 1960]

CONGRESSMAN HALL DIES; FUNERAL AT SYLVA SUNDAY

Representative David M. Hall, Democrat, of North Carolina, a paraplegic whose career carried him to Congress despite almost a lifetime of pain and suffering, was buried near Sylva Sunday.

Members of the U.S. Senate and House were among the mourners who crowded the small Sylva Methodist Church and thronged outside at services for the 41-year-old Hall, who suffered a bone disease at 12 and from 15 lived in a wheelchair.

"He had a strong will to live in a large world. He had drive, control, and discipline of his natural abilities. He had a desire to grow, to learn, to accomplish," said the Reverend Asmond L. Maxwell, the church pastor.

"He had faith in himself, boundless energy, unceasing hope, a sense of duty and mission, although he knew he lived on borrowed time."

Hall, a lawyer prominent in civic and Democratic Party affairs, was elected to Congress in 1958.

Those attending the funeral included North Carolina's two Democratic Senators, SAM J. ERVIN, of Morganton, and B. EVERETT JORDAN, of Saxapahaw, and seven of the State's Congressmen.

The House Space Committee, of which Hall was a member, was represented by Representative GEORGE P. MILLER, Democrat, of California. Zeake W. Johnson, Jr., Sergeant at Arms of the House, also attended.

The church was filled to its 200-person capacity and many stood in the sanctuary. An estimated 400 others stood outside.

Mr. Maxwell was assisted in the service by the Reverend Robert G. Tuttle of the Asheville district of the Methodist Church.

Congressman Hall was buried in the family cemetery at Webster, a few miles south of Sylva and a short distance from the Hall homeplace. At least 200 persons attended the graveside services.

Attending Hall's funeral, in addition to North Carolina's two Senators; Johnson and Representative Miller, were North Carolina Congressmen Hugh Q. Alexander of Kannapolis, L. H. Fountain of Tarboro, Charles R. Jonas of Lincolnton, A. Paul Kitchin of Wadesboro, Alton A. Lennon of Wilmington, Ralph J. Scott of Danbury, and Basil L. Whitener of Gastonia.

Telegrams of sympathy were received by Mrs. Hall from Governor Hodges, Members of Congress, and other notables with whom her husband had been associated.

[From the Smoky Mountain Times, Bryson City, N.C., Feb. 4, 1960]

DAVID M. HALL

David Hall proved that a person can become successful in spite of handicaps if he has the courage and if he has the will.

Crippled at the age of 12 and confined to a wheelchair since the age of 15, with determination and courage he forged himself a place as a leader in western North Carolina civic and political circles.

He had served in the North Carolina Senate and as a member of the North Carolina Board of Water Commissioners before being selected to serve in Congress by the Democratic executive committee in 1958.

This was the first time in more than two generations that a 12th District Democratic Representative from west of the Balsams was in Congress.

He became ill less than 2 months after being sworn in as a Member of the House of Representatives, thus never getting the opportunity to do all he wanted for his district. But in spite of his serious illness, he kept in touch with affairs of the 12th. His interest in the proposed Federal building in Bryson City is an example of his continuing work.

After his last major operation (he had 100 operations during his lifetime) he announced that he was coming home to recuperate and run for reelection.

This was typical of Dave Hall who never admitted defeat against physical handicaps which would have overwhelmed a man of smaller stature.

It was with deep regret and sense of loss that the 12th District and North Carolina learned of his death.

He has made a high mark in his life as a gentleman, family man and man of courage. We salute Dave Hall, every inch a man.

[From the Sylva (N.C.) Herald, Feb. 4, 1960]

DAVID HALL WAS A SYMBOL OF COURAGE AND DETERMINATION

Jackson County has reason to long remember and honor the life and courage of David McKee Hall, cut down so young in life, and who lived and achieved great success under trying physical handicap and suffering from his public school days, through his college training and professional career.

David Hall, confined to a wheelchair since his teenage days, packed more living, business, and public service into his 41 years than the majority of us achieve in a long lifetime.

Endowed with a keen mind and indomitable courage and a determination to achieve success in anything he undertook, David Hall achieved professional and political success and rendered outstanding service to his county, State, and Nation.

Following his graduation from the university law school and on being granted his license to practice he wasted no time in opening an office in his hometown and was soon recognized as an attorney of ability and gained a wide practice, particularly in the civil courts. He served as attorney for Jackson County, represented the 32d senatorial district in the State senate, where he sponsored much constructive legislation on the local, district and State level. When the new and very important water resources commission was established to study and report on the State's water use and resources, he was appointed as a member of that body by Governor Hodges. It was while serving in the senate that he proposed an income tax withholding law for North Carolina. He lived long enough to see that law passed and put into operation, although it was by a money-hunting legislature 2 years later.

The young attorney spent many hours working for industry, schools, roads, the new hospital and other things for the betterment of Jackson County. During all of this time few people, other than his immediate family, fully realized the tremendous handicap under which he labored, and at times, with much pain and physical discomfort.

The crowning success of his political career came with the nomination as Democratic candidate to Congress and the winning of the 12th congressional seat in the November election in 1958. The few months he was able to serve in Congress he exhibited the kind of leadership and wisdom that this Nation needs in its national representatives. Had his health and strength prevailed there is little doubt of his having made a remarkable record of service to his district and the Nation as U.S. Congressman.

Of the many editorials written about Representative Hall since his death, the predominating theme of most of them has been his "spirit of courage and determination." Quoting the Waynesville Mountaineer, "Representative Hall was an inspiration to people of all ages in all walks of life. He won out many, many times over great odds as he underwent numerous operations in an effort to regain his health. David Hall was a symbol of courage and determination."

Although his county, State, and the Nation have suffered a great loss it is his family who will feel his passing most keenly.

An indication of his concern for his fellow man was one of his last requests—that a scholarship fund be established at Western Carolina College in lieu of floral offerings.

[From the Sylva (N.C.) Herald, Feb. 4, 1960]

THE DAVID MCKEE HALL SCHOLARSHIP FUND

The many, many friends of the late David M. Hall, throughout North Carolina have an opportunity to honor his memory and at the same time aid many deserving young men and women of this mountain region in pursuing higher education at Western Carolina College.

One of the last requests made by Representative Hall was that in lieu of flowers at his funeral contributions be made to a scholarship fund at Western Carolina College to aid deserving young men and women in securing a higher education at this college. Having struggled through college himself, under great physical handicap, he realized the need for more scholarships at Western Carolina College. His friends have suggested that the scholarship fund be known as the David McKee Hall Scholarship.

Many people here in Sylva, Jackson County, and elsewhere have said that this is one of the finest opportunities to honor the late Congressman and are already sending in their contributions. Machinery for handling the fund has been set up at the college and checks may be drawn in the name of the fund and mailed directly to President Paul A. Reid at Cullowhee.

This can well be the source of funds for one of the largest scholarships at Western Carolina College as hundreds of friends of the young attorney and civic leader will wish to remember his life and service to his State in this way.

Our fast growing Western Carolina College does not have a wealthy alumni and therefore scholarships, memorial and otherwise, are not available for those who could qualify for them. The David McKee Hall Fund offers an opportunity for many people to join hands in providing for this much needed part of our college.

[From Highlands (N.C.) Highlander, Feb. 5, 1960]

CONGRESSMAN DAVID M. HALL

The untimely passing of Representative David M. Hall is mourned by everyone in this entire area. His death has brought a deep sense of loss to the 12th North Carolina District which he served as Congressman. He will be missed by everyone, and our hearts go out in sympathy to his family.

David Hall's life has been a shining example of courage comparable to the life of the late Franklin Delano Roosevelt. Assuredly no man ever came to the end of his life who had done more to rise above his infirmities in order to unselfishly serve his fellow man than these two men. In spite of the crippling disease since the age of 15, which confined David Hall to a wheelchair, and made him a paraplegic, this handicap did not deter him from acknowledging that it was what he could do for others, and nothing else, that satisfied him, and he fulfilled his destiny of having responsibility, and the burden of other people's business laid upon his shoulders.

His loving and spontaneous service to others will be long remembered. His courage and faith in spite of his adversities will bring hope and faith to many others in the same set of circumstances. His calm, gentle spirit will live on in the lives of everyone in the Nation who was privileged to know him personally, or know of him through his service to his country and his fellow man.

[From the Sylva (N.C.) Sylvan, Feb. 1960]

JACKSON COUNTY LOST ONE OF ITS ABLEST CITIZENS IN THE DEATH OF DAVID M. HALL

A grievous loss has been suffered by Jackson County, N.C., and the Nation in the recent passing of Congressman David M. Hall, one of the ablest and most highly respected citizens of our day.

Seldom has one in so short a time been able to build such a record of achievement. The disabilities which confined him to a wheelchair during most of his life seemed to instill within him that burning ambition and courage that recognized no limitation.

At a time when lesser men would have accepted their fate, David Hall undauntedly pursued his education and graduated with honors from the Law School of the University of North Carolina. He established practice in his home town of Sylva and demonstrated a legal talent that soon brought him clients beyond his ability to serve without assistance. He represented the Mead Corp. in many important legal matters. He was an honorary member of the Mead Foreman's Club and the November meeting honoring Raymond Sutton, which he attended, marked what was perhaps his last public appearance.

His list of official duties includes those of attorney for Jackson County, State senator, and a member of the State water resources commission. In 1958 he was elected Congressman of the 12th District in which honored position he was ably serving when overtaken by the illness from which he failed to recover.

Despite the demands upon his time by legal and official duties, he rendered a full measure of service in civic, church, social, and community activities. With it all he seemed never lacking in time for a congenial chat with his many friends.

His accomplishments in 41 short years is seldom matched in the threescore and ten allotted to many and truly proves that it is not how long one lives but how well.

[From the Waynesville (N.C.) Mountaineer, Apr. 18, 1960]

AWARD MADE TO LATE REPRESENTATIVE HALL

"I know in my heart that David is as proud of the award as I am."

With these words, the saddened wife of the late Congressman David M. Hall, of Sylva, accepted a posthumous award Friday given to her husband for being chosen the outstanding handicapped North Carolinian for 1959.

"He was one of the most courageous men I have ever known," Governor Hodges declared in presenting the award. "I can't think of a finer tribute than for the State * * * to give this award to Mrs. Hall and her children."

Mrs. Hall's three daughters—Hannah, 5, Allison, 9, and Anne, 11—watched the presentation in the Governor's conference room.

Hall, confined to a wheelchair for many years, died January 29 of cancer. He was stricken by osteomyelitis during his childhood. At the age of 15, the infection affected his spinal cord, paralyzing him from the waist down. He underwent scores of surgical operations.

Despite his handicap, Hall became the first special student to be graduated from the University of North Carolina Law School with an LL.B. degree. He practiced law for some time in Sylva.

A district committee nominated the late Mr. Hall for the award. Serving on the district committee were Miss Debrayda Fisher, and Mrs. Edith P. Alley.

The following was published in a booklet, "Reach," about Mr. Hall:

"Handicap," as defined by Webster, means to put at a disadvantage or to hinder, but had you been present on January 3, 1959, when David McKee Hall, paraplegic, quietly rolled his wheelchair into the Nation's Capitol to take the oath of office as a Member of the 86th Congress, representing the 12th Congressional District of North Carolina, you might have said "Hall has revised Webster." And indeed you would have been quite correct, because his journey to Washington had been made over a long and toilsome road strewn with boulders of pain and suffering, blocked at intervals by detours of long, lingering months in hospital beds—all of which would have made a person of less fortitude, determination, and driving ambition turn back and thus confirm Webster's definition

that a handicap is truly a hindrance. But because of his relentless drive, his complete unwillingness to admit defeat, his all-consuming ambition, the journey had been accomplished. And in so doing, he had lent inspiration and encouragement to others, both handicapped and physically fit, to complete the task at hand, to achieve that goal out yonder, and to do it without complaining.

At the age of 12, David was a round, pudgy, pink-cheeked lad who had more than the normal boy's interest in fishing, hunting, scouting, football and the like. That is, until the day that osteomyelitis destroyed the participation, even though it could not lessen the interest which remained intact for some 28 years later. And thus began the years of suffering, of excruciating pain and of long, long months in Piedmont Hospital, Atlanta—years which deprived him of a secondary education because of the some 200 surgical operations he was required to undergo and the repeated close brushes with death. At the age of 15, the infection affected his spinal cord to the extent that he was permanently paralyzed from the waist down and thereafter confined to a wheelchair life.

Throughout the 28 years his family, physicians, and close friends were constantly amazed at the indomitable courage he manifested at all times, never discouraged if his plans and activities were brought to an end by another painful hospital experience, but always ready to begin a new project or complete the old one when given brief respites at home.

Then, with the discovery of the sulfa antibiotics, his hospital stays became less frequent, and so he determined to enter the University of North Carolina and like all his plans and ambitions, he carried this to a successful, brilliant conclusion by his graduation in 1948, thus becoming the first special student to graduate from the law school with an LL.B. degree. Thereafter, he passed the State bar examination and opened a law office in Sylva where he practiced law since that time. During the time he was in college, he was not only studying law himself, but was helping blind students by reading to them.

His subsequent achievements and accomplishments came as no surprise to those who knew him best, for at last they were convinced that when David Hall said, "I will," it meant that he would and could. Because of his attitude and demeanor concerning his handicap, one forgets that he cannot stand up tall and straight or that he is denied the simple art of walking into a room. He has never sought concessions or privileges, because of physical limitations; rather, he preferred to take his turn always with the physically normal.

Too much cannot be said for his mental approach to his handicap. Gov. Luther H. Hodges said at the recent Young Democratic Club convention in Asheville that David Hall had exhibited more courage than any man he had ever known. The distinguished Senator SAM J. ERVIN, Jr., in introducing him at the 12th Congressional District rally in Bryson City, likened his courage and achievements to those of the knight described in the poem "The Broken Sword."

More important than these encomiums is the widespread influence he has had on other handicapped people by his inspiring example and the tangible things he had done for their benefit. Perhaps one of his most noteworthy contributions was in 1946, at Manhattan Institute for the Crippled and Disabled in New York.

Through his understanding and sincere appreciation of the vocational rehabilitation program, he has encouraged many handicapped people, especially other paraplegics, to develop their limited abilities. Searching out those in need of help and working in close cooperation with the vocational rehabilitation counselor, he has frequently made his office available for conferences and interviews between these individuals and counselors which resulted in their receiving training and/or other rehabilitation services through which they gained a new lease on life.

For many years David Hall devoted considerable time and effort in working with the local committee on employ the physically handicapped; he was instrumental in getting a survey made by the employment service on the county's labor supply which later led to the location of a new industrial plant in the community, thereby creating additional job opportunities for the unemployed. He has helped many handicapped people to secure gainful employment and thus become useful citizens who experience the satisfaction that comes with finding one's place in life.

He has served his district well in the House of Representatives and has been accorded recognition unusual for a freshman representative. He was honored by being appointed to the House Committee on Science and Astronautics, the first permanent standing committee to be created by the Congress since 1892. As a member of this committee, he participated in an 11,000-mile fact-finding inspection tour of the major research and development centers of Western Europe's NATO countries.

He served in the Senate of the 1955 North Carolina General Assembly, has been a member of numerous boards and commissions, was active in the Methodist Church, and in local civic organizations.

[From the Asheville (N.C.) Citizen, Apr. 18, 1960]

IN MEMORY

The late Representative David M. Hall of Sylva lived in memory in Raleigh last Friday when he was honored as the outstanding handicapped North Carolinian for 1959.

The posthumous award, presented by Governor Hodges, was accepted by the widow, who expressed her pride in the honor and in the memory of her husband.

Representative Hall, who died last January 29 of cancer, had been confined largely to a wheelchair since he was a youngster.

His affliction did not bar him from a university education, his law license, and a successful career in professional, civic, and public life.

To those who knew him, his life and courage were inspiring.

EXTENSION OF NATIONAL DEFENSE EDUCATION ACT

Mr. DODD. Mr. President, in 1958 the National Defense Education Act established a program of federally financed loans to enable prospective college students to get their education now and repay the loans on exceedingly easy terms at a later date.

This act has made a good beginning toward strengthening our system of higher education, but the full amount authorized by Congress for the student loans has never been made available and as we study the operation of this act, we see ways to enlarge its scope and improve its effectiveness.

I have joined with others in cosponsoring a bill introduced by the Senator from Texas [Mr. YARBOROUGH], S. 3481, which would make the student loans under the act available to teachers attending summer sessions. Repayment would not be due for several years and half of the loan is forgiven to those in the teaching profession. I feel that this amendment would be widely utilized and that it would be extremely helpful to teachers in financing courses pursued for higher degrees and refresher courses that would improve their earning power and their professional competence.

There is growing national awareness of the injustice to our teachers and the danger to our educational system posed by our failure to pay teachers adequate salaries. I have supported legislation to increase those salaries through Federal aid, but we can help our teachers and our educational system in other, smaller ways. This amendment would help thousands of teachers carrying heavy financial burdens by making it possible for them to advance in their profession through attending summer sessions. And the whole country would be the beneficiary.

The PRESIDING OFFICER. Is there further morning business?

FISHTRAPS IN ALASKA

Mr. GRUENING. Mr. President, I ask unanimous consent that I may proceed for not to exceed 5 minutes.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). Is there objection to the request of the Senator from Alaska? The Chair hears none, and it is so ordered.

Mr. GRUENING. Mr. President, one of the most flagrant cases of attempted Federal executive usurpation is inherent in the action of the Secretary of the Interior in attempting to establish fishtraps in several Alaskan communities. If successful, it will constitute a wholly unwarranted and unjustified interference in the affairs of the recently admitted State of Alaska. If successful, it will be a nullification of the rights of the 49th State. If successful, it will be an overruling by a Federal executive agency of the repeatedly declared wishes of the people of Alaska.

The issue strikes at the very heart of Alaskan sovereignty. Ever since the passage of the Organic Act of 1912, which unjustly denied the people of Alaska the right to manage their own fisheries, the people of Alaska have pleaded for the right to manage and control that vast resource. An essential part of that plea was for the abolition of fishtraps. The fishtrap is a costly device which takes large quantities of fish economically as they are on their way to spawning beds, but also takes them destructively.

For 47 years, from 1912 until the passage of the Alaskan Statehood Act, the people of Alaska sought through ever-repeated memorials of the Alaska Territorial Legislature, and through the introduction of bills in every session of Congress by Alaska's voteless delegates, to secure the abolition of fishtraps.

But the Interior Department's opposition, combined with that of the absentee canned salmon interests, proved to be too strong. They were never abolished until statehood was at hand.

In the meantime, because of the fishtraps, this once greatest national fishery resource, and Alaska's greatest resource—the Pacific salmon—was tragically depleted. Year after year the catch became smaller. From a pack of over 8 million cases in 1936, it dropped to 1,600,000 cases last year.

In 1959, the last year of Federal control, the pack reached the lowest point in 60 years. A tragically wrecked, depleted resource was turned over to the infant State.

There was hope, however, that with statehood, with the people of Alaska at long last assuming control of its fishery, by their abolition of the fishtraps provided both by the Alaska constitution and action by the State legislature, by the application of and by the action of effective conservation measures, by the patience and restraint of the Alaska fishermen this once great, and now almost vanished fish resource might eventually be restored. That is the objective of the people of Alaska.

But, alas, Alaskans did not reckon with the self-perpetuating determination of the Federal bureaucracy.

Secretary Seaton insists that he can and will authorize fishtraps in Indian communities. Those communities have themselves gone on record in a statewide referendum by overwhelming majorities against fishtraps.

Now, the tragic aspects of Secretary Seaton's intrusion into the affairs of Alaska is that racial friction and antagonism will be aroused in a State where it has been virtually nonexistent.

Secretary Seaton claims the right to order the erection and operation of fishtraps in certain Indian villages. The situation he will create, if he succeeds, is that fishing villages inhabited by whites will be denied the right to fishtraps in conformity with their own oft reiterated wishes, in conformity with the expressions of all the Alaskan people, by the legislature, and by the Territorial Delegates of Alaska for nearly half a century, but that Indian communities and Indian villages only, which always in the past have voted against fishtraps, will by action of the Secretary of the Interior henceforth operate them.

Only last summer the Alaska Native Brotherhood representing the Indian communities of southeastern Alaska where Secretary Seaton is determined to install fishtraps, adopted a resolution at its annual convention condemning the restoration of fishtraps. Racial antagonism and racial friction, previously nonexistent, are almost certain to follow if Secretary Seaton has his way.

Mr. President, years ago there was a certain amount of prejudice and discrimination in a few places in Alaska against the so-called native people, as the Indians and Eskimos are called there. It did exist in occasional instances, but vanished completely a decade and a half ago after the 1945 Territorial legislature passed an antidiscrimination act, penalizing any discrimination on the basis of race, creed, or color. That action responded to a wide sentiment. Since then there has been only harmony and friendship between the aboriginal races and the later white comers. Natives thereafter began to be elected to our Territorial legislature. They served well. They helped make our laws. They served on executive boards.

In the first State legislature a year ago the contest for the presidency of the senate lay between an Indian, who had formerly served as president of the Territorial senate, and an Eskimo, who had served for years in the legislature. Both were admirably qualified. The Eskimo was elected on a basis of longer service in the legislature. He acquitted himself of this responsibility admirably in the first two sessions of the first legislature to date, the second of which has just been concluded.

Mr. President, the action of the Secretary of Interior will tend to destroy this admirable relationship between the races in Alaska. It will establish by Federal action racial discrimination. It will also tend to nullify the desire and hope of the people of Alaska to restore their fishery.

Mr. President, I wish to call attention to the fact that earlier in this session, on April 19, my distinguished and able colleague [Mr. BARTLETT] discussed this subject for six pages in the CONGRESSIONAL RECORD, and I supplemented what he had to say on April 29. These statements constitute a complete summary of the tragic and wholly unwarranted and unjustifiable action which the Department of the Interior proposed to take. I hope it will not succeed.

I now ask unanimous consent that there be included at the conclusion of my remarks an article entitled "Fishtrap Battle," written by Jerry Bowkett, and published in the Anchorage Times, which gives a résumé of the situation to date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FISHTRAP BATTLE

(By Jerry Bowkett)

Next week the State of Alaska is going to argue before the U.S. Supreme Court that it is entitled to full control of its fisheries and that Interior Secretary Seaton has no right to continue to meddle in such affairs.

And Interior Department attorneys are going to declare before the High Court that Seaton can do anything he wants to do when it comes to Indian fishing rights in Alaska.

Seaton will be hard pressed for sustaining arguments. The constitution of Alaska, approved by Congress, declares that no fishtraps shall be allowed in the State and no special group shall enjoy exclusive privilege in the fishery.

And the Statehood Act itself states that Alaska will gain control of its fisheries after the Interior Secretary has certified it has made adequate provision for the administration, management, and conservation of the resources. Seaton made such certification last year and the State theoretically gained full control of the fisheries last January 1.

Seaton declared he is obligated to protect Alaska natives—under authority of the Bureau of Indian Affairs—when he issued certain fishing regulations last month which, among other things, could perpetuate 11 southeast Alaska fishtraps and closed the Karluk fishery off Kodiak Island to many Kodiak fishermen.

Senator E. L. BARTLETT protested the new Federal fishing rules on the floor of the Senate. And Gov. William Egan and the Alaska Board of Fish and Game added their voices to his protest.

It was not too long ago that the battle for statehood came to an end, and Alaskans can still come up with strong arguments why they should manage their own resources and the Interior Department should be sent packing.

The fish and game board in a letter to Seaton said his new fishing regulations "will make a giant stride in introducing flagrant segregation in a presently well-integrated State. Not only do the regulations set off Indians differently from whites, but they even separate villages of natives."

The board expressed fear it would not be able to manage the fishery properly. The board said:

"The native of Alaska probably composes about one-half of the total resident fishing effort. In order to effectively manage any fishery, only one agency can have the responsibility. This and the other proposed regulations will have the effect of maintaining two fisheries in Alaska, one for natives and one for other groups * * *. All that can result is complete chaos."

Some 400 to 500 fishermen each year fish at Karluk, the board pointed out to Seaton. There are only about 25 Karluk villagers who use the fishery.

Seaton declared in his new regulation that only natives of the village of Karluk may use the fishery this year.

Seaton is getting little support from the natives themselves in his attempt to extend Federal authority over Alaska fishing. The Alaska Native Brotherhood, meeting at Yakutat last November, passed a resolution calling for the abolition of all fishtraps.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

The Senate resumed the consideration of the bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

ORDER DISPENSING WITH CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the calendar be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

NOMINATION OF ARTHUR V. WATKINS TO BE CHIEF COMMISSIONER OF THE INDIAN CLAIMS COMMISSION

Mr. MANSFIELD. Mr. President, I send to the desk a nomination and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The nomination will be stated for the information of the Senate.

The Chief Clerk read the nomination of Arthur V. Watkins to be Chief Commissioner of the Indian Claims Commission.

The PRESIDING OFFICER. Is there objection to the present consideration of the nomination?

There being no objection, the Senate proceeded to consider the nomination.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the nomination of Arthur V. Watkins to be Chief Commissioner of the Indian Claims Commission?

The nomination was confirmed.

Mr. MANSFIELD. Mr. President, I ask that the President be immediately notified.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

Mr. BENNETT. Mr. President, I can think of no more gracious or fitting tribute which the Senate could pay to one of its former Members than to accept a nomination of that Member to an office in the administrative branch of the Government, offer it, and approve it on the floor, without referring it to committee. This is a mark of respect, of appreciation, and of confidence. I am certain that our former colleague, Senator Watkins, deserves that respect. I am sure he will very effectively carry out the responsibilities of the new office to which he has been appointed and his nomination has been confirmed.

For some time, former Senator Watkins has been serving as a member of the Indian Claims Commission. By the President's nomination, and the confirmation by the Senate of the nomination, he now becomes the Chief Commissioner of that Commission.

Before he came to Congress, Senator Watkins presided with honor and success as a judge in my State of Utah. His work as the chairman of the special subcommittee committee which considered the censure of Senator McCarthy demonstrated to the Senate his judicial ability and temperament.

During his service in the Senate as a member of the Committee on Interior and Insular Affairs and of its Subcommittee on Indian Affairs, Senator Watkins demonstrated his interest in and his basic fitness for the kind of assignment which he now holds, a position which involves him deeply in the problems of the American Indians and their claims against the Government. So I am very happy that the Senate, under the leadership of our distinguished acting majority leader, took a short cut and honored my colleague in this rather unusual way.

Mr. KUCHEL. Mr. President, our former colleague, Arthur V. Watkins, has performed an invaluable service to the country in his membership on the Commission, and I feel sure that in his new responsibilities that type of service will continue in the future. I congratulate the President on his nomination.

Mr. GRUENING. Mr. President, I should like to join in the remarks the Senator from Utah [Mr. BENNETT], and the Senator from California [Mr. KUCHEL] have made on the nomination of former Senator Arthur Watkins. He served with great distinction and devotion in this body. I think this is an excellent appointment, and I think he will be a most useful public servant in a field in which he is well acquainted.

Mr. MANSFIELD. Mr. President, I wish to join with the Senator from Utah [Mr. BENNETT], the Senator from California [Mr. KUCHEL] and the Senator from Alaska [Mr. GRUENING] in what they had to say about our former colleague, Arthur Watkins. He was a truly great Senator, who made many contributions to the welfare and betterment of this country and also of the Senate. Our confidence in him and our appreciation and affection for him are indicated by the fact that his nomination was not referred to a committee, but was considered immediately, by the Senate and confirmed unanimously.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

There being no objection, the Senate resumed the consideration of legislative business.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

The Senate resumed the consideration of the bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. McGEE in the chair). Without objection, it is so ordered.

REDUCTION OF FIGHTER PLANE STRENGTH IN ALASKA

Mr. GRUENING. Mr. President, I wish to serve notice that tomorrow, if we can obtain the time, my colleague [Mr. BARTLETT] and I will address ourselves to the utterly amazing reduction, by nearly 50 percent, of the Air Force fighter strength in Alaska.

The Air Force has informed us that its purpose is to abolish the entire fighter squadron of 25 F–89 planes at Ladd Field, the northernmost air base under the American flag, and the U.S. air base nearest Russia. It is an almost unbelievable piece of folly; and we shall attempt to secure its reversal in the interest of the national security. To cut almost in half our fighter strength in that area would be sheer idiocy; and we intend to explore the matter fully.

In that connection, let me say that I am delighted to see in the Chair at this time my colleague from Alaska [Mr. BARTLETT]; and I am also very happy to see on the floor at this moment the Senator from Arizona [Mr. GOLDWATER], who is fully aware of the importance of maintaining the strength of our Air Force. I am likewise very happy to see in the Chamber at this time the junior Senator from Washington [Mr. JACKSON], who has conscientiously devoted himself to the maintenance of our strength in the interest of our security and is fully aware of the strategic importance of Alaska to national defense.

I now give notice that we intend to do our utmost to have this very much mistaken order reversed.

THE EISENHOWER-NIXON DOUBLE STANDARD OF AREA REDEVELOPMENT FOR THE PEOPLE OF EUROPE, ASIA, AFRICA, AND SOUTH AMERICA BUT NOT FOR THE PEOPLE OF THE UNITED STATES

Mr. GRUENING. Mr. President, last Friday the President returned to the Congress, without his approval, S. 722, the area redevelopment bill.

Thus, the Eisenhower-Nixon administration, by veto—or threat of veto—marches on.

Thus, the Eisenhower-Nixon "double standard"—everything for the people of foreign countries, little or nothing for our own people—is once more, for the *n*th time, reaffirmed.

Shortly after the receipt of the President's 161st veto message last Friday, the distinguished senior Senator from Illinois [Mr. DOUGLAS] presented on the floor of the Senate a masterful analysis of the President's reasons for vetoing S. 722. Of this message, Senator DOUGLAS said:

> This message betrays ignorance, it is unctuous and hypocritical, and it is greatly mistaken in its attitude toward what is happening in this country.

Mr. President, I want to associate myself with the analysis made by the able senior Senator from Illinois in his characterization of the President's message.

Senator DOUGLAS was joined in his analysis of the President's actions by the able and distinguished junior Senator from West Virginia [Mr. BYRD], with whose remarks I also wish to associate myself.

I also wish to thank the Senator from Illinois [Mr. DOUGLAS] for referring to my 5 pounds and 7 ounces book setting forth some—only some—of the many, many projects under the mutual security program. Our efforts are not yet con-

cluded, so I cannot at this time say with certainty how many volumes will ultimately be filled or how many pounds those volumes will weigh.

But this much I can say at this point: Contained in this one volume are example after example of items for which Federal dollars have been spent for projects of exactly the same type as those which this administration bitterly opposes at home.

The President's veto of the area redevelopment bill is, for me, just one more example of the double standard, doubletalking, and doubledealing of the Eisenhower-Nixon administration.

We have seen many similar actions in the past.

Mr. President, I think that relieving want and unemployment and economic distress, wherever they may be found in the United States, should not be made a political football. But that is exactly what the President is making of the problem of relieving those areas—some 40 major areas and 103 minor areas—which are suffering from economic dislocation. That was the purpose of S. 722, the area redevelopment bill vetoed by President Eisenhower.

In the CONGRESSIONAL RECORD for Friday, May 13, 1960, the Senator from Illinois [Mr. DOUGLAS] detailed on pages 10303–10304 the incontrovertible proof that the Republican Party is only paying lipservice to the problem of relieving the economic distress of the 143 areas in the United States which, as of May of this year, needed help.

The Senator from Illinois recounted very well the long and rocky road followed by this legislation. Today, I shall not take the time of the Senate to recount in detail the proof offered by my colleague from Illinois of continued Republican opposition to the area-redevelopment legislation. It is written clearly in the votes in both Houses of the Congress.

Mr. LONG of Louisiana. Mr. President, will the Senator from Alaska yield to me?

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Does the Senator from Alaska yield to the Senator from Louisiana?

Mr. GRUENING. I yield.

Mr. LONG of Louisiana. Does the Senator recall that about a year ago, when I offered an amendment—and the Senator from Alaska voted for it—to increase welfare payments, not 10 Republican Senators voted for adoption of the amendment, although the amendment was adopted because the overwhelming majority of the Democratic Senators voted for it.

Now, in an election year, the Republicans say they think they are in favor of some improvement of social security which is pretty much in line with the type of assistance and the type of philosophy for which many of us voted. The difficulty which some of us experience, however, is that we are accused of favoring the enactment of such measures in election years. However, the fact is that we vote for them year in and year out; but it seems that some of the Republicans want to vote for them only in election years, when they can explain to the chambers of commerce that that was necessary in order to be reelected, although they did not really believe in it.

Mr. GRUENING. And, Mr. President, it was interesting to note, the other day, that Senators on the other side of the aisle made fine speeches in favor of area redevelopment; but the next day, following the breakfast at the White House, the same Senators voted to recommit the bill. Perhaps such reversal is not difficult to understand.

Mr. LONG of Louisiana. They were in favor of it, except when the time for decision came.

Mr. GRUENING. That is correct.

An area redevelopment bill was originally introduced by the Senator from Illinois [Mr. DOUGLAS] 5 years ago—in 1955. It passed the Senate; but the Republican leaders in the House refused to give unanimous consent for its consideration by that body, so it died.

In 1957 the able and distinguished senior Senator from Illinois introduced another bill for area redevelopment. Only 15 Republicans voted for it when it passed the Senate. Over the opposition of the Republican leaders in the House, the bill was passed and sent to the President, only to be met by the customary veto.

In 1959 a similar bill passed the Senate, with only four Republican Senators voting for it. For approximately a year it was held up in the House by the Rules Committee. I shall not dwell at this time on the composition of the Rules Committee in the House or how the combination of votes there makes delay possible. Finally it passed the House on Calendar Wednesday, again in the face of stiff Republican opposition.

And now, for a second time, the President has vetoed the area redevelopment bill.

Twice before, area redevelopment has been defeated by the administration. It simply does not want a program for our own American depressed areas.

But my purpose today, Mr. President, is to consider one particular facet of the President's message and to show the extent of the double standard of this administration.

In his veto message, the President said:

> Under S. 722, however, financing of industrial development projects by the Federal Government—limited to 35 percent under the administration's proposal—could go as high as 65 percent, local community participation could be as low as 5 percent.
>
> S. 722 would authorize Federal loans for the acquisition of machinery and equipment to manufacturers locating in eligible areas. Loans for machinery and equipment are unnecessary, unwise, and costly.

The Eisenhower-Nixon administration, therefore, Mr. President, seems to be saying that in making grants for industrial development, the localities should put up at least 65 percent of the total, and that loans for machinery and equipment are in all events "unnecessary, unwise, and costly."

Does the Eisenhower-Nixon administration apply the same high-sounding standards to its foreign-aid program, for which we were asked, this year—under threat of a special session if we do not comply—to authorize the appropriation of over $4 billion, and that $4 billion only a part of the foreign-aid request?

No, Mr. President, what is sauce for the goose is not sauce for the gander under this administration.

There is not even the semblance of equal treatment.

The sky is the limit on our foreign-aid standards. Things which the Eisenhower-Nixon administration calls unnecessary, unwise, and costly when Federal dollars are to be spent on them at home, are deemed urgent, essential, and for an unassailable purpose when the Federal dollars are to be used for the same types of things abroad.

Consider the loans made by the Development Loan Fund.

I ask that there be printed at this point in my remarks in the CONGRESSIONAL RECORD a list furnished me by the Development Loan Fund, at my request, showing the cumulative status of loans and commitments.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

	Amount (thousands)	
I. Total loan and guarantee agreements signed Apr. 13, 1960 (from attached report)		$872,806
II. Other loans approved, not yet signed:		
Letters of advice issued:		
Borrowers and project:		
Government of Yugoslavia, diesel locomotives (2d stage)	$14,800	
Government of India, Chandrapura electric power	30,000	
Government of India, Sharavathi hydroelectric power	8,400	
Industrial Finance Corp. of India, industrial finance corporation	10,000	
Tec Pan Industrial Corp. (Korea), Tec Pan	1,100	
Peru Savings & Loan Association, savings and loan association	1,000	
Societe National des Chemins de Fer Tunisiens (Tunisia), National railways	+350	
Taiwan Telecommunications Administration, telecommunications	2,000	
Liberia: Bank of Monrovia, Bank of Monrovia	250	
Government of Vietnam, Saigon-Cholon water distribution	19,500	
N. V. Indonesia Service Co., N. V. Indonesian service	2,600	
Central Sucriere Nord-Haiti, SA, sugar mill	3,000	
Government of Peru, Aguaytia-Pucallpa Highway	3,500	
Industrial Development Bank of Israel, development bank	5,000	
Government of Paraguay, telecommunications	1,000	
Vinylex Plastics, Ltd., plastics, carbide plant	6,100	
Koruma Tarima Ilaclari, production of chemicals	2,800	
Government of Pakistan, dredging facilities	2,000	
Banque de Credit Agricole Industriel et Foncier (Lebanon), development bank	5,000	
		118,400
Letters of advice pending		70,500
III. Other project commitments		18,150
Total loans approved, Apr. 30, 1960		1,079,856

Development Loan Fund—Cumulative status of approved loans as of Apr. 13, 1960

[1] Pakistan Industrial Credit and Investment Corporation.

Mr. GRUENING. Mr. President, it is rather striking that the first item is for diesel locomotives to the Government of Yugoslavia, in the amount of $14,800,000.

The second one is a loan to the Government of India for the Chandrapura electric power, in the amount of $30 million.

There is no partnership there as in the administration's hydro policy at home; the Government does it all. There is a second loan to the Government of India for the Sharavathi hydroelectric power, amounting to $8,400,000.

There is another one to Industrial Finance Corporation of India for $10 million.

There are others, as this list in the RECORD will show.

Let us consider one or two of these projects in the light of the President's own standards.

One of the loans is to India—and I am not critical of the project as such. I know no more about it than the information furnished me by the Development Loan Fund. But in looking through this information, I find that a loan has been made to India in the amount of $5 million, repayable in 15 years in Indian rupees.

What is the loan for?

Five million dollars to purchase equipment for use in the modernization and expansion of India's privately owned jute industry. Equipment to be procured includes looms, spindles, and spare parts. The proceeds of the loan will be made available by the Government of India to private companies through a national jute trust composed of representatives of the industry and government officials.

But the Eisenhower-Nixon administration just told us on Friday, in the veto message, that loans to American communities—even when they are to be repaid in good, hard American dollars—and not in soft currency, in rupees—are unnecessary, unwise, and costly.

Obviously, a different standard is to be applied when the loans are made abroad and are to be repaid in soft currencies—much of which we cannot even take out of the foreign countries and much of which today poses a serious problem of inflation in some of these foreign countries—which we are then asked to remedy by further contributions, either as grants or loans, and cheerfully do so.

Consider another example, Mr. President.

Consider, Mr. President, the loan of $1,350,000 for the Taiwan Aluminum Corp. repayable in 5 years in new Taiwan dollars.

What is this loan to be used for?

According to the Development Loan Fund, it is to be used as follows:

The proceeds of this loan will assist in financing the costs of acquiring equipment, materials, supplies and services required for modernization and expansion of the corporation's facilities for producing aluminum and aluminum ingot at Kaohsiung, Taiwan.

Mr. DODD. Mr. President, will the Senator yield?

Mr. GRUENING. I yield with pleasure to my able and distinguished colleague from Connecticut.

Mr. DODD. I wish to say to the Senator from Alaska that I think, in the speech which he is making today, and which I have had the privilege of following as I sat here, he is again contributing, as he has so often in the past, to a clear understanding of just what the American people are up against in this administration which is so concerned about big private business, and so little concerned about small people and their needs. There is no more dramatic example of that fact than in this whole business of aid to depressed areas.

I received only this morning a communication from a very good Republican friend of mine in my own State. I have his letter on my desk, but I do not have his permission to read it into the RECORD. I think it is fair to say that he is a very prominent member of his party. He says, among other things, "I am writing to you because I read in the press that Ike will veto the $251 million depressed areas bill." Then he asks me if I will send him the figures of the staggering amounts we are sending to foreign countries as subsidies. "I am still a Republican," he says, "but I am critically wondering just how I can go on being so with this attitude in the White House." Little wonder that he is worried.

Before I go any further, I wish to say to the Senator from Alaska, I think he is doing a great thing in helping our people

to understand just what this question is really all about.
